His finger pointed to the portrait of a man of five-and-twenty, attired in a jockey's dress, and about to mount a sleek and well-bred horse. His hand was on the reins, but his face was turned round to the spectators, as though giving some final order before he set out.

'Yes, sir, that is Squire Ferdinand; and very like. He is painted with his famous mare, that won so many steeple-chases. I recollect her well. She realised four thousand pounds in stakes in a single year, though, it is true, she cost her owner thrice the money in lost bets. He would back her against anything, and so would all about here.' The lawyer, ready enough to exchange the dangerous topic of humanity for that of horse-flesh, or, perhaps, since he had some turn for sport, being really interested in it, waxed eloquent upon his glossy theme. 'She was a genuine beauty; and though, as you see, she had one white stocking, which was thought a blemish, her owner would never allow she was not perfect. She had a stall and a paddock to herself; two grooms to wait upon her; and during one very severe season, the Squire had the straw-yard roofed in for her, so that she might take her exercise under cover. Let me see, which winter was it?'

'Perhaps it was that same winter,' broke in Anthony hoarsely, 'when we nearly lost our Ellen, because coal was too dear for us to buy. Yes, sir, we starved and shivered, while yonder scoundrel lavished gold—*my* gold—upon his pampered pet.'

'She broke his neck, for him, poor fellow, at last,' pleaded the lawyer softly, 'as I wrote to let you know.'

'Was that the mare that did it?' ejaculated Anthony excitedly. 'Then I am sorry that I grudged her aught. I will have a statuette of silver cast of her, and underneath it written: "The Queen of Horses." Or stay; I'll have this rascal painted out, and the mare left; by Heaven, I will.' The vehemence of the old man's passion was even more

Digitized by Google

terrible to witness than to listen to: it seemed to go well nigh to choke him before it found vent in words; and full a minute passed before he got the mastery over himself and it; then turning to the neighbour-picture, he inquired contemptuously: 'Whose brat is that?'

'That is young Ferdinand, sir, who died of the fever.'

'Humph!—And this is Charles the Sot, I suppose?'

'It is your brother Charles, sir,' answered the lawyer quietly. 'If he was fond of the bottle, at least he had no weakness for the fair sex. There was not a woman-servant in the Manor, nor one admitted within the lodge-gates for the five years he ruled the place. A most eccentric personage.'

'An idiot, sir,' ejaculated Anthony, 'who would have drivelled out his days in some asylum, if delirium tremens had not cut them short.—This is the fisher-fellow, Richard, I suppose?—And that his son, who died here this day fortnight, eh? Now all these rogues shall burn together, at once.' And the old Squire reached out a trembling hand and grasped the bell-rope.

'I pray you consider, sir,' interposed Mr Moffat hastily. 'If you are so ill resolved, at least do nothing in such sudden heat. Although these folk were not your friends, still you were kin, and blood is thicker than water, or is, at all events, so held to be in these parts. Your neighbours here would resent such conduct deeply, they would indeed, sir.'

'The neighbours?—You mean the flatterers, the lickspittles, all those who fawned on this precious brotherhood! What care I whether they are pleased or displeased?'

'For your own part, nothing, sir, doubtless. But for Miss Ellen's sake, you should wish to be on good terms with the country-side. To burn these portraits of the men they knew so well, would bring you into much discredit. Your kin are dead and gone to their account, and hate should not be pushed beyond the grave. Besides, there are some among them who have done you no evil turn, nor thought to do it. The boy Ferdinand here, for instance, who perhaps never heard your name; and this young Richard—if you would but have believed it, sir—no better-meaning and more generous lad ever drew breath. His people here adored him.'

'His people! They were mine.'

'The people of the village, I mean, sir; they did not know, remember—although *you* knew so well—but that they *were* his people; nor did he himself. He understood nothing of the rights of the matter, nor your wrongs. Do you think his father yonder told him: "We usurp this place, which should be your uncle Anthony's?"'

'And why did not *you* tell him?' inquired the Squire, facing round upon his guest. '*You* knew.'

'I did say much that moved him greatly, sir. You know yourself how instantly he acted upon it; and although you spurned his offer, I still think'——

'Ah, I see,' interrupted Anthony; 'you feared to tell the truth, else justice, reparation even, so far as he could make it, might have been done at last. You, then, are to blame, not he.—Among that nest of rogues, this Richard, then, was honest at the core. He has a comely face enough, now that I look into it, and a pleasant smile.'

'He has indeed, sir; and if I were one given to compliment, I could tell you how old folk about here used to say they found young Squire Anthony reproduced in this same boy. Indeed, I have often seemed to sit beside you when I have sat with him at this very table. He had, like you, his mother's gentle nature, rather than his father's. He fell in love too, just as you did, when he was quite a boy.'

Squire Anthony had sat down in front of this likeness of his former self, and was regarding it attentively. He did not hear one half of what the lawyer said. The fifty years that lay between him and boyhood seemed all swept away, and he was once more a lad. What airy dreams he had then indulged in! what rose-tinted visions of life had his fancy painted! How passion had swayed him! It was in that very room, whither, on the occasion of her taking her new place, his Mary had come to have a few words of advice from her mistress, that he had first seen his charmer in that house (he had only known her by sight as the acknowledged beauty of the hamlet, and his mother's favourite pupil in the village school, before). He even remembered where she stood, close by the window yonder, with her hands modestly folded; and the pattern of the simple gown she wore, and the colour of the ribbons in her bonnet. It was a foolish enough thing to do, but he had fallen in love with the new waiting-maid as honestly as ever duke did with duchess. He had never meant otherwise than honourably towards her. And while it lasted, what a transport it had been! He had not inherited the gross animal nature of his father; but his affections were very strong, his heart was tender, his voice and air were winning. All the beauty and physical grace that had departed from him so long were seen once more in the portrait on which his eyes had been fixed. They were now cast down upon the shining table, on which quite another picture was mirrored—an aged, furrowed face, white hair, white beard, and eyes that gazed dimly forth from beneath white bushy brows.

'You are right, Moffat,' said he thoughtfully, and after a long pause: 'the pictures must not be burned, though I will not have them here. Let them be put away out of my sight, till I am dead and gone like the rest—all but young Richard's there: he shall have the place of honour above the mantelpiece. If the lad had lived, and taken a liking to his cousin Ellen—— But there; he had a sweetheart of his own, you told me.'

'Yes, sir; Miss Lucy Waller; a sweet girl, whose father until lately sat in the House for Mosedale.'

'What a handsome pair they would have made!' mused the old squire, quite unconscious of the lawyer's reply. 'Both Blackburns too: I could have made a point of that.' Then suddenly: 'How do you think her looking, Moffat?'

'Miss Ellen, sir?'

'Of course; who else?'

'Indeed, sir, she is very beautiful, though, I should fear, somewhat delicate. She will cause many a heartache in the county with those large soft eyes of hers, doubtless; since, I suppose, if it is not an impertinence to ask it, she is fancy free as yet?'

'Yes, yes,' said Anthony hastily. 'She has formed no engagement: you have my leave to say that much. To see her married well, and

Digitized by Google

happily, would make amends to me for much that I have suffered.—You hear her singing in the drawing-room even now. Yes, that is my Nelly's voice; and, as you say, as clear as any bird's.—If you have done your wine, sir, let us join the ladies.'

CHAPTER VII.—BENEATH THE OLD ROOF-TREE.

The Manor-house was not without its memories for Mrs Blackburn as well as her husband, although they were of a different sort. She had dwelt as a servant where she was now the mistress: she had returned in triumph across the threshold from which she had been driven with shame. It was no wonder, therefore, that she wore an air of triumph. A powerful ally, Death, had declared himself upon her side, and at last had conquered all her foes for her; for the Blackburns—fathers, and sons, and grandsons—were all enemies in her eyes: cruel and unnatural in their treatment of her husband—insolent and cruel to herself.

She had made a hasty tour of the house before dinner, and insisted on her grand-daughter's accompanying her. The handsome sitting-rooms had been expatiated upon, and in one of them, the library, she had whispered (it was one of the few touches of pathos she exhibited throughout): 'It was here that your grandfather confessed his love for me, and gave me his first kiss. Ah,' sighed she, stepping up to the old oak-framed mirror that stood over the fireplace, 'I was as bonnie a lassie as thou, Nelly, then, and a deal healthier-looking. But rheum and wrinkles is what we must all come to.'

In the best bedroom, which had been prepared for Anthony and herself, her reflections were of a more agreeable nature: 'It was here, Nelly, that I waited on my Lady—and a kind-hearted loving creature she was, with a brute for a husband. He was a bad man every way. Alack! how I have heard him bang and swear in that dressing-room, while I have been doing madam's hair. And how she would start and colour as our faces met in this glass.'

'Did she know how you and grandfather loved one another?' asked Ellen, with an interest which she had been hitherto far from evincing in any of the circumstances of the day.

'Not at first, although she found it out before the Squire did. She tried her best to stop it—for which, indeed, I don't blame her; it is best in a general way for folks to marry in their own rank, you may depend on that, Nelly—but when she found Anthony quite set upon it, she addressed herself to me.'

'And what did she say, grandmother?'

'Well, she spoke very fair, I will say. She owned that she was much averse to her son's marrying such a one as me. "But it's better, in God's sight, that he seek to marry you," said she, "than seek your ruin." (Poor thing, she knew more than people guessed of the wickedness that went on under her own roof.) She so moved me, indeed, with her kind words, that I almost made up my mind to give Anthony up; and I would have done so—yes, I do believe I would—rather than have got him turned out of house and home for my sake. But it was not in my power to stop that. Whether I had married him or not, that would have happened all the same. He and his father spoke such bitter words to one another; and no wonder, so far as Anthony was concerned; why, you would scarce believe it! but that wicked old man, your great-grandfather—think of *that*, Nelly, and I alive to tell it!—if he had not had a wife already, would have married me himself!'

The young girl shuddered, as well she might. These reminiscences of vicious passion, told by the lips of age concerning one far older, and whom Death had so long taken, seemed to have a smack of the charnel.

But the narrator herself had no such qualms. 'I only saw madam once after that dreadful quarrel,' she went on. 'Your grandfather and I were married then, and forbidden the house; but his mother wrote us word to meet her on a certain day in Redmoor Fir Grove, when Russell Blackburn was at York races. She looked white and thin as a ghost; and indeed she died within six months of that date; and if ever a broken heart was the cause of death, it was so with her. I thought she would never have unclosed her arms from Anthony's neck, they clung to him so at parting: he was her favourite son, as well as her eldest born, and she must have felt it was for the last time. I did not know then, as I know now, Nelly, what a bitter cup that was to drain; but I pitied her from the bottom of my heart. Besides, she had not a word of blame for me, nor even of warning; she had been such a good wife herself, that perhaps she had no idea of what some wives are; but she bade her son be true to me, even when the days should come, as they have long come, though I little thought of them at the time, when all the beauty that then gladdened him so in my face and form should have faded and gone.'

'She must have been a good woman,' sighed Ellen sympathetically.

'Yes, wench—too good for this world. Another one in her place, not so good, might have done better. She did not make the most of herself even in appearance, as I have told her, in this very chamber, many a time.—Hark! there's the first dinner-bell. The last time I heard it, and saw Anthony go down without me to take his place at table, I little thought it would be fifty years before I got my own. Well, better late than never; the tide has turned at last, though it is not at full yet; nor will be till my Willy has his rights. See, here is the girl coming to dress me; just as I used to come to madam, directly that bell rang.'

Ellen partook of none of this triumph and exhilaration. She tried to be glad, for her grandfather's sake, that their prospects had been so marvellously changed for the better; but in her heart she was sorely grieved. If the thing could have been postponed till three months later, when she would have been John Denton's wife, then she might have welcomed this stroke of good fortune like the rest, although it would have always been in an inferior degree; for she did not care for wealth for its own sake, and of the advantages it bestows she had had no experience. At present she only knew that the acquisition of it had dispelled her brightest dream. Her grandfather had sternly commanded her to break off all relations with John Denton; such an engagement, he contended, to which, even under other circumstances, he had always refused his consent, had

Digitized by Google

now become utterly incompatible with her position, and was to be no longer entertained.

Not even her strong sense of gratitude and filial respect towards her grandfather could induce her to send such tidings to the young engineer; but she had written him word that for the present his visits, and even his correspondence with her, must cease. The pair were doomed to test the strength of that constancy of which each had boasted; and though she feared no danger from the separation, she deeply felt the pain of it. The fact was, now that the barren hope to which Anthony Blackburn had clung for near half a century of toil had at last begun to bear, he was greedy for the full fruition of it. He wanted to be all his ancestors the squires of Blackburn Manor had been before him, and by the help of Ellen, to whom he was sincerely and devotedly attached, even something more. He was in secret much more solicitous to secure the good opinion of his new neighbours than he pretended to be, and we have seen that he was content, for the sake of it, even to forego some taste of the pleasures of revenge. He well knew that the attempt to recover his old position in the neighbourhood would be a difficult one; that his own manners, address, and even language were not what they had been before he lost it; and that his wife would be totally unable to adapt herself to her altered fortunes. In the background, too, was a third member of the family, to whom we have not as yet been introduced, but who could not be kept away from Blackburn Manor for ever, and who was likely to prove a still more formidable obstacle to his views.

Indeed, without Ellen's aid, the case was well nigh hopeless, and therefore it was that he threw in the scale against her love for Denton the full weight of his authority, and piled upon it all the considerations of gratitude and loyalty he could call to his aid. Without her, how could an old man (however pitiable for his misfortunes), and an old woman, whose audacity in wedding above her station had, in their opinion, deserved all the misery it had earned, recommend themselves to the proud and well-born folk, with whom he hoped once more to mix—even putting out of consideration that more serious hindrance to his efforts which for the present he might contrive to keep out of sight? But, on the other hand, with his beautiful grand-daughter to help him, how altered was the case! A country-house that was the casket of such a jewel as Ellen Blackburn could not fail to be attractive. She had good blood in her veins, and looked and moved like a princess. She would be rich, for he would make her so. With whom, then, among untitled folk at least, might she not form an alliance? and that once cemented, her husband's kin would stand shoulder to shoulder with her own, and help them to keep their place. Thoughts of this kind had begun to fill the old man's brain from the moment that he had received the news of his nephew's death, and had even taken definite and material shape with respect to his young neighbour, Herbert Stanhope. But at all events he had quite made up his mind that the proposals of John Denton should be rejected; for let the young engineer's future prosperity be what it might in his own line, it could never be of the sort to further the family popularity. Perhaps in one who had himself sacrificed so much to mere sentiment, this resolve may seem harsh and unnatural; but it is easier to give way to the softer emotions at eighteen than at sixty-eight, and easier at all times to disregard the sentiment of other people than one's own.

Thus it was that Ellen Blackburn found small pleasure in the sudden prosperity of her kindred, and sighed in her well-furnished chamber at the Manor for that little room in the cottage, through whose latticed window she had so often watched for her lover across the moor, and smoothed the tresses, innocent of flower or gem, to welcome him. Still, she was not unconscious of the delights of her new position, nor so plunged in grief (since she had hope to mitigate it), as not in some measure to appreciate them. The view from her present apartment (even without that beloved figure in the foreground) was not indeed to be compared with that to which she had so long been accustomed; but it had a beauty and home quiet of its own which pleased her much. Beyond the terrace and the carriage sweep, and separated from the latter only by a deep-sunk fence, lay a small but undulating and well-wooded park, with here and there a herd of deer. Upon one side was the village, with its ivied church-tower, from which the joy-bells were still pealing dreamily; and on the other, field after field of richest pasture-land, with luxuriant hedges (so different from the stone walls about Slogan), that seemed to grow so near to one another in the blue distance that they enclosed no space at all.

Her bedroom opened upon a still more charming boudoir, from whose windows, if the prospect was more restricted, it was not less fair. Immediately beneath them lay the well-kept garden, a chess-board of flowering squares of various hue. A quaint old arbour, built of fir-cones, and ornamented with painted glass, opened on what had once been the bowling-green, but was now in course of alteration into a croquet-ground—a change which she rightly guessed had been made by young Richard for the sake of his betrothed. Beneath the shade of those spreading cedars, and on the levelled turf, he had doubtless stood with her, and shewn how all things were to be, under her coming reign. They had paced together the winding walks of the shrubbery beyond, and climbed yonder little hill with its gay pavilion, from which all the fields and farms which owned him for their master were to be seen. The boudoir itself had been recently fitted up, and for whom but for this poor girl, of whose very name she was ignorant, but whose fate—divorced for ever from him she loved—touched her eyes with sympathetic tears. How it would vex this poor creature, when she came to hear it, that the new Squire had forbidden his people to breathe young Richard's name! That had been a bitter speech of her grandfather's, and painful to listen to; and although she did not doubt that his affection for her was genuine, though he shewed it in such mistaken fashion, it was plain wealth had already made him hard and stern; and might not his nature keep that mould for the future? She could refuse to be false to her love, but she could never act in defiance of the old man's express commandment.

It did not need, then, the cold hand of death to keep asunder John Denton and herself. But against such thoughts as these she had a simple charm, that for the present at least proved efficacious.

Digitized by Google

She drew from her bosom John's last letter, written on receipt of her harsh tidings, and which bade her be of good cheer, and to wait in hope. There was not a syllable of anger in it against her grandfather, who he frankly owned had at no time encouraged his addresses. It breathed nothing but love and trust in her; and as she read it softly to herself, the words seemed like a song, to which the summer breeze that came in at the open window, laden with evening odours, was the fit accompaniment; and her whole soul was lapped in comfort, and grew calm. Her toilet suffered from the use of this specific, for the second dinner-bell sounded before she had time to assume her evening attire. Her appearance, however, as has been shewn, proved sufficiently attractive in the eyes of the only guest, Mr Mowbray Moffat; while the lack of splendour in her attire was fully compensated for by that of Mrs Blackburn, who, having had her pick of the family jewel-box, had not confined herself to mere satin and pearls.

After dinner, while the elder lady made an elaborate tour of the drawing-room, and approximately priced the furniture, the younger sat herself down at the piano and played a few sacred airs, such as she had been used to evoke from the harmonium in the little church, of which she had been organist, under Slogan; and presently, as we have seen, this attracted the notice of the gentlemen, and brought them in from the dining-room. Wrapt in the melody, she did not notice their arrival, but continued to play on, her pensive features with a chastened glow upon them, and her eyes full of devotional fire. Even Mr Moffat, a man not given to enthusiasm of any sort, was struck with her rare and ethereal beauty, and stopped in the doorway like one spell-bound.

'She is a thorough Blackburn, is she not?' whispered Anthony admiringly; 'as handsome as the dead lady we have just been speaking of, and with a look besides such as the angels wear. I have sometimes feared that she would be taken from me because of that.'

'Does she inherit any delicacy of constitution?' inquired the prosaic lawyer. 'Both her parents died very young, sir, did they not?'

'Yes, but they were a hearty couple. The mother, a pretty girl enough, but not like this one, died in giving her birth. Her father, as strong a man as myself, came to an untimely end.'

'Yes, poor lad. He fell down some precipice in Wales, as you wrote to tell me: that mountaineering' [he had been killed on Slogan by a powder-blast] 'which is so much the fashion now-a-days has been the death of many a fine young fellow. But though you have not mentioned him for years — your letters were so brief—this sweet young lady here is surely not your only hope—your eldest son is still alive, I trust?'

This was the question which the lawyer had had in his mind from the first, but had not hitherto ventured to put, since it was evident that his new client had reasons for his strange reticence on so important a matter. Mr Moffat put it now with such directness, that an answer could scarcely be avoided, but kept his eyes averted from his host, and fixed on the young girl at the piano, otherwise he would have seen old Anthony's ruddy colour change to deadliest white, as he replied stiffly: 'My son William is alive, or I should not have failed to let you know, sir. At present, however, I do not expect him home. He is abroad.—There at last she sees us!—I am afraid we startled you a little, Nelly. But pray, play on; Mr Moffat dotes on music as much as I do.'

THE LAND OF THE DIAMOND.

Captain Burton has lately given to the public the results of his exploration of the Highlands of the Brazil, and an account of his voyage down the São Francisco on a raft, a distance of fifteen hundred miles, from Sabará to the sea.* His narrative is instructive and entertaining; and its practical result, if his expectations are realised, will be to turn the stream of vacation-tourists in the direction of the only monarchy on the American continent, the newest empire in the world, and assuredly the most beautiful country, with the most enviable climate on the face of the earth. 'A thousand vacation-tourists will learn that yellow fever is not an abiding guest in the empire; that her shores can be reached in ten days from Europe; that no long sea-voyage is more comfortable or more pleasant; that the Highlands of the Brazil, which popular ignorance figures to be a swampy flat, are exceptionally healthy, and have been used as sanitaria by invalids who had no prospect of life in Europe; and lastly, that a short visit to Barbacena, in the province of Minas Geraes, *vid* the D. Pedro Segundo RR., will offer the finest specimens of the three great geographical features of the land—the Beiramar or seaboard; the Serra do Mar, maritime range or Eastern Ghauts; and the Campos, commonly translated prairies.' This is an attractive programme to any mind accessible to the delights and beauties of such a revelation of nature in its most lavish grandeur; and he afterwards adds another touch to the picture, completing its charm by his description of the Niagara of Brazil, and curtly informing us that Paulo Affonso, King of Rapids, is more accessible than Northern Scotland. To think of such a journey, of such scenes, of such a climate, of air, and space, and sunshine, in which mere physical life is enjoyment, is a holiday for the imagination. What a holiday for body and mind to 'go and do it!' And how pleasant to know that it would not cost more than one of the conventional 'trips' to semi-Anglicised continental places, in which the travelled Briton has the advantage of living very expensively among bad imitators of his social surroundings in England. From Rio to Peteropolis, and thence to Juiz dé Fora and Barbacena, the road, on which travelling is quite easy and well regulated, lies through scenes of incredibly varied and entrancing beauty, and leads to the grand *Campos*, the wonderful, fertile, sterile, flower-decked, stone-strewn, forest-laden, bare-stretching prairies of Brazil, where the pure air is laden with perfume; where fatigue is put to rout by a strange all-pervading exhilaration; where, though in a tropical land, the weary European recovers full vigour, and acquires such animal spirits as he never previously knew. 'There,' says Captain Burton, 'the mornings and evenings are the perfection of climate; the nights are cool, clear, and serene as in the Arabian Desert, without its sand. Nor are the prairies deficient in the highest beauties of form and tint. There is grandeur in the vast continuous

* *The Highlands of the Brazil.* By Captain Richard F. Burton, F.R.G.S., &c. London: Tinsley Brothers.

Digitized by Google

expanse fading into the far distance. The eye can rest upon the scene for hours, especially when viewing from an eminence, while it is checkered by the afternoon cloud, whose eclipse seems to come and go, and thus gives mobility to the aspect, as it walks over the ridged surface of the light-green or pale golden earth-waves, upheaved in the intensely blue atmosphere of morning, or in the lovely pink tints of the "afterglow," from the shadowy hollows and the tree-clumps glooming below. If we analyse the charm, its essence seems to be the instability of the ocean, when we know that there is the solidity of earth.'

When the way lies no longer through the prairies, but by the cultivated lands, and through the Brazilian cities, gaudy, bright, interesting, and tenanted by good-looking, gay-hearted people, all is still beautiful. The forest-paths are glorious, the air is gemmed with hundreds of the bright birds of Brazil, rich fruits grow wild in lavish profusion, streamlets, waterfalls, lakes, adorn the scene. Through such paradisiacal scenes Captain Burton's way lay to Minas Geraes, where, according to him, the exploitation of gold and diamonds has but just commenced. In the immense resources of the Brazil, in its possession of wealth to an extent which may hereafter change the significance of the term, he is a firm believer; and he has left no detail of the working of the present system of mining, insufficient and merely inauguratory as he believes it to be, uninvestigated. He earnestly deprecates the general opinion that Brazil is an unprofitable field for the employment of capital, and steadfastly maintains that the disasters which have given rise to the unpopularity of the empire in commercial esteem, are due to the dishonesty and incapacity of English speculators. 'Charlatanism' is the mildest term he applies to the 'promoting' manœuvres adopted for the formation of companies, the statements, utterly irrespective of truth, the subtraction of distances, the falsification of figures, the unmitigated, shameless extortion for the comfort and accommodation of 'Mr Commissioner.' Humour is by no means a characteristic of Captain Burton's writings, but he certainly succeeds in being funny at the expense of the prospectuses. Thus he adds: 'In the mines, as in the railways of the Brazil, the fault, the cause of failure, lies at our own door, and not with the Brazilians. There has been the grossest mismanagement both at home and abroad. Private interests have been preferred to public; in certain notorious cases, a system of plunder has been organised, impossible schemes have been floated through the market, and money has been buried as though it were expected to grow.' The result is a rooted distrust of the Brazil, to the removal of which the author applies himself diligently. He has the most splendid conceivable visions respecting the future of the Brazil. He regards the gorgeous, beautiful, bountiful, tropical land as the future home of the perfect race which is to people the earth, and to supersede the necessary but unpleasant negro, and the mongrel mixed blood. It is doubtless against his will, and contrary to his intentions, that the author produces rather a pleasing impression of the 'anthropoid,' the object of his scorn and loathing, whom he holds to be a brute in a rough imitation of human shape, soulless, and ill smelling. On the head of 'the black miner,' he accumulates every possible epithet, in prose and verse, calculated to inspire disgust, and to express ignominy, but his facts do not quite bear out his theory; for instance, in his account of the Revista, or muster of the blacks, which takes place at the Morro Velho Mine every second Sunday, he presents a pleasant picture of placid, cleanly, contented working people, and concludes thus: 'Muster over, both sexes and all ages are marched off to church. The day is then their own. The industrious will look after house and garden, pigs and poultry; they will wash and sew, or fetch water, wood, or grass, for sale. The idle and dissolute will keep the day holy in African fashion, lie in the sun, smoke, and, if they can, drink and smoke hemp, like the half-reclaimed savages of "Sá Leone." Dinah, here and elsewhere, is proverbially fond of trinkets and fine rags. Parades over, she will doff her regimental attire, and don a showy printed gown and blazing shawl, the envy of all beholders.' This is very horrible, no doubt, to Captain Burton; but we feel many of his readers will fail to perceive its peculiar atrocity, or to recognise that the separation of Sambo and Dinah from the ranks of humanity, is to be inferred from the depravity of Sambo's lying down and smoking in the sun, after a week's work underground, and Dinah's fancy for a bright-coloured gown.

The mine in which the despised negroes labour is a wonderful thing to see. Here is Captain Burton's brief description of its interior appearance, in one of the best passages he has ever written: 'And now, looking west, the huge Palace of Darkness, dim in long perspective, wears a tremendous aspect. Above us, there seemed to be a sky without an atmosphere. The walls were either black as the grave, or reflected slender rays of light, glancing from the polished watery surface, or were broken into monstrous projections, half revealing and half concealing the cavernous gloomy recesses. Despite the lamps, night pressed upon us, as it were, with a weight; and the only measure of distance was a spark here and there, glimmering like a single star. Distinctly Dantesque was the gulf between the huge mountain-sides, apparently threatening every moment to fall. Everything, even the accents of a familiar voice, seemed changed; the ear was struck by the sharp click and dull thud of the hammer upon the boring-iron, and this upon the stone; each blow invariably struck so as to keep time with the wild chant of the borer. The other definite sounds, curiously complicated by an echo, which seemed to be within reach, were the slush of water on the subterranean path, the rattling of the gold stone thrown into the kebbles, and the crash of chain and bucket. Through this Inferno, gnomes and kobolds glided about in ghostly fashion, half-naked figures muffled by the mist. Here dark bodies, gleaming with beaded heat-drops, hung by chains in what seemed frightful positions; there they swung like Leotard from place to place; there they swarmed up loose ropes like the Troglodytes; there they moved over scaffolds, which, even to look at, would make a nervous temperament dizzy. It was a place

> Where thoughts were many, and where words were few.'

The capital of the mining district is Sabará, a very interesting town, situated in the midst of a Swiss landscape. (Every country seems to repeat itself in this wonderful land.) The foreground is a green flat, with a single noble tree; the river

bends away to the right with graceful sweep, exposing the slope upon which sits the loftily placed city, whose many steeples tell the pride and piety of the old population. Sabará is a picturesque city now; when the mines are more prosperous, it will be made stately with marble and tasteful decoration. Here Captain Burton concluded his land-journey of five hundred miles, through the richest portion of the Minas Geraes, having seen nature in her most beautiful and varied forms, every mile of the road being rich in all the splendour of feature and colouring. Such forest tangle, such wondrous luxuriance of vegetation, such mighty lords of the woodlands, and infinitely varied crowding parasites, struggling and writhing upwards towards the pure perfumed air, and the glorious sun of the tropics.

At Sabará, Captain Burton began his voyage on the unknown river São Francisco, in very good spirits, though quite aware of the hardship, privation, and fatigue which lay before him, together with 'just enough risk to enliven the passage,' before he should have accomplished thirteen hundred miles, in the craziest of crafts, calked with Sabará clay. He thus describes the craft and the crew: 'The Ajôjo is a bundle of three canoes, the longest occupying the centre. The canoes are lashed together by hide ropes, with an interval of six to eight inches. Round poles, fastened by leather thongs to the gunwales, support the *soalko*, or platform, which should fit tight to the sides, otherwise, the craft, when "broaching to," may be waterlogged. This boarding of ten planks, laid horizontally, projects laterally into *coxias*—trampways eight to ten inches wide—where the men work. The standing awning was made fast by five wooden stanchions, of which the two pair fore and the one aft were supported, besides being nailed, by strong iron knees or stays. Facing the head, and in the coolest place, was a tall deal writing-desk, which rivalled the awning in catching the wind. Behind this, on each side, stood a *girão*, or boarded bunk, for sofa and bed, raised on four uprights. Amidships, was the table, a locked box of provisions, and two stools. In the stern stood the galley, a similar bench lined with brick, the *batterie de cuisine*, not forgetting the invaluable frying-pan. Two large jars of porous earth carried the supply of water. My crew numbers three—old Veira and his sons. My sole attendant is a Morro Velho boy, named "Agostinho," lent me by the superintendent. He knows something of the river, of gold-washing, of diamond-digging, and of rough cookery. Negra, the mastiff, wild-eyed as an ounce, is the terror of those who see her for the first time, and will prove useful—in these parts, all men travel with fierce dogs.'

With this queer equipment, Captain Burton set sail, no doubt forming a complete puzzle to his crew, and to every human being with whom he subsequently came in contact. Down the beautiful varying river he floated, sometimes easily, sometimes with infinite difficulty, by cultivated lands, growing sugar-cane and coffee; by rich banks of flowers and orange-groves; by splendid sweeps of forest; by swampy plains, where water-fowl and the river-pig abounded; by many a beautiful tarn and fierce rapid, and day by day approached the home of the diamond. Through all the wildness and the desolateness, the traveller's mind was busy with what is to be, when the desert stream shall have become a highway of nations, an artery supplying the lifeblood of commerce to the world. The sandbank where he lay and took in the silent magnificence of the scene may be the landing-place of a wealthy town. The 'Ounce Rapid' and the 'Fierce Sandbar' will be silenced for ever; 'and,' says the author, 'the busy hum of man in time will deaden the only sounds which now fall upon our ears, the baying of the Guára wolf, and the tiny bark of the little brown bush-rabbit.' So, to Diamantina, where the whole population lives on the diamond mines, as that of Sabará lives on the Morro Velho; and to the Jequitinhonka Diamond Diggings.

As Brazil has borrowed her gold-mining through Portugal from the Romans, so she has taken her system of diamond-washing from Hindustan. The process is very laborious, and highly interesting in its material aspect; how suggestive to the imagination need hardly be mentioned. The mind runs in a moment over a wide range of fancy, fiction, and fact—from Sindbad the Sailor to Mr Harry Emanuel. One thinks of all the beautiful historic baubles, and the misery and guilt they have caused; of all the fairy tales in which diamonds have figured; of all the strange stories of theft of them, and its discovery and cruel punishment. Tavernier's pretty story of the young jewel-purchasers of Hindustan, and their grave organisation, recurs to the memory when Captain Burton tells how children are employed in the Diamond Diggings. Their sphere is the *lavagem*, or washing. Their keen bright eyes detect the lurking treasure when older optics fail; even at twenty-five years, there are few which can be trusted to let no crystal prize escape amid the gravel. The simple expedient of the magnifying-glass is not yet in use, and the toil of the sifter is laborious and slow. It is during the lavagem that robberies are generally effected. 'Few,' says Captain Burton, 'swallow the diamond, not because it is considered poisonous, as by the Hindu, but on account of the difficulty of doing so unobserved. In India, the miner jerked the stone into his mouth, or stuck it in the corner of his eye; twelve to fifteen overseers were required per gang of fifty light-fingered men. The civilised thief pretends to be short-sighted, and picks up the plunder with his tongue-tip. A favourite way is to start as if frightened by a snake, and thus to distract the attention of the superintendent, who, if "clever," is wide awake to the trick. Most of the stones disappear by being tilted or thrown over the top of the pan during the washing, and are picked up at leisure. They are easily sold to the huckster, the pedler, or the keeper of the nearest groggery. Thus may be explained the number of slaves who have purchased their liberty, and taken to the bush. Even the white man has owned that his first impulse is always to secrete the diamond.' The diamond-bearing hills are singularly barren, the least beautiful portion of beautiful Brazil. Captain Burton tells some new diamond stories, but we feel that the diamond wants a Sir Emerson Tennent to do it the same justice as that which has been meted to the elephant. Of the unrivalled *Estrella do Sul*, which every one remembers at the International Exhibition, he says: 'This superb brilliant was found in July 1853, at Bagagem of Minas Geraes, by a negress. In the rough state it weighed 254½ carats. The owner parted with it for thirty contos (L.3000); at the Bank of Rio de

Digitized by Google

Janeiro it was presently deposited for 300 to 305 contos, when it was worth L.200,000 to L.300,000. After being cut by the proprietors, Messrs Coster of Amsterdam, it was reduced to 125 carats; and now it belongs, I believe, to the Pasha of Egypt. Though not perfectly pure and white, its "fire" renders it one of the finest gems extant. This diamond has one exceptional circumstance attaching to its history—it has caused no bloodshed; not even the finder was murdered. She was only deceived and ruined, and died broken-hearted. This was the negress who brought the gem to her inhuman master, hoping for her freedom; but he took the jewel, and kept the slave.' How comes Captain Burton to concede the possibility of an 'anthropoid,' having a heart which could be, and was, broken? Is there anywhere, in any palace in the world, a band of jewels on any stately neck, a star in any shining hair, a flashing gem on any slender hand, but has blood-drops or tear-drops upon it, and the curse of tortured, vengeful hearts?

As yet the Diamantine formations of the Brazil have been barely scratched, and the works have been compared with those of beavers. The rivers have not been turned, the deep pools above and below the rapids, where the great deposits must collect, have not been explored; the dry method of extraction, known long ago in Hindustan, is still unknown here. 'The next generation will work with thousands of arms, directed by men whose experience in mechanism and hydraulics will enable them to economise labour; and it is to be hoped that the virgin gem-bearing waters will be washed up-stream. This was the sensible provision of the old Diamantine Regulation. Unfortunately, it came too late, when the channels had been choked with rubbish that was hardly worth removing.

After a close inspection of the Diamantine district, Captain Burton resumed his adventurous voyage, and his close observation of nature, which became increasingly beautiful. The banks of the great river are rich in magnificent sugar-cane, and on both sides offered the most tempting inducements to emigration, while the climate is superb. At Coroa do Gallo, the author says: 'To-day we passed over immense wealth. The Rio Pardo, like the Paraná, drains highlands rich in diamonds and gold, whilst the bed of the Rio das Velhas is a natural system of launders.' Here the splendid Burity palm grows in great luxuriance. No weariness could come to the voyager amid such scenes, under such a sky, breathing such air, and nearing with every day the King of the Rapids, which he reached in safety at last. Niagara is always the same; Paulo Affonso varies, but is ever sublime, ever awful. 'The general effect of the picture,' says the author—and the same may be said of all great cataracts—'is the "realised" idea of power, of power tremendous, inexorable, irresistible. The eye is spell-bound by the contrast of this impetuous motion, this wrathful, maddened haste to escape, with the frail steadfastness of the bits of rainbow hovering above; with the "Table Rock," so solid to the tread, and with the placid settled stillness of the plain and the hillocks, whose eternal homes seem to be here. The fancy is electrified by the aspect of this Durga of nature, this evil working good, this life in death, this creation and construction by destruction.' The age of the King of Rapids is estimated to be 2400 years.

In the presence of this mighty phenomenon of nature, Captain Burton concludes the story of his latest feat of travel, one which is no less remarkable for its wonderful interest, than for the ease of its accomplishment. His admiration of these western lands is deep and enthusiastic, his belief in the splendour of their future destiny fixed. He says: 'They are emphatically the Lands of Promise, the "expression of the Infinite," and the scenes where the dead Past shall be buried in the presence of that nobler state, to which we must now look in the far future.'

A REVOLUTIONISED TRADE.

It has often been a subject of wonder to me, that no one of that really unfortunate body, the London cowkeepers and dairymen, have ever come forward to describe some of the trials which have so completely changed their trade, and to a great extent injured or absolutely ruined nearly all its followers. This has all been done within the experience of men still pursuing the calling; and many of my readers must remember the 'murrain' of 1841 and the subsequent year, which was as terrible to cattle as the devastating 'plague' of two or three years back, only its area was narrower, and it was chiefly confined to milch cows. What the technical name of this disorder was, I do not know, nor, most assuredly, do the majority of the dairymen themselves; who call it indifferently the 'rinderpest' and the 'foot-and-lung disease;' the swiftness of its progress, however, combined with the unknown cause of its rise and contagion, and the impossibility of curing it, combined to produce a mysterious scourge, which seemed sent on purpose to ruin the wretched proprietors. Nothing like it had ever been seen before, at least not in the memory of recent generations: what the old murrains were could only be guessed, but the worst were probably not more fatal or irresistible than this.

From this great evil arose one still greater for the time; a general prejudice against milk prevailed, and while its consumption was diminished in nearly every household, it was in many entirely discontinued. At first, this was wholly from the dread of some infectious property being imparted to the milk, which, it was naturally enough argued, might, even unknown to the dairyman, be drawn from cows in which the disease was fermenting; but to this dislike soon became added others of a far less rational character; and for years, almost ever since indeed, the most absurd assertions respecting the adulteration of milk have found ready and general credence. Twenty years ago, the statement was gravely made, and repeated in almost every newspaper in the kingdom, that to thicken and whiten the milk, weakened almost to transparency, a mucilage of dog's brains was commonly employed. The utter impossibility of dissolving the brains of a dog or any other animal in milk, and there holding them in complete suspension, had no effect whatever in checking the general belief. The mildest form of adulteration allowed by public opinion was the adding of chalk to the watered milk. Now, this is just as impossible as the other; and if any reader believes that chalk is put into milk, let him grate a knob into his next pint of milk, and see how he can prevent it from shewing itself.

That milk is sold to the customer precisely as it

Digitized by Google

is drawn from the cow, few persons believe: it is not so sold. The deterioration which it suffers occurs in two ways—one is taking the cream from it; this of course impoverishes the milk; but when it is intended to sell it as 'new milk,' much less cream is taken than when skim-milk is to be the residue. The other mode, as no one will be surprised to learn, is by the addition of water. Nearly all the milk sold in London is watered, 'washed' or 'bobbed,' to use the dialect of the trade; but I am quite sure that no other adulteration whatever is at all extensively practised. Spanish annotta, it is true, is occasionally used, but only in very small quantities. The object of this is to give a richer colour to the milk or cream; partly because a colour unnaturally high is looked for and admired by the customers, and partly because the 'washing' gives a bluish cast to the milk, especially to the margin when the vessel holding it is tilted; added water can generally be thus detected. One very curious fact, however, must be borne in mind—the milk from a black cow is bluer than that of any other cow. The reader may perhaps smile incredulously at reading this, but it is true nevertheless, and can no more be accounted for than the equally puzzling fact, that all white cats are deaf.

By no means, however, could the dairyman make his trade a profitable one during the murrain, nor has it ever since been so good as of old, for the price of milk, oddly enough, does not seem to vary like other commodities, but remains the same whether cows sicken or thrive, rise or fall in cost. No practicable advance, however, would have met and sufficed for the emergency in which the trade found themselves placed; and a single illustration will shew this. At that time, cows were not nearly so dear as they are now; and I remember a cow-keeper buying, on the Monday, three very fine healthy cows for fifty-seven pounds; but so swift, as before remarked, was the progress of this disease, that these identical animals were sold on the following Friday for six pounds, being, excepting as offal, worthless. There was one West-end dairyman who had a 'staff,' as one may say, of thirty-two cows; that was the number usually in his shed; and some idea of the virulence with which the murrain raged may be formed from the fact that he, in six months only, lost thirty-seven cows from that stock and its renewals. There was no fault in his shed, which was warm, roomy, and dry, and was, strange to say, in the second plague, almost the only one I knew in London which entirely escaped its ravages. The owner never lost a cow all through the recent cattle-plague, so capricious and so baffling have been these scourges.

The first murrain, although subdued, yet seems never to have wholly disappeared, and a few cases occurring now and then kept up the memory of the foot-and-lung disease; its chief commercial effect had been to induce some of the trade to look to the country for their supply, instead of depending entirely upon their own cows. Now that this has become rather the rule than the exception, we wonder to read that great dislike and prejudice existed in the customers to this course, and that the country milk-trade was left in the hands of the lower dealers. The public, in short, seemed to think there was the same difference between a dairyman who sold milk from his own cows and the one who imported it, as there is between the boot-seller who makes his articles at home and his rival who has them all from Northampton. Squabbles, amusing to the looker-on, would often arise between the regular vendor and those who sold the disliked railway milk. A certain eminent nobleman was reported at that time to be labouring under a cutaneous affection, for which immersion in milk was the only palliative, and I have heard the orthodox milkmen exasperate their rivals by taunts relative to the latter having to wait until the 'duke had come out of his bath' before they could go their rounds.

It soon began to be evident that the carriage of milk by railway was destined to grow more important almost day by day; for, while the price of the article remained unchanged, the purchase-money of the cow had increased fully one-third, and the cost of her keep had risen in a very much higher proportion. A first-rate cow still yielded a profit, but then they were not all first-rate cows; one really deserving the name would yield, perhaps, fourteen or sixteen quarts of milk per day; a few rare animals have given twenty quarts, but the average may be taken from ten to fourteen. The trade do not keep a cow if she does not give at least six quarts per day. They usually give a good supply of milk for ten months, but some have been known to continue in full milk for more than two years; a cow has yielded for three years, but this is extremely rare. The little Brittany cows, which have become rather popular of late, do not furnish more than four quarts a day, and are only kept for pleasure, not profit.

In London, at anyrate, the cost of keeping cows depends chiefly on the price of grains, the demand for which, even now, is almost in excess of the large quantities produced by the metropolitan breweries and distilleries. This would naturally make them dear, but would not account for a most remarkable and sudden advance which took place in their price a few years back. The price of grains at the time of which I speak was about one shilling per quarter, but they quickly rose to two shillings, and then all at once became very dear—so suddenly, that a dealer, buying grains on the Monday, gave two shillings per quarter, and on the following Saturday, the same quantity cost the same man six shillings. They are now about eight shillings per quarter, and as they form the staple of food for cows in London, this advance is a very serious one. A cow will eat about a quarter of distillers', or a quarter and a fourth of brewers' grains weekly; this difference arises from the quarter of the one trade containing eight bushels, of the other only six bushels. They are considered equally nourishing, and when judiciously changed with other food, conduce more than anything else to increase the supply of milk. Several dry seasons in succession had caused hay to be dear beyond all precedent, and probably this had a great deal to do with the almost fabulous price to which grains advanced, because, as is well known, the production of these depends on an entirely different trade, and cannot be governed by any fluctuations in the milk business, so an extra demand will no doubt increase their price rapidly.

At anyrate, there was another blow struck at the trade, and gradually the better shops began to draw their supplies from the country. The causes

Digitized by Google

alluded to were still in operation, when, all at once, came the terrific 'rinderpest,' and scores of sheds were cleared at once and entirely of their stock: what the disease passed over, the alarmed and often inexperienced inspectors would condemn, until it seemed as if there were about to be put a complete and final period to the trade of cow-keeper. This last catastrophe decided the matter; and, as we now see, there has sprung up on all our railways an important milk-carrying trade, which gives every promise of its becoming larger year by year; thus knocking away about the last item in which London was self-supplying, and rendering it still more dependent on the provinces. The change will do some good to the trade if it only emancipates them from the tyranny of the servants of their patrons; all tradesmen have to fee and court these people, but none of any calling are so thoroughly at their mercy as the milkseller. If he fail to propitiate the housekeeper, cook, or whoever is the presiding genius, in vain is all his struggling to retain the custom. I have known a nobleman give an audience to his milkman, who wished to know why he was going to lose a customer he had served for years, and he shewed to the earl very plainly that he was suffering from the spite of an upper servant; so a continuance of the patronage was promised him. But the nobleman had overrated his power in his own house. Seldom, from that day, did the cream prove rich, or the milk for the nursery good, which the cow-keeper sent in. He exculpated himself over and over again; but at last the head of the department, whoever it was, grew tired of the complaints, and changed the tradesman. The good-natured earl saw the dairyman again, and assured him he was very sorry for the change, but that he really could not help himself.

So the milk-trade of London is revolutionised, and has passed into a totally different phase from that which it wore a generation back. On the whole, the change is for the better, because the quarter whence we now draw our supplies is inexhaustible, while the productive power of the London dairies grew smaller every year. Nevertheless, they had their advantages in some respects over the present plan; be the tradesman ever so honest, he cannot now insure the absolute purity of his milk, nor can a drop of new milk be drawn for the invalid at any time, as before could be done. Other points might be cited; but we may be content with knowing that, on the whole, the change is an improvement.

FROM THE RANK.

'WHAT was the queerest thing as ever happened to me since I ha' been on the rank? Well, there has been a many queer things, and one a most terrible one. We Four-wheelers sees a deal of life; much more than them 'Ansom chaps does, notwithstanding the little hole in the roof through which they looks down upon parties when parties isn't aware. They drives fast and fast folks, and some has an idea that it is only fast life as *is* Life; but you knows better, sir, I daresay.'

I was taking a long street-drive upon the box-seat of a 'growler,' with my family in the interior, bound for a distant railway station, and I had put a certain question to my cabman, in hopes that his answer might make the journey less tedious. He was a young fellow, smartly dressed, and drove a horse so unusually quick-paced that I felt quite a scruple of conscience in not inquiring into his merits. But then I had asked a cabman about his horse before, and the consequences had been most disastrous; as bad as asking a High Church clergyman about his Chancel, or a valetudinarian about his complaints; there had been no end to the subject at all: and now I congratulated myself upon my reticence, for a cabman's long-windedness is in inverse proportion to that of his steed, and since, when my inquiry had only been directed to human affairs, my Jehu shewed such signs of verbosity, what would he not have been (thought I) upon the subject of horse-flesh?

'What was the queerest thing as ever happened to *me* as a kebman? Well, perhaps this un was; or, at all events, I remembers it best, because it happened only last week. O my! yes, it was a rummy go!' And with that, my friend was so tickled with the recollection, that he rolled on his seat till I thought he would have rolled off it, while the reins so shook in his hand, that the speedy horse, who took it for a sign that he was 'called upon,' started off at score, and missed only by an inch or two making himself a passenger in a *Citizen* 'bus that chanced to be before us with its door open. This formed, of course, the introduction to an exchange of repartees between the cad and my impulsive companion, in which the latter had decidedly the better of it; and then, to my great relief (for I had come in for my share of epithets), we shot into a by-street, more suitable to the composition and appreciation of narrative.

'It was down by Cavendish Square that I took her up—a well-looking woman of nine-and-twenty or thereabouts, and a perfec' lady. Not only well dressed, but well mannered and affable, which is what I goes by, more than all the fine feathers as a bird can wear. "Kebman," says she, "drive me to the nearest chemist;" and I druv her accordingly.

'But she did not get what she wanted at that shop, for she says: "Drive me to another chemist." And I druv her. I should think we went to a matter of fifteen chemists, and yet she couldn't get what she was in search of. *That*, I began to think, was a little queer, because chemists mostly has things one wants—spirits, or what does as well, for instance, on a wet Sunday, when the publics is closed—besides, everything as one can possibly *not* want, in them green and blue bottles. So, says I, seeing her look a'most as blue as they: "What is it you *do* want, mem?"

"Want?" said she, in a slow, absent sort of way, which made me somehow get it into my head (and it's there still) that what she did want, poor soul, was P'ison, "well, I want to go into the country."

"Country!" says I, quite cheerful: "you have got into the keb with the right horse for that, mem. He can go a stretcher, *he* can. Where do yer wish to go to?"

"I want," says she, speaking just like one in a dream, "I want to go to Bath."

'Now Bath was rather a long order, even for my nag here, and I told her so.

"Very good," says she. "Drive me to another chemist."

'Then, as it didn't seem of any consequence to herself where she was druv, I took her up Maida

Digitized by Google

'Ill way (where my stable is), and tried a chemist or two in those parts; but none of them had got the thing she wanted any more than the others; and she looked more concerned and vexed than ever. She was such a perfec' lady to look at, and so affable, that I felt pity for her; and though it was not to my advantage, I said, says I: "If you really do want to go to Bath, I had better drive you to the Great Western Railway, where you can take the train."

"Ah," says she, with a sort of a shrink, as though somebody had struck at her, "but isn't that Paddington Station?"

"Well, mem," says I, "I will not deceive you, it certainly is."

"You are a good man," says she. "I wish everybody was like you" (which was very kind of her, I'm sure); "but I can't go to Paddington Station, because my husband is there waiting for me."

'Well, for all I know, this might be a very good reason; I know many a good woman—'Ansom kebmen's wives—as avoids Paddington Station on that account, and small blame to them. So, since the chemists couldn't suit her, I offers her an alterative of my own.'

'Alternative,' said I involuntarily.

'Very likely, sir; only *I* always calls it alterative,' replied my Jehu coldly. I had offended him by my foolish particularity, and it cost me a four-penny cigar out of my case to re-establish his good-humour.

'Well,' continued he, puffing slowly, and speaking with greater deliberation than ever, '"If I can't take you to Bath," says I, "I can take you somewheres on the way—say Windsor."

"How much would that be?" says she, taking out her purse.

"We couldn't do it, speaking for horse and man, under two pund, mem, and there's not another horse on our rank as could do it at all."

"Two pund is a large sum," says she.

"Well," says I, "say Ealing. I will take you to Ealing Station, mem, for twelve-and-six, including all these chemists"—and indeed I had got off and on my box, for a matter of forty times, by this; so I don't think it was unreasonable. I would not have been hard upon that 'ere fare, if it was ever so, partly because of the p'ison as I had in my mind, and partly because she was such a perfec' lady.

"You may drive me to Ealing Station, then," says she, in a sort of despairing voice; and I druv her. The train to Bath was not due for an hour or so, and she wanted to try the chemists at Ealing; but that I wouldn't have nothing to do with. A country chemist might have given the poor thing what I am sadly afraid she wanted, and I wasn't going to have anything happen in my keb, if I knowed it—out at Ealing.

"No," says I, "mem, asking your pardon, but no more physic-shops for me. If you would take my advice, you would let me drive you to a public-house, for a drop of somethink better than physic, and of which I am sure you stands in need.'

"As you please," says she, "kebman," in such a soft and miserable voice as went to my heart; just as though she did not care where she was druv to, if it couldn't be out of the world. So I pulled up at a public, and gave her some bread and cheese—good Wiltshire it was, and yet she took no more than a mouse might nibble, and a little sup of porter, which she drank as though it was black dose, sitting all the while in the keb; while I made a goodish meal, I promise you. Then we went back to the station, and she gave me her purse to get her ticket—first-class—to Bath for her, "for," says she, "I can trust you with untold gold" (which was also very kind of her, and I hope the truth). Then I gives her the ticket and her purse. "And will you stay here in the keb," says I, "or wait upon the platform, mem?"

"I will stay in the keb, thank you," says she; and upon my life, sir, I do believe it was because I had been tolerably kind to her, and she did not like to part company with me before she was obliged. She had had "hard lines" in the world, and been very badly treated by some one or another, you may take your davey: poor soul.

'I did not like to trouble her with such a matter, but as the time was getting very short, I says: "Please, mem, you have forgot to give me the twelve-and-six:" for as for the bread and cheese and porter *that* she had paid for on the spot.

"O dear, I am so sorry," says she: "I fancied you would have paid yourself when I gave you the purse."

"No, mem," says I. "I should never have thought of taking any such a liberty."

'Then she paid me, saying with a sad smile: "I am afraid I have been very troublesome," and wished me "good-day." And then the station-bell rang.

'I had the curiosity to peep through the door when the train came in, and watch her. She ran down the platform looking earnestly into every individual carriage, and would have been left behind altogether, but for the guard who opened the door, and popped her in at the very last moment. I was sorry to leave her, for I never took a fare who was a more perfec' lady; but I was somehow glad, too, to get her out of my keb. There was somethink very queer about her, that you may depend: and if she were mad (which, however, I don't think as she was), she must ha' been druv and druv, by some wus-hearted chap than me, until she was druv out of her wits.

'Perhaps he is sorry for what he has done by this time, says I to myself, and this here party will be adver*tised*, and I took great count of her dress and appearance, in case she should. But, curiously enough, nothing came of it all; and yet, even as it stands, it seems to me one of the queerest starts as ever I came across since I ha' been on the rank.'

'It was undoubtedly very queer,' said I. 'But you hinted something, my friend, of a certain terrible adventure that had once happened to you; I should like to hear that too, please.'

'Why, this is what I call reg'lar sucking a cove's brains,' responded my cabman, looking up at me with a cunning leer. 'If I did not see as you was a family man, with luggage and that, I should be a'most inclined to believe as you was some literary carakter. There's a many on 'em about; Maida 'Ill way; only, when they rides at all, they takes a 'Ansom.'

Remembering what Mr Pickwick had suffered at a cabman's hands, from using a notebook, I hastened to clear my character from this imputation, and to assure my companion that I had no other idea in questioning him beyond that of increasing my knowledge of human nature, for observing which

Digitized by Google

he must have had so many and exceptional opportunities.

'Well, that's true,' said he, greatly mollified. 'Considering the various parties as uses four-wheels, I knows of nobody (excep' perhaps some as keep a public) who is so likely to know a thing or two as one of us. Deary me; the games as has been a going on in this here very keb!'

'Games?' said I. 'What games can people play in a cab?'

'Why, bless yer, lots of games. I don't mean cards and that—though I *have* known 'em play cards, with my 'ind cushion on their laps for a table—but all sorts of schemes and devices, played by all classes of folks. I have druv marquishes, and I have druv parties as you would not have thought could ever stand a shillin' fare. I have druv the perlice, and I have druv thieves. I don't care who it is, so long as they don't want to be druv to the Fever 'Ospital.'

'Was the horrible case you spoke of a case of infection?' inquired I.

'No: it was a deuced sight worse than that, sir. It was summut as sends a cold chill to my marrer, whenever I thinks about it. And yet it began so cheerful. Just after I first began to be a kebman, I was 'ailed in the Kilburn Road by a couple of fares: two middle-aged comfortable ladies, small tradesmen's widows, as I should set 'em down as, and they asked me how much it was to Blackfriars. "Half-a-crown," says I.

"Werry good, young man," says the fattest of 'em: "then drive away, and just stop at the first public-house, will ye?"

'Well, I pulled up, willing enough, at the first public, and they gave me a shilling, and had some gin and beer, and "Never mind the change, young man," says the fattest; "but drive along sharp, and stop at the next public-house."

'Well, between Kilburn and Blackfriars, I should think they stopped at a matter of four-and-twenty public-houses. The lady with the chemists was nothing to them; moreover, unlike her, they never failed to get what they wanted at each, until they had took a great deal more than was good for them, and I must say as they had made me a little "fresh" myself. And every time it was: "You may keep the change, young man;" so that I had at last more than five-and-twenty shillings of it (mostly in coppers). This is all werry nice, thought I, as long as it lasts; but sooner or later these here parties will be a dozing off, and expec' me to see 'em home, which maybe will be the perlice station, for they had not told me their address yet, but only Blackfriars. They must ha' been very much accustomed to strong liquors, for unless it was sobbin' and cryin' a bit, which the one as was not the fattest did continual, they shewed no signs of bein' overcome. What a middle-aged female of the respectable class *can* take, and yet sit in a keb, is only known to us drivers; but these two, they beat all as ever I see. Well, at Blackfriars, they gave their address at last. It was a queer little street, but very respectable-looking, and I druv 'em up to their house, which I noticed had all the blinds down. They got out without much help; and the one as was not the fattest, she speaks to me for the first time, and says: "Young man," says she, "you have druv us well and safe, and over and above your fare, you shall see my dear daughter."

"Well," thought I, "here is a queer start. This stout party has taken such a fancy to Dick Braddle (which was me), that she wants him to become her son-in-law;" and I larfed aloud.

"Don't larf," said she, quite solemn like, and pointing to the drawn-down blinds; "but come in." Well, I went in. Not into the parlour, as I expected, but up-stairs, the two ladies leading the way. At the first-floor, I stopped. I did not like it—the house was so dark and still; but then, thinks I: "Lor, I'm only a poor kebman, and it's their own money I've got in my pocket after all. Why should they want to rob *me*?" So I went on, into the second-floor front, which was a sittin'-room. Here the old lady as was not the fattest began to moan and cry, and, pointing to the sofy, on which lay somethin' covered with a sheet, she says: "There is my poor daughter."

'And the other one, she turned the sheet back a little, and there was the face of a dead young lady, very white and quiet, but looking to me, as had never seen any one dead before, most awful. Coming, as it did, so sudden and unexpected, and just after I had been larfing down below, it gave me, I do assure you, an uncommon turn.'

'Indeed, I can quite believe it, Mr Braddle,' said I, 'if the thing happened as you state: but did it really happen?'

'As true as I sit here, sir. Why, who would ever have invented such a story?'

'Then, what is your explanation of the two women's conduct?'

'That ain't my business, sir. My business was only to drive 'em; and you may be sure I did not stop a minit more in that 'ere house to ask any questions. It is, however, my opinion that the old lady as was not the fattest was really the poor girl's mother, and that sorrow had made her take to drink for comfort: and as for the other, she was glad enough to sympathise with her friend so far as drinking the liquor went. But, at the time, it seemed to me a most terrible Start, I do assure you. It 's the worst thing as has ever happened to me yet, since I ha' been on the rank; and I wouldn't have it happen again for twice twenty-five shillings.—Here 's the station, sir; and see, you 've got fifteen minits to spare, all along of my good horse, which I hope you will take into account in the fare, according.'

LITTLE MAY.

Oh! empty is her little bed!
And useless stands my darling's chair.
That sunny face, that golden head,
Shall never more rest there!

Oh! silent is the little room
Where once her childish voice was heard;
No sunlight ever breaks the gloom;
The blinds are never stirred.

Her toys with dust are covered o'er;
Her little books unopened lie.
Her merry laugh will sound no more
In joyous melody;

For little May, fair as the light,
Fresh as the flowers that bloom and die,
Is singing with the angels bright,
In lands beyond the sky.

POPULAR

LITERATURE, SCIENCE, AND ART.

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 282. SATURDAY, MAY 22, 1869. PRICE 1½d.

THE GOLDEN AGE OF LITERATURE.

BEFORE giving facts to shew why this nineteenth century is entitled to the above title, it will be well to inquire the rates of literary remuneration authors received in former times—men 'who daily scribbled for their daily bread.' Tasso was reduced to such poverty that he was obliged to borrow a crown for a week's subsistence; Cervantes, the Spanish genius, wanted food; Corneille died in great poverty; Spenser lived in great want. Letters patent under the Great Seal were graciously granted by James I. to the learned antiquary, Stow, permitting him, as a reward for his labours and travel for forty-five years, 'to gather the benevolence of well-disposed people within this realm of England—to ask, gather, and take the alms of all our loving subjects!' This was to be published by the clergy from their pulpits; and one parish in the City generously sent seven-and-sixpence! The immortal Shakspeare received only L.5 for *Hamlet*, though his commentators have been greatly enriched by their various editions of his plays. (Dr Johnson had L.375 for his first, and L.100 for his second, edition of the great dramatist's works.) Till he was thirty-one, Milton did not earn a penny for himself. *Paradise Lost* was completed by the 27th April 1667, he being then fifty-eight years of age. On that day it was sold to Samuel Simmons the bookseller for L.5 down, with a promise of L.5 more when thirteen hundred copies of the first edition should have been sold; another L.5 more when thirteen hundred copies of the second edition should be sold; and so on for successive editions. It was not, however, till 1674, the year of his death, that the second edition was published; and in December 1680, Milton's widow parted with all her interest in the work for L.8, paid by Simmons. The daughter of Milton had to crave alms from the admirers of her father. Tonson, in 1739, obtained an injunction to restrain another bookseller from printing *Paradise Lost*, Tonson and his family deriving great benefit from its sale. The elder Tonson was, says Mr Disraeli, at first unable to pay L.20 for a play by Dryden, and joined with another bookseller to advance that sum; the play sold, and Tonson was afterwards enabled to purchase the succeeding ones. He and his nephew died worth L.200,000. Dryden sold Tonson ten thousand verses for L.268.

Dr Johnson thought that there existed among authors no other motive but writing for money; however that may be, the price that the great doctor had for his work, the Dictionary, was exhausted long before his work was concluded. Smollett wore himself out for inadequate literary remuneration, and died in poverty, almost broken-hearted, in a foreign land. He is buried in the English cemetery at Leghorn; and had he lived a few more years, he would have been entitled to an estate of L.1000 a year. He wrote: 'Had some of those who were pleased to call themselves my friends been at any pains to deserve that character, and told me ingenuously what I had to expect in *the capacity of an author, when I first professed myself of that venerable fraternity*, I should in all probability have spared myself the *incredible labour and chagrin I have since undergone.*'

Bernard Lintot, the bookseller, has left a curious account-book, entitled *Copies when Purchased*. Mr Disraeli, in his *Quarrels and Calamities of Authors*, gives some particulars from it; but a more extended list will be found in the *Percy Anecdotes*. According to this, Pope received L.215 for each of the six volumes of his translation of Homer, and also a further sum from 654 subscribers—amounting altogether to L.5320. 'No such encouragement to literature had ever before been manifested,' says Mr Carruthers. He secured his life from want by considerable annuities. The estate of the Duke of Buckingham was found to be charged with L.500 a year, payable to Pope. He also bought the lease of his house at Twickenham—that is, L.500 a year and a villa out of L.5000! The king gave L.200 and the Prince L.100 for their copies. For the *Odyssey*, Pope received L.2855, paying L.700 to his assistants, Elijah Fenton and Broome. For some smaller poems contributed to *Miscellaneous Poems and Translations by several Hands*, 1712, he received for *Windsor Forest*, L.32, 5s.; for *Ode on St Cecilia's*

Digitized by Google

Day, L.15; and *Temple of Fame*, L.32, 5s. Pope is stated to have satirised the Duchess of Marlborough in the character of Atossa, and received L.1000 from her Grace to suppress the satire; but a writer in the *Athenæum* stated that it was not the Duchess of Marlborough, but the Duchess of Buckingham that Atossa was meant for.

To return to Lintot's book. Gay, for his *Wife of Bath*, received L.25; for his *Trivia*, L.43; and *Three Hours after Marriage*, L.43, 2s. 6d. Dr Sewell, for his *Observations on the Tragedy of Jane Shore*, received only a guinea. Theobald was to have translated for Lintot the twenty-four books of Homer's *Odyssey* into English blank verse; also the four tragedies of Sophocles, called *Œdipus Tyrannus*, *Œdipus at Colonus*, *Trachiniæ*, and *Philoctetes*, into English blank verse, with explanatory notes. He was to receive for every four hundred and fifty Greek verses, with the notes, L.2, 10s.! Rather different to Pope's gains. The facetious Dr King received only L.5 for the *History of Cajamai;* but obtained L.32, 5s. for the *Art of Cookery;* and the same sum for the *Art of Love*. The highest prices paid by Lintot are for plays: Dr Young, for his *Busiris*, had L.84; Smith for *Phædra and Hippolytus*, L.50; Rowe for *Jane Shore*, L.50, 15s., and *Jane Grey*, L.75, 15s.; Cibber obtained L.105 for the copyright of the *Nonjuror*. For a seventh share of *Captain Cook's Voyages*, Lintot gave L.7, 3s. Jacob, for his *Accomplished Conveyancer*, had L.105: Keill, for his *English Astronomy*, L.100.

Sheridan, for translating *Pizarro*, received L.1500; as a contrast to which, we may mention that Goldsmith sold his *Vicar of Wakefield* for L.10. Johnson had three hundred guineas for his *Lives of the Poets;* Dr Darwin L.600 for his *Botanic Garden;* and Gibbon L.600 for his *History*. Disraeli tells us that at the sale of the Robinsons, the copyright of *Vyse's Spelling-book* was sold for L.2200, with an *annuity* of L.52, 10s. to the author!

Charles Lamb, in writing to Bernard Barton, a poet who consulted him about starting as a professional author, said: 'Literature is a very bad crutch, but a very good walking-stick.' In this opinion Mr Froude seems to agree; but it certainly is not applicable at the present time, and though we are far from recommending young men to venture without fitness into such a pursuit, in no occupation is it so easy to earn L.200 or L.300 a year; though it is certainly difficult, even in this golden age of literature, to earn L.700 or L.800. As a modern writer has well expressed it: 'Those who live by writing, must write to live; and they must write too much, too fast, and on too many subjects, to write as well, and think as deeply, as those who can wait five years for the payment of their labours—who will not starve if they be never paid at all. They may write brilliant leading articles, or graceful poems, or delightful stories; but how can they find time to think out a great work of history, politics, or philosophy; how can they spare the mental labour necessary to produce a book which shall influence statesmen, engage the attention of sages, or command the acceptance of a nation? How, in one word, can they have leisure and energy thoroughly to master any subject whatever? The power of brain-work is limited, the hours of the day are numbered, and both are fully occupied with uttering; there is no time to think. Men who live by teaching lack leisure to learn.'

In days now happily gone by, an author had to write a fulsome dedication to his book, hoping to get a good present from his patron; but now authors write for the public, and the publishers take good care to cater to its taste. The sums publishers pay authors now for their works are wonderful—a striking contrast to those paid in former times. Scott, even after the failure of Ballantyne & Co., reduced their debts from L.117,000 to L.54,000, which latter sum was paid by his executors out of the moneys arising from his life insurance, copyright property, and other literary remains. With respect to living writers, we have only the authority of the newspapers for what follows; but even if they magnify in some cases, the exaggeration is significant. It is stated that Lord (then Sir E. B.) Lytton received L.100 for each week's instalment of *A Strange Story;* and that Mr Wilkie Collins received L.5000 for a novel contributed to the *Cornhill*. Messrs Blackwood and Sons are said to have paid Miss Evans L.2500 for *Silas Marner*, L.4000 for *The Mill on the Floss*, and L.7000 for *Romola*. The *Literary Budget* stated that in 1862 Mr Coventry Patmore was paid L.2000 by Messrs Macmillan & Co. for his *Victories of Love*, contributed to *Macmillan's Magazine*—or about a guinea a line. Messrs Strahan & Co., the publishers of *Good Words*, placed L.5000 to the credit of Dr Guthrie, for the purpose of his going to the Holy Land and there writing a Commentary on the Bible, to be published in penny numbers. The same publishers paid L.1000 to Mr Millais for twelve illustrations to *The Parables read in the Light of the Present Day*, by Guthrie. Messrs Lacroix & Co. of Brussels stated that they paid Victor Hugo L.16,000, or 400,000 francs, for *Les Misérables;* but the author was for twenty-three years engaged on the work. According to the *Pall Mall Gazette*, the same publishers have just signed a contract with Victor Hugo to purchase, for the sum of L.12,000, the right of publication for a limited term of an historical novel in four volumes entitled *Par Ordre du Roi* (By Order of the King), the scene of which is laid in England, at the close of the seventeenth century; together with a volume of poems entitled *Fin de Satan*, and a volume composed of three dramas not intended for representation, and entitled *Théâtre en Liberté*.

Mr Tennyson is said to have been offered L.4000 a year by his new publishers for the exclusive right to publish his works.

There was certainly never such an opening for young authors or for those who dabble in literature in addition to another calling, as at present. To take in a copy of all the periodicals for one

Digitized by Google

year would cost, exclusive of the Transactions of the Learned Societies, L.450; of which about sixty guineas would be laid out in quarterlies, L.160 in monthlies, and L.230 in periodicals published at shorter intervals, principally weeklies. A single copy of each would cost L.30; they number about 750. In addition to this, there are thousands of newspapers which are able and willing to pay well for their articles; and then there is the Reporters' Gallery, from which, as has been well said, a man can rise to anything.

A COUNTY FAMILY.

CHAPTER VIII.—THE SHADOW IN THE SUNSHINE.

The evening passed away without any further reference on Mr Moffat's part to the subject which had so embarrassed his host; but he had already sown the seed of disquiet in the latter's breast. Anthony Blackburn could not but have expected that his confidential man of business must needs, sooner or later, have put to him so pregnant a question—it was clearly necessary that he should convince himself of the existence or demise of his client's only son—and yet he had found himself quite unprepared to answer it. He was conscious that he had hesitated in his reply, and felt that he might very possibly have aroused suspicion; and all the time his grand-daughter was singing, and while his fingers seemed to move in accord with her tunes, he was reproaching himself with his want of readiness, and devising plans for setting the lawyer's doubts at rest. He could never suffer him to leave the house with this idea of something amiss upon his mind, to grow and grow, until perhaps it took some monstrous shape, as bad as the reality itself. Accordingly, when the lawyer rose to take his leave, his host insisted upon his having brandy and water and a cigar, in what was called 'the Squire's Room,' a cosy chamber decorated after the family fashion with portraits of horse and hound, the possession of which had at various periods dignified the Blackburn race. Stuffed fish of portentous size, that had fallen victims to brother Richard's rod and landing-net, adorned the walls; the bell-ropes were fox brushes earned by Ferdinand; and on the mantelpiece was a mighty drinking-horn with silver edge, the contents of which Charles had been wont to empty at a draught before being helped to bed. The window of this apartment was at the back of the house, and opened upon a portion of the stable-yard; and in times not very remote, the diversion of cock-fighting had been carried on outside, while the inmates sat at ease, as in an opera-box, and wagered, pipe in mouth, upon the result of the conflict. Perhaps, upon the whole, it was of all the rooms in the house the one most redolent of the family fragrance; and when the door opened to Anthony's touch, a crowd of memories seemed to come forth to greet him, which, although by *no* means hallowed, had a certain impressiveness; for all these jolly sportsmen, dicers, drinkers that he had known or heard of had been his kith and kin, and were now dead.

'It was in this room, Moffat, that I tasted my first whiff of tobacco,' quoth Anthony, gazing earnestly around. 'My father filled the pipe, and laughed till he cried, when the fumes made me ill. It seems but yesterday! How well I remember that old print yonder of the prize-fight! One of the men is Mendoza; and that old fellow with the lady is Old Q. at ninety years of age with his nurse. Old Q. was Queensberry, you know.'

'Yes, yes,' said the lawyer; 'the Duke, of course. He was quite childish for years before his death.'

'Ah,' said Anthony suddenly, 'that reminds me, Moffat, it is a thing that may happen to either one of us in a year or two, for we are not young men; and I wish to provide at once against it.—Here, mix your liquor for yourself, and take a cigar, and let us have a quiet chat together about business.—I wish to make—to give you instructions about my will.'

'Your will, sir? I hope it may be many years'—— (The Squire motioned with his hand impatiently.) 'But there, as you would say, it is well to provide against the worst, and while we are in health, to do those things, which, being undone, may make sickness an anxious time.'

'My father, as I understood,' said the old Squire thoughtfully, puffing at his cigar, 'placed my name in his will without putting it into the entail at all.'

'Just so, sir. He left, failing your brothers and their heirs, the whole estate to you absolutely and at your own disposal.'

'No thanks to him, sir,' exclaimed Anthony hotly. 'I've no more gratitude for what he did than he felt towards the fox whose brush gave him yonder bell-handle. Why should I?'

'Well, certainly your father little thought that you would ever be the Squire here, when he made that will, sir; and, by-the-bye, his instructions for it were given singularly enough in this very room. My uncle told me all about it, when he came home that day—and vexed enough he was that matters had so turned out, for, like myself, he had always wished you well.'

'Never mind his wishes, Mr Moffat; let me know what he said about the will.'

'Nay, there was not much to tell, sir. I know, of course, how bitter your father was against you, and how resolved to cut you off. But still I thought there might be some remembrance—a legacy or something—and it gave me quite a shock sir, it did, upon my sacred word and honour, when my uncle Robert told me what had happened. Mr Ferdinand, you see, was but a lad at the time; and your other brothers mere children; and it seemed so certain that if one died the others would live—and then their children—why, your chance seemed out of the question altogether. "I wish," said your father, "to make an eldest son of Ferdinand, and to leave the Manor in entail to him and his heirs; and they failing, I would do the same with Charles, and then with Richard." Well, you remember how bad your father was to cross; so my uncle said nothing about you at that moment, but entered into the affair of your younger brother's portions, in case Ferdinand and his heirs succeeded; and then, when that was settled—they were to have the Mosedale property between them, which has

Digitized by Google

now, by-the-bye, become more valuable than all the rest—and yet no word was spoken about yourself, my uncle ventured to say: "And what do you wish done about your son Anthony?"'

'Yes; now, what did he reply?' asked the Squire earnestly. 'Tell me the truth, Moffat, though I know it will be a bitter morsel.'

'He said that he wished nothing done, and that he had no son Anthony.'

'He said that, did he?' observed the Squire between his teeth. 'Well, I had no father, then.—Go on.'

'Then my uncle Robert spoke of some money that happened to be lying in the banker's hands—a loose thousand or two; altogether, perhaps fifteen hundred pounds—and mentioned that he had heard of you of late as being very ill off, and since this sum was not appropriated—— But your father burst in with his "No, sir, no;" and there was an end of that.'

'But how, then, came my name to appear in the will at all?'

'It was your mother's doing, sir: she begged and prayed that it should not be left out altogether; and since it looked as though it did not matter a pin's point, your name was put in last, to comfort her. "And if he gets it, wife," said Squire Russell, with a wink at my uncle, "he shall have the Manor for his own, to leave it to whom he pleases;" whereupon she thanked him with tears, thinking, poor soul, that he was really doing you a kindness. And indeed, as it has turned out, he was; for although, in any case, you must have succeeded to the estate, as your late nephew's heir-at-law, you might not have found it solely at your own disposal.'

'Which it now is, of course?'

'Most certainly it is, sir; and a very fine property it has of late become. Your income, thanks to the growth of Mosedale, is at least thrice what your father's was—and, if I may venture to advise, it is out of that portion of the estate that any provision you may please to make for Miss Ellen should come, leaving the Manor lands to descend as a matter of course.'

Anthony held up his finger. 'I wish my granddaughter, Ellen, to inherit Blackburn Manor and all the lands about,' said he with grave distinctness. 'She will be my sole heiress, Mr Moffat.'

'But your son, sir?' ejaculated the lawyer with profound astonishment.

'I shall see that my son, William Blackburn, is provided for according to his deserts, out of the Mosedale lands. Your own suggestion, in fact, is to be adopted, with a change of names; and you will come to-morrow and lay the whole matter clearly before me; but in the meantime I wished you to labour under no misconception, not even for a single day, concerning my intentions for the future. Do you understand them?'

'Perfectly, sir.'

'Well, that is enough for to-night then; we will speak of details at a more seasonable time.—If you will really not take another glass, I will ring for your horse.'

The lawyer had not recovered from his surprise even when he found himself in the open air and on the back of his own sober gray. 'Is there never again to be a Blackburn at the Manor-house?' muttered he. 'Are Squire and son for ever to quarrel? And yet these two cannot have had so serious a breach as I at first imagined, else the old man would not be so well intentioned towards him. But to have this young girl to be his heiress, who has herself so much sweetness and beauty, is to make her the best match in all the county!' And the lawyer, who, although so keen at his trade, was a very old woman for matchmaking and gossip, began to reckon up in his mind all the local magnates who had sons to enter for so desirable a prize, and hugged himself with the possession of the great news that he should be first to spread.

Thus Anthony Blackburn had succeeded to his heart's content in putting to rest his guest's suspicions, and sent him away precisely in the frame of mind in which he would have had him to be. Yet the old man sat long alone after the lawyer had departed, with moody and dissatisfied face, and though he drank glass after glass of the strong liquor, it failed to cheer him. At last, with not an altogether steady step, he sought his bedchamber, and finding his wife seated at an escritoir, inquired of her, in no distinct nor amiable accents, what was keeping her up so late.

'I was writing the letter, Anthony,' said she simply.

It may seem strange that an occupation of so ordinary a kind should have engaged a lady from ten o'clock until after midnight, but the fact was that epistolary composition was not an art in which Mrs Blackburn was a proficient, and the sheet of paper before her had only just been folded, and was being placed in its envelope, when her husband appeared. He staggered across the room, and looked over her shoulder at the address, which, with her head aside, her lips projected, and her eyes in apparent astonishment at the success which crowned her efforts, she was in the act of completing. 'You might have saved yourself this trouble,' said he doggedly: 'that letter must not be sent.'

'Not be sent, Anthony!' ejaculated she with sudden pallor. 'Why, you promised me that so soon as we got here, I might write to tell him! It is what I have looked forward to above all else.'

'I cannot help it, Mary,' answered the Squire, moved by his wife's disappointed tone; 'and I am truly sorry for your sake. But I have been thinking of the whole matter for these last two hours, and it will never do to let him know—that is, not yet. He would be coming down upon us here post-haste, and spoiling all at once.'

'Spoiling all?' repeated Mrs Blackburn.

'You need not mock my words, woman, like an echo,' replied the Squire, endeavouring to lash himself into a passion, which his genuine affection for his wife rendered very difficult: 'there can be no doubt of what I mean. Shall we not find it hard work enough to win our way here among our equals, without being hampered with such a clog as he?'

'A clog, Anthony, your own and only son!'

'Ay, would he were not: he is a taint in my blood, a disgrace to me, who begat him; to you, who bore him. I will not have him here, to frighten folks with his black looks. He cannot keep from mischief, nor in his cups from bragging of it. He will blurt out the whole story of his shame some day, and then what will become of Nelly?'

'She has a pretty face, and will have a fortune that fits in with it,' said Mrs Blackburn coldly: 'no hurt can happen to her.'

'What! do you think, then, that the young

Digitized by Google

gentleman—or nobleman, as likely as not—whom she may chance to choose, would hold to his bargain, if this ruffian, her grandfather's son, should once shew himself in his true colours? And would *that* be no hurt to Nelly? If she comes to harm that way, as surely as the moon sits in the sky yonder, William shall never see a penny of mine.'

'You would play the same part then, Anthony, as your father played to you, and earn the hatred of your own flesh and blood, as he did.'

'No, not the same,' said the old man excitedly, now taking vast strides across the room, the passion of his mind having apparently overcome all effects of the liquor he had so lately swallowed. 'I call Heaven to witness, as I have often done, that my father had no honest ground of quarrel with me. *I* had not disgraced him and his for ever; *I* had not committed a mean and hateful'——

'Hush, Anthony, hush!' exclaimed Mrs Blackburn piteously. 'For *my* sake, if not for his, do not proclaim his shame to all the house.'

'There,' answered the Squire triumphantly, 'you yourself fear that it should be known here, and yet you would take no precaution to prevent its disclosure. You wish it to be told, I suppose, by his own sottish tongue, to be corroborated by his own brutal ways and hang-dog looks, as you well know it will be.'

'But, Anthony, what would you have him do?'

'I would have him kept off from here as long as may be—for one clear year at least—for thirteen months—is it not thirteen?' And the Squire stopped in his walk, and cast a terrible glance at his wife, who turned her face from him as he did so.

'It is twelve months and fourteen days,' replied she in low and trembling tones.

'At least, then,' continued the Squire, 'let that much of time elapse before he shews his face here. There is surely reason enough for setting of that limit. When it is passed, you shall take your own way in the affair. Our Nelly will by that time—and I have set the matter in train already, if I am not mistaken—have made her position in the county assured by marriage; only, let not this precious son of ours come here and ruin all, before he is sent for, else, by Heaven, it will be the worse for him. So let the thing be settled, wife, as I have said, and do you tear up that letter.'

But Mrs Blackburn had already locked it safely in her escritoir, and secured the key.

'I will not send it, Anthony, since you forbid me,' returned she quietly; 'but I must keep the letter until the time comes at last for me to send it; for then, as he reads it, he will know how, when fortune began to smile on us, I welcomed it mainly for his sake, and guess at all I feel this wretched hour.'

'He will know nothing—he will feel nothing,' answered the Squire sternly, 'except so far as he is himself concerned. Do not flatter yourself that William Blackburn is in any way changed, or ever will be, from the heartless good-for-nought we have always found him. At least, for my part, whatsoever disappointments may lie in store for me, and they may be many yet, I can experience none from him.'

And the Squire moved slowly into his dressing-room, keeping his eyes fixed to the last upon his wife, as she sat with her face in her hands, and her gray hair falling over them, as the willow droops above a tombstone.

CHAPTER IX.—THE HORSE AND THE MARE.

It is ten months since the events related in our last chapter, and the morning sun of another autumn is lighting up a scene far different from the quiet landscape about Blackburn Manor. It shines upon our great seaside haunt of fashion, fuller even than usual of gay company, because of the race-meeting at neighbouring Goodwood. It is the Cup day, and therefore many of its stately mansions and all its hotels have been astir earlier than usual. Upon this day the tide of brilliant equipages on the west cliff will suffer perceptible decrease, and the broad walks will be traversed without jostling. For the present, however, all is haste and preparation. The *New Unlimited* in particular, before which are in waiting a score of various vehicles, seems alive from its eighth floor to its basement. The porter opens its folding-doors to incomers and outgoers with the regularity of a swift automaton; the clerk in the glass box is questioned ten times per minute respecting the movements of this or that inmate of the gilded hive. The spacious hall is crowded by knots of men, who whisper to one another mysteriously, and jot down the result of their deliberation in little books. The broad staircases are trodden by ethereal creatures ascending and descending in gorgeous attire, but all bound, sooner or later, for the park and the course. In the balconies, too, are here and there to be seen a pair of eager but quiet talkers, very different from the tender couples who have been known to stand there by moonlight, and watch the waves kiss the shore, and sighing, reluctantly withdraw. These present pairs are all of the masculine gender, and their theme is a sordid one enough. If their thoughts are concerned with the other sex at all, it is with females of the equine race. Is the mare 'fit?' Can the mare 'stay?' are the questions that absorb them. Let us play the eavesdropper upon these two gentlemen-sportsmen who are looking forth from the first-floor circle upon the vast expanse of sea and sky, without the least consciousness of the presence of either. Folks do not come to Brighton for sublimity and the beauties of nature, and least of all in the Goodwood race week.

This pale-faced, delicate-featured young fellow, with the well-kept black moustache, we have seen before, and easily recognise, although, in place of the tourist suit in which we saw him last, he is dressed in the highest fashion, with a rose in his button-hole, and an opera-glass slung across his shoulder. It is Mr Herbert Stanhope of Curlew Hall. The other, a stout, good-humoured-looking gentleman, is his junior by a year or two, his elder in point of astuteness in the business in which they are both engaged, by many years; inside the cover of his race-glass is to be read, in great gold letters, his name and address: 'Mr Frank Dawlish, The Albany.' But he is known by all the world—that is, *his* world—as Sporting Dawlish. We do not pay him an extravagant compliment when we say that among 'the gentlemen-sportsmen' who live, and move, and have their being upon British race-courses, there were very many worse than he.

'It is not the perfect certainty that all these fellows think, Stanhope,' said he, jerking his thumb contemptuously towards the open window behind them, through which, in a large finely furnished

Digitized by Google

room, two or three men could be seen still seated around the breakfast-table, although the special trains had already begun to run from the station, and all the hired vehicles in the street were tending thither, as though drawn by a magnet.

'There is nothing to beat her,' replied Stanhope, positively, and without removing the cigar that was between his lips: 'that is Dean's honest conviction. I had a long talk with him this very morning.'

'In spite of Dean's honesty, however, if I were you, I should hedge.'

'What bosh you talk, Dawlish,' ejaculated the other impatiently. 'How *can* I hedge, with such short odds against the horse? I just heard Wyndham taking two to one about him.'

'I saw you did,' said the other drily. 'If *Gazeebo* wins, you will be hard hit, I fear, won't you?'

'Hard hit? I shall be ruined, Frank; that's all. But there is no chance of such a thing, I feel sure of that, whatever wins.'

'You don't *look* sure, my dear fellow; and, forgive me, but it is you who are talking bosh now, not I.'

'I betted against that horse,' said Stanhope excitedly, 'when he stood at twenty to one, which was his proper position, as you will own to me to-night, Dawlish; and I will bet against him now, though he rose to evens. I hate the beast.'

'You should never hate a horse, my good fellow,' returned the other coolly; 'it is almost worse than having a particular fancy for one, as you have for this *Vignette*. Horses are like men and women: you should never let your judgment of them be blinded by your partiality or prejudice. You are saying to yourself: "Here's a pretty 'mentor,' who is said to have lost a fortune in one race at Ascot!" Yet, surely an experience which has cost one so dear ought to be worth something, as indeed it is. I tell you this "picking out an animal for one's self from the very first," as some of those wiseacres in yonder room are so fond of talking about, is sheer madness, simple suicide. I believe in the mare myself, but I also believe in *Gazeebo*, or rather I believe in neither of them.—What do you stand to win by, besides the mare?'

'Everything. Nothing but *Gazeebo's* winning can hurt me. I would give a thousand pounds to know the beast was dead.'

'Well, I am not so bloodthirsty,' said Dawlish, laughing; 'a little lameness would satisfy me; then, when he got well, I would back him for the next long race, for I do think he's a good "stayer;" and if it happened to be wet to-day—but there, there is no chance of that. It is the very weather for *Vignette*. Come, let us drink her health in a glass of Hock and Seltzer, and then be off.' Whereupon the two friends stepped inside.

Have any of my readers ever had a large sum depending upon a horse-race? I mean a sum, whether large or not, which is of considerable importance to themselves. If so, they will easily understand that as Mr Herbert Stanhope drives through the pleasant Park of Goodwood side by side with 'sporting Dawlish,' he does not interest himself greatly in the scene nor in the company. A less occupied mind could not fail to mark the incongruity between those shady glades and sylvan solitudes and the noisy throng that hurries through them, in every species of conveyance, from the four-in-hand to the coster's cart, on horseback and on foot. Among these last, a tumultuous array of country folks, and card-sharpers, orange-sellers, and acrobats, there is one class alone, the gipsies, who do not seem out of place, but even they have suspended their usual picturesque avocations, and taken to selling 'lists of the running horses.' Upon the whole, the spectacle suggests some pantomimic rehearsal, in which the beautiful scenery by Grieve or Telbin has been suffered to remain, while that indiscriminate mob who are so much in need of the policeman engross the stage. But for all that he sees, and almost for all that he hears, Mr Herbert Stanhope might be in the Underground Railway. His stake in the coming 'event' itself is so large that the anticipation of it may well monopolise his mind; and yet he does not think of the race at all, but only of its possible consequences. In the case of one result, which is likely enough to happen (Mr Dean says it's 'a positive certainty'), he will *recoup* himself for the losses of years, and be re-established at Curlew Hall in at least as good pecuniary circumstances as those in which he was left at his father's death; and in the case of any other result save that, and *one other*, he will be no worse off than at present, and indeed (only it is not worth his while to think of that) the better by some hundreds. But then it is also possible that this *one other* thing may happen, in which case Herbert Stanhope will be ruined. 'If there is a worse thing than "a fancy" in horse-flesh,' says that experienced sage Mr Dawlish, 'it is a prejudice;' and his friend has entertained a prejudice from the first against *Gazeebo*. It is well to lay odds rather than to take them, but then you must lay them *round*. It is bad to stand to win upon one horse only, but it is much worse to have staked your all against another. Mr Herbert Stanhope has not only 'put the pot' on the black and yellow, which are the colours of *Vignette*, but he is 'full,' and a great deal too 'full,' against the 'scarlet' worn by the rival favourite. Of course, there is nothing in his outward demeanour to shew it: to look at, Mr Stanhope is merely a calm, unexceptionally attired young gentleman, whose mission, like that of the rest of the aristocracy present, is to maintain the poor fellows who form the betting-ring; but his heart throbs under the rose in his button-hole, and an unpleasant shiver pervades him when the strident voices round about him roar out: 'I'll bet against *Vig-net*,' and still worse when he overhears a colloquy (and there are many such) between 'Fly and Spider,' when the latter answers: 'I can only give you six to four, sir, against *Gazeebo*.' He is quite resolved not to hedge a shilling at such a price as that.

What a scene it is!—yonder noble sweep of level turf embosomed in the wooded hills, with the sunlit sky above all, and these discordant human figures, the members of the betting-ring, in the foreground, as jealously railed in as though they were really the wild beasts that faintly typify them. The din, the roar, and, may we be permitted to add, the smell of them, are to be found on a smaller scale in Wombwell's Menagerie; the brazen fraud, the rapacious merciless greed, are wholly without parallel elsewhere. Look at these men; they have mostly some inscription upon the money-bags or pouches which they bear round their necks—*Jones of London*, *Smith of Birmingham*, or what not—whereby those who have dealings with them may recognise them at a glance; but none of them are more legible than the word Rogue, which their

Digitized by Google

trade has stamped upon their features. Some of them have planted in the earth gigantic umbrellas (similarly emblazoned with their names and addresses), and under these they carry on what is literally enough a roaring trade. Others stand with their backs against the railings, protesting, and methinks they do protest too much, that there they will be found after each race, prepared to settle with all and sundry who shall in the meantime have favoured them with their patronage—intrusted them with the money which not many of their patrons will see again. These Spiders are all wonderfully alike in visage, though they may differ in form—some being bloated and unwieldy, as though they were almost gorged; others thin and hungry; but the Flies on whom they feed are more diverse. There are several quiet, sober-looking, respectable brown flies (clerks who have borrowed their employers' money perhaps to make a safe investment on this occasion); very many, too, of a hybrid sort, that would astonish a naturalist, being half-fly half-spider, and in a transition state from the former to the latter; and a considerable sprinkling of quite bright and brilliant flies, who are, however, come in search of the same garbage as the rest, just as one marks with wonder what gay and golden insects will circle about the offal in the streets. These last are the noblemen and gentlemen who would not soil their hands with vulgar Trade upon any account, but who think it no shame to adopt as their profession the Turf; and, curiously enough, notwithstanding their gilded wings, it is whispered that even some of these are on the verge of the transition state which has been hinted at above.

Strangest of all, immediately above this crowd, from which arises an indescribable clamour (when the coming-off of some minor race does not subdue it to that sort of insect hum which is so often heard in the summer-time above some mass of material corruption)—strangest of all, we say, in box and balcony of the Grand Stand that immediately overhangs this crowd sit the fairest and proudest of England's daughters, and apparently not at all discomposed by the scene in question. Many a smile and nod greet Mr Herbert Stanhope as he looks upward into that bright array, and time had been when more than one neatly gloved hand would have pointed out a vacant seat for him beside its owner; but the great ladies who patronise Goodwood are very wary, and soon get to know when a *parti* has ceased to be eligible to their sweet Constances and Arabellas, and the losses of the master of Curlew Hall were no secret to any of them. It is probable, however, that in his present mood Stanhope would not have accepted an invitation from any quarter; his mind was too anxious to stoop to frivolities; he found it hard enough to throw into his expressive features the air of delighted recognition they were expected to wear, without being compelled to exchange polished commonplaces and wager gloves with ladies of fashion. True, a horse-race is itself a frivolity in the eyes of many, but the one which was now approaching was to Stanhope at least a matter of the most paramount importance, and monopolised his attention wholly.

The bell was rung for saddling, and his friend and himself went to see the horses, or rather to see the mare and horse (for he had no eyes for the others) stripped and shining like mirrors, each with arching neck and pricking ear, as though conscious of the hopes and fears that they excited in so many human breasts; for verily the Goodwood Cup day is one cut out of the calendar of the Houhynhyms, wherein the Horse is the master of the Man. When this was over, Stanhope and Dawlish made their way to their own places in the Grand Stand, in a box of about the size of a bathing-machine, which they had secured months beforehand at a great price.

The jugglers, the dancers, the Ethiopian singers, the sellers of gingerbread nuts and of effervescing drinks, had been driven from the course by the impartial hands of the police, and even the few gentlemen with Stand tickets in their hats who still remained were condescending to leave it. The broad green road, hitherto concealed by countless thousands, lay bare at last, as though some Red Sea miracle had been wrought for the horses' sake who were about to run between those pent-up waves of men. One by one, they take their preparatory canter down the course; each as they go by evoking his share of applause, mingled perhaps with some would-be knowing criticism from the spectators; but the admiration rises to a sullen roar as, side by side, the horse and mare happen to go by together, stride by stride. They are both bays, but the black and yellow contrasts sufficiently with the scarlet to keep them distinct to all eyes (had there been need) to the very horizon's verge. Gay and haggard, Stanhope raises his glass, and scans them narrowly. His hand is a little tremulous, but his face is perfectly calm as he remarks: 'The horse gallops well.' Sporting Dawlish gives a nod and a look which are quite the perfection of sign-language—'I believe you; he gallops a deal too well, as I always told you'—but he does not reply in words. The vast sea of humanity has ceased to roar; only one wave of speech breaks upon the ear, where a cardseller, who unites with his calling that of sweeping unconsidered trifles from people's carriages while their attention is absorbed, and who has been detected, inveighs against an eaves-dropping police.

The long array of shining steeds, with their still more conspicuous riders, is drawn up in two lines, like a rainbow and its reflex; the red flag falls; an inarticulate thunder of voices announces the fact that 'they are off.' The mare is leading as they pass the Stand, but will she lead when they come round again? From his position, Stanhope is able with the aid of his glasses to command the entire course—to mark every incident of the struggle from first to last. But he makes no comment. Sporting Dawlish is not so reticent. He has no such stake in the event as his friend has, although he has other reasons besides friendship for wishing to see *Vignette* win. He has many strings to his bow, and one of them has snapped. 'There's one out of it already,' says he composedly; 'that *Campfire* has pulled up short. I always thought he would never stay such a course as this, though I did put a tenner on him. They're beginning to scatter, eh? That wretched weed *Julep* seems to have a nice chance, don't he?—last of all. By Jove, how the horse is coming on!'

The horse—that is, *the* horse—was indeed coming on; even at that great distance, and while the goal was yet far off, experienced eyes, such as were now watching so eagerly, could detect certain portentous signs in the equine struggle. *Vignette*,

Digitized by Google

who had taken up the running too early, as it was afterwards said (for no race-horse is ever beaten, in the opinion of his backers, but through some extraneous cause), was indeed already 'in difficulties.' Herbert Stanhope was among the first to see this, and with the air of a general who sees the battle has gone against him, he shut up his glass with a laconic 'The mare is beaten,' long before the jubilant crowd began to shout: '*Gazebo* wins!'

THE LIFE OF THE RANK AND FILE.

The order recently issued by the Secretary of State for War to recruiting-parties to enlist no strollers or persons whose antecedents are unknown, and the carrying out of the recommendations of the Royal Commission on Military Punishments, cannot fail to give a higher tone to the army, and to attract to it as a profession many of those who are now, in the various callings of clerks, canvassers, &c., struggling to maintain a respectable appearance on a miserable weekly pittance, that barely enables them to keep the wolf from the door. We believe that such persons will have no reason to regret their adoption of the army as a profession. Even at present, and it is every year improving, the life of a soldier is by no means one of such hardship and misery as it is commonly supposed to be: of course, occasional 'roughing it' is inseparable from a military career; but whether on home or foreign service, the soldier has it generally in his own power to live as happy a life as falls to the lot of ordinary mortals. From the day that he enters the service till he leaves it, the supply of all his wants is under the constant supervision of officers, some of whom may indeed be rather perfunctory in the performance of their duties, but who are all really the soldier's friends; yet the notion of a great many people is that a soldier lives a half-starved and in every way wretched life; the writer of this paper has seen an old lady tender a few pence to a soldier waiting at Charing Cross for the Aldershot train, that he might get a glass of beer, she being evidently of opinion that he could not himself afford even that very moderate luxury. And yet, if a soldier is well conducted, he need never be without money in his pocket.

Within twenty-four hours after a man has 'taken the shilling' in the Queen's name from the recruiting-officer, he is taken before a doctor, is stripped, and his physical excellence thoroughly tested. If he is passed by the doctor as a fit subject, he is immediately conducted to a justice of the peace, and having in his presence declared to be true the statements as to his birthplace, age, trade, &c., which he has made on his 'attestation' paper, and having reiterated his willingness to serve, he is duly sworn in to be faithful to his Queen, her heirs and successors for ever. Should he have changed his mind before being sworn in, the enlistment is cancelled on the 'smart-money' (twenty-one shillings) being paid; but after being sworn in, he is to all intents and purposes a soldier, and can obtain his discharge only by the usual expensive mode of 'buying off.' As soon as may be convenient after his attestation, the recruit is despatched to his regiment's headquarters, if the regiment be on home service, or, if it be abroad, to the dépôt: till within a few weeks ago, this was always done under the escort of a non-commissioned officer; but now that the army is recognised as a profession in which bad characters are unworthy to remain, the recruit himself receives the advance of money, and is allowed to find his way without any guard to the station of the corps he has chosen. Arrived at headquarters, the recruit must be examined by the regimental surgeon: if disapproved of by this officer (which rarely happens), he receives his discharge; if approved of, he is conducted before the commanding-officer, who finally passes him—a purely formal ceremony—and 'posts' him to a particular company. If he has a brother in the regiment, he can demand to be placed in the same company with him; and similarly on this ground a soldier can claim to be transferred from one regiment to another.

Feeling very awkward and with many misgivings, 'Johnny Raw' is ushered in, by a soldier-clerk sent from the orderly-room, to one of the mess-rooms of the company to which he has been posted; and he is speedily taken in hand by some old soldiers, 'drouthy' customers, who see the chance of several days' 'wetting' in assisting the recruit to spend his bounty. If the young aspirant for military distinction belongs to the better classes of society, he probably expects to find the barrack-room a dirty overcrowded apartment, redolent of anything but Rimmel's odours from Araby the Blest: if so, he finds himself agreeably disappointed. The barrack-room is generally a lofty well-ventilated long room, its length and breadth being in the proportion of about three to one: and the number of men lodged in it is so regulated as to allow from four hundred to six hundred cubic feet of air to each. Down the middle of the room run the mess-tables, with the forms on either side: there are generally two fireplaces, or one large one. Ranged on each side of the room are the iron cots, about eighteen inches apart, which are drawn out to their full length only after tattoo. During the day the lower half of the cot is 'run in,' to give more space in the room, and to serve for a seat: the straw mattress and pillow are rolled up, and with the sheets and blankets neatly folded and strapped on the top, form the back stuffing, while the rug serves as the cushion for the seat. In the wall, over each cot, is a shelf, with three pegs beneath, for clothes and accoutrements.

It is always very easy to fraternise with the members of the army or navy; so the recruit soon finds himself tolerably at home in his new position. But lucky it is for him if some of the non-commissioned officers or of the well-behaved privates take him in hand (which they generally do in case of a respectable-looking recruit) before he falls completely into the clutches of the 'old soldiers,' who so readily volunteer information, and shew how everything is done, but always with a view to the 'main chance'—that is, an invitation to the canteen; for, though these latter often leave him after his money is spent, yet the damage they do him is not to be measured by loss of his bounty and the money he has acquired by the sale to some old Jew of his civilian suit of clothes: he probably is made drunk, and, thus getting into trouble, is at

Digitized by Google

once brought in an unfavourable character under the notice of his officers; or, if this misfortune does not befall him at the outset of his career, he has, at all events, been set on the fair road for forming the habit of daily visiting the canteen, and spending his small allowance there, which we need not say is a sure barrier to promotion.

As soon as practicable, after being posted to his company, the recruit receives his 'kit,' which comprises a knapsack with straps and canteen, a greatcoat, a tunic, a shell-jacket, a pair of cloth trousers (for winter), a pair of serge trousers, two flannel shirts, three pair of socks, two pair of boots, a shako, a forage-cap, two towels, and a complete set of articles for cleaning his clothes and accoutrements. This kit is inspected at stated periods, usually once a week, by the officer of the company, on rare occasions by the commanding-officer, and annually by the general of the district; any articles missing are at once supplied from the stores at the soldier's expense, and the selling or destroying wilfully any part of the kit, and more especially the greatcoat, is severely punished. Every subsequent year each soldier receives a new tunic, two pair of trousers, two pair of boots, and a shako; a new greatcoat is issued once in three years, when the old one is returned to the stores: but all the other articles of the outfit must be kept up and renewed at the soldier's expense. The total value of the free kit supplied to each recruit is about four pounds.

As soon as he is clad in his regimentals, the recruit is attached for drill purposes to the most recently formed body of raw material, the 'awkward squad.' With them he is drilled usually four hours daily: from seven to eight, nine to ten, eleven to twelve, and two to three; and learns the stand-at-ease, extension motions (or 'setting-up' drill, to expand the chest and increase the height), facings, forming twos and fours to the right, left, and deep, marching in quick and slow time, &c. After being about a month or six weeks in this squad, the recruit is placed in the armed squad, and learns the manual (that is, presenting arms, shouldering, &c.) and the platoon (that is, firing) exercises; and after another month the bayonet exercise. When he has been altogether about three or four months at drill, he is dismissed to his duty, but is not considered a full 'duty soldier,' nor can he contend with his company for a marksman's badge till he has been trained for a certain number of days, usually fourteen, but varying according to the weather, under the instructor of musketry, and has, under his inspection, fired ninety rounds of ball-cartridge. After this training, he becomes fully qualified for promotion, provided his education is good enough. When a soldier is relieved from recruits' drill, his work is really very slight, leaving him the greater portion of his time at his own command. Except at special training stations like Aldershot Camp and the Curragh, the regiment is drilled usually not more than ten or eleven hours a week: the only other work besides drill being guards and fatigues, and the duty of orderly-man. The frequency of the recurrence of 'doing guard' depends on the station. In some places, as London or Dublin, the guard 'catches' a man once every three or four days; in other places, where only one or two small guards are furnished, a soldier may have ten days or a fortnight without doing guard. The guard mounts for twenty-four hours; each private does two hours on and four hours off sentry, being thus actually on guard eight hours out of the twenty-four. But all the men must, when off sentry, be ready in the guard-room to turn out at any time during the day or night to pay 'the compliment of the guard' to any passing officer entitled to it, or to be inspected by the officer of the guard, or the captain or subaltern of the day. Besides the guards, each soldier has in turn to take part in the 'fatigues;' that is, doing any work about the barracks or hospital, and going out on picket. Lastly, there is the 'company fatigue,' or duty of orderly-man. Every day two men are in each room told off for attending to the fires, cleaning the room, tables, and mess-dishes, and bringing from the cook-house and distributing the food of the mess. And this leads us to another subject—the soldier's food. The soldier is allowed three meals daily, for which sevenpence-halfpenny is stopped out of his daily pay. At eight he has breakfast, consisting of a pint of coffee and a pound of bread, anything else that he may desire in the way of 'kitchen' being paid for by himself; at one he has dinner, for which twelve ounces of meat are allowed, and potatoes. To give variety to this meal, the meat is cooked the one day as 'a steam,' the next as 'a bake,' and the next as 'a boil;' on this last occasion, a pint of soup each man being allowed. At five, there is a pint of tea, and bread. The food of each mess is cooked separately by itself in the regimental cook-house by a staff of cooks selected, one man from each company; and is conveyed thence, at the bugle-call, by the orderly-men to their several mess-rooms. There is no supper. This fare is a very great improvement on what used to be allotted the army: many a man is still in the service who was enlisted when the soldiers were really half-starved, as they got nothing after midday till breakfast next day, till a petition was presented to the Queen to order a third meal; moreover the pay of the soldier was not what it now is, so that he was unable to buy for himself any extra meal.

When a soldier has served about six months in the regiment, if he is well conducted and has a fair education (and the better his education, the sooner he rises), he generally receives the single stripe of a lance-corporal, or acting-corporal; that is, though still a private, he has all the power and receives the respect (though not the pay) due to a full corporal. In many regiments there is an examination in writing, spelling, and the first three rules of arithmetic before the lance stripe is given. Once a lance-corporal, the soldier is fairly started in his course of promotion to corporal, lance-sergeant, and sergeant, each grade being, as vacancies occur, supplied from among the occupants of the lower grade according to seniority and education: the examination for promotion to each rank is slightly higher than for the rank immediately below. But in promotion to lance or full sergeant, regard is also had to smartness at drill. In each company there are two or three ordinary or 'striped' sergeants, and at their head the colour-sergeant, who is also usually the pay-sergeant: he represents the captain in his absence, and is on all occasions responsible to him for the state of the company. The non-commissioned officers of the regiment (as distinct from the officers of the several companies) are the staff-sergeants, six in number—namely, the schoolmaster, the sergeant-major, the quarter-master's

Digitized by Google

sergeant, the orderly-room clerk, the drum-major, and the musketry-instructor's sergeant; these in dress, pay, and rank hold a position intermediate between the officers and the non-commissioned officers. The post of sergeant-major is that from which promotions to commissions usually take place. Cases of rising from the ranks occur far more frequently than is commonly supposed; in fact it may be with truth asserted that in nine cases out of ten, an energetic well-educated man who really devotes himself to his profession, and carefully avoids everything which tends to the formation of those habits that will some day or other lead to his losing his stripes and returning to the ranks as a private, is certain to receive a commission. The real obstacle to promotion from the ranks lies with the men themselves: they *will*, in the majority of cases, yield to vices that entail neglect of duty and lead to a court-martial and consequent reduction. Many sergeant-majors are by their previous training unfitted for, and would themselves decline, a commission; but the gift of a commission is not attended with so many drawbacks as is commonly supposed. Along with the commission a grant of one hundred pounds for outfit is conferred; and the newly gazetted ensign usually receives some lucrative post, as that of quarter-master, in which he can not only obtain a very substantial increase to his ensign's salary, but can also, when the regiment is abroad, make a considerable sum; while, when the regiment is at home, a good many 'pickings,' by no means to be despised, fall to him. Unhappily, indeed, many a sergeant-major who has held the office for any length of time is really a wealthy man, though the mode by which he has become enriched will not often bear official examination. It is a common practice for the pay-sergeants to make advances to men at a very usurious rate—for example, purchasing a man's pay for fifteen days, by giving him in advance his pay for ten days. It is unnecessary to say that this is strictly forbidden by the regulations, as being subversive of discipline, besides on other grounds; but nevertheless the advances are quietly made without risk, for the pay-sergeant holds the man's pay in his own hands, and has a private too much in his power in every way to fear his 'peaching,' and invoking the aid of the captain or commanding-officer in his breach of a voluntary engagement. From small beginnings a sergeant can in this way accumulate a large sum, which can be distributed over a larger area and with even less risk if he ever becomes sergeant-major, for, in a private's opinion, it is as dangerous to incur the hostility of the latter functionary as of the commanding-officer himself. Most money is made in this way on foreign service; as in India, where the men are greatly given to gambling, for want of anything else to do, and often 'discount' their pay, their 'marching-money,' or other grants due them. The present writer was assured on unimpeachable authority that a sergeant-major who had served in India in that capacity during the Mutiny, and for a few years after, retired with upwards of ten thousand pounds, chiefly gained in this way. One more remark we have to make about men who have risen from the ranks; it is, that their subsequent promotion is generally very rapid, after they have had time to 'feather their nests' as quarter-masters.

The daily life of a soldier is rather monotonous. The reveille sounds usually at five in the morning in summer, and half-past six in winter, when all must get up. At seven the men fall in on the parade-ground for drill, which in the winter months chiefly consists of running one thousand yards. At ten there is the commanding-officer's parade, when the troops are drilled for half-an-hour or an hour. On two or three days in the week, there is the adjutant's drill at two o'clock; but on other days at that hour only a roll-call, from which all wearers of badges for good conduct, and marksmen, are excused. In most stations, and except under a very strict lieutenant-colonel, the men rarely have more drill than this. On Saturday there is no drill of any kind, that day being devoted to kit-inspection and to a general scrubbing and cleaning-up of the barrack-rooms, that they may be faultless in every respect when the commanding-officer comes round at the dinner-hour on Sunday to inspect the rooms and receive any complaints. The rooms are, however, always expected to be in good order and scrupulously clean; the captain or subaltern for the day has to visit every mess-room in the barracks when the men are at breakfast, dinner, and tea, to receive and lay before the commanding-officer any complaints of the quantity or quality of the food, and he generally makes a cursory inspection of the room and checks any irregularity. On Sunday there is only the church parade in the forenoon, and the ordinary roll-call at two. The soldier is then free, as on other days, till tattoo, which is usually fixed at ten in summer and nine in winter. So, from motives of public economy, a soldier lies two hours more in bed in winter than in summer. From these arrangements it will be seen that unless when required for guard or picket, a soldier has all the afternoon and evening to himself, and during the rest of the day is anything but hardly worked; and it is no wonder that with so much time on his hands the soldier used to become after a few years a degraded being. But now much is done to elevate our soldiers, by providing a rational occupation for their disengaged hours. There is not only the regimental school, at which, in many regiments, attendance is very properly enforced, until the soldier, if a private, has obtained a third-class certificate from the Council of Education, or a first-class if a non-commissioned officer; and if the Minister for War were to enforce this rule in every regiment, he would confer a great boon on the army. But in addition to the regimental school, there is now at almost every station a good library of interesting and elevating works, and a reading-room supplied with papers and magazines: and most of the men avail themselves of this means of instruction and amusement. Lectures, readings, and concerts are given weekly, fortnightly, or monthly, as may be practicable; in almost every regiment now there is an amateur theatrical corps, composed of non-commissioned officers and men, who possess a fair collection of dresses and scenery, and give monthly entertainments, at a small charge for admission, when the acting is always fully equal, and often superior, to that of the officers at their occasional gratis performances. Cricket and foot-ball clubs are also formed by the men, and athletic sports are annually held, when several valuable prizes are given by the officers.

The condition of married soldiers has been very much improved of late years. They are more

Digitized by Google

comfortably housed in quarters by themselves, each couple occupying one or two separate rooms. Not very many years ago, the married women used to live in the barrack-room. They generally earn a fair sum by washing for the men (who pay a half-penny a day for this) and for the officers. In India a special allowance is made to a married soldier for his wife and every child he has. Of course these privileges are restricted to those who have married with the permission of the authorities. Leave is usually given only to men of good character, in possession of two good-conduct badges, and with at least five pounds in the regimental savings-bank. But at best the army life is not well fitted for women; and, hard as such a statement may seem, it would really be in the interest of the soldier if the authorities were to prohibit him from marrying.

In regard to pay, the soldier has nothing to complain of. The full pay of a private is fifteenpence per diem, besides the penny per day for each badge: of this he receives sixpence daily, the remainder being 'stopped' for food, &c.; and at the end of the month, if he has not had anything out of the stores, he usually has a balance of a shilling or so to receive. When in debt for anything, till it is fully paid he is placed under 'stoppages;' that is to say, he receives only the beer-allowance—one penny daily. A corporal receives fourpence per day more than a private. The full pay of a 'striped' sergeant is two shillings and fourpence, exclusive of a penny daily for each badge. Tenpence daily is stopped from *every* sergeant for the mess—that is, for all his food; a small subscription being made among themselves for the papers, &c. A colour-sergeant receives one shilling more than the striped sergeants when he is also, as is generally the case, pay-sergeant; otherwise, only sixpence extra. The staff-sergeants receive about four shillings, but the sergeant-major receives, besides this, one shilling per day as chief drill-instructor. This latter functionary also receives one guinea for every recruit enlisted at headquarters, and seven shillings and sixpence for every recruit enlisted elsewhere for his regiment, provided, of course, that the recruit is approved of; he also receives a sum, usually half-a-guinea, for each recruit when he is dismissed drill. When we consider how many recruits are enlisted for a regiment annually, it is evident that the legitimate income alone of the sergeant-major must amount to a good sum.

There can be no doubt that sergeants, if they remain unmarried, are in a far better position than the great majority of small clerks. If they have joined the army when young, they are at their prime when they leave, after a twenty-one years' service, with a pension of from one shilling and ninepence to half-a-crown per day; and they generally receive a staff appointment, with a good salary attached to it, in the militia or the Volunteers. Any man of fair education, who will give attention to his duties and keep steady, can become a sergeant within three years. We believe that if the real life of the army, with its many and everyday increasing advantages, were more generally known, many would gladly join, and never regret their choice of, a profession which at present, from their ignorance of it, they despise; and we hope the day is not far distant when clever pushing young fellows will in crowds seek the army as a profession, and set a commission before their eyes as the prize of life, when that ogre, the 'purchase-system,' will not long be able to hold even that limited amount of sway which it still wields.

MY VERY ODD UNCLE.

I HAD once an uncle who was allowed to be the greatest oddity in Shropshire, which is saying a good deal. As far as I heard from the elders of my family, he got on like other people in his early days (the most accurate said up to the beginning of his twenty-sixth year), when, after having been duly articled to the most eminent solicitor in our county town—getting through his seven years without mischance, passing his examination respectably and obtaining his certificate—he entered into partnership with Messrs Gammon and Gosling, the heirs and successors of his master in the law, and thought by all Shrewsbury to be a most promising firm. I believe they did business together for about six months; the great will-case of Sharp *versus* Smoothy was the storm that shipwrecked them, and then my uncle's oddity was somehow developed. It proved to be of an uncommon kind: there was nothing peculiar in his dress, manners, or conversation; he had always been of a quiet sensible turn, and so he continued to be; but his heart and mind, and money too, went, from that time, after old and dilapidated houses.

Wherever there was a decayed cottage, a half-ruined barn, a tumbled-down tenement that nobody could be got to take or buy (and there's no scarcity of the like in the county Salop), it was sure to be heard of, hunted up, and leased, rented, or purchased by Richard Ramshorn, Esquire—such being the style and title of my estimable relative. For that branch of business, he gave up the management of people's legal affairs, his time being entirely occupied with his takings and purchases. He spent day after day in solitary surveys of these ruined dwellings, locking or bolting himself in, as if any human being was likely to intrude upon him. He half-repaired some of them; he half-furnished others: he advertised them far and wide, with the usual flourish about convenient and desirable premises, and had sundry fierce quarrels with high-tempered ladies and gentlemen, whom, they said, advertisements had brought miles out of their way for nothing. When no tenant could be got at any rent, and none of the old women in the neighbourhood could be induced to 'mind' them, my uncle consoled himself by paying rounds of visits to his far-scattered possessions. He was to be seen in all weathers, sometimes on foot, sometimes on horseback, but always carrying a leathern bag, which he had provided for the purpose of holding the rusty keys, which he guarded with a care as jealous as though they were the title-deeds of a manor.

As his peculiar taste became known to auctioneers, house-agents, and all who had unsaleable and unlettable buildings on their hands, his transactions increased and his finances diminished. Of course, they were all great bargains—monstrous cheap, and sure to enrich him some day; but his means were dribbled away on those unprofitable estates without the smallest return; for, if he succeeded in getting some misguided man, or more frequently a widow or maiden lady, in a moment of weakness, to become his tenant, the lawsuit which invariably

Digitized by Google

arose at the end of the first quarter of occupation more than swallowed up his gains, and he had generally a bonus to pay to the retiring enemy.

My uncle did not fall in love, or take to betting, or go to the bad like other young men; the old houses were sweetheart, entertainment, and sensation for him. It was commonly believed that the more out-of-the-way and out-of-the-world they were, the better he liked them; and the standing grief of his days was that he could not raise money enough to bid for an almost ruined mansion, which nobody had inhabited for more than fifty years, because it stood in a marshy hollow at the foot of a rocky hill, and had a bad repute on account of midnight visitors. He had borrowed from all his friends by this time, till none of them would lend him any more; he was at the end of his means, and his relations were at their wits' end to know what to do with him. We, the Ramshorns, had been always a genteel but not an independent family—that is to say, every one of us had to do something for his living; and when my uncle Richard contrived to get out of business and out of pocket in his affection for ancient walls, his relations had to take him in hand, as prodigals are commonly dealt with. At first they thought his brain was affected; paid him particular attentions at the full of the moon, and brought two physicians in the guise of house-agents to examine him surreptitiously; but the lunar orb had no influence on his old house-hunting, and the medicine-men could detect no crack in his upper story. Then they wanted him to emigrate; but my uncle Richard had too considerable a stake in England, and refused to leave his property. He consented, however, to give up buying and leasing, and returned to business.

With the help of his friends and relatives, he got into another legal partnership, and went on steadily for some time, doing junior partner's work and realising accordingly; but as soon as a little money got into his fingers, another great bargain was heard of, and within less than two years he was in hot pursuit of the old houses again. Of course, they led him to the same goal, and he was brought back from the husks once more; but what need to tell of his relapses and restorations; they were numerous as those brought about by the glass or the gaming-table. He was fished out of low lodging-houses; he was redeemed from the debtors' prison; his requisites were taken out of pawn; his I O Us were paid, according to the custom of families endowed with such straying sheep; he had intervals of respectability, longer or shorter, as good fortune attended him or funds held out; but neither the example nor the preaching of his kith and kin could wean Uncle Richard's heart from the old houses.

A serious acquaintance of ours called him the dark dispensation of the Ramshorns; a troublesome dispensation he undoubtedly was, and served for a use of terror to our rising generation, all of whom grew up remarkably prudent through the dread of his example, inspired by the lectures of judicious friends. Myself being his eldest nephew, took early to saving, and had done wonders at it before I was nineteen, and got my first clerkship with Cheek & Co. Uncle Richard was reckoned an old bachelor by that time, and the only confirmed specimen of the single profession within our borders, except Cousin Grace.

In what degree of cousinship she stood to all or any of us, I never clearly understood; but Miss Grace, as we juniors had to call her, styled herself our cousin-in-general, and insisted on all the rights, privileges, and immunities belonging to that title. She never told her age, and nobody else ever dared tell it, so I am silent on the subject; but Cousin Grace was not very young, and never could have been supposed handsome by any stretch of the imagination. Fortune had been quite as niggardly as nature in her case; her father had left a considerable legacy of debts as well as his only daughter to the care of his kindred; and Cousin Grace said she would live and occupy herself among them for the rest of her days, since a maiden lady of sense and energy was an invaluable addition to any family. Accordingly, she minded their houses and their affairs generally, she governessed their children, she lectured their young people, she gave the old ones her advice whether they wanted it or not, and she made them all understand that Cousin Grace was to be well paid as well as highly esteemed for her services.

There was a fine contrast between the maiden and the bachelor of our family: while Uncle Richard was perpetually spending and losing on his favourite species of real estates, Cousin Grace had powers of saving and getting which were perfectly marvellous, considering her opportunities. As far as we knew, nobody had ever proposed for her heart and hand, and Cousin Grace had a high disdain of all mankind in consequence; yet, strange to say, some of us thought she had a lurking partiality for Uncle Richard. We could all sympathise with her in that; notwithstanding that he was the blot on our escutcheon, the oddity of the family was generally liked, and welcomed wherever he went. Uncle Richard had such an easy, friendly way of meeting his difficulties, that the general opinion was, a capable woman might do worse than marry and settle him. But Uncle Richard had no heart to give away from the old walls; and Cousin Grace inferred, with some justice, that the workhouse was the only jointure his spouse could expect; so the little scheme for making a Benedict and Beatrice of our own appeared to be adjourned *sine die*.

We all thought it a pity, for our uncle had been living in the odour of respectability for some time, as senior clerk to his early partners, Gammon and Gosling, who had hung out their legal banner once more, being men of large connections in Shrewsbury; but signs of an approaching change were beginning to be visible. He had been met late in the evening coming from a roofless cottage, and seen to linger about a ruined barn for the greater part of an afternoon. That was ominous, but worse threatened our peace. The old house in the marshy hollow at the foot of the rocky hill, now become too ruinous to shelter even ghosts, was advertised to be sold for one hundred pounds to any one who might be induced to buy it for the materials. 'There is a bargain!' said Uncle Richard to me, as we sat alone in my father's back-parlour, every soul of the family but myself having gone to the Bounceleys' grand party, to which neither my uncle nor Cousin Grace, who happened to be with us at the time, was magnificent enough to be invited; I had staid at home to keep them company, knowing that my fair enslaver, Lucy Sutton, was not to be there—'a bargain not to be

Digitized by Google

got hold of every day, George. If I had that one hundred pounds to lay down, I should make my fortune, ay, and the fortune of my friends too. The property is worth two thousand to any man of judgment. I could drain the ground, and build three houses out of the materials, any one of which would pay my expenses three times over; and I am ready to give anybody twenty per cent. for the loan of the money; to be paid quarterly in advance: that is better interest than you get in the Salop bank, my boy.'

The old fox knew that I had just the sum he wanted, saved from cigars, theatres, and other causes of young men's outlaying, by way of commencing a fund for housekeeping expenses, in case Lucy and Lucy's parents should smile upon my suit. I had been vain enough to exhibit the bank receipt, and Uncle Richard had fixed upon it as his prey to sink in the old house in the marshy hollow; but he did not know that his nephew had affections as strong as his own, though they went in a different direction, and, moreover, had been made wide awake to the results of his old house-hunting from early childhood. Steel and stone he found me to his promises of twenty per cent. and eternal gratitude, to all the castles he built in the air out of the ill-repnted ruin, and to his final lamentations that his own brother's son would not help him to make the fortune of the whole family; when we were both startled by the voice of Cousin Grace behind us saying: 'Richard, I will lend you the money.'

I could scarcely believe my ears and eyes; but there she stood, in her long worn and much mended black dress and crape collar, which she wore to save washing, her face bound up with another piece of black—for she was troubled with the toothache, and her gray hair hidden by a red flannel hood, to ward off the rheumatism.

'You are an angel!' cried Uncle Richard, running towards her with extended arms.

'Recollect propriety, sir,' said Cousin Grace, taking him by the shoulder and setting him down on a chair. 'George,' she continued, 'the Bounceleys have sent over for you: they can never get young men enough at their parties; but it is not right to offend them: you know they are related to Mr Cheek's brother-in-law: go up to your own room and dress this minute.'

I saw the necessity of going, under the circumstances; and what passed in the back-parlour that evening, I never could make out; but Cousin Grace kept her resolution to lend Uncle Richard the hundred pounds, which we all believed to be her entire savings. No persuasion, no pointing out of probable consequences, could move her from it. Uncle Richard had promised to pay her; he would not break his word to an unprotected female; and she thought it her duty as a cousin to give him a chance of retrieving the misfortunes of his life with the money, which she would probably never want, for it was her belief she was not long for this world. Cousin Grace was a lady not easily turned from anything she had set her mind on. When the entire clan of Ramshorn had exhausted their arguments and adjurations—when she had fought wordy battles with each of their wives, and general engagements with the whole family—when she had shaken the dust of most of their houses off her feet and got it on again, the money was lent to Uncle Richard, and with it he bought the old house in the marshy hollow.

The joy or the folly of his life appeared to be crowned by the possession of that coveted tenement. Morning, noon, and night, he was descried moving about its ruined walls, scrambling out of some of its sashless windows, or seated on a rock hard by, contemplating his desirable property. The reputation of the place prevented his being intruded upon by curious neighbours; none of the Ramshorns, except Cousin Grace, would come within a mile of it or him; their indignation, including my own, knew no bounds at this last and most desperate relapse. At the end of the first fortnight of his ownership, Messrs Gammon and Gosling summarily dismissed him for neglect of business, and Cousin Grace announced her intention of marrying him without delay. Of course she was reminded of what sort of jointure was to be expected; but Grace said one couldn't pass over one's lot; and Uncle Richard being agreeable, the marriage came off accordingly. The Ramshorns one and all protested, in the first instance, that they would have nothing to do with the pair, and finally went in a body to their wedding. Grace almost sent the ladies of the family into fits by appearing in a silk dress on the occasion, bought out of the remains of her savings, no doubt, and therefore shewing a clearer prospect of the workhouse.

But Mr and Mrs Richard Ramshorn did not betake themselves to that dignified retirement; on the contrary, they first took quiet chambers in Shrewsbury, where Richard advertised himself, and commenced business as a solicitor; while Grace supervised both him and his clients; then they leased a piece of ground in the neighbourhood, and began to build a house of very decent dimensions out of the materials in the marshy hollow. By-and-by, it was evident to us all that Uncle Richard was an altered man; and that the change was much for the better. The most unmanageable of his domains in the roofless-cottage and ruined-barn line were pulled down, to help the building of his new home, or disposed of for like purposes; the best of them were by degrees repaired, and let to honest tenants: his own house was finished; he and his lady took possession, and furnished it wonderfully well, though with great complaints of the dear times. Uncle Richard's legal business increased, or at least his prosperity did; first, Mrs Richard had one servant, then she had two; a black silk dress replaced the well-mended stuff one; and the rheumatism was kept out of her head by a velvet hood, instead of the red flannel.

Time works wonders in all parts of the world, and so it did in ours, for the disgrace of the Ramshorns became their glory. Within ten years after my refusal to help Uncle Richard in making the fortune of the whole family with that hundred pounds I had in the Salop bank, I found myself quoting his sayings of wisdom, and setting forth his greatness on every opportunity. All the rest of his kindred were doing likewise, except Mrs Richard, *née* Cousin Grace: she had admonished him before marriage, and, excellent woman, she continued to admonish him after it; but their conjugal life was, on the whole, an easy one. They had no family, and they appeared to be getting rich, and we, every one, paid them court accordingly. Uncle Richard's days of oddity were over, but he had the gout sometimes; I suppose people must have something; and on those occasions of being laid up, he was partial to sending for my good father and

Digitized by Google

mother, who had been most considerate to him in the old times of relapse and restoration. When he couldn't sleep, they used to sit with him till far into the night; and at one of these sittings, as they told me, he made them an unexpected revelation.

'Robert,' said he, addressing my father, 'don't you remember what a nuisance I used to be to you and Emily, with my buying of old houses?'

'No; not exactly a nuisance,' said my prudent father.

'Oh, but I was. Many a time you wished me at Jericho; and you had good reason. I want to tell you something that will explain that matter; and I know you will keep the secret for all our sakes,' said Uncle Richard. 'When I was partner with Gammon and Gosling in the *Sharp* and *Smoothy* case—it must be thirty years ago now—there were two pedigrees to be made out, and bundles of papers and letters to be looked over for that purpose. The looking-over business fell to me; and among the letters, I found one addressed to Henry Sharp, Esq., dated St Germain, the 30th September 1720, and evidently written by a partisan of the exiled Stuarts, who still lingered there, and deplored, in the old-fashioned spelling of his time, besides the absence of the rightful king, that thirty thousand pounds worth of plate, jewels, and coin, which somebody, whom he called the most loyal K., had hidden in an old house in the County Salop, how it could not be discovered, nor any information about it obtained, since K. was lost at sea, and the secret went with him. On the blank side of the letter there was written in a different hand, which I found to be that of the late gentleman whose will was disputed: "The thirty thousand pounds worth has not been discovered yet, but I have reason to believe that the old house was in the neighbourhood of Shrewsbury." Messrs Gammon and Gosling never heard tell of that letter; but I read and thought over it night and day: it sent me after old houses, it made me what you know I was; and it and Grace helped me to find at last what the loyal K. had hidden in the cellar of that old house in the marshy hollow. Maybe I paid for it, through so many years; so did you, for that matter, Robert; but you and yours will be the better of it when Grace and I are gone.'

Lucy's children and mine were grown up, when my father and mother told me that tale. They believed it firmly, and so do I; for, though Richard and Grace are gone this many a year, I, as well as the rest of the Ramshorns, have excellent reason to remember my very odd uncle.

MAY CUSTOMS.

Among the Romans, this month was held in high estimation; it was by them assigned in honour of the *Majores*, or *Maiores*, the senate; as June was to the *Juniores*, or inferior branch of their legislature. Olaus Magnus says, 'that after their long winter, from the beginning of October to the end of April, the northern nations have a custom to welcome the returning splendour of the sun with dancing, and mutually to feast each other, rejoicing that a better season for fishing and hunting was approached.' It is stated by Ovid, in his *Fasti*, that May is an unlucky month in which to be married; and this idea is still prevalent in Europe. The Roman Floral Games, or Floralia, began on the 28th of April, and lasted for some days into May. The festival among the Celts was called Beltein, in which fires were kindled on the hill-tops at night. An old Romish calendar cited by Mr Brand says that on the 30th of April the boys go out to seek May-trees: 'Maii arbores a pueris exquirunter.' The date of the institution of May-games in England during the middle ages cannot be traced. A poem of the fourteenth century, *The Romance of Kyng Alisaunder*, says:

> Mery time it is in May;
> The foules syngeth her lay;
> The knighttes loveth the tornay;
> Maydens so dauncen and thay play.

In Chaucer's *Court of Love*, we read:

> Thus sange they alle the service of the feste
> And that was done right early, to my dome [*as I judged*];
> And forth goeth al the court, both moste and leste,
> To fetch the floures freshe, and braunche, and blome;
> And namely [*especially*] hawthorn brought both page and grome,
> With fresh garlandes party blew and white;
> And than rejoysen in their grete delight,
> Eek eche at other threw the flowers bright,
> The primerose, the violete, and the gold [*marigold*].

This extract shews that the king and queen mingled with their subjects in these fine old English customs. Henry VIII. and Catharine of Aragon once came from their palace of Greenwich to meet the heads of the corporation of London, who had been into the woods of Kent to gather May. The custom seems to have been for people to go into the woods in the night, gather branches of trees, flowers, &c., and return with them at sunrise to decorate their houses. Shakspeare (*Midsummer Night's Dream*, Act i. sc. 1) says:

> If thou lov'st me then,
> Steal forth thy father's house to-morrow night;
> And in the wood, a league without the town,
> Where I did meet thee once with Helena,
> *To do observance for a morn of May*,
> There will I stay for thee.

Spelman, in his Glossary, remarks that the court of King James I. and the populace long preserved the observance of the day. In a manuscript in the British Museum called *The State of Eton School* (1560), it is stated that on the feast of Saints Philip and James, if the master grants leave, the boys who choose may rise at four o'clock, to gather May-branches.

Stow tells us: 'In the month of May, the citizens of London of all estates, generally in every parish, had their several Mayings, and did fetch their May-poles with divers warlike shows; with good archers, morrice-dancers, and other devices for pastime, all day long; and towards evening they had stage-plays and bonfires in the streets. These great Mayings and May-games were made by the governors and masters of the city, together with the triumphant setting-up of the great shaft or principal May-pole in Cornhill before the parish church of St Andrew'—hence called St Andrew Undershaft. A dangerous riot, in which several foreigners were slain, took place on May-day 1517; and Stow, who died in 1605, complains that the festivities were not conducted with such magnificence as formerly. Stubbs, in his *Anatomie of Abuses* (1585), tells us that the May-pole was brought home with great ceremony: 'They have twentie or fourtie yoake of oxen, every oxe having a sweete nosegaie of flowers tied to the tip of his hornes,

Digitized by Google

and these oxen drawe home the May-poale, their stinking idol rather, which they covered all over with flowers and hearbes, bound round with strings from the top to the bottome, and sometimes it was painted with variable colours, having two or three hundred men, women, and children following it with great devotion.' In the *Hours* of Anne of Brittany (1499), in the Bibliothèque Royale at Paris, there is a drawing of a curious May-pole. An engraving of this is given in Chambers's *Book of Days*, i. 575. The earliest representation of an English May-pole is depicted on a window at Betley in Staffordshire, of the time of Henry VIII. This pole is painted black and yellow, and has a St George's red-cross banner and a white pennon affixed to it. One standing in the village of Welford, Gloucestershire, is painted red, white, and blue, and is probably a copy of the ancient one. Machyn, in his *Diary* (1552), tells us of one brought into Fenchurch parish, 'a goodly May-pole as you have seene; it was painted whyte and green.' Owen, in his Welsh Dictionary, says that the pole was always made of birch.

Douce, in his *Illustrations of Shakspeare* (ii. 463), remarks that during the reign of Elizabeth the Puritans made considerable havoc among the May-games by their preaching and invectives. By a warrant of Charles I., dated October 18, 1633, it was enacted that 'for his good people's lawfull recreation, after the end of Divine service, his good people be not disturbed, letted, or discouraged from any lawfull recreation; such as dancing, either men or women; archery for men, leaping, vaulting, or any other such harmless recreations; nor from having of May-games, Whitsun-ales, and morris-dances, and *the setting up* of May-poles, and other sports therewith used; so as the same be had in due and convenient time, without impediment or neglect of Divine service. And that women shall have leave to carry rushes to the church for the decorating of it, according to the old custom.' Eleven years after, the Long Parliament enacted that 'because the prophanation of the Lord's Day hath been heretofore greatly occasioned by May-poles (a heathenish vanity, generally abused to superstition and wickednesse), the Lords and Commons do further order and ordain that all and singular May-pole that are or shall be erected, shall be taken down and removed by the constables, borsholders, tything men, petty constables, and churchwardens of the parishes, when the same shall be; and that no May-pole shall be hereafter set up, erected, or suffered to be within this kingdom of England or dominion of Wales. The said officers to be fined five shillings weekly till the said May-pole be taken downe.'

In Randolph's *Poems* (1646) we find the following about the Puritans:

> These teach that dancing is a Jezabel,
> And Barley-break the ready way to hell;
> The morice idols, Whitsun-ales, can be
> But prophane reliques of a jubilee:
> There is a zeal t' expresse how much they do
> The organs hate, have silenced bagpipes too;
> *And harmless May-poles all are railed upon*
> *As if they were the towers of Babylon.*

In the *Welsh Levite tossed in a Blanket* (1691), cited by Brand, we have a like passage: 'I remember the blessed times when everything in the world that was displeasing and offensive to the brethren went under the name of horrid abominable popish superstition. Organs and May-poles, bishop's courts and the bear-gardens, surplices and long hair, cathedrals and playhouses, set forms and painted glass, fonts and apostle spoons, church musick and bull-baiting, altar-rails and rosemary on brawn, nay, fiddles, Whitsun-ales, pig at Bartholomew Fair, plum-porrige, puppet-shows, carriers' bells, figures in gingerbread, and at last Moses and Aaron, the Decalogue, the Creeds, and the Lord's Prayer. A crown, a cross, an angel, and bishop's head could not be endured so much as in a sign. Our garters, bellows, and warming-pans wore godly mottos, our bandboxes were lined with wholesome instructions, and even our trunks with the Assembly men's sayings. Ribbons were converted into Bible-strings. Nay, in our zeal we visited the gardens and apothecaries' shops. *Unguentum Apostolicum*, *Carduus benedictus*, *Angelica*, *St John's Wort*, and *Our Ladie's Thistle* were summoned before a class, and commanded to take new names. We unsainted the apostles.'

In May-day 1661, the May-poles were again erected all over the country, amid the joyous shouts of the delighted populace.

The most famous pole of that time was erected in the Strand, opposite Somerset House. It is stated to have been one hundred and thirty-four feet high, and sent expressly for the purpose by the Duke of York. Pope thus alludes to it:

> Where the tall May-pole once o'erlooked the Strand.

It was taken down about 1717, and purchased by Sir Isaac Newton, who had it removed to Wanstead in Essex, to use as a support to the great telescope (one hundred and twenty-four feet in length) which had been presented to the Royal Society by the French astronomer, M. Hugon.

We must not forget to mention that a Queen of the May was always elected, probably intended as a living representative of the goddess Flora. The custom still survives in France. In many parts of England at the present day, children come to the houses carrying garlands of flowers and singing carols. Here is an example:

> Remember us, poor Mayers all,
> And thus do we begin
> To lead our lives in righteousness,
> Or else we die in sin.
>
> We have been rambling all this night,
> And almost all this day,
> And now returned back again,
> We have brought you a branch of May.
>
> A branch of May we have brought you,
> And at your door it stands,
> It is but a sprout, but it 's well budded out
> By the work of our Lord's hands.
>
> The hedges and trees they are so green,
> As green as any leek;
> Our heavenly Father he watered them
> With his heavenly dew so sweet.
>
> The heavenly gates are open wide,
> Our paths are beaten plain,
> And if a man be not too far gone,
> He may return again.
>
> The life of man is but a span,
> It flourishes like a flower;
> We are here to-day and gone to-morrow,
> And we are dead in an hour.

The moon shines bright, and the stars give a light
A little before it is day;
So God bless you all, both great and small,
And send you a joyful May!

At Charlton-on-Otmoor, near Oxford, at this time of the year, there is still kept up a beautiful ceremony, the crowning of the cross in the parish church with flowers on May-day. The parish maidens, all dressed in white, bring the 'May-Cross' to the church in procession, and place it where the old rood-loft stood. The cross is allowed to remain there all the year round. Morris-dancers formerly took a chief part in the May festivities. These were derived from the Moors, hence the name (Morisco, a Moor). They generally consisted of Maid Marian, or Queen of the May, Robin Hood, Friar Tuck, the Fool, Robin Hood's Men (Scarlet, Stokesley, and Little John), Tom the Piper, and the Hobby-horse.

In Coates's *History of Reading* (1802, p. 220), in the churchwarden's accounts of St Lawrence parish is the following entry: '1531.—It. for ffyve ells of canvas for a cote for Made Maryon, at III^{s}. ob. the ell, XV^{d}. ob.'—In Greene's *Quip for an Upstart Courtier* (1620, p. 11), that effeminate-looking young man, we are told, used to act the part of Maid Marian, 'to make the foole as faire, forsooth, as if he were to play Maid Marian in a May-game or a morris-dance.' After a time, Maid Marian was always personated by a clown, and afterwards called Malkin, as:

Put on the shape of order and humanity,
Or you must marry *Malkyn* the May lady.
Beaumont and Fletcher in *Monsieur Thomas.*

Robin Hood was a very popular character among the morris-dancers. Douce thinks 'the introduction of Robin Hood into the celebration of May, probably suggested the addition of a king or lord of May.' In the churchwarden's accounts of St Helen's, Abingdon, 1566, we find eighteenpence charged for setting up Robin Hood's bower. Bishop Latimer, in his sixth sermon before King Edward VI., mentions the following anecdote: 'I came once myself to a place, riding a journey homeward from London, and sent word over-night into the town that I would preach there in the morning, because it was a holy-day; and I took my horse and my company, and went thither. (I thought I should have found a great company in the church); when I came there, the church door was fast locked. I tarried there half an hour and more; at last the key was found, and one of the parish comes to me and says: "This is a busy day with us; we cannot heare you: this is Robin Hoode's daye; the parish is gone abroad to gather for Robin Hoode." I thought my rochet would have been regarded, though I were not; but it would not serve, but was fayne to give place to Robin Hoode's men.'

Friar Tuck was habited as a monk of the Franciscan order, or one of the Gray Friars. Perhaps the name was a sort of generic appellation for any friar, originating from the dress of the order, which was *tucked* or folded at the waist by means of a cord.

The Fool, of course, was in great requisition at the dances. In Tollett's window he appears with all the badges of his office—the bauble in his hand, and a coxcomb hood, with asses' ears, on his head.

Brand quotes an old ballad giving the names of the companions of Robin Hood:

I have heard talk of Robin Hood—
Derry, derry, derry down,
And of brave *Little John*,
Of Friar Tuck and *Will Scarlet*,
Stokesley, and Maid Marian—
Hey down, &c.

Douce says Little John is first mentioned together with Robin Hood by Fordun the Scottish historian, who wrote in the fourteenth century.

Lastly, we have the hobby-horse, made of pasteboard, and ridden by a man who often displayed tricks of legerdemain. A ladle stuck in the horse's mouth received the spectators' donations. The earliest representation of this character is believed to be in the painted window at Betley. In later times, the fool appears to have performed this office. In Nashe's play of *Will Summer's Last Will and Testament*, Will Summers is made to say: 'You, friend, with the hobby-horse, goe not too faste, for fear of wearing out my lord's tyle-stones with your hob-nayles.'

THE SCHOOLMASTER.

Di, majorum umbris tenuem et sine pondere terram,
Spirantes que crocos, et in urna perpetuum ver,
Qui præceptorem sancti voluere parentis
Esse loco.—*Juvenal.*

Our Academe, whose massive towers
Look forth upon the narrow sea,
Must lose its Master. Pleasant hours
Of happy toil remember we,
When came upon the summer gale
Rich memories of the Attic time—
Of joyous Tempe's fragrant clime—
Of sweet Colonos' nightingale.

And though from other lips we hear
Of the island-studded seas that kiss
Those rocky shores, and eddy clear
About immortal Salamis—
Though Plato's lore for us be set
In golden English, even now—
We still shall miss his thoughtful brow;
His teaching never shall forget.

For he who gives to glowing youth
Those glimpses of th' heroic time,
Those never-changing laws of truth
And wisdom, which may make sublime
The deeds of man, holds higher place
Than sceptred ruler of a realm,
Or he whose fiery-crested helm
Bears conquest o'er a trampled race.

The Publishers of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

1*st*. All communications should be addressed to the 'Editor, 47 Paternoster Row, London.'

2*d*. To insure the return of papers that may prove ineligible, postage-stamps should in every case accompany them.

3*d*. All MSS. should bear the author's full CHRISTIAN name, surname, and address, legibly written.

4*th*. MSS. should be written on one side of the leaf only.

Unless Contributors comply with the above rules, the Editor cannot undertake to return rejected papers.

Printed and Published by W. & R. CHAMBERS, 47 Paternoster Row, LONDON, and 339 High Street, EDINBURGH. Also sold by all Booksellers.

RAILWAY COMMUNICATION ACROSS THE CHANNEL.

THERE is much that is both unscientific and unpractical in our present means of communication with the continent. The steam-vessels employed are, as a rule, small, ill-ventilated, and totally inadequate to properly accommodate the traffic. Between Dover and Calais, for instance, more than a hundred passengers may be frequently seen huddled between decks, without any regard to either cleanliness, comfort, or health; while a number of delicate and refined women are jammed into a cell (termed the ladies' cabin), in which there is literally not room to move. On the other hand, the transport of goods is, in its way, every whit as discreditable. Railway trains run down to the sea-shore on either side of the Channel; the contents are strewed over the quays, laden in ships, unladen on the other side, and again stowed away in wagons, before they can continue their journey; thus enduring more delay, and suffering more wear and tear, with its consequent expense, than they would on hundreds of miles of railway. What makes the continuance of our present barbarous means of communication seem the more extraordinary is that it could be superseded at a comparatively moderate expense by a plan which would tend to develop the traffic to an enormous extent. The plan in question consists in having a large steam-vessel or ferry to convey the trains bodily across the Channel, as proposed by Mr Fowler, the eminent civil engineer, and Mr John Scott Russell, the builder of the *Great Eastern*. For years past, the Americans have had these railway ferries running day and night across the lakes of Canada; and within the last few months a similar arrangement has been adopted on one of the Swiss lakes with the greatest success.

Boden-See, or Lake Constance, is a fresh-water lake, some sixty miles long by some ten or twelve miles wide. It separates Switzerland from Austria, Bavaria, and Würtemberg, and stops direct railway communication between Switzerland and these countries, just as the Channel does in the case of England and France. It was impossible to carry the railway round the lake, as the natural barrier which this forms is prolonged at its extremities by the impassable Alps; consequently, the goods-traffic of Germany with Switzerland and the south of France, which is considerable, was exposed to delay by transhipment, to the great inconvenience of every one interested in it. Under these circumstances, Mr Scott Russell, who had built the first fast steamer employed on the lake, was asked by the Swiss Railway Company whether he would undertake to design a vessel by which railway trains and locomotives could be carried across, with the understanding that no machinery of any kind should be required to put the trains on board, except the ordinary locomotive engine. To this Mr Scott Russell at once acceded. The Swiss railway from Zurich, or the Nord-öst-bahn, as it is called, terminates at Romanshorn, on the shores of the lake, and on the opposite side the Würtemberg Railway stops at Friedrichshafen. Both these harbours are shallow and small, so that six feet was the maximum draught of water that could be allowed to the vessel; and in order to carry the prescribed load of fourteen to sixteen carriages, two lines of railway were necessary on a length of two hundred and twenty feet. The vessel itself standing in its place in the harbour appears to form a railway station, with platforms, offices, and refreshment-rooms on either side. She has two decks, one on which the train stands, and the other above it. Double sides of iron connect the upper with the lower deck, and convert the body of the ship into an iron girder, twenty-five feet deep at the centre; thus giving great strength to the whole. The upper deck does not quite extend to the extremities of the vessel, so that passengers in the end-carriages are able to enjoy the Alpine scenery of the lake without leaving their seats; while in fine weather it forms a promenade for the others. The vessel has a rudder at each end, in order to save the trouble of turning in the narrow harbours. Each paddle-wheel can revolve independently of the other, and has two steam-engines attached to it, so as to be able to work readily and

Digitized by Google

quickly; the four engines making up a total of two hundred horse-power. These two rudders, and the paddle-wheels with their independent engines, are an invaluable security against accidents, for if either engine or wheel becomes disabled, the other wheel with its engines is at once ready to continue the voyage. Indeed, it is stated that the vessel has already performed a trip in less than an hour with only one wheel working; it having been found that with the rudder fifteen degrees over, a straight course could be steered. There is another advantage secured, however, by having the paddle-wheels independent of each other. Large vessels, like this ferry, are known to steer wild in shallow water; but by making the paddle-wheels revolve in opposite directions, or in the same direction with varying velocity, perfect steerage-power is obtained. An index on deck keeps the captain informed of what each engine is doing, so that a mistake is no sooner made than it is discovered, and rectified.

The placing of the trains on board the ferry is a very simple operation. They are transferred by means of a bridge, suspended in the air by heavy weights, capable of adjustment to the rise and fall of the water, which, although it is a lake that is in question, has, it seems, a periodical variation of about ten feet. Carriages intended to cross the lake are left at the siding which leads to the ship, the locomotive which does the ordinary work of the station comes and pushes the train on board, and once there, special precautions are adopted to prevent its breaking loose; the whole operation only taking about five minutes. Such, then, are the principal features of the railway ferry across Lake Constance.

Among the places which have been proposed for a similar ferry between England and France, are Newhaven and Dieppe on the one hand, and Dover and Calais on the other. It would no doubt be preferable to make the experiment, in the first instance, at the latter ports, owing to the shorter distance to be traversed, the Channel being here little more than double the width of the lake. Of course, in the lake there is no Atlantic wave, and no ocean ground-swell, and, consequently, never in the worst storm the great motion of our seas; but there is the short, sharp, breaking wave, which is both dangerous and inconvenient, and also the terrific Alpine hurricane, which is not to be despised. The ports on both sides of the Channel have been surveyed, and the necessary plans for harbours, &c. completed; they are designed to be capable of easy entrance in all weathers and at any state of the tide. The boats will run into a covered water-station, so that all transfer either of passengers or goods will be effected in still water, and under shelter from wind and rain. The English harbour will be at Dover, and can be conveniently approached by both the Chatham and Dover and South-eastern Railways. It is proposed to form the French harbour at a spot between Cape Grisnez and Boulogne, where the depth of water and the approaches are highly favourable for such a work. The steam-vessels to be used will be four hundred and fifty feet long, and are to be propelled by engines of fifteen hundred horse-power. They will make the passage from shore to shore in one hour; and, from their great size, motion in any weather is expected to be almost imperceptible. The carrying out of this great work of international communication would result in a saving of time of two hours in the journey between London and Paris. The total expenditure is estimated at less than two millions, and the time required for the full completion of the works is about three years. That the project, if carried out, is likely to be a profitable one, may be inferred from the results of the working of the ferry on Lake Constance. It is now doing its daily work of railway communication, taking over trains of fourteen to sixteen laden wagons at one time. The cost of the goods per ton per mile is from three farthings to five farthings, including interest on capital, depreciations, and repairs. Of course, anything like this rate applied to a ton of passengers is enormously profitable. The advantages of such a system of communication have been well pointed out by Mr Scott Russell, who says: 'The comfort of taking your bed-carriage in London, and not having to leave it till you awake in Paris, need not be enforced; and the economy and expedition which must arise from sending goods right through to their destination without change of carriage or wagon, is thoroughly appreciated by all merchants and shippers. That the trade of Europe with England would enormously increase who can doubt? while the mails of India would reach Brindisi or Marseille in the same carriage in which they would be stowed by the post-office officials of St Martin's-le-Grand.'

A COUNTY FAMILY.

CHAPTER X.—MR DAWLISH'S 'TIP.'

At the moment that the race was won, and almost before the numbers displayed upon the official board quenched the last hopes of the losers, a tumult arose in the ring beneath the Stand. One of the spiders, who happened to have laid too heavily against *Gazeebo*, was detected in attempting to make his escape, and so avoid settling with his creditors. He had his money-bag full of the coin intrusted to him by the backers of the winner, and such a proceeding as he had in contemplation was undoubtedly far worse than pick-pocketing, inasmuch as it was robbery aggravated by breach of confidence. But if it had been murder in its most aggravated form, it could not (or certainly would not) have aroused so furious a storm. It was not only those whom he had plundered who were now setting on him like terriers on some hated vermin, but his own brethren of the pouches, whose honour, forsooth, was the breath of their nostrils, and whose credit—on which all their hopes were built—was imperilled by his felonious intent. 'A welsher! a welsher!' resounded from every side; and in less time than it takes to tell it, he became the centre of a crowd, in whose looks was no shadow of mercy, and whose hands threatened to tear him limb from limb. 'If we cannot get our money,' cried one, 'we will have his skin;' and in one minute the howling mob had so far acted upon this suggestion as to denude the delinquent of his clothes. In half a shirt and some remnants of a pair of trousers, the miserable wretch was tossed, and torn, and worried immediately beneath the eyes of that gracious female aristocracy in whom Mr Thomas Carlyle sees the last hope of England's stability. It was only the unanimity of his assailants, who by their kicks and blows kept him up on all sides, that saved him from death, for if he had once gone

Digitized by Google

down, he would have been trampled into a living grave. Naked, and bleeding, and bruised, and with his thievish face distorted by pain and terror, he offered indeed a frightful spectacle, and Stanhope shuddered as he looked down upon it. 'By Heaven! they'll kill the man,' cried he. 'Not they,' answered Sporting Dawlish with his pleasant smile: 'Welshers are never killed. I wish I had got his bag, for it had a pony of mine in it—the scoundrel!—what one may call a Welsh pony. See how the cunning villain is working himself towards the gate.'

And indeed, even while he spoke, the miserable creature, as though by special assistance of his patron the Devil, did manage to get himself hustled towards the turnstile, whence, by the simultaneous impulse of a dozen feet, he was shot out into the course, which absorbed him.

'There's a fine moral lesson,' observed Dawlish. 'Not one of those gentry down yonder but will be careful to settle their debts of honour for the rest of the day. Now is the time to invest a little money, if one had it, upon the next race, with the certainty of getting paid if one won. It's a fine thing is Lynch Law, where there's no other.'

Stanhope did not speak; he was thinking that the difference between his own case and that of the welsher was but small; for, by *Gazebo's* victory, he had lost not only more than he could afford, but even more than he could pay.

'I am afraid you have been hard hit, old fellow,' said his companion kindly; 'but better luck next time.'

'There is no next time for me, man,' returned the other gloomily.

'Pooh, pooh; so thought I at one time, when I dropped twenty thousand "thou" at Ascot; and yet here I am, you see, both merry and wise.'

'Yes, but you had another fortune left you, in place of the one you lost; and there is nobody to leave me a penny. I told you this morning, that, if that cursed horse won, I should be a ruined man, and now it has come to pass, Frank.'

'Well, you can't say I didn't warn you, old fellow. I always had my own opinion about "honest Dean" and his prophecies. But there; that is cold comfort. Now, let me say this, Stanhope'—and he placed his hand upon the other's shoulder: 'I am not so well off as I have been, but I have something yet with which to serve a friend. I will help you to settle this matter, and then in three months' time—or even in six—you can pay me back, you know.'

'Thank you, Dawlish—thank you kindly. You are a better fellow than I took you for. But, on the other hand, I am worse than you imagined: I can't pay my debts.'

'You mean not now; well, that can't be helped. They must wait a bit—that's all; or rather, *I'll* wait, and do you pay the rest.'

'I cannot pay you nor them,' returned Stanhope sullenly; 'neither now or ever.'

'Not pay?' ejaculated Dawlish aghast, and mechanically returning to his pocket the cheque-book in which he had been calculating his balance at his banker's. 'Not pay, Stanhope? But that's all confounded nonsense; you know one must pay;' and his gaze wandered, or seemed to his friend to wander, to a certain spot, where, on the railings of the ring, fluttered, in sign of avenged justice, or as a flag of triumph, three-fourths of the welsher's shirt. 'Why, good heavens!' continued the astonished turfite, this outrage upon his narrow but strong instincts of morality quite elevating his style, 'I can scarcely believe my ears, or at least that they are listening to Herbert Stanhope. Sooner than be a de'——

He hesitated; but the other supplied the half-finished word: 'Sooner than be a defaulter, you were about to say,' observed he quietly, 'you would do what?'

'Well, I would sell my very clothes off my back;' and again that fluttering emblem of peace, and confidence restored, seemed to catch the speaker's eye. 'I would sell my place, Curlew Hall, if I were you, every stick and stone of it, rather than not pay.'

'The Hall *is* sold; or at least mortgaged to nearly its full value,' replied Stanhope hoarsely. 'As sure as the sun shines, I have almost a mind to go down among those devils, and let them tear me to pieces, as they did the—the other fellow. I could bear the pain, if it wasn't for the shame of it.—By-the-bye, I owe *you* a couple of ponies, old fellow; and here they are. I shouldn't like *you* to say, if anything were to happen to me, the same word you said of me just now; because we were at Eton together, and—— O Frank, old fellow, what an infernal fool I've been!'

The babel of the racecourse had once more broken forth. Beneath them, the brazen voices were shouting their offers against this and that in the race to come; the drums of the showmen were beating; the vendors of cards were plying their trade in tones as harsh as the corn-crake's; and the busy throng was all astir again about its business or its pleasure. But, for the moment, Herbert Stanhope's mind was far away in the 'playing-fields' of Eton. The tall elms swayed above him, as he lay on the grassy bank of the loved river, with his friend beside him, both boys without a care. It was not ten years ago; but what a gulf had he dug with his own hands between those days and this! What chances—nay, what certainties—had he flung away, until there was no chance left!

It is not to be imagined that Sporting Dawlish (who, after a short but severe struggle with himself, had pocketed the pair of 'ponies,' otherwise fifty pounds) was overcome by boyish reminiscences to the same extent as his friend; but he was not untouched by Stanhope's involuntary reference to that common portion of their past, and while he leaned over the balcony, and seemed to scan the surging crowd, he was stroking thoughtfully his still smooth and dimpled chin, and thinking within himself what help he could be to his old school-fellow.

'There was Sweden—he had heard men say—where a fellow might get out of the way for any amount of years, and live pretty jollily too, except that there was no Epsom nor Ascot. And if Stanhope went there, and waited, why, in time that Redmoor property, so near to Mosedale, would be worth any money. The lawyer fellow, Moffat, —and a deuced sharp old file too—had told him so himself, when he was staying at his friend's house that very summer;' and then, all of a sudden, another plan, begotten of that reminiscence, sprang, Minerva-like, full grown from Sporting Dawlish's quick brain. He turned.

Stanhope had risen, and was evidently about to

Digitized by Google

leave the box. 'Old fellow,' said he, with an attempt at a smile, 'I have made out matters to be rather worse than they really are; I daresay I *shall* pull round after all. I have plenty of money at the banker's to settle next week with all those at least who are likely to make themselves unpleasant. Those who know me—I am not hinting at that fifty pounds, Frank—that was a mere bagatelle, unfortunately, and would do me no good, and you were quite right to take it—those who know me, I say, will wait a little; and you may tell them yonder, if they ask, that they shall hear of me in a day or two.' And Stanhope nodded as though he would be back again shortly, and laid his fingers on the handle of the door.

'I say, Herby, you mustn't do *that*, you know,' said Dawlish, stepping hastily up to him—'you mustn't, indeed.'

'Mustn't do what, my good fellow?'

'Why, fight a duel with yourself, like Hervey did last year, just because he had made a bad book on the Leger. Your brains are far too good to be scattered that way; and besides, though I'm no parson, it ain't right, and it won't stop people's mouths neither; they will "say things" just the same, whether you are dead or alive, you know!'

'I never dreamed of any such folly as you hint at, Dawlish.—Come, let me go.'

'Not yet; I want to say a word or two to you first. I have thought of a way by which you can get out of this hole altogether; not a way that you would have chosen for yourself, perhaps, but, at all events, a far better one than blowing your brains out: one, too, that would seem pleasant to lots of men, let me tell you—very.'

'You make one quite pleased at being ruined, Dawlish,' said Stanhope bitterly. 'This seems so good a plan, that I wonder you have never taken advantage of it yourself.'

'I would if I could,' returned the other naively; 'that is,' he added hastily, 'I only did not try because I saw the thing was out of my reach.—Now, tell me how much money do you stand to lose by this last race?'

'Why, to make a clean breast of it, my dear fellow, I have made a pretty mess of it. I have lost nearly eighteen thousand pounds.'

'The devil you have! you must have "plunged" indeed.—Well, I have hit upon a scheme whereby you may pay your debts, and still put two-and-twenty thousand pounds in your pocket.'

'My handwriting is very peculiar,' said Stanhope gravely, 'and like no other man's that I am acquainted with; for I suppose you are suggesting a forgery.'

'Nay, my good fellow; I am perfectly serious. The advice I give you is, to marry an heiress.'

'Excellent!' said Stanhope grimly. 'I saw Lady Anne Golconda in the Duke's box, just before the race. They say she will have half a million. Her mother was so good as to nod to me just now. I'll step round and arrange the matter.'

'I am not speaking of any impossibility,' continued Dawlish. 'Just sit down, take a cigar, and be reasonable. I know of a girl both younger and prettier than the Golconda filly; a perfect lady (whatever her mamma may have been); and what is more to the point, one who will have forty thousand pounds *down—down*, sir, on the day of her wedding! You must marry Nelly Blackburn of Redcombe Manor.'

Stanhope took from his case an immense cigar, and lit it with great care and deliberation.

'The idea is first-rate, old fellow,' replied he quietly, 'but perfectly impracticable, as nobody should know better than yourself.'

The countenance of Mr Frank Dawlish, always of a fine fresh colour, began to glow like a peony. '*I!* How so? What the deuce do you mean?'

'I thought there had been a trial-race between you, that's all,' said Stanhope laughing; 'and my impression was (to repeat your own metaphor) that you had found the Blackburn filly so unapproachable that to enter for the matrimonial stakes with her was out of the question.'

'Upon my honour, Stanhope, I never proposed to the girl.'

'I know you didn't; but still there was a trial-race: it was on the terrace after dinner, the night we dined there last, and you left me, if you remember, rather suddenly—"particular business" at Tattersall's, you told me—the next day.'

'Well, perhaps there was,' said Dawlish ruefully. 'I confess I was a little spoony for a week or two; but we are talking of your affairs, and not of mine. I could not have been very deeply smitten, or I should not now be offering the young woman to your consideration. There are reasons to my disadvantage, which would not tell against you. I am not a swell like Herbert Stanhope. Nobody knows who my grandfather was, and indeed I don't know myself. My people made their money by a patent medicine; I am quite aware that I am called Pill Dawlish. It is only because I have a few thousands to lose to them, that I am tolerated by these fine gentlemen here. (I don't say by *you*, mind; you are not a born idiot, though you do happen to be well born.) Well, putting myself aside, then, in this matter—though I do not choose to be put aside by others, and there's not one of these insolent scoundrels who have shewn their hands to me so plainly, but shall lose when we come to play together'——

'My dear Frank, you astonish me!' interrupted Stanhope; 'I did not know you were capable of a revengeful feeling, and I do assure you, you have greatly exaggerated'——

'Never mind me, Stanhope,' replied the other imperiously, 'even though passion were to send me into a fit. The Dawlish pill is good for fits. I say this girl, Miss Ellen Blackburn (whom I very much esteem, let me tell you, and entertain no sort of grudge against), will not have the same objection to you as to me. That respectable savage, her male parent, is resolved to marry her to a noble swell—and you were a noble swell until within the last three-quarters of an hour. Up in Derbyshire, folks will not hear of the change in your circumstances for months.'

'What you recommend is not running very straight, eh, Frank? or, at all events, not riding in one's own colours?'

Sporting Dawlish shrugged his ample shoulders, thereby obliterating altogether his inch of neck. 'Not to pay one's debts of honour is not quite playing on the square, Stanhope, if you come to that,' said he coolly. 'If I thought you would ill-treat the girl, I swear I would not recommend her to you. But she will fare better with you than with almost any of these "landed" gentry, as they call themselves, whom you and I know. (Landed, begad, I know they landed me when I was but two and

Digitized by Google

twenty!) Yes, I own I should be disgusted to see her fall to one of them; but it is you I am thinking of mainly, old fellow; it is indeed. I know you are as proud as the devil; but you have so placed yourself, that some sort of humiliation must be endured. I daresay it will be disagreeable to you to have such a mother-in-law as Mrs Blackburn (I shall never forget her drinking the water out of her finger-glass after dinner—never), but then you will not have to marry *her*. Now, Miss Ellen'——

'My good fellow, you waste your breath!' exclaimed Stanhope suddenly. 'I agree with all you are about to say of that charming girl; but the fact is that the Blackburn filly has an engagement of her own, which her trainer knows nothing about. Ellen Blackburn is betrothed; for she gave that as the reason for rejecting me, when I proposed to her myself.'

Mr Frank Dawlish whistled long and loud, like a locomotive before entering a tunnel. 'Well, you must cut him out, that's all—I mean the other man, whoever he is.'

'No, Frank; that is impossible. I am not in a position to stick at trifles; but when a girl has once declined to listen to me'——

There was a knock at the door, and a stout middle-aged gentleman of an astute countenance made his way into the small box, which was only intended to accommodate two persons.

'Hollo, Stanhope!' said he sharply, 'you are the very man I wanted; and seeing Dawlish from below, I thought he could tell me where to find you. I wish to speak three words with you about business.'

'You must go out first, Sir Arthur, if you wish to be alone, for I am hanged if I can pass you,' said Dawlish laughing.

'Don't go, Frank,' said Stanhope quietly. 'I have no secrets from my friend here, so you can say whatever you please, Sir Arthur.'

'Well, it's a very simple matter,' said the newcomer, with an affectation of carelessness; 'but the fact is this, I have been rather hard hit to-day. I have won of you, it is true, but I have lost more to others; and some of them don't know me so well as you do, and want their money at once. It's a queer thing to offer, but since it will put a few fivers in your pocket, and because you and I are old friends, I have just come to say this. Instead of your paying me that five hundred pounds on settling-day, if you choose to make it four hundred and seventy-five pounds *at once*, I'll take it.'

'If you are in want of the money, Sir Arthur,' said Stanhope, taking out his well-furnished pocket-book, 'you are very welcome to what is your due, without any usurious discount. I had no idea your credit was so low with the fraternity down yonder to which you belong.' Every word was an icicle, and the air with which they were delivered was cutting as a north-east wind. 'I hope you find the notes correct; perhaps you had better reckon them again.'

'No, no: quite right, quite right,' stammered the recipient, confused, if not abashed. 'I only hope I have not inconvenienced you.'

'Not by taking the money,' said Stanhope, 'at all; but you inconvenience us very much by remaining in the box.'

'Just so, just so; two is company, and three is none, eh? Good-bye, then, and better luck to you next time.' And the two friends were once more left alone.

'This beats everything!' ejaculated Stanhope, his smothered fury at last exploding. 'Why, I myself gave that infernal scoundrel "time" only last Derby. To dun me like this, before even the money was due—why, what, in the devil's name, does it all mean?'

'It means simply this, my dear fellow, that you have already begun to be "blown upon," and that Sir Arthur guesses what has really happened. He believed you would bolt before settling-day, and that so firmly, that he was content to take twenty-five pounds off his little bill, if he could but get it paid at once.'

'No other man in England, who calls himself a gentleman, would have ventured on such a step,' cried Stanhope. 'What a shameless scoundrel!'

'Chut!' answered Dawlish contemptuously: 'we are all alike on the turf, as we are under it. It is only that Sir Arthur wears triple brass upon his forehead, as that fellow we read of at Eton did about his heart, who first went to sea in a cock-boat; and, at all events, Sir Arthur is a magnificent liar. I saw his book upon the Cup, and so far from losing, he stood to win five thousand pounds on *Gazeebo* at least, besides your own little contribution. His manner may be grosser, but his method is only what is to be expected from all of them—even the best of these fellows won't wait for their money for ever. Yours is not a case where one can afford to be squeamish about anybody's feelings. I tell you, you must marry Ellen Blackburn, and cut the other fellow out.'

'You talk of this cutting-out expedition,' observed Stanhope grimly, 'as though it were a cruise round the Isle of Wight.'

'And so it is. Nothing is easier for a man like you, of good birth, of good looks, and I will add, of good brains—except when you take a prejudice against a horse: you have got both the girl's parents on your side.'

'I think they did want me to marry her,' muttered Stanhope thoughtfully.

'Want you!—they were pushing her down your throat, as a conjurer forces a card upon his audience. You should always endeavour to make a young woman obedient to her parents. I daresay she has formed some objectionable attachment. Why, it's your duty, sir.'

'Is it?' said Stanhope absently.

'Of course it is. And then think of her forty thousand pounds *down!* Two-and-twenty thousand to live upon, after having satisfied these cormorants. Then, as for her not having been reared so delicately (although she is as true a gentlewoman as any in his Grace's box there), that is all the better. She will never miss the money; and having been brought up in habits of economy, will make what is left go further. There: I think I have placed the whole matter now in its proper light. Is it possible, my dear fellow, that you fail to see it?'

'I see my necessity,' answered Stanhope sighing; 'but in case I don't win the girl after all?'

'You can't fail to do it,' answered Dawlish energetically; 'I'll bet ten to one on you. In the meantime, pay those you must, and let the others wait for their money. If you are very hard pressed, you may refer them to me. I am not a sentimental beggar, you know, *now;* that Ascot business took the softness out of my heart as well as my head; but for the sake of old times, Herby, you may, if the worst comes to the worst, depend upon me for

Digitized by Google

four thousand.—No thanks, old fellow; but if you wish to oblige me, you will be at Curlew Hall by to-morrow night.'

THE RED RIVER AND THE FERTILE BELT.

ANOTHER great commercial sovereignty is about to be brought to an end. Another mighty and gigantic monopoly is to be broken up, and millions of acres of fair land brought into profitable cultivation. What the East India Company has already undergone, the Hudson's Bay Company is about to undergo, in principle if not in detail. The former was deprived of its trading monopoly thirty or forty years ago, and then (as a consequence of the formidable Mutiny) its sovereign or governing powers were taken away in 1858. There is no probability that the Hudson's Bay Company will be reduced to a level with its great predecessor, in being made simply the receiver of guaranteed dividends; it will still be a considerable landowner in North America; but there will be an end put to that pernicious state of things whereby vast regions of the earth's surface have purposely been kept out of cultivation, in order that fur-bearing animals may be plentiful.

What a halo of romance there is around this Hudson's Bay Company! It reminds us of the arctic expeditions of Franklin, Richardson, Back, Rae, and other daring spirits, which the Company (to its great credit be it said) so often assisted with men and stores. It reminds us of the old days of the fur-hunters and the trappers, when the Canadian voyageurs came down the Ottawa to Montreal with the year's accumulation of furs, and when Moore's 'Canadian Boat-song' *might* have been sung, whether it was or not. And it reminds us, too, of glorious old Leatherstocking and other fur-hunting heroes of Fenimore Cooper's novels. Often have the hunters and the beavers, and the Company and their territories, been incidentally noticed in this *Journal;* but it may be useful just to group together a few facts, sufficient to shew how the present improved prospect has come about.

In the time of James I., Hudson the navigator visited the bay which has ever since been known by his name; and that is nearly all that is recorded concerning him. Half a century or so later (about 1670), Prince Rupert equipped an expedition to Hudson's Bay, built Fort Charles on the shores, and asked for a charter of incorporation. This was granted; and never surely was a wilder grant based on so slender a ground. Charles II. had no sovereign rights whatever in that inhospitable part of America; and yet he gave to the adventurers, under the title of the 'Governor and Company of Adventurers trading to Hudson's Bay,' the most extravagant powers. They were to enjoy 'the sole trade and commerce of all those seas, straits, bays, rivers, lakes, creeks, and sounds which are not now actually possessed by any of our subjects, or by the subjects of any other Christian prince or state.' The grant was vicious in legality, because Charles had no rightful power over those regions; and it was indefinite in extent, because no one then knew how large is the area drained by the rivers which flow into Hudson's Bay. The adventurers, doubtful whether the royal charter was strong enough in itself, succeeded in obtaining an act of parliament in 1690, confirming the privileges, but only for a term of years. That act expired in 1697, and has never been renewed. The Company has boldly rested on its royal charter, and has fought several successive generations of lawyers as to its validity.

Until about the middle of the last century, the Company's operations in no place extended more than a hundred miles from the shores of the bay. The furs were brought by hunters and trappers to the forts or factories, where they were (not sold for money, but) bartered in exchange for articles of English manufacture; and it is abundantly evident that the Company made enormous profits out of this bartering. In 1763, when British superseded French sovereignty in Canada, all that had been French was given up to George III.; and it was tacitly assumed that the vast territories around and beyond the great lakes were to be his also. It was deemed quite a legitimate thing that a body of Canadian adventurers, called the North-west Company, should establish a fur-trading system between Lake Superior and the Rocky Mountains; and this they did in 1783. Then it was, however, that the Hudson's Bay Company startled everybody with a bold claim to *all* the territory included between the great lakes, Hudson's Bay, and the Rocky Mountains. In England, the Company baffled the lawyers; in America, it fought its battle in rougher ways. The dividends from 1690 to 1783 had averaged sixty or seventy per cent.; the shareholders did not like so rich a preserve to be poached upon by outsiders; and consequently they declared something like war against the North-west men. This warfare continued nearly forty years. We are told that 'the whole resources of the Company were put forth to compel the North-west traders to abandon their project and retire from the contest. Bloody contests ensued. The country was the theatre of scenes of brutal violence on the part of white men, which matched, if they did not surpass in atrocity and ruthlessness, the horrid scenes of slaughter in which the Indians gloried. The warfare between the rival traders was at its height in 1811. In one pitched battle twenty-two persons were slain. In 1821, exhausted by their barbarous rivalries, the two companies resolved to forget ancient feuds, and form a new association, in which both might prosecute the desired ends for their mutual advantage.'

The 'desired ends.' What were these ends? To keep out emigrants, settlers, colonists of all kinds, in order that all trade with the natives, and all profits from fur-bearing animals, might come to the shareholders of the companies. The two companies were equally bitten with this fault; and it became even stronger after the amalgamation than before.

Most persons have heard of the Red River Settlement. The half century or so of its existence has illustrated in a striking degree the plight of a colony set down in such a land of monopoly. In 1811, the Earl of Selkirk, a very large shareholder in the Hudson's Bay Company, succeeded in obtaining from the Company a grant of sixteen thousand square miles of territory, in a region westward of Lake Superior; this was to enable him to colonise the land with destitute Scotchmen and their families, as a means of bettering their condition. But although he succeeded by his voting power in influencing the one Company, he could not control

Digitized by Google

the other. The North-west Company traders were bitterly hostile to the Scotch settlers, who were driven to great shifts in order to preserve life, and were often driven to seek safety in flight. When the two companies coalesced, the settlers believed that happier times were in store for them; there was less barbarity, it is true; but the united Company sought more strenuously than ever to retain sovereign power over the whole of the vast territory north and west of the great lakes. The Earl of Selkirk died in 1836; and the Company gave eighty-four thousand pounds to his heirs, to buy back the Red River Settlement. This was bad for the settlers; seeing that free enterprise is quite inconsistent with the plan on which the fur-hunting Company has been accustomed to act. Throughout the subsequent third of a century, the settlers have been constantly complaining that the Company's servants exercised a despotic authority over them; that the judicial tribunals were partial and incompetent; that the conditions under which the settlement was made have been violated; that freedom of trade did not exist; that they were forced to pay taxes, in the imposition of which they had no voice; that they were not allowed to import goods, except under the control and in the ships of the Company; and that letters were often tampered with under an odious system of espionage.

A new interest has lately been brought into the question. The British North American colonies became one confederation in 1867, by acts of the several legislatures; and it is now a matter of great commercial and national importance that there should be a good line of travel formed from these confederated colonies to British Columbia and Vancouver, across the Rocky Mountains. Unless this is done, our Yankee cousins will obtain almost complete and permanent command of the Pacific coast of North America, with all the advantages of trade to China, Japan, and the Malayan Archipelago. It has now been clearly ascertained that canals or railways, or both, can be formed. There is a tract of very rich soil called the *Fertile Belt*, stretching no less than one thousand miles long by two hundred wide, in the very route between Lake Superior and British Columbia: well fitted for a railway, and bounded on either side by luxurious corn and agricultural land. Red River Settlement is in immediate contiguity to this Fertile Belt, and would share in its prosperity. Those who have read the accounts given by Captain Palliser, Professor Hind, and Viscount Milton of this Fertile Belt, cannot but earnestly wish that such a favoured region were brought under cultivation, and made the home of a numerous and flourishing people.

But this is well-nigh impossible, so long as the region belongs to a fur-hunting Company. The land so well fitted for human beings is improvidently wasted while left to beavers and raccoons, musquash and otter, nutria and chinchilla. The Red River, the Assiniboine, and the Saskatchewan will assuredly become the centre of a mighty civilisation by-and-by. Viscount Milton, and his companion, Dr Cheadle, having no other interest than that of truth to subserve, tell us that 'from Red River to the Rocky Mountains, along the banks of the Assiniboine and the fertile belt of the Saskatchewan, at least sixty millions of acres of the richest soil lie ready for the farmer, when he shall be allowed to enter in and possess it. This glorious country, capable of sustaining an enormous population, lies utterly useless, except for the support of a few Indians, and the enrichment of the shareholders of the Last Great Monopoly.'

It is no part of our present purpose to comment on the financial affairs of the Company. The territory, not the Company, is the point of interest to the public. Fortunately, the crown, a few years ago, refused to renew the fur-trading privileges in Vancouver and British Columbia; and since then, these colonies have prospered greatly. Many of the more experienced of the Hudson's Bay directors and shareholders began to see clearly that colonisation and free trading would inevitably come before long in other portions of the territory. The Company, in 1863, claimed fourteen hundred thousand square miles, or eight hundred and ninety-six million acres of territory, watered by fourteen hundred miles of lakes and navigable rivers; and on the strength of this magnificent claim (more than one hundred and fifty times the area of Great Britain), obtained a large increase of capital from new shareholders—converting the enterprise, in fact, into a kind of Limited Liability Company. Whether the new shareholders paid too dearly for their venture, is a point with which we are not concerned.

The state of the wide-spreading Hudson's Bay Territories, then, within the last two or three years, has been this. In the first place, Vancouver Island and British Columbia have become a flourishing colony, busy with gold-digging, corn-cultivation, and commercial enterprise, and never likely again to be handed over to beaver-trappers and fur-traders. Then the British North-American colonies on the Atlantic coast—Upper and Lower Canada, New Brunswick, Nova Scotia, &c.—having formed a confederation for mutual advantage, feel now a stronger incentive than ever to become a firm and flourishing community, constantly recruited with active and hard-handed emigrants from the mother-country. Next comes the fact, that England has long felt that the ten thousand residents at Red River Settlement have had a hard and unjust lot to bear, hemmed in on every side by a commercial body whose interest lay in regarding fur-bearing animals as more important than free colonists. Again, reliable travellers have clearly ascertained that the almost unpeopled region beyond and north-west of the Canadian lakes, now wholly owned (or at anyrate claimed) by the Company, contains the magnificent Fertile Belt, the potential food-granary for millions of people. In the next place, the United States' territories of Illinois and Minnesota, the very heart and centre of corn-growing, are so near to Red River, that the settlers will have a strong temptation to become members of the great Republic, and thus introduce political complications, if they are much longer neglected by the British government. Then comes the consideration, that the British colonies on the Pacific coast have a strong desire to be placed in easy communication with those on the Atlantic coast; this can only be done by means of good roads, canals, or railways; it is known that such channels of travel can be made through the whole breadth of America in land belonging to the British crown; and it is urgently felt that the interests of no private Company ought to be allowed to stand in the way of so magnificent a future. Lastly, the Hudson's Bay property has passed, to

Digitized by Google

some degree, into the hands of new owners, naturally desirous of retaining such rights and privileges as can be shewn to be legally possessed, but a good deal shorn of the old-fashioned fur-hunting exclusiveness.

Out of these multiplied considerations a new state of things has arisen. The Company is willing to part with hundreds of millions of acres now uncultivated and almost unpeopled, upon equitable terms. Canada, backed up by the other colonies, is willing to encourage in every possible way settlement and cultivation in the fertile portion of this region. The imperial government is willing to assist, in its own cautious way, in establishing and recognising a free and busy colony there. It will be hard indeed if something good does not come out of all this. A 'Rupert's Land Act' was passed in 1868, empowering the crown to obtain territory from the Hudson's Bay Company, and to add it to the dominion of Canada. Based upon this act, a formal offer has been made by the government to the Company: so many hundred thousand pounds in cash, and so many million acres in undisputed ownership, in return for a surrender of all the other territory now possessed by the Company. The result must be recorded in other pages than these; but that the 'beginning of the end,' in regard to the long-continued neglect of that region, is coming, we may regard as almost certain. Let us remember that it was Sir George Simpson himself, the highest representative of the Company over there, who used these glowing words: 'The soil of the Red River Settlement is a black mould of considerable depth, which, when first tilled, produces extraordinary crops, as much on some occasions as forty returns of wheat; and even after twenty successive years of cultivation, without the relief of manure or of fallow or of green crop, it still yields from fifteen to twenty-five bushels an acre. The wheat produced is plump and heavy. There are also large quantities of grain of all kinds, besides beef, mutton, pork, butter, cheese, and wool in abundance.' All that we know of the Red River and Lake Winnipeg regions seems to point to an analogy with the land noticed in Douglas Jerrold's sparkling words: 'Tickle it with a hoe, and it will laugh with harvest.'

AN OPTICAL DELUSION.

'I TELL you what 'tis, Pen, you've just fallen in luck's way—that's where it is.'

I had spent the evening with him; we had supped. Penuel Crossley, my old schoolfellow, the dunderheadedest boy in the school, without a shilling's-worth of brains, or sixpence-worth of expectations, had, somehow or other, managed to make a good match a year ago, on the strength of which he had just taken the Manor-house in our little village of Copseford, and settled down in dignified ease as a country 'squire,' with a four-wheeler of his own; whilst I, who used to write half his exercises for him, was still working hard for a living, and trudging it on foot. I didn't grudge him his prosperity, but I wanted him at least to admit that it came through no effort of his own—that it was, in fact, nothing but luck.

'Luck!' cried Crossley, a little contemptuously, I thought—'luck! do you say? Look you here, my good fellow; my luck is just this: it is *all my eye*—that's what my luck is.'

'Nonsense,' I retorted. 'Do you mean to tell me that you've worked for the money you spend in paying for this place? Do you mean to say that your gold is the fruit of your brains or your hands? That it is good money, warm from the sweat of your brow, or that'——

'Now, don't,' he interrupted, 'don't I tell you it's all my eye?'

'It's not all my eye,' I continued, 'if you'——

'Hush! I didn't say 'twas all your eye; I said it was all *mine*. Look at me.'

I looked at him. I saw through the wreathing clouds of smoke with which he surrounded himself, a great, tall, handsome, hulking fellow, with close curly hair, like a Roman gladiator, and a pair of very handsome eyes, a little constrained perhaps in their expression, partly, as I judged from school antecedents, because he hadn't much to express, and partly from his being a little far-sighted. I knew he could not see objects close to him without peculiar spectacles.

'You don't see anything wrong about me, then?' he asked, when I had concluded my scrutiny.

No, I didn't. He was toying with a lead-pencil which was in his hand when he asked the question.

'Nor yet now?' and he deliberately took the lead-pencil, and tapped it against his left eye—right on the eyeball—and played a little tattoo upon it. 'Nor yet now?' he said.

'Pen, what *do* you mean?' I cried aghast.

'Just this: I tell you it's all my eye. It's only a glass one, but a capital bit of window-glass it is—as good as most window-glass you'll find in London—too dark to see through, but it keeps the draught out.' And he turned away for a minute, whisked his eye out, wiped it with his handkerchief, and then, covering up his sightless cavity, brought the eye to me to examine. It was so thin one could blow it away with a breath, and it looked like a fragile shell of porcelain.

'This is my luck,' he said, when he had inserted his eye again. 'It is my eye—all my eye—and nothing else. If you want to know how, just light up another Manila, and listen.'

'But which is the artificial eye?' I asked, for I declare I could not tell as I looked at him.

'Left,' said Pen, tapping it affectionately. ''Tisn't bad, eh? There are only three people know it beside yourself—namely, the optician, my father-in-law, and my wife, so I've kept my secret pretty well; and you need not go and tell everybody about Copseford that the new squire has a game eye! Twopenny-worth of gunpowder did it, at school, after you left, so it's no wonder you didn't know. I had loaded a small brass cannon which wouldn't fire; and looking down the muzzle to see why it wouldn't go off, the charge went in, and my eye went out. I left school—blown out of it, as it were; and having recovered from the accident, and had my eye replaced with this very artistic piece of china-ware, I went home to Stepminster, to study medicine under my father. My father, although called Dr Crossley by courtesy, was not a properly qualified doctor of medicine; he was, strictly speaking, a "medical man;" but folks in our town were never very particular about what

Digitized by Google

letters a professed surgeon wrote after his name, so long as he could write enough of them. Dr Crossley was Medical Inspector to the Local Board of Health (unkind persons called him Inspector of Nuisances), and had little or no private practice. It was his idea that I should keep the loss of my eye a profound secret, because he wished gradually to work me into his own position, for which his failing health was rapidly incapacitating him. He had some notion the Board might fancy a man could not "inspect" enough for the post with one eye. For my part I should have thought a nose the most needful organ for an inspector of nuisances; and I have found one eye quite enough to see through a Board and all their wooden ways. After a few years, I began to relieve my father of his duties, until, though he still nominally held the position of inspector, the whole of the work was done by me. As it was satisfactorily done, the Board made no difficulty about transferring the appointment to me, on my father's retirement, which only shortly preceded his death. One member of the Board in particular complimented me very highly on my assiduity in the discharge of the duties of the office. "He is only a young man, sir," he said, addressing the chairman; "but he has an eye like a hawk." He was right. I had *an* eye. Such was the energy with which I worked to put down nuisances, that the mere mention of my eye was almost sufficient to get them removed. A person whose neighbour kept pigs in his backyard had simply to say to that neighbour: "Look out; the inspector has his eye upon you," and there was really no need for my interference. Such was the beautiful respect and awe in which the townsfolk held my eye. But not one of them knew the *singular* meaning which attached to being under my eye—not a soul of them knew he was telling the truth by accident.

'Some time before I was appointed inspector, a wealthy old gentleman, by the name of Tredgold, a widower, had settled in Stepminster. Some said he was a retired Liverpool merchant, others that he was a retired London broker. People hardly knew what he was, or where he had come from, or what for. He was not very communicative on these points; but it was agreed that he was rich, and it was indisputable that he had a very pretty only daughter, Laura. He therefore became an object of interest to parents of marriageable young men in Stepminster; whilst Miss Tredgold became a ditto ditto to those young men themselves. The Tredgolds were invited out a good deal. They were not at all proud; they appeared fond of society; they accepted those invitations; and in turn, their hosts became their guests. They were very much liked, I really believe for their own sakes, more than on account of Mr Tredgold's wealth. Mr Tredgold was excellent company; had seen a great deal of the world, could make himself at home in any society, and, what is more, could make every one else feel so too, if not a little too much so at times, for he was somewhat eccentric. As for Laura Tredgold, there could not be two opinions about her: she had the blackest eyes, the prettiest face, and the best fortune of any girl in Stepminster; more, she was known to be good tempered, unassuming, and, in a word, nice.

'Now, although the Tredgolds had been settled for four years in our town, and notwithstanding one after another of the best and most well-to-do of our young gentlemen, young professional men, and young tradesmen had laid continual siege to her heart during that time, Miss Tredgold was still disengaged. She referred all suitors to her father, who professed to be flattered by their attentions, but told each of them, with never-failing affability, "he had other intentions respecting his daughter's future." This was his continual reply to all applications—"he had other intentions respecting his daughter's future;" and he never varied a word, but delivered it with equal good-humour and courtesy in every case.

'Stepminster was puzzled as to what those intentions could be. It was demonstrable that Miss Tredgold was not engaged elsewhere. They never received visitors from a distance; and more than one disappointed suitor ascertained, through his servants, from the Tredgolds' servants, that Miss Tredgold was actually free still.

'I became acquainted with the family through my connection with a private musical society for the practice of vocal and instrumental chamber music. The society had been founded very recently by Mr Tredgold, himself no mean amateur on the double-bass. We met at members' houses alternately, and managed to spend some of the pleasantest evenings I can call to mind in this way. My own part in the performances was chiefly confined to singing tenor. Laura Tredgold played the piano or organ with real nervous feeling, besides which she had a very respectable soprano voice. My great interest in the study and practice of music led Mr Tredgold to invite me to his house rather frequently, to try over some of Mendelssohn's trios with Laura and himself, until I became a constant visitor, always welcomed to their home and table.

'It went on like this for a good bit, and the trios frequently came down to duets between Miss Tredgold and me, whilst her father would add a double-bass *obligato* to her piano accompaniment. At last I grew very miserable. I began to feel that I loved Laura Tredgold, and that my position as a miserable one-eyed inspector of nuisances was an insuperable barrier to telling her so, and much less her affable old father rasping away at his double-bass in happy unconsciousness of my feelings. I tried to stifle these feelings, and to look upon our acquaintance simply in the light of a musical one. I am afraid the very effort I made to hide them must have in some way betrayed them to Laura, for I became impressed with a growing conviction that she knew what I felt, and that her own inclinations were at least not unfavourable towards me. I noticed, or thought I did, that when I entered the room a faint blush would overspread her cheek—that she would look round and single out mine from among the other faces at the meetings of the musical society, and that having found it, her eyes would stay restfully and satisfied on mine for a moment—her deep lustrous dark eyes—before turning with greater unconcern upon the rest. And when she parted from me of an evening, I remember how she would raise those eyes to mine with a gentle expression that made me dizzy to think about as I would run out of the house and reflect on my one-eyed-ness. Laura had speaking eyes, as folks say. They were not bashful eyes, but mild and gentle; and when I looked into their depths, they seemed to flash back already

Digitized by Google

a favourable answer to what I longed to, yet dared not, ask. That the longer I reflected on the social inequality between my position and hers, the more resolved I became at least to try my fate, and hear at worst my rejection, will be readily understood by the lad who has read his first love-story. It was not so much this—it was my eye. I dared not tell her, lest, if she rejected me, it should get bruited about Stepminster that the Board had a one-eyed inspector. That would be ruin. It was clear to me I must keep this secret locked up in my own—eyelid. But suppose I should be married with my glass eye, and never tell my wife? I should be found out? There would be an end to all confidence, for I should be a wretched deceiver; and would it not be obtaining a wife and a fortune under false pretences?

'However, candidly, I only expected rejection of my suit, after the experience of so many more eligible young men than myself. And should I, for this, put my eye in any one's power, and lose my place as inspector? No. I would risk keeping the secret, and know my fate first. I could easily tell her afterwards. Excuse my not dwelling on the terms in which I laid bare the state of my feelings to Laura Tredgold. It is neither here nor there to the story.

"I have loved you, Mr Crossley," she said with emotion, "and only you. I have never loved another. Yet I fear I can never be yours. You do not know—not know," she continued, sobbing on my shoulder, "what brought us to Stepminster. No; you don't know. Yet, if you will ask my father, first, for his consent to your suit, and next to tell you what brought us to Stepminster; if his answer to the first is favourable to your desire, and if his answer to the second is satisfactory to your mind, I will be your wife."

'This seemed queer to me. What did I care what brought them to Stepminster? Absolutely nothing.

'Whilst we had been talking—Laura and I—the old gentleman had been up-stairs, to rummage out some new trios for our next practice.

"Lovely things!" said Mr Tredgold, patting them affectionately.

"Could I have a little conversation with you, Mr Tredgold, in private?"

"Oh, nonsense! Not now. I know what you've got to say—or I guess. That's all my eye, sir," he said severely: "we are going to practice now. Oh, they are lovely things!" and he took an enthusiastic rasp at his double-bass. "We will talk, if you like, after supper, when Laura goes to bed. Now, then—one, two, three."

'And off we went into chamber music. It was a very constrained affair, after what I knew, and what Laura knew, and what we both judged, I feel sure, that he seemed to know was coming. For three blessed hours we kept this up; then supper came, which I thought never would end. At last, Laura kissed her father, and wishing me good-night, resting her full dark eyes on mine with a new and happier meaning in them, retired.

"Well, Mr Crossley," the old gentleman began, when he heard Laura's footstep die away up the stairs—"well, sir, I expect I know what you have to say. I may as well be candid, and tell you I am not taken by surprise. I have had a good many young men here, and I have observed their attentions to my daughter have naturally resulted in a little conversation with me. I have also watched you, and had no doubt your attentions would result similarly in a few words in private with me. Now, let us have these few words short and to the purpose. You are come to tell me you love my daughter, Laura?"

'This was a most unpromising beginning, certainly. It is very annoying to get the ground cut from under your feet with this bewildering candour.

"I certainly was about to say, sir, that I love your daughter; that I love her truly and disinterestedly; and that in making this confession, I have not an eye to"——

"You have *not* an eye to?" echoed Mr Tredgold, emphasising the "not" in a very unpleasant manner.

"I mean, sir, I am not in the slightest degree influenced by pecuniary considerations, knowing, though I do, that Miss Tredgold's position is very far above mine, from a pecuniary point of view. In fact, a reflection on this very inequality has for a long time prevented my declaring the state of my feelings to Miss Tredgold herself, notwithstanding I had reason to hope that it would be reciprocated on her part."

"Well, sir, I can only say I have other intentions respecting my daughter's future"——

'Mr Tredgold coughed. The very words. It was all over, I thought.

"Than pecuniary ones," the old gentleman added, after a slight pause. "They are a very one-eyed sort of consideration, sir, after all."

'I acquiesced, but I wished he would not allude to partial blindness even in that metaphorical manner.

"But," Mr Tredgold continued, "having seen a good deal of you for some time past, I am not disposed to think you a man influenced by considerations of that kind. Have you mentioned your sentiments to Miss Tredgold? Yes? And they are returned? Yes? In that case you may consider the matter settled, so far as my consent is concerned. I am simply anxious for her happiness. No doubt, you wonder at my ready assent in your case to a suit which I have refused a number of gentlemen in much better positions than your own? I have my own reasons. I do not want money for my daughter. I can give her as much as I think it good for any young pair to have."

"What a gem of a father-in-law!" I thought.

"The fact is, I am a student, sir," he went on—"a humble one, it is true, of individual character as delineated in the human eye."

'I began to feel very particularly uncomfortable.

"At one time I studied phrenology. What is moral character? says the phrenologist. Moral character, he replies, is bumps. I tried nosology. What is the index of intelligence? asks the nosologist. It is your nose. He knows nothing. They are all wrong together. Where do I look to read the moral and perceptive faculties of the human mind?—whither do I turn to seek for infallible indications that my confidence shall not be misplaced? To the eye, sir. The eye is the window of the soul. That is where a man's character is written. Depend upon it, it is all in your eye."

'Really, this was very disagreeable. I was so perplexed I could not tell what to do. It flashed through my mind that I had better go down on my

Digitized by Google

knees, and at once avow myself a wretched one-eyed impostor, regardless of all consequences to the inspectorship. But this is weakness, I thought. Should I give up the secret of so many years' standing, and lose Laura and the inspectorship at one fell swoop? No. With a powerful effort, I controlled my feelings.

"I have read your eyes," said Mr Tredgold, "and I must say they impress me with a favourable opinion of the candour and frankness of your disposition."

'What a guilty being I felt!

"A very favourable opinion, sir. And I will say I have confidence in you. Plainly, I like you; and I would rather have you for a son-in-law than any other young gentleman I know; and I believe you will make Laura a good husband."

'For very shame, I could hardly find words suitably to express my acknowledgments of his good opinion; but I blurted out something, and the old gentleman shook me cordially by the hand, and wished me good-night.

"I don't know if you will think me unduly inquisitive," I said, "but I should like to ask you one question before I go."

"Not at all. You probably mean as to the amount of the settlement"——

"No, no," I interrupted, colouring. "I assure you that was furthest from my thoughts. It is on a very different subject. Your daughter wished me to ask why you came to Stepminster?"

'Mr Tredgold looked at me keenly for a moment, then he replied, with some abruptness: "Change of air.—Good-night."

'The manner in which he said "good-night" did not admit of further conversation.

'Why had Laura insisted on my asking this question? Surely not to elicit such an unsatisfactory piece of information as this. I fancied I heard the old gentleman chuckle to himself as he shut the street-door on me.

'Could there be any reason worth keeping secret connected with Mr Tredgold's coming to Stepminster? Had he done anything wrong? Did he want to avoid anything, or anybody? It did not look like it, for he had taken no pains to live a quiet retiring life in the town. Again, *why* did Laura wish me to know the reason that had brought them here? It mattered nothing to me, that I could see. I loved Laura Tredgold; that was enough for me.

'Then I thought about my eye. Could I tell them, after deceiving them hitherto? The worst of the first step in deception is, it makes the others so easy. I did not see that I could. Besides, surely it was no crime to have a glass eye: it was my misfortune. Why should I go and tell people: "Look here; this is a glass eye," when they liked it better for believing it to be real? It would be cruel—heartless. Besides, Laura did not love me for my eye. No; I would not tell her yet, I determined—I would rather she should find it out. Perhaps I would lead her on gently to the discovery, and so break the blow, and be able to say: "La! bless me—what! didn't you know it?" That would be the preferable course.

'When I next saw Laura, she was very eager to know if her father had told me anything about the reason which brought them to settle in Stepminster. I mentioned his reply, and it caused her a good deal of apparent uneasiness.

"He ought to have told you that, Pen. I don't think I ought to be your wife till you know."

'I protested my utter indifference to the cause that brought them here, whatever it might be.

"But, Pen," she said, plucking at her dress—"O dear, you ought to know it. I wish I could tell you. I am sure you will regard me with an eye of scorn by-and-by, when you find I have kept something from you." The tears were coming up in her beautiful eyes as she looked at me.

'No, I said; nothing would ever make me change my opinion of her, as the dearest darling—— Well, we will leave the epithets. In fact, as I thought of my secret, which I had not disclosed, it was rather a relief to me that she should *not* tell me why they came to Stepminster. It encouraged and excused me, as it were, for my own reserve. But I would much have preferred, though, she should have said "eyes of scorn," instead of *an* eye. Everybody seemed to talk about *an* eye to me in a way which seemed quite personal.

"Are you sure, Pen, you will forgive me, whatever you learn about me in the future?"

"Certain," I said.

'Well, in course of time, we were married. I still maintained my office as inspector. No one ever had such a wife as mine—the best-tempered and most lovable creature, I really believe, in the world. Our congeniality of feeling was something wonderful. Even down to little matters of the most trivial character in likes and dislikes, there was perfect unanimity between us. It may seem a very absurd instance to give of this unanimity, it is so trifling. But I have always had a great antipathy to flies. I very nearly exposed my secret on one occasion before the Board, owing to flies. It was autumn, and a fly had been buzzing about my face, stinging me for a long time whilst reading a Report. Then I missed him; I thought he was gone. Meantime, that fly was intently engaged in my glass eye. It was a wonder the Board never noticed it; if they had, I should have been found out. At home, I have devoted a great deal of my leisure, in the fly-season, to devising traps and poisonous sweetmeats for them, and I have fly-cages in every room. I was almost afraid Laura would think this suspicious; but no, she never did. Her skin is particularly delicate and sensitive. Laura did not like flies; I was glad of that.

'There was one thing, I must say, caused me no little annoyance about Laura. It was only a little thing in itself, and no doubt I ought to have been above feeling hurt at such a trifle. Still, ever so little a thing, when it's in your eye, for instance, as a speck of dust, does cause a great deal of annoyance. With the congeniality of feeling between us, I certainly did feel hurt that Laura should keep her desk constantly and consistently locked from me. I wanted some ink one day. I knew she had some in her desk, and asked for the keys. The way she hustled about to open that desk herself, and the excuses she made to prevent my going to it, were a masterpiece of female diplomacy. It was not that I wanted to go to her desk, so much as that I didn't like being locked away from it. It preyed on my mind when I considered the mutual confidence that should subsist between man and wife. To be sure, I had not told her about my glass eye—that was the only secret I had from Laura—but then she didn't know that, and she at least believed

Digitized by Google

I had withheld nothing whatsoever from her, so that there was no excuse for her withholding anything from me. Another thing to do with the desk was this: Laura had received at least two letters since our marriage, not in female handwriting, which she very artfully cajoled and persuaded me out of wanting to see. I knew they were in the desk. And there was a certain neat little parcel, "a present," she said, "from a friend." *That* went into the desk too. But why this mystery? A harmless deception on my part was excusable, but I could not bear deception in other people.

'By-and-by, from this very little seed, there grew up a sort of constraint between us, until Laura, observing it, at last threw me her keys, and calling me a "bad Penny" (a playful title of reproach), bade me examine her desk myself, and not be suspicious about nothing. Then I felt ashamed of myself, and wouldn't do it. Then Laura insisted on turning it out before my eyes, and shewing me its contents. I would not read the letters, but I saw a little box with a brooch in it, which I much doubted being the same she had received in the packet alluded to. It was all very well her calling me a "horrid Bluebeard," but I knew the handwriting on the paper enclosing it was not the same, for I distinctly remembered that writing.

'One day, coming home tired after a fagging morning's work at inspecting, I found my household in great commotion. One of my female domestics was crying, and on my entering the house, she began: "Oh, if you please, sir, missus have fell."

"Fell? fell?" I asked in amazement. "What do you mean, girl?"

"Fell, sir; fell down-stairs and hurt herself."

"Where is she?" I asked, pushing past her to seek my wife.

"I hope you 'll bear up, sir—but missus have gone. Gone, sir—left the house," the servant added, seeing my look of incredulity. "I was up-stairs, cleanin' of myself for dinner," the girl continued, "when I heard somethin' fall on the stairs, and I heard missus scream. I went and helped her up, for she had fell and hurt her forehead. She went to her room cryin' very much, and wouldn't let us do nothin' for her. She put on her things, sir, and went out almost directly afterwards, sayin' she had left a note for you, sir. She was sobbin' very much when she left."

'Seriously agitated about my wife, I ran up-stairs, and found on Laura's dressing-table the following note:

'DEAREST PEN—Forgive my leaving you thus. I have suffered much from deceiving you so long, but never thought it would come to this. Do not follow me; my peace depends upon it. You will soon know all. My father will know of my going. LAURA.

'Cool, upon my word. Was this the woman whom I had loved, and cherished, and adored, and kept no secret from?—that is, nothing worth mentioning—to go and own to a systematic course of deception? And her father a base accomplice too! he knew of her going. Clasping my hands frantically to my forehead, "O woman, woman! look upon the wreck you have made!" I exclaimed. The emotion was too powerful, for my glass eye fell out with the force of the blow, and shivered itself to fragments at my feet. On second thoughts, I was glad she could *not* look upon the wreck she had made.

'Yet, could I believe Laura false? Then the demon of jealousy whispered to me about the letters, and the "present from a friend." I hardly dared to think about the agitation she had invariably betrayed when I had referred to this subject. At least, I would go to her father, Mr Tredgold—go and wring the truth from him, deceitful impostor that he was—and know the worst.

'But stay. It was utterly impossible to go as I was—without my eye. I had been accustomed to keep a spare eye against emergencies in my desk at the inspector's office. I had broken that a month ago, and though I had written for a new one to be addressed to the office, it had not yet arrived. Delay was agonising; but I could certainly do nothing till I had been to London and got my vision repaired.

'Holding my handkerchief to my face, I set off immediately to the railway station, telling all the inquiring friends who stopped me, that something had blown in my eye (this was no fib, for gunpowder had, years before!). Arrived there, I eagerly inquired if my wife had been seen to leave. She had, the station-master told me; she had in fact left by the previous train, with a ticket for London—apparently much distressed in mind—dressed in travelling costume, with a thick black veil on. Evidently for the purpose of avoiding recognition as much as possible, I decided. I was therefore on the very road to overtake her, while, as my train was express, I should be in London within an hour of the time at which she could arrive.

'On reaching London, after a few unsuccessful inquiries at the Waterloo terminus respecting a lady answering the description I gave, I told a cabman to drive me to Mr Bernotti's, the optician's in Regent Street.

"Will you walk into a private room, and wait, sir, for a few minutes? Mr Bernotti is engaged just now."

However, presently, Mr Bernotti appeared. A pleasant little man, with twinkling eyes, a buoyant disposition, and a cork-leg, which always seemed restive, and not properly broken in—it never went well with the other leg; it was too fast for it; and it appeared to impress the natural leg with a hopeless conviction of inferiority.

'After profuse apologies for keeping me waiting, and several conciliatory flourishes which his cork-leg seemed to get up independently of him, and entirely on its own account, Mr Bernotti said: "This is your size, I see by my books—No. 193 Hazel"—taking one from a case of several hundreds—"and a very neat eye it is. Shall I put you up an 'off-eye' for spare use? Thank you, sir.—Am I doing pretty well in eyes? Thank you, yes; nothing to complain of.—You would hardly have thought it? No; probably not—few persons would, in fact. You see that the triumph of art is so perfect, one does not really know who has glass eyes and who has not. Scores of people, in every town, wear them who are never suspected of such a thing, the illusion is so perfect. Yours, I am proud to own, is a very successful case. There are others no less so. Among the list of persons who have obtained

Digitized by Google

respectable damages from various railway companies for the loss of an eye, and even pensions from government, I could point to at least a few instances in which the eye so damaged has been one of my make. No one has been the wiser. In fact, only the other day, I was deceived myself. A French gentleman was introduced to me by a friend as requiring an eye. This is his eye, sir—No. 81 Gray. Well, sir, after carefully matching the artificial eye by the real one, I directed his attention to the extreme lightness of our manufacture, and begged him to hold it up to the light and observe its transparency. If you will believe me, sir, that gentleman's other eye, which I took for real, was glass. He was blind as a bat. I never knew it till he told me."

'With renewed apologies, Mr Bernotti followed his leg, which flourished off, down-stairs. Having wished him good-afternoon, I set out to prosecute my search after my wife.

'I need not detail the particular steps by which I sought to carry out this purpose; but I may state that I drove to every metropolitan railway station, and made most careful inquiries. Next day, after fruitless search, I determined to return to the Waterloo terminus, and endeavour to elicit something which might guide me in fresh investigations. I found waiting for me there a telegram: "From Mr Tredgold, Stepminster, to Penuel Crossley, Esq., London.—Come down. It is all right. Laura is here."

'I was so thankful! But what could she have meant by "having deceived me," and "for long?" I thought, referring to her note. And why should she have written me such a note at all, and aroused such cruel suspicions? There was a good deal to be explained, at anyrate.

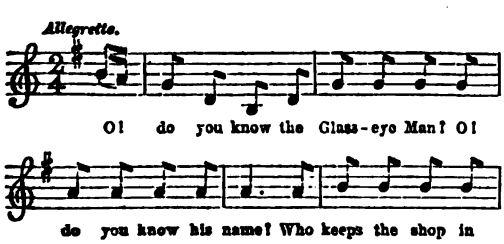
'I returned to Stepminster by next train, and hurried off to Mr Tredgold's. Laura received me at the door in an ecstasy of delight; and I was about putting twenty different questions to her at a time, to know the reason of her singular conduct, when old Mr Tredgold said: "Wait a bit. None of that. Just cast your eye this way, Pen, my boy: here 's a little bit of a round I want you and Laura to try over with me before I allow a word to be said about this little mystery.—No; I insist," he said, seeing me about to remonstrate. "Pleasure first, business afterwards."

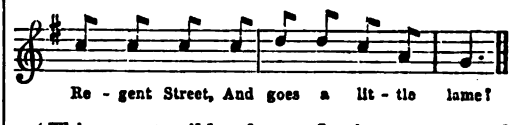
'The cloth was laid for supper, and we sat round the table, a plate in front of each of us, while Mr Tredgold handed Laura and me the notes of the round, keeping a copy for himself.

'When I had glanced at my copy, I felt ready to sink through the floor with mortification. I could not believe my eyes—eye, I mean.

"Now then," cried Mr Tredgold smartly. "Laura begins—one, and two, and"——

'Laura began, blushing, and in a voice very unlike her natural one, to sing:





'This was terrible; but reflection was out of the question, for Mr Tredgold, with his stentorian bass, immediately began singing, to the same air, by way of reply:

"O yes, I know the Glass-eye Man;
Bernotti is his name;
He keeps the shop in Regent Street,
And goes a little lame."

'But the worst was, the terrible proof Mr Tredgold gave that he really *did* know the Glass-eye Man, for he had no sooner finished the verse, than, with a burst of laughter, he took out his own eye—to my terrible surprise, a glass one—and placed it on the plate before him. I was almost stupefied. But in a moment, the old gentleman recovered himself from his chuckles sufficiently to call out: "*Cho*-rus, if you please!" In which I very lugubriously joined.

Then there's one of us knows the Glass-eye Man, There's
one of us knows his name, Who keeps the shop in
Re - gent Street, And goes a lit - tle lame.

"Now," said my eccentric father-in-law, "it 's my turn." And he addressed the inquiry to me to the same tune.

'I was forced, very reluctantly, to own, in reply, as he had done, that I certainly did know the individual referred to.

"Very well, then," he remarked, when I had finished, "out with it, can't you?"

'Very furtively I obeyed, and placed my eye on the plate before me. My wife gave a scream of laughter, which much disconcerted me. There we were, two of us—Mr Tredgold and I—holding our handkerchiefs up to our faces, and contemplating

Digitized by Google

the upturned glance of our eyes from our plates. It was most ludicrously horrible.

"*Cho*-rus, if you please."

'Whereupon we stated harmoniously that there were "two of us" knew the Glass-eye Man.

'I thought we had done.

"No, no," said Mr Tredgold; "pass the harmony round."

'It therefore devolved upon me to put the question to my wife: "Did she know," &c.

'Before I had finished, the truth flashed across me—sure enough she did.

'With a little terrified cry, she deposited *her* eye on the plate, and ran out of the room, leaving us to sing the chorus by ourselves, to wit:

"Then there are three of us know the Glass-eye Man;
Bernotti is his name;
Who keeps the shop in Regent Street,
And goes a little lame."

'In a few minutes, Laura returned with her "off"-eye inserted in place of the one left in the room. "You know now why I went to London, Pen. I fell down going up-stairs with my spare eye in my hand, and the other one falling out, I broke both unfortunately at once. The two letters you were so suspicious about were from Bernotti—so was the box. You might have known he would not have addressed letters to two persons in one house in the same handwriting, on such a private matter, you dear old goose you. But you need not be jealous again, for we will have our eyes down together in future—won't we, dear?"

"Yes," said Mr Tredgold; "we 'll all have our eyes down together, now the mischief is out, and perhaps they 'll come cheaper, like that.—But now, Mister Crossley, I 'll have a word with you. I 'll tell you why we came to Stepminster. Soon after Laura left school, she met with the accident that deprived her of the sight of one eye. When it was replaced with the best imitation we could procure, I began to see there would be plenty of suitors yearning to accept her one eye as a drawback that might be balanced by her money, for everybody knew of her *mis*fortune as well as her fortune. I did not care to have Laura wooed under circumstances so disadvantageous to her real merits, so I removed here, where at least there could be no knowledge of her infirmity to prejudice her future. I had no intention that Laura should marry without her husband's knowing the secret as soon as she was honestly loved for her own sake. If I withheld that secret from you, it was your own fault. I was disposed to you from the first, from discovering that *you* had a glass eye; and I gave you every opportunity to own it, even leading the conversation to the subject. You refused. I therefore considered myself justified in strictly forbidding Laura to tell you her secret till I gave her permission. Thought I, you will both find out the truth by-and-by; but till you do, not a penny of my money shall you touch, Mister Pen, as a penalty for your deception. Now that you understand one another, there is no further reason for your not giving up the one-eyed inspectorship to some man who is better qualified for the office. The next thing is for you and Laura to take a couple of months' holiday, and travel about the country till you cast your *one eyes* upon some comfortable little property where you can make up your minds to settle down in quiet—and you can send me the bill, and then we 'll see what else can be done for you."

'Need I say, we did so—or that, in consequence, here we are.

'There,' said Pen, when he had finished his story; 'I hope I have convinced you that my luck is "all my eye!"'

THE MONTH:

SCIENCE AND ARTS.

LONDONERS, and all the sight-seers who come up to the big city, have now had a month's enjoyment of the Royal Academy Exhibition, and a month's time to say what they think of the new galleries at Burlington House, in which the exhibition is held. The general impression is favourable, though opinions differ in matters of detail—some thinking the skylights too plain, others the coves too heavy. But all are agreed as to the improvement in the hanging compared with what used to prevail at the galleries in Trafalgar Square. In the new galleries you are not required to stoop to look at pictures on the floor, nor to crick your neck by looking up to the cornice. From this it will be understood that the pictures are hung neither too high nor too low; and though artists whose pictures are not hung may complain that so much wall-space is wasted, visitors will thank the Academicians for arrangements which promote their enjoyment. In themselves, the galleries are well worth a visit. Ample in space and light, and appropriate in colour, they call forth admiration, and heighten the effect of what they have to shew.

Among general topics, we notice that the great Pacific Railway from sea to sea across the United States is reported as complete. From east and west the rails have been laid—'rushed through,' as the Americans say, with marvellous rapidity, and now they have met in the territory of Utah. Soon we shall hear of through-trains from New York to San Francisco. The promoters expect to do all the carrying-trade between Europe and China and Japan. But now that Rupert's Land is to become a part of the Dominion of Canada, they will perhaps find ere long a British railway competing with them, and with a terminus at some port in Oregon.—The Pasha of Egypt is about to send an expedition, combining a military and exploratory character, up the Nile, and to the region of the great Lakes, to put down the slave-trade which is there rampant. Sir Samuel Baker is to have the chief command, and we may anticipate that he will take advantage of the occasion to widen his geographical discoveries.—Anxiety is felt concerning Dr Livingstone. He was expected at Zanzibar. The President of the Geographical Society is of opinion that the enterprising traveller, instead of journeying either north or east from Lake Tanganyika, has turned his face westwards, and that we must now look for his reappearance at the Portuguese settlements on the west coast.—Another African item is that the gold-fields of Natal, which have been so much boasted about, are scarcely more remunerative than the gold-fields of Sutherlandshire.

The survey of the peninsula of Sinai has been

Digitized by Google

carried on heartily by all concerned: heights are measured, situations determined, and topographical features laid down with accuracy, while the archæologists of the party copy all the ancient inscriptions they find, and take note of antiquities. What interesting work the examination and translation of these will afford to antiquaries for months to come!—The underground exploration at Jerusalem has brought to light many relics of the time when the city was held by the Romans. Some of these—specimens of pottery, lamps, and curious carvings—were exhibited at a recent conversazione of the Royal Society; and much attention did they excite, under the impression that they had been objects of household use in the Holy City in the days when Pontius Pilate was governor.

Two important questions—the magnetism of iron ships, and the best method of correcting the deviations of the compass, have been much studied of late; and it is encouraging to know that they are better understood than formerly. It now appears that those most conversant with the subject can tell from the evidence given at the Board of Trade inquiry into the occasion of a wreck, whether the compass was in fault or not. A noteworthy example occurs in a paper read a few weeks since at the Royal Society, by Mr Archibald Smith, F.R.S., *On the Causes of the Loss of the Iron-built Sailing-ship Glenorchy*. This vessel sailed from Greenock towards the end of December last, and a few days afterwards was wrecked on the Kish Bank in Dublin Bay. Her compass was so much in error that it pointed south when it ought to have pointed north; but this was rectified. There remained, however, the 'heeling error,' as it is called. This also was allowed for by the captain, one point *west* when the ship was on the starboard tack; but when he put the ship on the port tack he still allowed the same, not knowing that then the deviation was to the *east*. The vessel in consequence got twenty miles out of her proper course, went on the bank, and became a wreck. This loss might have been avoided, and others of the kind might be avoided, if shipmasters would only take the trouble to read the instructions concerning the management of the compasses in iron ships published by the Admiralty.

Mr Gisborne has invented a kind of magnetic trigger for firing torpedoes under water, which remains quiet in the place where it is sunk until a ship comes sailing by. The iron in the ship attracts the trigger, which by its movement 'makes contact,' the spark passes, the torpedo blows up, and blows such a hole in the ship that she immediately sinks.—Mr Wier has devised a system of signal-lights for ships which ought to prevent the collisions that have been too frequent of late. He connects the steering wheel and the signal-mast by a pneumatic apparatus; then as the wheel is turned in one direction a red light is shewn, in the other a green light, and a white light when the rudder is amidships. Thus, every movement of the helm is indicated to any vessels navigating in the same channel; and they can direct their course accordingly.—Dr Hawkesley has brought out a stetho-sphygmoscope, an instrument for indicating at the same time the movements of the heart, of the pulse, and of respiration.

A discovery has been made on the coast of Brazil, about thirty miles from Bahia, of an enormous deposit of clay which yields oil in considerable quantities. This clay—for which the name *turba* is proposed—is so light that it floats in water, takes fire easily, and may be expected to help on the solution of that important question, the burning of liquid fuel in sea-going steamers. Specimens of *turba* and of the various oils and other products extracted from it have been exhibited in London; and the result may be a trade in Brazilian clay which shall rival that in Peruvian guano. It is in favour of the *turba* that it forms the actual shore, so that persons landing from boats would step at once upon it.

Simultaneously with this comes news (with specimens) of cinnabar found in prodigious quantities in Borneo. What will mineralogists say to this? And is the island of the eastern seas about to compete with Almaden in supplying the world with a mineral for which there is a lively demand?

It has often been said that a good deal of trade might be developed in outlying parts of the country if they could be made accessible by cheap tramways. The want is now supplied by the Patent Wire-rope Tramway, which is supported on posts, and is well adapted for a rough country where the level can be maintained by simply varying the length of the posts. There are two rows of posts, and a horizontal wheel at each end of the line, and the endless wire-rope passed round the wheels is supported by pulleys attached to the line of posts. On the turning of the wheels, by steam or any other power, the whole length of rope is set in motion. The carriages (if such a name may be used) are boxes made to hang on the rope by a couple of pulleys, which run easily over all the points of support, conveying their load down one side of the line, and returning empty on the other. That this can be done is demonstrated by a tramway on this construction which has been in operation for six months, carrying granite from a quarry on Barden Hill (Charnwood Forest) to a village three miles distant. And we hear that a similar line is to be erected at the gold-mines a little below Macugnaga, in the Val Anzasca.

For those who want to know everything about that important medicine bark, a book with large coloured plates has just been published by Mr J. E. Howard, entitled *Quinology of the East Indian Plantations*. This book gives microscopical details of the structure of the bark, and discusses the question as to the best time of year for stripping it from the tree. Mr Howard is of opinion that the best time is when the sap is freely flowing, and not, as some think, during the period of repose. He states also that plantations of the bark-tree must not be below the line of four thousand feet above the sea-level, and that some of the plantations in India not only produce bark equal in quality to that of the Andes, the native abode of the cinchona, but that, in some species of the plant, the alkaloid, or medical substance, is 'susceptible of a large increase.'

It was a wise and beneficent undertaking on the part of government to introduce the culture of the cinchona into India and also into Ceylon, and it is gratifying to learn that it is likely to be attended with complete success, if, as Mr Howard remarks, proper attention be paid to the selection of species. Happily the gentlemen appointed to superintend the work have proved themselves equally earnest and intelligent, and some of them now hold rank as quinologists in chief to the government of India.

ONLY SEVEN YEARS OLD WHEN SHE DIED.

Only seven years old when she died!
Surely the angels must love her dearly!
Bright golden-haired and violet-eyed,
None could e'er look on her face severely!
There are children as many as the flowers,
But never was one more sweet than ours,
The latest bud on an aged tree
Where never blossom again may be.
Once I held up my head with the best,
Crowned with three flowers of promise bright;
Two—two of the fairest—Death tore from my breast,
Five years ago, in the self-same night.
She was the only one left to me,
And I prayed with groans of agony
That burst from my heart, a mingled prayer
Of hope and doubting and black despair,
That He who doth wisely whatever betide,
Would be willing to leave her aye by my side,
Still blessing her richly with increase of days.
It may be He heard me—but ah! His ways
Are not as ours—from the heavenly place
Perhaps she lighteneth our life with grace.

Only seven years old when she died!
Yet the hopes of two lifetimes died with her!
We have not a wish in the world wide
Save that we had gone out on the tide with her!
The tide that has borne them all away,
Sybil and Avis, now little May;
The ebb that never knows turn or flow
However the full moons come or go!
But I would not murmur—no complaint
Breaks from the lips, asleep or awake,
Of the mother who bore them, making a feint
Of being content for my love's sake.
But sometimes her hand clings to her heart,
And at certain hours she sits apart;
And the golden light of sunset skies
Brings a far-off look into her eyes;
And I fear me much that her treasure in heaven
Her heart from its earth-hold has almost riven,
And soon, hearing the voice of her children three,
She, too, will drift out to that unknown sea—
'The sea of glass' for her it should be—
God help me! what then will become of me!

Only seven years old when she died!
How our old hearts took young delight in her,
Our only pleasure, our hope, our pride!
Well! He who made her had the most right in her!
We took her from Him thanksgivingly;
We gave her back—no, not willingly,
But not with repining—God forbid!
Yet I think He pardons that we did
Falter awhile and fail in our praise,
Missing the key to which it was set
For a sweet child-treble in happier days.
The old tune haunts our memory yet,
And we scarce can read, for tears, the page
Of blessings left to our altered age.
Our 'lines,' once 'fallen in pleasant places,'
Blankly stare in our darkened faces,
And our harps on the willows of grief hang low;
But God, omniscient, has known what we know.
Once the harpings of Heaven ceased suddenly,
And His heart was thrilled by a bitter cry—
The cry of His Son's last agony:
He knows what we felt when we saw her die.

Only seven years old when she died!
Passed from the earth ere she learned its history!
Now she stands up with the glorified,
Fully as wise in the heavenly mystery
As they who through great tribulation
Fought their way up from every nation,
Leavened the world with their life-blood warm,
Carried the kingdom of God by storm.
Sometimes still they talk of their story—
How they suffered, and conquered, and died;
Cleft a path on through the cloud to the glory:
She stands listening, wondering-eyed.
Nought *she* knew of toil or endeavour—
Mother's arms were around her ever;
Little of sorrow, doubt, or despair.
Half she questions her right to be there—
She who has nothing either suffered or done;
Till, suddenly smiling, she looks to the Son,
And, folding her pretty hands reverently,
Lisps out her child-creed most confidently—
The same she learned at her mother's knee—
'He said: "Let the little ones come to me."'

Only seven years old when she died!
Seventy long years, yea, and more years still,
We have clambered and clung to the side—
She stands even now at the top of the hill,
Bright in the beams of the morning light!
Ours, at the best, is a starry night.
We toil on through the dust and the heat;
She sitteth calm at the Master's feet
Reading the truth of His lovelit face;
Answering Him back glad smile for smile.
We tremblingly shriek out for grace—'Lord! more grace!'
Dreading to meet His look all the while,
So spotted our souls, and moiled with sin.
She shews stainless without and within—
A snow-white soul in a robe like snow.
Weary, and wayworn, and sad we go,
Sorely doubting if, after our course be run,
Our life-lasting tourney well battled and done,
When the Judge stands up the awards to divide,
We shall be worthy to stand by her side,
Whose sword was ne'er fleshed, whose strength was ne'er tried—
Who was only seven years old when she died!

The Publishers of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

1*st*. All communications should be addressed to the 'Editor, 47 Paternoster Row, London.'

2*d*. To insure the return of papers that may prove ineligible, postage-stamps should in every case accompany them.

3*d*. All MSS. should bear the author's full CHRISTIAN name, surname, and address, legibly written.

4*th*. MSS. should be written on one side of the leaf only.

Unless Contributors comply with the above rules, the Editor cannot undertake to return rejected papers.

Printed and Published by W. & R. CHAMBERS, 47 Paternoster Row, LONDON, and 339 High Street, EDINBURGH. Also sold by all Booksellers.

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 284. SATURDAY, JUNE 5, 1869. PRICE 1½d.

THE SUBLIME SOCIETY OF BEEFSTEAKS.

THE sponsors of the famous convivial association, lately dissolved, after a merry existence of a hundred and thirty-four years, had good reasons for choosing a designation sufficiently strange to distinguish it from other societies of a similar character. The outer world, however, from the first ignored the long-winded title, and would call it the Beefsteak Club, thereby causing much unnecessary confusion. Only the other day, we were told by one of our daily instructors that the Sublime Society was the only London club that had ever permitted a woman to share its privileges and pleasures—the said woman being that sometime pet of the public, Margaret Woffington. The truth is, that the club of which the beautiful theatrical queen was enthroned president had nothing to do with London, but was attached to the Dublin Theatre-royal; indeed, it could hardly be called a club, seeing all expenses were defrayed by Manager Sheridan, who likewise invited the guests—generally peers and members of parliament who patronised the dramatic temple of which he was master. Victor says such weekly meetings were common to all theatres, it being a custom for the principal performers to dine together every Saturday, and invite 'authors and other geniuses' to partake of their hospitality.

If any such convivial society was entitled to be called *the* Beefsteak Club, it was certainly that described by Chetwynd as composed of the chief artists and great men of the nation, and alluded to by the *Spectator* when it remarks: 'The Beefsteak and October Clubs are neither of them averse to eating and drinking, if we may form a judgment of them from their respective titles.' Ned Ward declares it was started by some seceders from the Whiggish Kit-cat Club, desirous of proving substantial beef was as prolific a food for an English wit as pies and custards for a Kit-cat beau. Their first meeting-place was 'at the sign of the *Imperial Phiz*, a public-house in the Old Jewry, in repute for its steak-cookery and its two-threads.' The members elected an Irish comedian their providore or president; and to distinguish him from the rest, 'made him a knight of St Lawrence, and hung a silver gridiron about his neck by a green silk ribbon, as a badge of the dignity they had conferred upon him, that when he sang *Pretty Parrot*, he might thrum the bars of his new instrument, and mimic a haughty Spaniard serenading his donna with guitar and madrigal.' Ward owns they could not have chosen a better man, since none could boast a greater variety of qualifications for the promotion of becoming mirth, he being such a master of humour and gesticulation, that he could change his shape and mien, and put on any man's gesture and manner with wonderful exactness. This gift the president turned to the benefit of the club, by making it his practice to represent any absent member, thus insuring a full house, no one caring to be made a laughing-stock for his club companions. This Irish comedian was Richard Estcourt, a man counting among his friends such men as Pope, Steele, Parnell, and the Duke of Marlborough; while the general public esteemed him as one of the ornaments of the stage. Cibber, prompted perhaps by professional jealousy, calls him a languid, unaffecting actor; but owns at the same time that he was so unequalled a mimic that no man or woman could move or speak before him but he could carry their voice, look, mien, and motion instantly into another company. Steele praises him as the first mimic that ever gave the beauties as well as the deformities of his original; and so perfect was he in this way, that he even fell for the time into the way of thinking of the person he imitated. Estcourt died in 1712, having enlarged his acquaintances and shortened his days in his vocation as mine host of *The Bumper*.

Dr King, dedicating his *Art of Cookery* to the Beefsteak Club, writes:

> He that of honour and of mirth partakes,
> May be a fit companion o'er beefsteaks;
> His name may be to future times enrolled
> In Estcourt's book, whose gridiron 's framed with gold.

The book here mentioned was one in which the

Digitized by Google

president entered every witty saying uttered at the table whereon the beef of Old England appeared, roasted, fried, broiled, and stewed, according to the various tastes of the diners. The club were not left long undisturbed: the boys of Merchant Taylors' School took it into their mischievous heads to assemble round the tavern doors upon club nights, and shout: 'Huzza, Beefsteak!' a tribute of admiration quite unappreciated by those it was intended to honour, who, 'not affecting popularity, and choosing rather to be deaf to all public flatteries, thought it an act of prudence to adjourn from thence to a place of obscurity, where they might feast knuckle-deep in luscious gravy, and enjoy themselves free from the noisy addresses of the young scholastic rabble; so that now (1745), whether they have healed the breach and are again returned into the Kit-cat community, or whether, like the Calves'-head Club, they remove from place to place to prevent discovery, I shall not presume to determine; but at present, like Oates's Army of Pilgrims in the time of the Plot, though they are much talked on, they are difficult to be found.'

How the Sublime Society of Beefsteaks, which abhorred the idea of being set down as a club, came to be founded is a matter of some little doubt. Edwards says: 'Mr Lambert was for many years principal scene-painter to the theatre at Covent Garden. Being a person of great respectability in character and profession, he was often visited, while at work in the theatre, by persons of the first consideration both in rank and talent. As it frequently happened that he was too much hurried to leave his engagements for his regular dinner, he contented himself with a beefsteak broiled upon the fire in the painting-room. In this hasty meal he was sometimes joined by his visitors, who were pleased to participate in the humble repast of the artist. The savour of the dish, and the conviviality of the accidental meeting, inspired the party with a resolution to establish a club, which was accordingly done, under the title of the Beefsteak Club, and the party assembled in the painting-room. The members were afterwards accommodated with a room in the playhouse, where the meetings were held for many years; but after the theatre was rebuilt, the place of assembly was changed to the *Shakspeare Tavern*, where the portrait of Mr Lambert, painted by Hudson, makes part of the decorations of the room in which the party meet.'

According to another story, the Society claimed for its founders the matchless Lun, the inventor and unrivalled exponent of English pantomime, and the most dashing and daring soldier of his age —Pope's friend and Marlborough's foe, equally at home conquering a province or courting an opera-singer—Mordaunt, Earl of Peterborough, who

> Shone in all climates like a star;
> In senates bold, and fierce in war;
> A land commandant and a tar.

The association was not so very incongruous. The sword of the harlequin warrior had wrought wellnigh as sudden and unexpected changes upon the world's stage as the wooden bat of the harlequin of harlequins effected upon a less mighty one. The tale goes that the earl was in the habit of popping in upon Rich when he was busy constructing his models and pantomimic properties, and 'who shall say,' as Mr Tom Taylor pertinently observes, 'that he did not invent some of Rich's most wonderful tricks and transformations, perhaps old as he then was, devise for harlequin some peculiarly daring leap, or altogether daring animation business?' One Saturday he staid so long that Rich's dinner-hour came round, and the latter duly laid his cloth, and set the gridiron over the fire to cook his modest steak. As his visitor shewed no signs of departing, the actor could but ask him to join him at his meal; and so enjoyable did fare and entertainment prove, that Peterborough promised to dine at the theatre again on the following Saturday, and bring a friend or two with him; and out of this simple piece of hospitality sprang the most successful assembly of good fellows ever formed.

Although it would be pleasanter to think the reverse, the probability is in favour of Edwards's account being the correct one, two circumstances telling heavily upon his side. First, the fact that the meetings of the Steaks were originally held at the theatre in which Lambert painted, instead of that of which Rich was manager; and secondly, the non-occurrence of the Earl of Peterborough's name in the list of the original members—the twenty-four being Lambert, Hogarth, Rich, John Thornhill, Lacy Ryan, Ebenezer Forrest, Robert Scott, Thomas Chapman, Dennis Delane, John Boson, Francis Triveton, Sir W. Saunderson, Richard Mitchell, Henry Smart, John Huggins, William Huggins, Edmund Taffnell, Thomas Salway, Charles Neale, Charles Latrobe, Alexander Gordon, Hugh Watson, Gabriel Hunt, and William Tathall. It must be confessed there are not many names known to fame among the two dozen. However it originated, it is certain their sublimities commenced their merry meetings in 1735, and spite of their professed contempt for it, they did not disdain to imitate the old Beefsteak Club in some matters. They had their record of *bon mots;* their president wore a silver gridiron pendent from an orange ribbon: and when Mr Justice Welsh filled the office he used to don a hat decorated with ribbons, something like that once worn by the so-called 'beef-eaters.' They had their insignia and their uniform too, the latter being a blue coat with red cape and cuffs, bearing buttons with the initials B. S. upon them. The motto of the Society was Steaks and Liberty; its dining hour five o'clock; its season from the first Saturday in November to the last in June; its fare beefsteaks hot from the gridiron, marrow pudding, and toasted cheese, washed down with the primest old port and the best of punch; with the accompaniments of song, jest, and uproarious fun—in short, the Steaks aimed at realising Johnson's definition of a club, and by all accounts succeeded.

The *Connoisseur* lamenting, in 1754, that roast beef is utterly banished from good society, exclaims: 'Our only hopes are in the clergy and in the Beefsteak Club. The former still preserve, and probably will preserve, the rectitude of their appetites, and will do justice to beef wherever they find it. The latter (who are composed of the most ingenious artists in the kingdom) meet every Saturday in a noble room at the top of Covent Garden Theatre, and never suffer any dish except beefsteaks to appear. These, indeed, are most glorious examples; but what, alas! are the weak endeavours of a few to oppose the daily inroads of fricassees and soup-maigres?' Another proof of the reputation the Society had achieved is presented in Walpole sneering at it: 'I scratched my name out

Digitized by Google

of the Society of Antiquaries, and what was I the better? Lord Buchan chose me into his congregation of Wiseacres at Edinburgh! Nay, I have been called names; I have been styled in magazines *an ingenious and learned author!* now I am to be a Fellow of an Academy in Germany. I wish I do not live to be a member of a Beefsteak Club.' It is evident, too, that the Steaks are meant when he reports: 'The wicked affirm that very lately at a club with Mr Wilkes, held at the top of the playhouse in Drury Lane, Lord Sandwich talked so plainly that he drove two harlequins out of the room!'

At the top of the playhouse the Society continued until the theatre was burned down in 1808, when they had to bewail the destruction of their table service, fifteen hundred pounds' worth of old port, and, greatest loss of all, their archives; a loss, says a member of the period, 'the lovers of wit and pleasure have much to deplore, inasmuch as not only the names of many of the early members are irretrievably gone, but what is more to be regretted, some of their happiest effusions.' After this untoward accident, the Steaks found a temporary home at the *Bedford* in Covent Garden, until one of themselves, Mr Arnold, was able to welcome them to a permanent lodging at the English Opera-house, better known as the Lyceum Theatre, where they pursued the even tenor of their enjoyment, until another fire, in 1830, compelled them to seek their former place of refuge. When the theatre was rebuilt, the Society took possession of 'a little Escurial in itself, with doors, wainscoting, and roof of good old English oak, ornamented with gridirons as thickly as Henry VII.'s Chapel with the portcullis of its founder;' while Rich's own gridiron, that had defied the assaults of fire, adorned the ceiling of the chamber, looking down upon the busy cooks preparing the feast in sight of the feasters, but parted by a grating surmounted by the lines:

> If 'twere done, when 'tis done, then 'twere well
> It were done quickly.

Many of the Society's belongings were gifts, probably upon election. The Duke of Sussex gave two dozen water-plates and eight dishes; Lord Suffolk, a silver cheese-toaster; Sir John Boyd, six spoons; Barrington Bradshaw, a punch-ladle; Bolland, a cruet-stand: and so on. Everything that could be so distinguished was marked with a gridiron; even the table-cloths bore the homely blazon.

It would be singular if a society admitting statesmen, peers, lawyers, artists, actors, poets, playwrights, wits, and men of fashion, could not boast some celebrities. Unfortunately, no records exist enabling us to do the Steaks justice; but we may mention the notable names of Gay, Tickell, Aaron Hill, Arthur Murphy, Theophilus Cibber (the good-for-nothing husband of the great actress), Bonnel Thornton, Bubb Doddington, 'Leonidas' Glover, Hoadley, Hudson the portrait-painter, Jolly John Beard of Ranelagh renown, Crossdill (the first violoncello-player of his day), the two Colmans, Fox, Sheridan, Sheridan's brother-in-law (William Linley), and his long-suffering treasurer, Dunn. We are in doubt about Tom Moore, not knowing whether it was as member or guest that he engaged to meet Brougham and Morris at the Steaks, but broke his promise through staying too long at a prize-fight, that proved not altogether so horrid as he expected. Royalty figured at the select board in the persons of the Prince of Wales (for whose sake the number was increased by one) and his two brothers, the Dukes of Clarence and Sussex. Garrick was long a delighted and delighting sharer in these weekly jovialties. One evening, he was declaring how much his feelings would be hurt if he could not lay his hands upon a manuscript when the author demanded its return. Murphy exclaimed: 'A fig for your hypocrisy! You know, Davy, you mislaid my tragedy two months ago, and I have no doubt you have lost it. 'Yes,' answered Garrick; 'but you forget, you ungrateful dog, that I offered you more than its value. You might have had two manuscript farces in its stead!' Davy sometimes made himself ill with steaks and arrack-punch to follow, and upon one occasion was so loath to leave their company, that the gods of Drury Lane began to roar for Ranger. When he did obey the repeated summonses of his fellow-patentee, Dr Ford, the latter said: 'I think, David, considering the stake you and I have in this house, you might pay more attention to its business.' 'True, my friend,' responded the impenitent actor; 'but I was thinking of my steak in the other house.'

Wilkes writes to Churchill the poet: 'Your friends at the Beefsteaks inquired after you last Saturday with the greatest zeal, and it gave me no small pleasure that I was the person of whom the inquiry was made.' Wilkes (whose admission caused the retirement of Mr Justice Welsh) shocked the not particularly strait-laced fraternity by the presentation of a copy of his disreputable Essay, and was obliged thenceforth to stay away from their meetings; although when he went abroad, the Society made him an honorary member. His friend Churchill soon afterwards had to avoid expulsion by resignation, when his conduct to his wife became town-talk. The poet laid this to the door of Lord Sandwich—who had moved in parliament that Wilkes should be arrested—and revenged himself by portraying his quondam boon-companion as one who

> Wrought sin with greediness, and courted shame
> With greater zeal than good men seek for fame.

Strangely enough, before the year was out, 'Jemmy Twitcher' himself was expelled the Steaks for blasphemy. The same fate was suffered by John Kemble 'for his mode of conduct.' What his mode of conduct was is more than we know. One of the favourite butts for the wits of the club was Lord Eldon's secretary, Wilson, the lucky steward, solicitor, and residuary legatee of Lord Chedworth. He never heard the last of his visit to Paris, where he declared the *boulevards* were delicious eating, and to having called for a *paysanne* for his dinner. Recorder Richards, never absent except on gout days, was another source of fun. He took upon himself to pass sentence upon any rule-breakers. 'Having put on Garrick's hat, he proceeded to inflict a long wordy harangue upon the culprit, who often endeavoured, most unavailingly, to stop him. Nor was it possible to see when he meant to stop. But the imperturbable gravity with which he performed his office, and the fruitless writhings of the unlucky being on whom the shower of his rhetoric was discharged, constituted the amusement of the scene.'

It was the custom for the president to give the

Digitized by Google

signal for raising the curtain before the kitchen exactly as the clock struck five. At nine, he vacated his seat, the new occupant of the chair becoming the mark at which every one aimed the arrows of his tongue. A city alderman was once so badgered, that he exclaimed: 'Would to Heaven I had another vice-president, so that I had a gentleman opposite to me.' 'Why should you wish any such thing?' cried Cobb, John Company's secretary: 'you cannot be more opposite to a gentleman than you are at present!' Sir John Hippisley, who Windham said was very near being a clever man, had a curious fancy for visiting great criminals. When Patch lay awaiting execution for the murder of Mr Bligh, Sir John saw him in Newgate, and tried to extract a confession; but he only got a promise that all he had to be revealed should be revealed on the scaffold. Sir John kept the appointment, and attracted the attention of the crowd by his conference with Patch. An old countrywoman mistook Hippisley for the murderer, and departed before the ceremony was over, her curiosity being quite satisfied. A few days afterwards, she happened to run against Sir John in Cheapside, and screaming out: 'It's Patch, it's Patch! I saw him hanged!' fainted away. This delicious incident found its way to the Steaks; and at their next meeting, a mock-inquest was held, the jury ultimately finding that Sir John *was* Patch. The victim of mistaken identity did not care to face the humour of the Steaks, and resigned rather than do it. One of the best of presidents was the Duke of Norfolk, who liked anything in the way of good living, and plenty of it. He used to discuss a fish-dinner at the Piazza tavern, preparatory to his Saturday repast, at which he would dispose of three or four pounds of steak, and finish off with a salad of beet-root and onions. It was to his liberality, excited by the after-dinner eloquence of Kemble, that Captain Morris, the loving lyrist of the 'sweet shady side of Pall-Mall,' owed the ease of his latter days. The captain was the most constant of Steaks, never allowing anything to keep him from his post as punchmaker. For the Steaks he wrote his best songs, and to the Steaks he sang them, and won the smile of the gay and the nod of the grave. In 1831, he resigned the laureateship of the Society, and bade a graceful adieu to the world, in which few men had found more delight and comfort, singing—

In the close of Life's chapter, ye high favoured few,
Take my Muse's last tribute—this painful adieu!
Take my wish, that your bright social circle on earth
For ever may flourish in concord and mirth;
For the long years of joy I have shared at your board,
Take the thanks of my heart—where they long have been stored;
And remember, when Time tolls my last passing knell,
The old bard dropped a tear, and then bade you farewell!

Four years later, however, he revisited the scenes of his happiest hours, to receive a handsome silver bowl as a token of remembrance; and the ninety-year old lyrist acknowledged the gift with an appropriate stave. He lived, cheery to the last, for three years more, and justified Curran's prophecy: 'Die when you will, Charles, you will die in your youth.'

For some reason or other, the Sublime Beefeaters resolved to commit 'happy dispatch;' and the deed was consummated upon the 7th of April in the present year, when the fatal hammer dispersed far and wide all the goods and chattels of the most successful convivial society ever established. As might be expected, fancy prices were the order of the day. One punch-ladle, dating from the year 1735, brought L.14, 5s.; some of the spoons reached over 13s. an ounce; and a hunting-knife, attributed to Cellini, went for L.84. The port fetched from 93s. to 95s. a dozen; while some of the wine-glasses reached 34s. per pair. George IV.'s chair was sold for L.20, that of the Duke of Sussex for the same; Earl Dalhousie's went for L.14, and Lord Saltoun's for the like sum. Morris's chair fetched L.9, 10s., and his portrait just a sovereign less. The bust of Wilkes, rather the worse for wear, was knocked down for 22 guineas. Garrick's hat went cheap at 15s., considering two pewter quart pots cost the buyer above L.4. The presidential chair fetched L.7, 10s.; the president's badge, L.23, 10s. 6d.; and, to conclude, a well-known firm, to whom the travelling public owe some gratitude, became the owners of the gridiron of gridirons at an outlay of L.5, 15s.

A COUNTY FAMILY.

CHAPTER XI.—INSULA IN INSULÂ.

WITHIN ten hours' sail by steamer from Southampton, lies one of the most charming islands in the world. Though it acknowledges English rule, it is known, except through the geography books, but to few Englishmen; and it is so small, that one can scarcely see it upon the map. So small, and yet so grand. Huge cliffs still form its walls, albeit they are undermined and tunnelled everywhere, for the very entrails of the little isle are devoured by the raging seas. Six days out of seven (or so), it is set in a caldron of boiling waves; no boat can reach it, no boat can leave it. But on the seventh, as on some ocean Sabbath, it reposes calmly on a far-stretching deep, of Mediterranean hue. In summer-time (as it now happens to be), there is sometimes 'a week of Sundays.' But even in summer, and when the sea—which on the most windless day never ceases to hiss and foam immediately about it—is comparatively calm, no stranger may land on this enchanted isle. It has indeed one tiny harbour, but you might sail round and round, and never hit upon it; and when you found it, you would be no better off, were it not for the skill of man, that has worked a passage through the semicircle of solid rock into the heart of the island.

Across the harbour is built a break-water, very small but very strong, which leaves a narrow passage for such small craft as may venture to enter in. Even this snug haven is no shelter from the white malice of the ocean in its winter wrath; for a sailing-packet that had taken refuge there was once carried right over the sea-wall, forty feet in height, and then cast back again in the same perilous fashion, as it were in majestic disdain. It is the isle itself, and not mere ships (of which the sea has a plenty in those parts), that the waves are wild for; and they will have it some day, as they swore to do thousands of years ago. It is said, I know not with what truth, that at one time this dot, this atom of land,

Digitized by Google

was the extremity of a promontory from yonder foreign coast a score of miles away, and that the winds and storms have helped these foam-tipped thunderers to all the rest except this fragment, around which they leap and rage, and beneath which they roar and grumble, and above which (and right across it) they spout their sheeted spray.

It is no wonder they covet it; for the aforesaid tunnel from the harbour leads directly into Eden. From a scene of fury and foam, you step at once into quiet fairyland—a region of dell, and pasture, and shrubbery, and where, if the trees are small and scanty, the fuchsias are many, and, in bulk and luxuriance, trees. Nature made a garden here, with the original intention, as it would seem, of admitting not even an Adam and an Eve. But human beings got into it somehow, even before the tunnel era. There have been people on the little isle for many an age. The Romans 'dropped their money' upon it in the same reckless way that distinguished them elsewhere, so I suppose *they* must have got there. It is difficult even for modern folks to spend money in the island in any other way. There are no diseases, and therefore no doctors' bills (or perhaps *vice versâ*). Old age and drowning are the only complaints to which the inhabitants are heirs. There has never been a murder nor suicide in all that 'right little tight little island.' The uplands, bright with flowering shrubs, are swept by life-giving breezes; the wooded dells (for they are too small to be called dales) have no damp save the spray of the sea. Food is cheap, and there is no need for fashionable attire; hence it happens, though the people are poor, they have enough, and are contented—that is, the aboriginal inhabitants—but then there are (sometimes) others whose company might be spared. It is whispered that now and then this Elysium is visited by certain gentry, who are not so much in search of the sublimities of nature, as of a spot which is (in a general way) out of the jurisdiction of the police.

The government of the place is paternal; the seigneur who rules it is literally a feudal lord; and in case of any crime being committed by a vassal, such as over-populating the place, he can 'deport' the offender. It is even asserted that, if there be reason to suspect that such a misdemeanour may ensue, he has power to forbid the bans of a young couple; so that if they are bent on matrimony, they must emigrate elsewhere, where there is 'room and verge enough' to bring up a family. The accommodation is of course limited; and if once the population should outgrow their means of subsistence, what is to become of them all when the winds and waves forbid the arrival of provisions? There is a terrific example before these good folks in the rabbits which throng their little territory. No other crime that ever I heard of has been committed in this marine Eden. There are no rogues. Your portmanteau is left on the beach, without the least fear of its being appropriated as flotsam or jetsam. There is not even a public-house to get drunk in, so that all the vices have, as it were, to be imported; and it is not to be denied that in this great commercial era this has been done. With sherry at a shilling a bottle, and French brandy at two, the temptation is considerable, and especially to those individuals at whose existence I have hinted, who occasionally resort to the place for privacy, to escape the glare of Policeman X.'s bull's-eye. These drink to drown Care; and if they fail, it must be because he can swim, for they certainly take enough to drown him though he were cubits high.

The excellent *curé* of the place has less influence over these *mauvais sujets* than he might (perhaps) otherwise have, from the fact that he only speaks Norman-French (which is the tongue of the isle), and they for the most part only Cockney English. It may be asked by the sentimental: But does not the influence of the Beautiful and the Grand (and a number of other adjectives with capital letters) affect these scoundrels for good? Well-meaning but speckled* Enthusiast—no. The Italian brigand is none the better for the mountains that surround his home, or the flawless firmament that stretches over it; and marine scenery is equally inefficacious in similar cases.

When I said there was no public-house in the island, I should have added that there are, nevertheless, establishments for the accommodation of the stranger who procures from a neighbouring and larger isle his own spirituous liquors, or is content to do without them. Here is one of them; a small white farm-house (only without a farm), of two stories high, and with eight good-sized windows, that open on a natural lawn; there is no ordered garden, but the hedge that hems the little domain is of wild fuchsia; and there is a shrubbery, through which a tinkling stream runs, whose music is suddenly cut off by the sandy cliff, down which it softly falls some sixty feet into an enchanted bay—softly, so as not, in this calmest of August mornings, to disturb Thetis, who is basking on the shore, or, haply, Aphrodite, fresh and pink from the foam of the almost noiseless wave. The long blue coast, so clearly cut against the sky to eastward, is farther than it looks, so that she need not fear human eyes, even though aided by a Dolland's glasses; nor would mortal dare to peep at her over these dangerous overhanging cliffs, rich with grass and lichen, and with the heather on their topmost summits purpling in the sun.

But, alas! this was in the Golden Age, whereto the first sight of this bay transported me, and to which the recollection has carried me again. There are no goddesses now, nor even nymphs; which is quite as well under the circumstances, for there is a gentleman here, of middle age and objectionable appearance, who has evidently been bathing. If cleanliness is next to godliness, there is nevertheless, in some cases, a considerable interval; I am even inclined to believe that the proverb has done some harm, in persuading folks who patronise early 'dips' that they need not also be religious. The subject of our present observation—Mr William Roberts—for instance, has undoubtedly bathed, but I should question his having said his prayers. He is lying half-dressed upon the sand, with a short black pipe in his mouth, and an expression of countenance the reverse of devotional. 'A month more,' he soliloquises, looking spitefully round upon the sapphire sea, and the cliffs beginning to glow in the growing sun-rays—'a month more in this confounded hole.' From this remark, it may be gathered that the speaker was neither a painter nor a poet, which so far narrows the field of inquiry; but it is still difficult

* 'The speckled sort are the most credulous of the species.'—*Buffon.*

Digitized by Google

to guess to what calling he belongs. Mere appearance is not always to be trusted in such a matter, but he does not *look* like a clergyman; and, moreover, his attire—so far as it has at present advanced, which includes a red shirt and a pair of blue trousers—is scarcely clerical. Even if a white tie should lie among that heap of clothes which forms his pillow, it would not redeem him to that extent. Viewed from a distance, he really forms a charming bit of colour—quite carries off the landscape, as the artists say; but, as you get nearer, even the landscape, beautiful as it is, fails to carry *him* off. Cruel eyes, which shoot sidelong when he is addressed; a low retreating brow; and thin white lips, foully mar a face, which would otherwise be handsome, and make him, as it were, a blot upon that fair scene. What is he, and what does he there, insulting bountiful Natufe with his ungrateful looks and his foul words? He is not drinking her health—this Trinculo of a fairer isle than Prospero's—I 'll warrant, though again and again he puts yonder brandy-flask to his lips. The fact is, that Mr William Roberts, although a powerfully built fellow enough, feels, notwithstanding his dip, a little shaky of a morning without this stimulus, under which it is satisfactory to note that he revives. He rises, yawns, and stretches himself, and still half-clothed, saunters down to the very margin of the sea. It is at the lowest of a low spring-tide, and much that the sea at most times hides beneath her dainty fringes is now visible: smooth breadths of silver sand, set with many a sparkling shell; and here a splendid star-fish, like a Catherine-wheel without the rim; and there a glittering mass, which is a living jelly. Vast specimens of what may possibly form mermaids' chignons, sea-weeds of all sorts, strew the shore, or hang from the treacherous rocks, which are now left bare. Upon these, our new acquaintance, on his listless stroll, occasionally slips and slides, when his language is such as would shock Mr Gosse, or any other admirer of the Common Objects of the Sea-shore.

Mr Roberts anathematises all these candidates for an aquarium under the generic but unscientific term of 'slime;' and when a shell prettier than its fellows attracts his attention, he manifests his interest in the dainty treasure by scrunching it beneath his heel; or when he comes across a star-fish larger and more radiant than common, he kicks it limb from limb—in default (one would say, to judge by his evil looks) of something human that would feel pain more. It is evident that this gentleman's temper, perhaps not naturally angelic, has of late been sadly 'tried,' and that it has broken down under the ordeal. 'A month more,' he once more soliloquises, 'of kicking one's heels in this confounded island! One might just as well have been born a savage, as live as I have been living during the last year. Nothing to see but salt water, nothing to hear but salt water—and what an infernal row it can make! nothing to eat but what comes out of the salt water, and nothing to drink'—he took out his now empty brandy-flask, and surveyed it with a reproachful air—'yes, nothing to drink but salt water. Then, when the time does come to get away, it will be the windy season, and I may be kept here for weeks by the salt water. I am not going to trust myself in one of those cockle-shells of boats that they use in these parts—no, not if I know it, unless the sea is as smooth as a duck-pond. Why, it was just by that rock yonder that I saw two go down only last March; it was more exciting than a play; six men and a woman, and all drowned. I only wish that brute Richardson had been one of them. The idea of his giving me only half the money I had so richly earned, and refusing to pay the other half until the last day I was to be here, just to make himself certain of my remaining, and not coming home to trouble him, I suppose, the selfish, unfeeling scoundrel! I have a precious good mind to peach upon him yet. It 's all very well for him to say it could do me no good to have him lagged as well as myself; but it would have done me a deal of good. One of the bitterest morsels I have had in my mouth these five years was the thought, that that villain got off scot-free when I was punished, and has been living in clover ever since. But once I get the rest of that little consideration paid up, *I* 'll worry him; I 'll pay him out for keeping me in this cursed place until the last minute. If he couldn't have helped the other thing, he could have helped *that*. Pay him out? aye, it shall go hard if I don't pay out everybody!'

In this misanthropical frame of mind, Mr William Roberts proceeded to complete his toilet, and then to climb the cliff-path that led by the side of the waterfall aforesaid into the garden-ground about the inn.

On the lawn in front of the house stood a woman, middle-aged, but with some traces of beauty about her still; her hazel eyes would have been very handsome were it not for the timidity of their expression; and her features would have been well shaped, but that they were so wan. Though she did not look like a lady, the smile which came into her face as she caught sight of Mr Roberts was very sweet, and her voice sounded gentle and tender as she called out in indifferent English: 'My dear Bill, how late you are! The coffee is getting quite cold.'

'Then take care it gets warm again, that 's all,' was the growling and unreasonable response.

The smile remained, but flickering indecisively, as though half afraid to stay upon her lips, and the voice was troubled and timid as it continued: 'You have been more than an hour, Bill; I almost began to think you were never coming.'

'And devilish sorry you 'd have been, I daresay, if I never had come,' answered the man gruffly. 'Oh, yes, *I* know.' She had come forward to meet him, and tried to put her hand on his shoulder lovingly, but he fenced it off. 'You are like dogs, you women, uncommon affectionate to those you are afraid of.'

'I was not afraid of you when I married you, Bill,' said she reproachfully, but still with a tenderness in her tone.

'Was you not? Then that only shews you must have been a most owdacious young fool. But you ain't a fool *now*, at least in that respect, I reckon. You learned who was to be master *precious soon*;' and Mr Roberts for the first time that morning indulged himself with a burst of merriment.

'I did indeed, Bill,' sighed the woman wearily; and turning from him to hide her tears, she led the way into the house.

CHAPTER XII.—MR ROBERTS AT HOME.

It was a pleasant chamber enough, if somewhat scantily furnished, where Mr and Mrs Roberts sat

Digitized by Google

at breakfast; and the table was plentifully supplied not only with well-cooked fish, but various potted meats and preserved delicacies. The room and its accessories, indeed, would have been pronounced by any impartial looker-on as much superior to what are commonly used by those in the same station in life as Mr and Mrs Roberts. Yet one of the pair, at least, seemed greatly dissatisfied with what was provided for him; his language to the fried soles was shocking, and the coffee was consigned to a much warmer place than the kitchen before he sent it out thither to be heated. But after he had eaten and drunk, although his appetite (by reason, perhaps, of his previous devotion to the brandy) was by no means so good as his friends might have wished it to be, Mr Roberts grew somewhat mollified, and by the time he had lit his pipe and smoked a little, could be addressed, as the partner of his fortunes was well aware, without dread of immediate personal violence. As this favourable opportunity never lasted long, nor recurred before the same time on the morrow, it was highly necessary, if his lady had any wish for conversation, to take advantage of it; and she did so upon the present occasion.

'The packet will be here at ten o'clock or so, my dear, our landlady tells me. It has been sighted an hour ago. Perhaps it will bring us some letters.'

'Who *wants* letters? I don't,' was the discouraging rejoinder.

'But it is so very long, Bill, since we have heard anything from—from your folks at home.'

'For my part, I hope it will be longer. Who *wants* to hear? say I again. What is the good of hearing, unless, indeed, it was to say that the old man was dead!'

'O Bill, how can you talk so!'

'Ah, yes, that's mighty fine. You can afford to be shocked, *you* can, because, you lucky slut, you never had a father, leastways as I ever heard on. I say, in your case, there never was an old chap of the age of Methuselah living on and on, as though Death had forgotten him, and standing between his only son and his expectations. Father indeed! A nice father he's been to *me*. Why, he wouldn't even get into the witness-box, and swear me off before the beaks, as he might ha' done, and prevented all what happened afterwards, including my being moped to death on this precious island.'

'And yet, dear, I am sure we have never lived half so well, or been half so comfortable, and free from cares and fears, as we have been here.'

'And who have you got to thank for *that* but me?' was the inconsistent reply. 'Wasn't it my doing? Haven't I paid for it not only with money earned, but with my skin?'

'Indeed, dear Bill, I do think I suffered almost as much as you, while you were being so pun—so ill-used.'

'Do you? Then all I can say is, you are most confoundedly mistaken. Bread and water, and hard work—not to mention being cooped up within stone walls—are a deal worse, let me tell you, than any hurt done to the feelings. I wish they had tried to hurt *my* feelings, instead of what they did do. I wish it had been my father as they put in quod, instead of me; and then you would have seen how patiently I would have put up with it.'

'I know it must have been bad, Bill. My heart bled for you all the time; it did indeed. And I do hope—oh, I do so hope—that you may never again do anything as may bring you into such trouble again!'

'If you go on talking like that,' muttered Mr Roberts with an ugly look, 'I shall bring myself into trouble with a vengeance, and that upon your own account, you white-faced fool. Ain't it bad enough to have this misfortune thrown in my face by other people, or, at least, of running the risk of having it thrown, wherever I am, wherever I go, without *you* doing it?'

'Then why not stay here, Bill?' interrupted the woman, clasping her hands, and speaking very hurriedly. 'No one knows it here, no one ever can know it. We have enough and to spare for a long time to come to keep us as we are living now; and who knows but that before it is all gone, those expectations of which you speak may turn to realities. I will work for you, slave for you. The seigneur's lady told me only yesterday that my lace-work, if I should ever need to sell it, would fetch a great deal among some great folks she knows. Let us stay here, where you are safe, and out of temptation. Oh, never let us go back again to where all is suspicion, and fear, and danger, and one never knows what shame and sorrow the morrow may bring forth. We have never been so well off as we are here. What a pleasant house this is to dwell in; and only think how cheap in this place are the things you value most—more, I sometimes think, even than me—the brandy, and the wine, and the tobacco.'

'There is something in *that*,' observed Mr Roberts moodily, 'although all the rest is twaddle, except about the lace-work. I don't forbid you to sell anything for what it will fetch, only you must say it's for a charity, and not for ourselves. It will never do to let folks here suppose that I am anything else than a gentleman living upon his independent means, as indeed I am.'

As he sat with his feet lodged on the corner of the table, squirting tobacco-juice upon the carpet, and occasionally using a fork instead of a toothpick, the islanders (including the seigneur's lady) must have been insular indeed if they assigned to Mr William Roberts the social rank which he thus arrogated to himself; but it was plain that the speaker entertained no doubt of their credulity.

If Mrs Roberts had had a little more of that wisdom so often attributed to her sex, and which the serpent, perhaps, gave to Eve in not excessive compensation for damages, she would have permitted her husband to chew undisturbed that cud of reflection for which he was now obviously inclined, and left the seed of her suggestion alone to germ and ripen of itself. But she imprudently renewed her solicitations.

'Dear Bill,' she recommenced, 'you cannot think how I wish I could persuade you not to leave this place until some really better fortune smiles upon you. We have nothing to complain of here'——

'What!' broke in the man impatiently, 'nothing to complain of? It is all very well for *you*, who have got me all to yourself, to cozen and make a fool of, but it's not well for *me*. Why, I have not a soul to speak to from morning to night. Even if there is anybody worth speaking to, which I deny,

Digitized by Google

they can jabber nothing else but French. Do you think I am one of those idiots who can stare at the sky and sea all day, and want no other society than gulls and kittiwakes, like that painter who was here last month!—*You?* Yes, of course, I have *you*, who, however, are neither so young nor so pretty as you used to be.—There, you need not cry, you ninny; it's no fault of yours, of course, and I don't say but what you are well enough in your way; only a man wants a man to talk to him, and to smoke with him, and to drink with him. You are no *company* to a long-headed fellow like me—how should you be?'

'I am very sorry, Bill,' replied the woman sadly; 'I do my best. There was a time when you said you could be happy with me anywhere, and I am sure this place, of all others that I have seen or read of, seems made to be happy in.' And she turned towards the window, as though to gaze upon the fair prospect it afforded, or perhaps to hide her tears.

'I wonder where, now, did this woman pick up that sort of nonsense?' observed Mr William Roberts, soliloquising. 'Not from her mother, if all tales I have heard of her be true; and not from Jem Dean, the trainer, who brought her up. I wonder whether he *was* her uncle? He ought to have been something nearer, since he gave her a hundred pounds as a wedding dowry; and yet she never could have inherited such notions from him. Well, I suppose I must humour her a bit, so long as we are shut up alone together in this wretched hole.—Look here, Bess; I am not angry with you, you know; why should I be? It's only that I felt a little moped.'

'I am glad it was only that, Bill,' returned she quietly, but still keeping her face averted.

'Of course it was.—Now, don't be in the sulks: remember what my mother told you, that you would always find me a good husband, if only you kept a smiling face. But I do hate *black looks*, and especially in one's wife.'

Mrs Roberts sighed; and turning from the window came towards her husband with the smile required. 'Your mother was always very fond of you, Bill, and I am afraid she spoiled you just a little.'

'My father made up for that,' was the sullen reply, 'for he never had a civil word to say to me; and as for the old woman, she seems to have got over her extreme devotion to her offspring, since she has not written to me for near a twelvemonth.'

'Well, Bill, you must allow you don't give much encouragement to your correspondents, as you never answer their letters.'

'Why should I, when they 've got nothing inside of 'em? I answered Richardson's sharp enough when he sent me half that money instead of the whole of it—curse him! What 's the good of such letters? Why, the very last from the old woman had nothing else in it than the news that Ellen was likely to marry that stuck-up fellow John Denton, as if I wanted to hear anything about her, and much less *that*. I hate her, and I hate the man!'

'Why should you hate poor Ellen, Bill?' returned Mrs Roberts with some faint show of excitement in her tone. 'I 'm sure she has never knowingly done you any harm.'

'Knowingly or not, she *has* done me harm, and it 's my belief she 's a precious cunning minx. Why has my father taken such a fancy to her, instead of to me? It is true that I do not care a snap of the fingers whether he cottons to me or not, since nothing can possibly come of it as matters stand; but in case he ever came into that property about which he is always dreaming, it would be a pretty thing if that slip of a girl should get a great slice of it: you would see the harm of it then, quick enough, I suppose.'

'I am sure, Bill, in such a case, and provided that there was plenty left for you, I should never grudge her what she got, for she has been a real good friend to us, and always did her best to reconcile her grandfather with you. Indeed, but for her, we should never have been married at all.'

'And how do I know—supposing, for the sake of argument, that our marriage has turned out the success you seem to take for granted—that that was not all a scheme of hers, to set my father against me for good and all?'

'A scheme, Bill! Why, Nelly was but a child when she persuaded her grandfather, with her pretty artless ways, to give his consent to our wedding; and if it was a scheme, your mother was also concerned in it, and I don't suppose you would impute any evil motive to her?'

'Well, I don't suppose she *meant* any harm,' returned Mr Roberts with a sneer, 'although she may have *done* harm for all that.'

'In getting you married to me, William?'

'I didn't say so, though you may wear it if the cap fits. You seem most uncommon cantankerous this morning. All that I intended to observe was, that I don't believe Miss Ellen is such an innocent dove as you paint her.'

'She was wonderful kind and good to me—kinder even than your mother—when you were in trouble, Bill, that 's all I 've got to say.'

'You 're wise then, ma'am; for you have already said more than enough. When I observe, "I hate this man, or this woman"—for which, too, I happen to have good reasons—I do not wish to hear their virtues descanted upon. For the future, understand that, if you please.'

There was a long pause. Then, in a tone which was intended to be propitiatory, Mr Roberts observed: 'Didn't you say the packet would be coming in about ten o'clock, Bess? I think I shall take a stroll down to the harbour.'

The change of voice, even though it was but the alteration from downright menace to bare civility, called up the colour in the woman's cheeks as she caught up his straw-hat, with anxious eagerness to please, and placed it upon his head. Mr Roberts nodded in gracious acknowledgment of this service. 'I daresay you 'd like to come with me yourself?' growled he reluctantly.

'Indeed—indeed, I should, Bill,' cried she joyfully. 'We have not been out for a walk together for weeks, and it 's such a beautiful day! I will not keep you two minutes while I put on my bonnet.' And off she ran up-stairs.

'She ought to go on with that lace-work,' muttered Mr William Roberts discontentedly. 'If she really can get money for it, every hour she wastes is a dead loss to me. I am afraid I am spoiling Mrs W. R. with these sort of treats. But, however, it 's only once and away; and I 'll see that she works all the harder.' The sense of this excessive indulgence of Mrs W. R.'s fancy seemed

Digitized by Google

presently, however, to affect his temper. 'Come, be quick, can't you! I'm not going to wait here all day,' bellowed he from the foot of the stairs; and with that he lounged out of the house alone, leaving his wife to follow him.

COMETS.

A good many of our readers will be inclined to think that we know already quite enough about comets, and may as well put them aside as thoroughly explored and used up; and without doubt we have extended our acquaintance with them very considerably within the last one or two hundred years. We never think of being frightened at them now, or dream of questioning their having as good right to appear as any of the planets within the limits of our system. We know that they move about the sun, as we do, though with a difference; for as the earth and other planets move in ellipses, hardly distinguishable from circles, with the sun in the focus, almost coincident with the centre, in the cometary orbits, the sun is so far from the centre, that for a large part of their course, it may be for thousands of years, many comets are out of sight and out of mind with all of us; and when they do approach us and the sun, they accomplish their little transactions in our neighbourhood in a few weeks, or even days, and then are off again millions and billions of miles into space. But there is one question connected with comets which is still as far as ever from being answered—that is, how they are constructed, what kind of material they are made of, and especially whence arise those singular appendages called tails, which to the vulgar eye are the most remarkable feature about them. To understand a little of this difficulty, let us briefly call attention to some of the many surprising feats which they have accomplished with these tails of theirs. Take, for instance, the great comet of 1680, which had the advantage of being seen by Newton. This comet astonished everybody by darting out in the space of two days a tail which covered nearly half the visible heavens, or a length of twenty million leagues; at one time, indeed, it occupied forty-one million leagues, or a distance much greater than that of the earth from the sun. The tail of the comet of 1769 extended sixteen million leagues, and that of the comet of 1811 thirty-six million leagues. Newton's comet, it was known, would have to pass so near the sun in getting round him, that apprehensions were felt for its safe return; but it accomplished the whole business in about two hours, bringing its tail safe behind it; that is to say, having whisked this enormous appendage through half a complete circle in this incredibly short time.

It is needless to dwell here upon the numerous varieties and peculiarities in the lengths and positions of the tails of different comets; it will suffice to say, that in a general way the telescopic aspect is that of a quantity of vapour escaping from the nucleus towards the sun, and then carried directly behind the comet, as if by a repulsive force emanating from the sun, sometimes for a distance of myriads of leagues, thus forming the tail. Hence, in whatever direction the comet is moving, the tail is turned away from him, the furthest end being curved backwards, just as a flexible rod or feather would be if whirled rapidly round one extremity. Now, the great difficulty lies in conceiving the possible constitution of a body which can deport itself in the way we have been describing. We should imagine that it must sweep away planets in its wild gyrations. We hardly regard it as ridiculous that Whiston should have gravely maintained that it was by a whisk of one of these tails that the deluge was brought about, and calculated the particular comet which caused that catastrophe. However, everything goes to prove that these comets are huge impostors—head and tail alike—and are the most vapoury, windy bodies conceivable; so much so, that it is no exaggeration to say that the tail, with all its millions and billions of miles, might, if properly packed up and stowed away, travel by a continental passenger-train, and cost nothing in the way of extra luggage. This has been long known; and Sir John Herschel sees no difficulty in conceiving that the tail of a great comet, as, for instance, that of 1680, with its twenty million of leagues, might weigh only a few pounds, or even ounces. This tenuity of constitution is proved in many ways: partly by the disturbances and deviations caused in a comet's motion by the approach to any other body; and partly again, by the fact that stars have been seen to shine with undiminished lustre, alike through their heads and tails—stars which would be utterly obscured by a few feet of ordinary terrestrial mist. But, granting any amount of tenuity, it is hard to conceive such an extended mass whirled half round in two hours, and retaining its continuity. Sir John Herschel, therefore, ventured upon a conception involving the total absence of matter altogether—suggesting the hypothesis of a negative shadow; and an original thinker, speculating upon the last big comet of 1858, announced the discovery in the papers that comets were worlds on fire, most probably suffering the punishment of their wickedness; and that the light proceeding from the conflagration was invisible where the sun's rays penetrated, but was seen in the shadow cast by the head, thus producing the tail—an idea involving, among other absurdities, the necessity of all the planets appearing with black tails behind them.

But this conception of a negative shadow exactly coincides with the recent suggestion of Professor Tyndall, which we wish to lay before our readers. To make the theory intelligible, it is necessary to preface it by some short explanatory matter. We know, by every-day experience, that the solar beams bring to us light and heat; and we have hardly less constant experience, in the thousands of photographs which are hourly produced among us, of the chemical properties possessed by the same

Digitized by Google

beams. The sun's rays come to us laden with light, heat, and the chemical power which is called by the learned *actinism*. In a general way, these qualities co-exist, so that every body exposed to the sun's rays is simultaneously lighted, warmed, and actinised (if we may be allowed to coin this last word). But it is easy to separate these rays, and get one of the actions apart from the others. If we make a small hole in the shutter of a darkened room, and through it admit the sun's light, a circular, or, to speak more correctly, an elliptical patch of light will be seen upon the floor, in the straight line produced joining the sun's centre with the aperture. If we place our hand there, it will feel warmed; and on a plate properly prepared, photographic action would be recognised. The rays of light, caloric, and actinism are, in this case, travelling on in friendly company. But interpose before the aperture a piece of yellow glass bounded by parallel planes, and the elliptical patch of light will be found as before, but yellow, instead of white, and light and heat will be found still to co-exist within it, though not to the same extent and in the same proportion; while the actinic influence will have almost entirely disappeared, the rays producing it having been absorbed by the glass. By similar treatment, the hot rays and the light rays might be intercepted respectively. The separation may be effected in a different way by interposing a glass prism before the aperture; when this is done, the elliptical patch of light expands into a coloured line—the red being at one end, and the violet at the other; almost all the heat being found at the red, and the actinism at the violet extremity. By these simple illustrations we may see how the different agencies, light, heat, and actinism, though generally travelling on together in the solar beams, are really distinct and capable of separation. Up to this point we have been dealing with what has long been well known. But very recently, Professor Tyndall has discovered that if a glass tube be charged with certain perfectly transparent vapours—those, for example, of nitrite of amyl or iodide of allyl—and the electric light be thrown upon it, the effect is the immediate condensation of the vapour, and the formation of a cloud. This condensation is produced by the chemical rays, which are themselves absorbed in passing through the vapour, the cloud being of course rendered visible by the light rays, which, as well as the heat rays, are in themselves incapable of producing the effect just now described. Professor Tyndall also discovered that when he had, by certain refinements, with which we need not now trouble our readers, reduced the amount of transparent vapour in the tube to a mass which he has estimated at many million times less than that of the air in which it hung, a visible cloud was still formed as before by the action of the electric light, but of such excessive tenuity as to be incapable of dimming the weakest light when viewed through it—the flame of a candle, for instance, shining through it as clearly as in a vacuum. Hereupon, the thought struck him that he had before him an exact illustration of that spiritual texture of comets spoken of above, and a little more consideration led him to the theory which we are now about to give almost in his own words: That a comet is composed of vapour decomposable by solar light, the visible head and tail being an actinic cloud arising from such decomposition: that while the beams of the sun comprise heat, light, and chemical rays, the last alone form the cloud, while the first tend to bring the mist back again to the condition of transparent vapour: that thus two antagonistic powers are in action, and that the state of things at any instant, and at any point in the mass, is determined by the prevalence of one or other of these two powers: that the head and nucleus absorb all, or nearly all, of the calorific rays, so that in the part of the mass screened by the head, the cloud when formed is not again vaporised, thus accounting for the position and appearance of the tail; and inasmuch as it has been proved experimentally that the decomposition of the vapour may either be made to take place slowly or instantaneously along the whole beam, we thus escape the difficulty arising from the supposition of the projection of matter with the enormous velocity hitherto required to account for the rapid and extensive development of the tail; while the tail being no longer, on this supposition, composed of the same matter, but of a succession of new matter, across which the line from the sun to the head produced successively passes as the comet moves round in its orbit, we avoid the supposition of the stupendous whisking of the tail which has hitherto proved so great a difficulty: again, that the old tail, as it ceases to be screened by the nucleus, is dissipated by the hot rays, whence the bending towards the end of the tail, which arises from the small though finite time taken by the hot rays to travel along the whole length of this tail: and finally, that as a temporary advantage may occasionally be gained by the actinic over the hot rays, even in localities unscreened by the head and nucleus, we may account in this way for those temporary and unusual streamers which sometimes are seen directed towards the sun. Professor Tyndall further expresses his belief that there may be comets composed of vapour undecomposable by the sun's rays, and therefore invisible, through which the earth may have passed without our knowledge; and states his conviction that a few ounces of iodide of allyl vapour would suffice to produce an actinic cloud equal in size and brightness to Donati's comet, which astonished and delighted us all eleven years ago.

If these speculations are sound, and there really is nothing at first sight to suggest the contrary, the history of our knowledge of comets supplies us with one of the most instructive illustrations of the inroads of science upon ignorance and superstition. Not many hundred years ago, comets were regarded with a mixture of awe and wonder, their appearances and disappearances being equally inexplicable. Sometimes they were hailed as the souls of departed great ones, and sometimes deprecated as the messengers of divine wrath. From Newton's time onward these views disappeared. It was found that whatever else they may be, comets were at anyrate ordinary matter, subject to the inflexible laws of gravity and other similar indignities, which no great man's soul ever could put up with. Still, we were anything but easy in their company, and within the memory of many among us, the presence or expectation of a comet set all our nerves tingling, and old ladies used to talk of finding shelter in their water-butts, preferring death by drowning to one by fire. Now, it turns out that all this sensation has been caused by a shadow, or the nearest possible approach to a

Digitized by Google

shadow, a mist of such infinite tenuity that all the appliances of human art can scarcely produce its counterpart.

JACK HAVILAND.

I.

Jack Haviland was a fair specimen of public-school training. He had spent six years at Eton, and had been successively 'plucked' in three examinations—for the University, the Army, and the Civil Service of India. To the examiners of Oxford he had declared that Moses was the son of Adam; to those of Chelsea, that Heligoland was an island in Africa; and to those at Burlington House, that the leader of the first crusade was William of Orange. These brilliant answers having failed to convince the authorities, he had made up his mind that the public services had entered into a league against him, which it was vain to resist.

This resolution was the easier to keep as Jack Haviland had no one to goad him to active exertion. His only living relative was a maiden aunt. But this lady having viewed with extreme disfavour the results of his scholastic trials, and Jack having heard from her own lips that the provision intended to be set down for him in her will would probably amount to one shilling sterling, he had wisely reflected that the possession of an aunt of this kind was as good as having none at all; and he had made his arrangements in consequence.

Happily for him, he was not altogether destitute of means. He enjoyed two hundred pounds a year of his own and a cottage by the sea. But this was all he had in the world; and his prospects of ever obtaining more were excessively slender. However, he was of a gay, light-hearted temper; always ready to take the bright view of things; and looking upon life as a sort of game of football, in which it was absurd to mind a few kicks on the shins. Disappointments which would have hopelessly soured less happy minds than his, had left his soul as calm as a summer lake. He really did not know what it was to be put out; and the hardest epithet he ever applied to the numerous ills which checker life was, that this or that was 'rather awkward,' an ejaculation he used indiscriminately on the breaking of a meerschaum pipe, the being stumped out in a county match, or the losing of fifty pounds.

With such a disposition it was but natural that Jack should have many friends. He was a universal favourite with all who had ever known him; and in the snug seaport where his dwelling was there was no man so thoroughly popular. He was always doing a good turn for somebody. His mission on earth seemed to be to oblige people. If any service was to be rendered to man, woman, or child, any commission executed, any important errand run, he was the person to do it. He belonged to every soup and clothing club in the place. Beggars knew him by name, and touched their hats to him in the street. Stray dogs followed him home at nights with the certainty of being housed and fed. He was an out-and-out good fellow, that was the truth of it; and he had as pleasant and cheery a face as it was possible to meet with in any town of England from Land's End Point to Berwick-upon-Tweed. Of course he was young; and this fact, added to his vigour of limb and handsome features, made him the abject slave of womankind. In the morning he was to be seen rushing, breathless and hot, along the Marine Parade with six or eight parcels under his arm: these were worsteds he had been sorting for Mrs Curry-combe, the rector's wife. Two hours later, he might be detected on his way to Mrs Maydew's villa with a heavy cargo of sensation novels in tow. In the afternoon, it was Miss Bohea who wanted to consult him about her parrot. In the evening, Mrs Colonel Bowlemdown expected him to tea. Jack Haviland was anywhere and everywhere when wanted. All the ladies of the town had a joint-stock interest in him; and it was a sort of rivalry among them as to which should lay the most frequent taxes upon his ever cheerful readiness.

Under these circumstances, it was not without a certain emotion that the female population of Shingle-super-mare began to reflect, that for six weeks past and more Mr Jack had been much less frequently seen than formerly. His appearances upon the parade had become unaccountably few and far between. Two projected picnics had been given up from his inability to attend at them; and three dinner-parties had actually taken place without his having been present amongst the guests. The ladies of Shingle began to murmur. This desertion was something quite novel and strange. It could not be put up with at any price; and something must be done to find out the why and the wherefore of such highly censurable conduct. An ambassador—in the person of Thomas, Mrs Maydew's 'buttons'—was despatched to the shirker's abode, to inquire if any mishap had befallen him. But Thomas returned no wiser than he had gone. Mr Haviland, he reported, was not at home. His housekeeper had stated, upon cross-examination, that of late he had taken to leaving the house at ten A. M. and not returning till night; but whence and from what cause such a vagabondising humour, neither Mrs Nuffin (the housekeeper) nor he (Thomas) could explain.

This news caused a mighty commotion when Mrs Maydew gave it out at Mrs M'Hotscone's tea-party. The whole party burst into exclamations. Mrs M'Hotscone declared it 'very strange now;' Mrs Maydew pronounced it 'incomprehensible;' Mrs Curry-combe thought it 'unkind;' Miss Bohea hoped 'that nothing might come of it.' And then all these ladies remained for a moment silent; for the same thought had traversed all their minds—a horrid thought, which caused them of a sudden to bridle up together and, each in secret, to vow vengeance upon the culprit. If Mr Jack Haviland was nowhere to be found, it must surely be that he had been enthralled. But none save woman could have done this deed; and so—logical but bitter conclusion!—Mr Jack Haviland was no doubt in love!

II.

Alas, poor Jack! Not even upon him had the elfin god had pity. Right in the centre of his good stout heart had the barbed arrow struck; and it was of no use trying to pull it out. There it was, and there it must stay through sorrow and joy, through day and night, till gray old years and Father Time deemed well to close the wound.

He had fallen in love! Yes, one day on the beach, whilst picking up pebbles with the little M'Hotscones. The weather was cloudy, and the sea was running high. The wind, like an ill-bred

Digitized by Google

urchin, was romping about over land and water, covering people with spray, and casting up seaweed in gigantic handfuls, to throw at the passers-by. The little M'Hotscones were merry and soused. Jack Haviland had seen his hat disappear in the gust, and sail in triumph up the British Channel. Everything was going on well, when, of a sudden, br-r-r-r-oum! crash! and a monstrous wave, as big as a house, burst foaming, raging, and splashing on the beach. Away, with howls of terror, rushed the little M'Hotscones, abandoning a whole fortress of pebbles to the fury of the elements. Away also rushed a whole bevy of nurserymaids, children, and startled young ladies, like leaves in autumn before a south-west wind. Screams and laughter mingled with the noise, and—br-r-r-oum! crash! down came a second wave. This time the last remaining stragglers took to flight, but not quite fast enough to prevent two pretty maidens, who had been wandering too near the shore, from being overtaken by the treacherous tide, and bathed up to their waists in water. In ten seconds, Jack, who had been on the look-out, was bearing them both up in his arms. There was a great deal of pretty crying, a great deal of alarm in the tearful blue eyes, a great deal of sudden paleness on the little pink cheeks; but, on the whole, there was more fright than hurt. Before the third big wave had burst its bounds, both were standing high and dry, and not very much the worse for their wetting. As was natural, however, Jack protested strenuously against their going home in their wet clothes. His own cottage was a hundred yards off. They must come there and dry themselves, whilst he sent up to their house to get them other dresses. There was no refusing. A silver flask had already been produced from Jack's breast-pocket, and the contents soon brought a warm glow back to the pallid faces. The two young ladies began to stammer their thanks to their rescuer; next they began to laugh at their own wretched plight; and by the time the cottage was reached, the accident had become a joke, and they were little geese to have ever felt so frightened at it.

This was the beginning of Jack's misfortune. The two young ladies were cousins, and both of about the same age — eighteen. One was Miss Lucy Chatfield; the other, Miss Annie Heywood. It was Miss Lucy who spoke to Jack, and told him this. Her father, Mr Chatfield, was a rich city merchant, who lived in London all the week, and only came down to Shingle from Saturday till Monday. Miss Lucy had no mother, and Annie Heywood was staying with her on a visit. Miss Lucy hoped that Mr Haviland (whose card she put into her muff) would come and call on them; papa would be delighted to see him; and 'Annie and I'—this was said with a blush—should be very glad to thank him again. The address was Beauchamp Villa, on the road to the cliff.

When Miss Lucy Chatfield and Miss Annie Heywood had come out of Jack's room, where they had put on the warm dresses brought down to them by their maid—when they had shaken hands with him, and gone away smiling in the most prosaic of four-wheeled flies, our hero felt as though two rays of sunshine had left his dwelling. The cottage seemed dark, and Jack felt miserable. He picked up a tiny wet glove which he knew to be Miss Lucy's, and kissed it. After that, he ran to the almanac to see what day it was, and almost swooned with joy to find it was Friday, and that consequently, as Mr Chatfield would be at home on the morrow, he might call with perfect propriety at Beauchamp Villa. That evening he absented himself from a party where his presence was indispensable for the getting-up of charades, and wandered about on the beach till twelve o'clock, just near the spot where he had saved Miss Lucy. In a word, he behaved most irrationally, and took no breakfast next morning from sheer excitement of mind.

Mr Chatfield received him very well, and invited him to dinner on Sunday. Jack feared he should go mad when he found himself seated at table next Miss Lucy, and helping her to wine. In the drawing-room, she presided at the urn, and he thought he had never tasted anything so delicious as the tea she had brewed with her own hands. He took three cups of it. Mr Chatfield, finding him a pleasant guest, asked him to call again, which he promised to do with every intention of keeping his word. On his way home, he indulged in a delirious hornpipe by the sad sea-waves, to the mute stupefaction of a local policeman.

Love never does things by halves with such gentlemen as Mr Jack Haviland. By the end of a week, Jack found he could think and dream of nothing else but Lucy Chatfield. He was like a man who has stared too hard at the sun, and sees a luminous spot continually dancing before his eyes. He passed his days in alternations of giddy bliss and pitiable wretchedness, according as his suit seemed to prosper or fail. He was 'gone, gone all over,' as he himself expressed it; and as flame, when it rages so hotly as this, is contagious, Miss Lucy herself began soon to wonder how it was that her heart fluttered so fast whenever she met Mr Jack. At first, the meetings were confined to chance encounters on parade, once or so every other day. Gradually, the meetings grew more frequent and prolonged, until at last 'chance' became so complaisant, that the lovers met twice a day.

And then it was that the habit of long walks set in—long walks on the cliff, in country roads, on the desert parts of the beach; anywhere where they could be alone. Lucy, no longer timid, as at first, leaned innocently on Jack's strong arm, accepting the plea that it was prudent to do so, lest another big wave should come and sweep her down. Annie Heywood, who was the constant companion of these walks, had a true feminine tact for straying a few yards before or a few yards behind, that those adorable nothings, so sweet to exchange when there are only two to hear them, might not remain unspoken from the presence of a third. Jack was happy, and Lucy was happy too. No thought of to-morrow came to mar the *naïve* illusions of their dream; they lived only in the present, loving each other more and more every day. And once, when Jack had allowed his lips to whisper the first trembling confession of his heart, he drew his arm round Lucy's waist, and kissed her; and she, happy at what he had said, and not afraid to shew her happiness, did as he bade her, and returned his kiss.

III.

Two months had passed since the day when they had first met, and Jack Haviland's protracted absence from all the festivities of Shingle had

Digitized by Google

begun to sow bitterness and wailing in the female camp. The most terrible suppositions had already been set afloat by the joint ingenuity of Mrs M'Hotscone and Miss Bohea. The local journal had solemnly announced the arrival at Shingle of Mademoiselle Gredinette of the *corps de ballet* of the Paris Opera; and putting this fact together with the other fact of Jack's desertion, Miss Bohea inquired whether it were not possible to deduct therefrom a most scandalous conclusion. But it is fair to say that Miss Bohea remained alone of her opinion. The other ladies could not bring upon themselves to suspect Jack Haviland of so much blackness. Besides, Mademoiselle Gredinette had not remained in Shingle for more than two days, and she had been escorted both on arrival and departure by the Right Honourable the Earl of Wheezylung, a peer of the realm. Whilst queries and wonders, suggestions and exclamations, were still running riot, Mrs Maydew appeared one Sunday morning at St Marigold's Church with a look of triumph on her countenance. During the whole time of service, she cast looks of intelligence at Mrs M'Hotscone, Mrs Curry-combe, and Miss Bohea; and as soon as the service was ended, she hastened out, so as to meet her friends, and tell them all about it.

'Oh! would you believe it, my dear Mrs M'Hotscone, after all our kindness to him, to abandon us all for a girl like that?'

'Who can it be?' inquired Mrs M'Hotscone.

'Who is it?' asked Mrs Curry-combe.

'Who?' gasped Miss Bohea.

'Why, none other than that little Miss Chatfield, the child with auburn hair, who lives at Beauchamp Lodge, and has a father too proud to call upon any one.'

'Mr Chatfield the banker?'

'No; he's a timber-merchant, or a drysalter, or something of the kind. He's immensely rich, and I can't make out how he can accept such a man as Jack Haviland for his son-in-law. Mr Haviland hasn't a single sixpence.'

'Not a penny,' muttered Miss Bohea.

'But is it all settled then?' asked Mrs M'Hotscone.

'I don't know, I'm sure; but I suspect it must be. Mr Haviland no longer comes to St Marigold's on Sundays. He doesn't like to lose sight of his little waxy-flaxy miss for a single minute. I met him on Parade this morning, going with a smiling face to Mr Jumper's tabernacle.'

'A dissenting chapel!' exclaimed Mrs Curry-combe in horror.

'That young man has no regard for his soul,' cried Miss Bohea.

'I shouldn't have believed it of him,' said Mrs M'Hotscone; and the four ladies, mortally shocked at what they had heard, wended their way all chattering together.

'We must agree to cut him,' began Miss Bohea, who, from being the tenderest of Jack's admirers, had become of late the bitterest of his foes. 'We must scratch him off our visiting-lists.' The word *scratch* was pronounced with singular vehemence; so much so, that the other three ladies gave a start, then looked at each other, and finally smiled.

'After all,' said Mrs M'Hotscone, who had a warm Scotch heart, 'Jack's a gude laddie, and he couldn't always remain a bachelor. He'll make a canny bridegroom, and we'd best think of wishing him a bonny wife and a fair armful of bairns.'

Miss Bohea felt it binding upon her to blush.

'If he'd only not chosen a dissenter!' observed Mrs Curry-combe, relenting.

'Yes,' sighed Mrs Maydew; 'but we'll get him to convert his wife: you and Mr Curry-combe will manage that, dear.—What a delightful sermon that was the rector gave us this morning!'

Mrs Curry-combe's brow cleared up entirely. 'I'm glad you liked the sermon, dear; William and I worked at it together.—But, dear me, here he is in person!' exclaimed the rector's wife, glancing down the street.

'Who? William?'

'No, no; Jack Haviland.'

And so it was. Mr Jack, making fearful gestures with his arms, and walking at a break-neck pace, was looming in the distance. He seemed to be unconscious of surrounding objects, and was frightfully pale.

'Why, what can have happened?' cried Mrs Maydew; 'he looked so happy this morning.'

'He's not himself at all now,' said Mrs M'Hotscone, terrified.

'I think he's in a state of inebriation,' observed Miss Bohea.

'Mr Haviland! Mr Haviland! Why, don't you intend to speak to us?' cried out Mrs Curry-combe, as Jack, with his eyes cast down, seemed about to rush by without stopping.

Jack looked up startled, raised his hat mechanically, and stared vacantly at the group. 'Good-morning, ladies,' he stammered in an altered voice. 'I beg your pardon; I had not seen you.'

He spoke absently, scarcely knowing what he said. Mrs M'Hotscone took pity on him. 'The puir fellow's ailing,' she whispered; and the ladies—with the exception of Miss Bohea—nodded kindly, to give Jack an excuse for going his way. He made a second bow, and continued his course without looking to right or left. Something was clearly the matter with him.

'I wonder what it can be?' exclaimed the four ladies together, and they parted with every variety of conjecture and surmise.

'It's not very difficult to guess,' said Miss Bohea with an intonation of triumph; 'that little Miss Chatfield must have jilted him.'

At all events, not of her own accord, poor girl; for if Miss Bohea's suspicion was right in the letter, it was quite incorrect in the spirit. Jack had not been jilted; he had only been told that his dream of happiness was at an end—that was all; but was it not enough, and had he not reason to clasp his fists as he went, to vow that he was the most miserable being alive, and to plan throwing himself into the sea that very night as soon as ever the moon should have risen?

This is what had happened: Jack, that morning, had got up as usual without a cloud to dull his heart. He had breakfasted confidingly off two poached eggs, and had set out for Mr Jumper's place of worship, righteously purposed to attend to that reverend man's exhortations, and to make himself a cheerful soul by looking as frequently as he could during service at Miss Lucy Chatfield in the pew opposite him. He had arrayed himself in his best, had stuck a bright moss-rose bud within his button-hole, and had drawn on the choicest pair of dogskin gloves, quoted four shillings and sixpence in the market. His chin new reaped, his hair well brushed, and his whiskers trimly

Digitized by Google

combed, had all created the most favourable impression upon the congregation at the tabernacle. Mr Jumper, who had detected in him a proselyte, eyed him approvingly, on ascending the pulpit; and Mrs Jumper, who had had him shewn into her pew, presented him with her hymn-book. Albeit, as the service progressed, Jack's brow began to lower. At a quarter past eleven, neither Lucy, nor Annie Heywood, nor Mr Chatfield had yet appeared. Twenty minutes, twenty-five, half an hour elapsed, and yet no sign of the party. Jack's brow became overcast. The sermon commenced, and Mr Jumper with fervid eloquence began prophesying unpleasantries to the 'miserable sinniers' around him. It became evident that Lucy would not appear that day. Jack felt himself oppressed with all the terrors that the human mind, when suffering from the pains of love, can forge. He felt himself stifling in the close-packed chapel. His fears grew apace, and, to the speechless scandal of the congregation, he rose in the very midst of the sermon—at the pathetic point where Mr Jumper, with a view to his special conversion, was describing the joy of the black sheep who has been washed—and bolted out.

When once outside, however, he had a moment's hope. Susan, one of the housemaids at Beauchamp Villa, was standing on the chapel steps, and as soon as he appeared, drew a letter mysteriously from her pocket, handed it him, and without saying a word disappeared. It was not in Lucy's handwriting this letter, and Jack heard his heart throb again with all its fears as he tore open the envelope. This is what he read:

My dear Mr Haviland—All has been discovered. Mr Chatfield came home last night in dreadful anger, having been told by somebody, we do not know whom, that you were in the habit of going out walking with us every day. He scolded poor Lucy all the evening yesterday, and again this morning. He is the more furious as she has held out bravely that she loves you, and will marry no one but you. I believe Mr Chatfield will call upon you to-day, but I am afraid he will be very harsh, for he speaks most bitterly, and talks of sending off Lucy to France, and putting her in a convent, if she will not promise never to speak to you again. We are both very unhappy. Lucy has cried all the morning. I send this by Susan; and am, my dear Mr Haviland, very faithfully yours, Annie Heywood.

Jack grew cold as he finished this letter, and we know the state in which he ran home. Fortunately, it was Sunday, and the chemists' shops were closed, or else there is no telling to what lengths he might have run, had any one been found to sell him, upon his own recognisances, a dose of prussic acid. He ran so fast, and was so entirely absorbed in his own reflections, that he did not notice the frowning features of Mr Chatfield, who was mounting guard outside his cottage, and who, as soon as he had rushed in with his head downcast, strode menacingly after him, and banged for ten good seconds at the door with a furious double-knock. Jack had not yet had time to take off his gloves. He opened his sitting-room door, and heard a vibrating voice inquire of his housekeeper if he were at home.

'He's just come in, sir,' answered the terrified Mrs Nuffin, who had never heard anything like that knock before.

Mr Chatfield, without waiting to be announced, walked straight into the room where Jack Haviland was, and, confronting him with an angry stare, began abruptly: 'Do you consider yourself a gentleman, Mr Haviland?'

'I hope so,' stammered poor Jack, growing very red, and feeling very guilty.

'Ah, you hope so. Well, I am glad there seems to be some doubt of the fact in your mind, for I should like to know, sir, whether you consider it becoming a gentleman to make love to a young girl during her father's absence—to profit by the circumstance of my being in London six days of the week, to sing your maudlin love-songs in a mere child's ear—and to encourage that child to open defiance and disobedience of me? I ask you, sir, do you consider that conduct becoming a gentleman?'

'I love Miss Chatfield,' faltered Jack, not finding anything else to say.

'You love Miss Chatfield!' repeated the merchant, waxing more indignant as he continued to speak. 'And may I ask, sir, who you are, who pretend to love Miss Chatfield? What are your means of existence? How do you live? What are your claims to the hand of a young lady in my daughter's position? Are you a peer of England?'

Jack shook his head despondingly.

'A millionaire?'

Jack gave a sigh.

'A man of talent? A great author? A painter? A rising barrister?'

'I am nothing,' murmured Jack.

'Are you even an honest man, sir?' exclaimed Mr Chatfield, raising his voice till it shook the room, and crossing his arms contemptuously.

'Ah! there, yes,' cried Jack Haviland, with a red-hot glow on his face; 'I may have been thoughtless, Mr Chatfield, but I am an honest man.'

'That's very easily said, sir,' rejoined the merchant coldly. 'How much have you a year?'

'I've only two hundred pounds and this cottage,' answered Jack Haviland humbly. 'But you do not intend to judge of my honesty by the extent of my fortune, I hope?'

'But indeed I do, Mr John Haviland,' answered Mr Chatfield with a sneer, 'for if you had been the honest man you pretend yourself, you would assuredly have known, sir, that a man lays himself open to very ugly suspicions, when, having but twelve shillings a day to live upon, he makes love to the daughter of a man who has a hundred thousand pounds at his banker's.'

'I swear I never thought of your fortune,' cried Jack impulsively. 'Had you been poorer than I, it would have been just the same. You cannot think, Mr Chatfield, that there was ever a single mercenary wish in my love for Miss Lucy?'

'Prove it,' said the merchant sternly.

'How?' faltered Jack, feeling his heart droop within him.

'That is a strange question, sir!' exclaimed Mr Chatfield, pronouncing each of his words with terrible conciseness. 'You tell me that you ignored the extent of my fortune. Well, I reveal it you now: my daughter will at my death have ten thousand pounds a year. If your views have been so disinterested as you now affirm, you cannot but be struck with the immense disproportion that exists between Miss Chatfield's position and yours. And if you wish me to hold you guiltless of any

Digitized by Google

unworthy motives, of any fault, indeed, save that of thoughtlessness, you know very well how you must act.'

Jack became deadly pale, and drew his hand across his brow. 'Yes,' he said in a broken voice, 'you want me to promise that I will not speak again to Miss Chatfield.'

'I wish you to swear upon your word of honour as a gentleman that you will break off all further connection of any sort with my daughter. Do you promise?'

Jack hesitated a moment, and cast an imploring look at the merchant, whose features remained impassible.

'Very well,' he said sadly; 'I give you my word. But I think it will be better if I go away. I will leave England to-morrow, and not return until—until—yes, until Miss Chatfield be married.'

The merchant nodded; but he looked more attentively at Jack after the latter had spoken these words. There was even something like a trace of emotion on his face, and it was in a much softer voice that he said, holding out his hand: 'I accept your word, Mr Haviland, and confess that my estimate of you was a wrong one. But you must not bear me a grudge for the way I am acting. If you were in my place, you would understand that I have the welfare and happiness of my child to look to, and that I am bound to follow the promptings of my reason and my judgment.'

'If I were a father, I should no doubt act as you are doing,' said Jack mournfully. 'I am sorry I did not think of this before; but I will go away to-morrow, and you must tell Miss—Lu—Miss Chatfield to forget me.'

The merchant did not feel so satisfied with himself as he had done a moment or two before. He ought to have taken his leave, and yet he staid. 'It will be a great inconvenience to you to go away so suddenly,' he said with hesitation: 'you have probably many matters to settle; debts to pay perhaps. Will you allow me to take these off your hands?'

'No,' said Jack quietly; 'I have no debts whatever. I have nothing to settle either. I shall give this cottage to my housekeeper, who used to be my nurse; and I can start the first thing to-morrow morning.'

'Are you in need of money?'

'No; thank you. I had laid by a little store for a rainy day; and the rainy day has come.'

He opened his desk and shewed the merchant a little heap of five-pound notes. Mr Chatfield had become thoughtful. 'You have no debts,' he said pensively, 'and with two hundred pounds a year only you can manage to lay by. That speaks well for your training.'

'I was very idle at school,' said Jack reddening, 'and I know next to nothing; but whilst my father yet lived, that is, whilst I was still a child, he taught me two maxims, which he said contained the measure of all earthly wisdom: "Don't tell lies; and don't get into debt."'

'And you have observed these maxims?'

Jack's eyes beamed truthfully at the merchant. 'Yes,' he said simply.

IV.

Mr Chatfield left Jack's cottage with a host of new reflections in his mind. For the first time in his life he began to suspect that there was something on earth as honourable as birth, great wealth, or famous talent, and that was plain, unboasting honesty. He had never been a hard man; on the contrary, he passed for generous and feeling; but in common with most men in this mercenary age, he shared the idea that human merit was always to be measured by the standard of gold, and that where gold was wanting to prop it, virtue could never be very strong or very steadfast. He had always felt a certain contempt for poor men, and he grounded this feeling on the incontrovertible fact, that those who are obliged to battle continually against want must become narrow-minded at last, from the perpetual struggle and contact with petty miseries. It had never yet occurred to him that wealth was only a relative condition, and that some men could be richer with hundreds than others with millions. But, above all, it had never yet struck his mind that a man who brings to his wedding contract a spotless name, a rigid inflexibility of principle, and a cheerful heart, happy with little, and free from greed, has more to offer than any wealth that can be expressed in figures.

After wandering about some time and nearing his house, he turned suddenly back, and went again towards the town. He knew several people amongst the leading families, and he called upon them all, one after another, to gather information about Jack Haviland. Everywhere he heard the same thing. If ever Nature had made a good, honest, and amiable character, it was certainly Mr Haviland's. No man was so ready to do good; no one was so kind and even-tempered; no one so thoroughly unselfish, and so completely indulgent for the failings, vices, or caprices of others. The world is not altogether so ungrateful as it is painted. People do not always delight to repay kindness and service by slander. The astonished merchant saw more than one eye glisten with genuine tears of emotion whilst Jack's honest virtues were being descanted on. It began to be remembered, that on no one occasion had Jack ever been heard to say an unkind thing of any one; whilst, on the other hand, it was everywhere confirmed that he was invariably first to take the defence of those who were accused or maligned. Again, many acts of rare and touching delicacy were quoted of him; quarrels had been appeased by his means, reconciliations effected, and deeds of large and generous charity were attributed to him, the more surely as he had always denied them.

Mr Chatfield returned home towards evening in a silent, thoughtful mood. He found Lucy with her eyes very red, and her pretty face quite sad from weeping. He kissed her, and told her not to cry; but during dinner he scarcely said a word, and as soon as he rose from table, he shut himself up in his study, and remained there walking up and down for nearly two hours. When he came out, his face bore an unusually serious though mild expression. He held a letter in his hand, and rang the drawing-room bell. 'Take that to Mr John Haviland, at the Cliff Cottage,' he said; and when the servant had gone out, and when he had heard the house-door close on him, he heaved a sigh of relief, like a man who has done a good action, and has reason to be pleased with it.

'Come here, Lucy,' he said in a gentle voice; and when the poor child had begun to weep again at hearing him speak so kindly, his lips quivered, and it was almost in a whisper that he spoke his

Digitized by Google

next words: 'Do you think, my darling pet, that I would ever willingly cause you a moment's pain? Do you not know that you are my only treasure on earth, and that there can be no joy or pleasure for me in life unless you have your share of it? Do you think that anything could compensate me for shedding one of your precious tears? And do you not feel that for a single one of your smiles, I would do all that is humanly possible? Then trust to me, dear child, and never fear but that your happiness will be the sole guide to my actions, the only end to which I shall look.'

Lucy went to bed a little comforted, but with her heart still very heavy. Mr Chatfield waited till the footman had returned from the cottage; inquired if the note had been delivered safely, and then retired too. For the first time for many years, he retired to rest without reading the money articles in the weekly reviews, a task he always reserved for Sunday night. The fact was, his mind was very far from scrip and share that evening.

Jack was silently and sorrowfully packing up his boxes when Mrs Nuffin, who had been apprised of his departure, and thrown into a state of trembling wonder by it, brought up the merchant's note. Jack broke the seal without much excitement. The letter contained only these words:

MY DEAR MR HAVILAND—I should be very glad if you could call at Beauchamp Villa to-morrow towards eleven, for I have something to say to you.—Yours sincerely,

ROBERT CHATFIELD.

Jack put the letter in his pocket, and continued to pack. He did not go to bed at all that night—sleep would have been impossible; so he passed his time in looking over all his domestic treasures, laying by a number of things which he intended to send as 'keepsakes' to the numerous children by whom he was known and loved. He wrote also a few letters to different friends, ascribing his departure to a desire to travel—which indeed was strictly true, for he could no longer have borne to remain at Shingle. When all this was done, he slipped out of the house towards midnight, and went down to the beach, to the most deserted part of it, where he had taken his last walk with Lucy. He remained there listening to the monotonous but soothing roll of the waves till daybreak; and no one who had met him, as he returned home peaceful and composed on the morrow, could have guessed how deep and real was the sorrow that lay under his placid features.

One of his most trying moments was the parting with Mrs Nuffin, who was not at all to be comforted with the gift of Jack's cottage and furniture. The good woman invoked all the principles of common law and equity against the abandonment of an old nurse. It was contrary to the justice of the land, she affirmed; and as she was an old woman, and had but little more time to live, Jack might very well have waited until she died before beginning his ramblings abroad. Jack, who could not trust himself to remain calm a single moment where others were crying, was obliged to snatch himself away without listening. 'Drive to Beauchamp Villa,' he said to the driver on whose fly his boxes were piled; 'and after that, you'll have to take me to the station.'

On reaching the villa, Jack Haviland's heart began to beat so fast that he had scarcely strength to knock. He was shewn into an empty parlour, but a minute after the footman returned, and requested him to walk up to the drawing-room. Jack followed, hanging his head despondingly, and wishing he had been spared the last trial of coming to that house, into which he never more would enter. The servant announced him in a formal tone, and withdrew. Jack raised his eyes doubtingly, and then turned ashy pale; he was in the presence not only of Mr Chatfield, but of Lucy. His first impulse was to rush forward; but he remembered his promise, and remained motionless; only, he was obliged to lean against a chair for support—he had not been prepared for this emotion.

Lucy looked at him wistfully, but at a gesture of her father's, she walked slowly towards him, and held out her hand: 'Papa says I may shake hands with you, Mr Haviland,' she said faltering.

He looked up at her, and a look of pain flitted across his face. 'Good-bye—Miss Chatfield,' he sobbed, with a desperate effort to control his voice.

Mr Chatfield appeared moved. 'Mr Haviland,' he said quickly, 'I have sent for you to propose that instead of leaving England, and so abandoning the chance of ever bettering your fortunes in this land, you should come with me to London and enter my office. We can find plenty for you to do there, and you could begin on a salary of three hundred pounds. By-and-by, there is no knowing, you might become my partner. I have heard a great deal about your uprightness and steadiness of conduct, and you are just the sort of man I should be pleased and proud to work with. Do you accept?'

Jack looked inquiringly, first at the merchant, then at Lucy, who seemed as much astonished as he.

'Ah! by the way, though, there's a condition I forgot to mention,' added Mr Chatfield; 'but it's a condition about which I hope you'll make no difficulty.'

'What is that, sir?' asked Jack in amazement.

'That you agree to marry my daughter.'

'RESURGAM.'

Sweetheart, though 'tis years since we parted,
Are the voices of mem'ry asleep?
Though life's river rolls broadly between us,
And the ford with each day grows more deep.

When the spires of the chestnut are whitening,
And the air filled with sweet hawthorn breath,
And the words of the birds call the cowslips
To wake up from the long winter death:

When the gray nights of winter are short'ning,
And the day opens blue-eyed and clear,
And the dawn with a faint streak of saffron,
Brings the sun of the May of the year:

When the lily looks up from the river,
And the reed from its long-frozen bed,
Are there never faint spectres arising
Of our love and our youth, from the dead?

In the song of the thrush and the black-bird,
Whose voice melts us almost to tears,
Does your heart never throw in remembrance
A bridge o'er the river of years?

JINNY'S THREE BALLS.

IN THREE CHAPTERS.

CHAPTER I.—JINNY'S FIRST BALL.

'How kind you are.'

'LOOK at that girl, Fitz. I'll bet you anything you like she hasn't been trotted out once to-night. Poor thing!'

'She's not bad-looking; at least, not very, but awfully raw,' said Captain Fitzpatrick, leaning against the doorway, and surveying the lady in question critically, while she dropped her shy eyes, and blushed over ears and forehead.

'I wish I wasn't engaged all the way down,' continued his good-natured friend (who was called Dick Jones, and therefore surnamed by his brother officers, after the manner of their kind, 'De Courcy'), 'or that Sydney wasn't such a lazy wretch.'

'Look here! *I'll* ask her,' interrupted Fitzpatrick, starting from his languid attitude, 'else the unlucky little monkey will do something rash. Here goes. Put a bold face on it, and introduce me; there's a good fellow.'

'My friend Captain Fitzpatrick, of the 190th—Miss Lake.'

'May I have this dance?' asked the captain, sitting down good-humouredly on the so-long vacant bench, and shewing his big white teeth in a pleasant patronising smile.

'Yes. Oh, thank you very much.'

'May I put my name on your card? Perhaps you haven't got one?—Let me pick up your handkerchief. Stay; there goes the fan too. How cruel to give me so much trouble, isn't it?'

Then, at last, his shy neighbour looked up, and burst out vehemently: 'I am so—so stupid and awkward.—No, I've no card; I haven't danced once this evening. Pray, forgive me.'

'Forgive you! I should think so. What a shame!—This promises to be amusing.' The last five words were spoken to himself, as he turned and contemplated his partner.

She was not much to look at, he thought; a tall slim girl, with abrupt, awkward movements, a blunt nose, a wide mouth, and big, limpid, brown-gray eyes, with long level brows, and thick straight lashes. She was badly dressed in a tumbled tarletane, white, with blue flowers, ill made, ill fitting, displaying a sufficiently snowy, but lamentably thin neck and arms; and she wore an unfashionably tall wreath of forget-me-nots on her waveless, thick brown hair, and a black ribbon round her long throat. She was not pretty—she never would be; but she might one day have a good figure; and her eyes were fine, and her hair and teeth not bad. And then, she had a sort of innocent, babyish air, thought Captain Fitzpatrick, that made her look quite jolly sometimes, in spite of her 'missishness.' Poor little Jinny Lake of sixteen! It was a dangerous gift to her, that silly, happy, sweet smile, which lit eyes as well as lips; that low, cooing voice, which said such rash and simple things with that unconscious pathos of tender trust. At least, any one who loved Jinny unselfishly would have thought so, and trembled for her; but as no one did, it was no great matter. She might wear her heart outside, for daws to peck at, and no one would care; not, certainly, the aunt and sole guardian whose guardianship and affection were so careless and so torpid, they might almost as well never have existed. Before the music of the next dance struck up, Captain Fitzpatrick had learned almost as much of Jinny's life and prospects as could be told. The knowledge awoke in him such immense wonder and pity, that he determined to ameliorate her sad fate as much as lay in his power, and at the same time to form her character. Yet he had not the appearance of a safe mentor, as he bent towards her, his bright blue eyes dancing in amusement at her *naïveté*; his curved, delicate lips laughing beneath the silky curls of his golden-brown moustache; his glossy, close-cut head almost touching the ugly blue wreath. He looked kind, and good-tempered, and cheery, as he was; but a great deal too handsome and graceful, and agreeably conscious of those facts, for a safe instructor of susceptible youth.

Digitized by Google

'Well, you shall enjoy yourself for what's left of the evening,' he said. 'I'll tell you: I'll introduce two of our fellows to you, and'——

'There are only two dances more,' answered Jinny with alarmingly open appeal; 'and I thought perhaps *you*'——

'Thought what, Miss Lake?'

'Nothing; at least—no, I mean *you* are *so* kind, that'——

'You'll just as soon dance, then, with your humble servant? Was that it, eh?'

'O yes; indeed it was!' she cried with shy, vehement relief.

'All right: I shall be only too flattered, I'm sure,' the captain observed, unable to resist a rather conceited drawl, and a complacent caress of his moustache by a slender silver-gray hand, no larger than Jinny's own, and far defter than her long young fingers. Then they whirled away—Jinny in a seventh heaven of delight, doubting her own identity, and exciting the wonder of the sleepy old doctor who had consented to chaperon her to this, her first ball, but had not made the slightest effort to help her to either refreshment or dancing from the moment of their entrance until now.

When the last dance was over, and Miss Lake had made no movement to rejoin her chaperon, Fitzpatrick saw the matter was in his own hands. Partly through native docility, partly through her vast admiration of himself, she would have been content to sit all night with him in the empty ballroom. So he said, feeling quite benevolently prudent: 'By Jove! I'm sorry it's over. I suppose I must give you up to that old fogy now?'

He did it accordingly; and then Jinny, holding out a fervent hand, said: 'Good-bye' in a depressed and gloomy manner.

'Oh, it's not "Good-bye,"' he answered laughing: 'of course, I must see you to your carriage; and then'——

'But I'm going to walk,' avowed literal Jinny; 'a fly's too dear.'

'All the jollier. I'll come with you, if I may?' There was nothing very tender in the pleading of his bright blue eyes, but Jinny found it irresistible.

'Oh, I *should* like it!' she whispered, and soon came forth from the cloaking-room with a thin old shawl huddled round her; her dress caught up, regardless of grace, in a great bundle in front, and such an eager, shining, fluttered face as made Fitzpatrick feel at the same time thrills of affection and contempt for her. Poor Jinny! She was lamentably ignorant of these little details of the art of pleasing, to be so imprudently ready to be pleased.

Old Dr Irving (in deference to some vague notions of 'leaving young people alone') plodded on behind the two, who hardly noticed his forbearance, and never thought of a comic, sad, little romance, over years ago, of which a raw young Sawbones and a retired grocer's daughter were hero and heroine. It was a longish walk, and Fitzpatrick became a little tired, and thought with angry sadness of a big cushioned carriage which had brought him and somebody else back from many balls; but Jinny was radiant, and he could not spoil the pleasure ringing so sweetly in the foolish, soft accents, nor mar the perfection of *her* happiness, because she could not make his own.

The same motive, he believed, made him say when he left her that he would 'do himself the pleasure of calling.'

'Do, please, do!' cried she, squeezing his hand. 'Oh, how *kind* you are!' And she stood and watched him when he had bid a cheery, respectful good-night to the old doctor, making his way lightsomely down the muddy road with the sort of dancing walk, funny enough in its way, which characterises many cavalry men, but which seemed to her inexperience only another individual charm.

He would almost have laughed could he have guessed the passionate gratitude and trembling reverence with which Jinny regarded him; the latter feeling, indeed, I think little Captain Fitzpatrick had never, in the course of his five-and-twenty years, inspired before. She went up-stairs slowly, and sat down on the bed in her little room, without once looking in the glass, as most girls would, under the new and agreeable circumstances, have done; but she was thinking of him—not of herself. She was so bewildered, she could not have uttered one of her thoughts distinctly; and after sitting quite still, with a dreamy smile on her lips, for a long time, her head drooped on her shoulder, and she fell asleep.

As to Fitzpatrick, he was on the whole happier than he had allowed himself to be for a long while. This poor child's awkward admiration soothed the self-esteem which had recently received a sad shock; and its character was novel—people were wont to pet, and chaff, and be warm friends with him; but no one had ever seemed to look up to him until now. He resolved inwardly to be very kind and patronising, and shew the world in general, and *one* lady in particular—whose ears it *might* reach—that he could be worshipped as well as worship. And then, he really pitied this poor little Miss Lake, wondering that girls did not die, or 'go cracked,' who led such weary lives as hers.

He came to see her next day, sending in his card by a stolid maid, to whom he had first to explain this piece of courteous propriety. He found her alone, in a dingy, slovenly room, with a faded 'Kidderminster' on the floor, fluffy green rep curtains, and stunted furniture of a mysterious red wood, which *might* have been mahogany, or deal, red ochre, and varnish. There were some gaudy cheap china vases, containing bouquets of paper flowers, on the mantelpiece, reflected in a little greenish chimney-glass; two portraits of Jinny's parents (a pale ugly clergyman, and a pale pretty governess), flanked with some smudgy prints, decorated the walls; while the signs of occupation, which sometimes redeem an otherwise dreary apartment, were here only added uglinesses—some checked dusters in process of *hemming*; the *Slap Bang Polka* dog's-eared, open on a rickety, old-fashioned piano; and the ball-dress of last night thrown forlornly on the sofa, to be cobbled

up for next time: all this made Fitzpatrick shudder as he came in.

Jinny jumped down from the window-seat, where she had been undisguisedly watching for him, and ran to meet him very gladly, unconscious of the bad policy of her eagerness, which made her visitor cooler in his greeting than he might otherwise have been.

When he was seated, he looked at her critically, and came to the conclusion that she was better looking in the day than at night, and her awkwardness rather less apparent in the high woollen dress that veiled her thin, sloping shoulders, and fell in straight heavy folds—pleasanter to look at than that stiff crumple of tarletane—to her feet. Besides, her hair arranged without attempt at effect, and roughened by the window-curtain against which it had been impatiently rubbed, suited her better; and the creased pink ribbon, twisted inartistically through it, did not 'go' badly with her flushed cheeks and soft colourless eyes. But for all that—for all her happy look and almost fond smile—Fitzpatrick was not going to let her off that offence against propriety, the making this visit *look* like a rendezvous, by her eager cry: 'Here you are at last,' and her non-mention of her aunt. It was his duty to teach her such things, so he began in a society tone, tinctured with a certain rebuking courtesy: 'I hope I shall have the pleasure of seeing Mrs Lake?'

'I told you she was an invalid, and never came down,' returned the *mal-à-propos* Jinny.

'Did you? Ah! I 'd forgotten,' said the captain, fibbing, with a view to avenge himself for her persistent want of tact. But she was not hurt by his forgetfulness; she had never thought his gracious ears *could* remember her silly words—for silly even the everyday folks round her said she was—and what must *he* think! So she only answered: 'I 'm glad; no, I don't mean that; only, now, you have no one to talk to but me, have you?' and Fitzpatrick could not but be disarmed by her persistent humility.

He paid her a long visit, and promised to come again. He ascertained where she took her walks, and said inwardly he would sometimes look her up in them; although, when his minute inquiries had led her to cry delightedly: 'Are you going there too?' he had replied coldly that he more often rode than walked. He went away much raised in his own estimation, and consequently pleased with Jinny; leaving her in a self-depreciatory state, possibly quite as happy in its way.

She saw him again very often, although he was quartered at the next town, and had to ride or drive over each time. He was always kind to her, and more complimentary than any one else; and he would sometimes hint at a secret trouble in his life, in a way which gave him additional interest in her eyes. Jinny had never known *any* young men, had scarcely *seen* any so handsome, or, at all events, so refined, and in a manner fascinating, as Francis Fitzpatrick; no one took any interest in her, cared whether she was pleased or sorry, looked well or ill, laughed or cried, except him. He used to give her hints about etiquette, gravely consider and advise her toilet, lend her novels and poetry, and sometimes send her music—not songs, for she excruciated him by her faulty pronunciation and 'veiled' voice, but easy pieces, or perhaps the last value.

Then, at times, he would praise her, and make love to her a little carelessly—half laughing at his own sentimental speeches, half doubting whether, after all, this humble, adoring little soul would not make a better wife than another he had once courted in vain. And, meanwhile, he ran up to town, paid visits and went to balls in the neighbourhood, flirted in a harmless way with every pretty girl he came across, rode in local races, played in local cricket matches, and was more popular than any other man in his regiment, and deservedly so. Every one liked him: alas! it is a fatal thing to love with entireness somebody whom every one likes. I can hardly tell what were Fitzpatrick's real feelings for Jinny; perhaps he did not know himself; certainly, he would not inquire about them too closely, lest they should not warrant his words and actions with regard to her. He pitied her very heartily, enjoyed extremely her deep trust and open adulation; but beyond this, mystery reigned—a mystery his friend Jones's clumsy, though conscientious, efforts to clear up had only increased. Jones had first chaffed him about 'the native,' and his jokes not being taken as he, Jones, conceived a man in love should take them, he remonstrated, and made Fitzpatrick very angry; his anger with his friend being perhaps due partly to anger with himself. But, unluckily, neither had any effect on his conduct towards Jinny.

And Jinny? Three words tell her silly story plainly enough—she loved him. She had not paused to weigh his love for her, nor think whether he treated her with proper deference, nor whether their positions coincided, nor anything. Her heart had gone from her before she knew she had a heart, almost; and, whatever happened, she could never, never take it back. This awkward girl, with her half-grown ways; with the cooing tender voice, that said so many foolish, frank words; with silly soft eyes, like those of some gentle, half-tame animal; with her piteous utter ignorance of how to win a lover, and retain him: this country simpleton, who had not even begun to care about dressing becomingly yet, loved with the woful strength, the rash self-abnegation, the dreadful faith that has made of women noblest martyrs and basest criminals in all ages; which bid fair to make of *her*, with her commonplace surroundings, only one more, it might be, hard old maid, it might be, happy wife and mother—happy, despite her unlikeness to her husband's people.

For alas! when Jinny tried to put her love into words, none seemed so fit to express it as the answer to that question in the Catechism which she had learned before she was confirmed: 'What is thy duty towards *God*? To believe in Him, to fear Him, to love Him; with all my heart, with all my mind, with all my soul, with all my strength; to worship Him, to give Him thanks, to put my whole trust in Him, all the days of my life.'

An unutterably piteous profanity, almost to be pardoned when you think of the certain promise of failure and despair in the application of such awful words to a mere human being, especially a human being like Captain Francis Fitzpatrick.

But Jinny, rejoicing in the sunshine, recked no more of a better Light than she did of the coming darkness, and considered him missionary rather than tempter. Did he not tell her what was proper, and did he not say propriety was

Digitized by Google

goodness polished, and in a society setting? She never told herself he could not change, because that would have been, to her single mind, to acknowledge a possibility of his not loving her, and his looks and tones declared—oh, a great deal more surely than words, that he did! And to care for a stupid ugly thing like her must be great love indeed, all his virtue, and none of hers.

So Jinny reasoned, and grew more familiar with her gay captain, and now came and sat near him, and stared devotedly in his face, or took his hand in her long thin fingers, admiring its delicacy, or the perfection of his dress, from the brown velvet morning coat to the Indian gold coins that fastened his wristbands, and the marvel of a boot that defined that high-bred, slender foot. And Jinny's open and lavish tribute began to shock him a little; that *other*, had she loved him ever so, would never have let him see it so slavishly; Jinny's fond flatteries began to pall: there had been stinging sweets of old, far racier in flavour. Besides, the wound Jinny had soothed was healing, and invalid diet became proportionately mawkish. 'But it would be so awfully awkward to cut the thing suddenly, and really she was a dear little child, and too good for a heedless fellow like him—in *some* ways—not good enough in others; not fair, nor stately, nor clever enough to present to the regiment and society as Mrs Fitzpatrick. No doubt, the affair would in some way die a natural death, and if not—if not—why, hang it all! the girl shouldn't have made love to him in that way!' To which girl, next moment, he would make such a speech as: 'No, you mayn't be *pretty*, exactly, but I'd rather sit here with you than with all the pretty girls under the sun.'

And Jinny would give a tender half-shake of her head, and stare at him with her big wistful eyes in silent adoring gratitude.

After these impulses of treachery, Fitzpatrick was subject to revulsions of kindness, in one of which he committed a rash act. He asked Jinny, and old Dr Irving, as her chaperon, to a dance his regiment were about to give prior to their departure.

The unfortunate child danced about the room when he revealed the former fact to her (carefully concealing the latter); her joy was not quite so graceful in act as in feeling, and Fitzpatrick, with rather a cross laugh, told her she would tire herself before the party if she did not stop.

So she crept up to him, instantly subdued, and asked with an absurd air of tragic anxiety: 'Can I wear my tarletane frock *again?*'

'No, by Jove! I don't think you can,' he answered. 'You must manage something else—coax it out of the aunt, or spend your pocket-money; there's a good child. *I* want you to look nice.'

A sweet warm feeling made Jinny thrill at the 'owning' sound of his last words: to be a credit to *him*, for *him* to be proud of her! If Jinny had been offered marriage by the Prince of Wales, and an act of parliament made on purpose, it would not have flattered her half so much. She grew confident, and said with a new little air of dignity: 'Oh, I'll manage somehow.'

And the impressionable little officer thought he might rely on the feminine art he had been the first to awaken. Jinny's aunt, who always heard of his visits, and always said, in answer to her niece's rapture: 'He must be very agreeable—give me my drops, dear;' and then always shut her eyes and slept—gave her consent; the doctor said he would take her; so there was no obstacle in her way, and she was perfectly happy.

THE DIARY OF AN ELIZABETHAN BARRISTER.

Among the students of the Middle Temple in the last years of the reign of Queen Elizabeth was one who diligently noted down the events of the day, the talk of the town, the gossip of his friends, the substance of the sermons he heard, and anecdotes of the leading public men. His diary thus sparkles with references to Shakspeare, Sir Walter Raleigh, the Earl of Essex, and Coke, who prosecuted those two last celebrities; the Cecils, Bacon, Ben Jonson, Stowe the antiquary, Sir Thomas Bodley, the wizard Earl of Northumberland, Sir Thomas More, Fleetwood, the Cromwell family, and others concerning whom our sympathies never flag; his sovereign lady, 'sweet Sister Temperance,' as her brother called her, is frequently mentioned, and her last days are described with much minuteness. This tattling, racy, Tudor journal is one of the Harleian Manuscripts preserved in the British Museum. It has before now been looked through more than once by *littérateurs*, chiefly for the sake of the allusions to Shakspeare; and one of these treasure-seekers, the late Mr J. Hunter, was so fascinated with its contents, that he took a great deal of pains to ascertain who the diarist was. With the assistance of the internal evidence of the diary, keen-scented genealogical inquiries, industrious search through visitations, registers, and wills, he came to the conclusion that the writer was John Manningham, who was entered on the books of the Middle Temple in 1597—1598, and subsequently called to the degree of barrister. Furthermore, that he eventually married the sister of his 'chamber-fellow,' and of Dr Curle, Dean of Lichfield, and enjoyed the estate of Bradborne, near Malling, Kent, which at the date of the diary was the property of a cousin, Richard Manningham, who made him his heir. Now identified, then, as the diary of John Manningham, barrister of the Middle Temple, and of Bradborne, Kent, for the year 1602, and part of 1603, the manuscript has been printed for the Camden Society, as a present to the members from their president, Mr Tite, M.P.

As we turn over the leaves, we step into Tudor London, over which 'Mr Lee' was lord mayor for the time being. The tall gabled timber-houses; the narrow streets; the broad, bright, swift Thames, with wherries darting and barges gliding about upon it; Tudor crowds, with scolds, 'prentices, and 'maisterless men' in them, congregating and dispersing, stand out from the pages as though they were alto-relievos on them. Though much of the diary relates to London life, we observe the young Templar made frequent journeys into Kent, where he had a large circle of cousins, the chief of whom was the owner of Bradborne. This Richard Manningham, who had been a successful London merchant, although twice married, was childless; and he seems to have selected the diarist out of his wide connections to be his 'son-in-love.' John Manningham speaks of him as his 'father-in-love,' and records with admiration his classical attainments, and many of his opinions upon current subjects discussed as they sat chatting

Digitized by Google

together, or walked about that pleasant manor in the core of the hop-country which one had it in his heart to leave to the other. From Bradborne, he visited other relatives in neighbouring towns, sometimes in company with his cousin's wife. Once as they were jogging along the road to Maidstone, she entertained him with an anecdote of her early life, which he noted down too. She told him when she was newly married to her first husband, and riding behind him, she slipped off, and he rode on without stopping to help her up, or to ascertain whether she was hurt, and went on so far, that she began to make up her mind to leave him, and get her own living in some service, so as never to see him again; but he ultimately stopped, and she forgave him. The talk generally, however, was the news of the country-side, of estates changing hands, marriages, births, and deaths. At this visit to Maidstone, they dined with Dr Gellibrand, another cousin. He shewed them in his study a skull, and placing his finger on one of the seams, ungallantly said it was that which the midwives closed in female children to prevent the wit getting in, which made them such fools ever after. Another time he visited a 'Cosen Watts' at Sandwich, and rode with him to dine with a 'Cosen Cranmer' at Canterbury. In the course of conversation at this dinner, Cranmer referred to a new mode of bowing practised by those who had visited foreign countries, which he had noticed at the bishop's house. He said when the bishop's guests came bowing to him 'with their new-fashioned salutacions below the knee,' he budged not, but declared uncompromisingly, 'he had not learned to dissemble soe deeply.'

The diarist made another journey into Huntingdonshire, when he entered the orbit of the Cromwell family. There were races going on at Sapley, and Mr Oliver Cromwell, the uncle of the future Protector, had 'all the glory of the day,' for his horse won the 'sylver bell.' The communion was ministered at Sir Henry Cromwell's on Easter Sunday, but without booke. And a 'house-full' of Cromwells was living at Hinchingbrooke 'like a kennell.' A still more interesting jaunt was a shorter one to Richmond, when the queen lay dying. Manningham was acquainted with Dr Parry, one of the chaplains then in attendance upon her majesty; and when there were contradictory rumours of her life and death flying from lip to lip in London, he went to Richmond to ascertain the truth. He dined with Dr Parry, the Bishop of Chichester, the Dean of Canterbury, and Dean of Windsor, in the Privy Chamber, and heard from them the condition of their royal mistress. She was still living, they said, and might have lived for years but for her own obstinacy, for her constitution was an excellent one; but her long refusal to take food, physic, or rest, had brought her now to a hopeless stage. She was dying, lying 'verry pensive and silent;' only able to shake her head when the archbishop spoke of earthly matters, and 'hug his hand' when he touched upon heavenly joys. Before daybreak the next morning she had gone to her rest. Manningham wrote: '*24th March* 1602—This morning about three at clocke hir majestie departed this lyfe, mildly like a lambe, easily like a ripe apple from a tree. Dr Parry told me he was present, and sent his prayers before hir soule; and I doubt not but she is amongst the royall saints in heaven in eternal joys.' He seems to have returned to town immediately, in time to hear King James proclaimed by the Council, at ten o'clock the same morning, at Whitehall gates and Cheapside. He notes the general grief at the queen's death in the quiet in which this ceremonial took place. There was scarcely any shouting; but at night bonfires were lighted and bells rung; and at the evening service at 'Paules,' the king was publicly prayed for instead of the queen.

The diary tells of the news being conveyed to King James, and of the messages he sent, and ordinances he issued on its reception. Although all was externally quiet, the country was in expectation of 'risings' in all directions; no fewer than fourteen claimants to the crown could be counted, none of whom came forward, however, owing to the prompt measures of King James's supporters. There is a false alarm of a rival in the field, which is afterwards explained as having been local rejoicings. A new interest in everything Scottish is shewn, and an allusion made to the northern accent as a 'fumbling lisping language.' Scottish anecdotes come into circulation, and are duly recorded. One runs to the effect that when the Scots in the French court wished to distinguish between a Frenchman and a Scot, they gave the word 'bread and cheese,' which the French could only repeat as 'bret and sheese.' Nevertheless, the great dead queen occupied a place in our diarist's mind for some time. In one place he writes, she died worth twelve million pounds, in money, plate, and jewels, of which sum four hundred thousand pounds was in gold. In another, he says: 'It is certaine the queene was not embowelled, but wrapt up in cere cloth, and that very il to, through the covetousness of them that defrauded hir of the allowance of cloth that was given them for that purpose.' There are various calls and visits in London mentioned. One was made to John Stowe, the author of the *Survey of London*, then nearly fourscore years of age. When the young Templar asked him why so few new monuments were mentioned in the *Survey*, he replied that those who put them up had displaced others of antiquity to make room for them, and as they had deprived these of record, he had purposely left them out, that they should not enjoy the memory of which they had deprived others. With pride in the dignity of the chief citizens of London, he told his guest they were formerly called barons, and addressed as such by the early kings, and that the ancient seal of the corporation was inscribed *Sigellum Baronum Londoniarum*.

If the diarist had been studying divinity instead of law, he could scarcely have heard more sermons, or taken more ample notes of them. Thus we get the pith of scores of sermons—pungent, entreating, vehement, extolling, denouncing, doctrinal, abstruse, and otherwise. Mr John Bruce, who has edited the little book, which is not more than six inches square, reminds us it was a sermon-loving age, to account for the industry with which these notes were made. Sometimes the diarist attended service at 'Paules Crosse,' sometimes at 'Paules,' again at Westminster, hearing some of the most celebrated divines of the day. He notes, too, a sermon preached by the popular Mr Egerton, in a little church or chapel up-stairs at Blackfriars; and another by a second popular favourite, Mr Clapham of Paul's Wharf. The last sermon

Digitized by Google

recorded, before the diary was filled up and laid aside, was a bitter invective against women, by Mr Hemmings of Trinity College, Cambridge. Standing at 'Paules Crosse,' he said: 'Yf a man would marrie, it were 1000 to one but that he should light upon a bad one, there were so many naught; and yf he should chaunce to find a good one, yet he were not suer to hold her soe: for women are like a coule full of snakes amongst which there is one eele, a thousand to one yf a man happen upon the eele, and yet if he gett it in his hand, all that he hath gotten is but a wet eele by the tayle.'

Interspersed among these notes of visits and sermons occur the references to Shakspeare that first drew attention to the manuscript; here a string of posies for jet rings set with silver; there an anagram, epitaph, or 'rime.' Scattered among the pages, as though the diarist wrote wherever the book first opened, are anecdotes of the celebrities we have mentioned, and of others with whose names we are not all so familiar; and reports—now that Sir Walter Raleigh is out of his captainship of the guard, and that Sir Amias Preston had sent him a challenge, or that the Earl of Northumberland was living apart from his lady again with his infant son at Sion House, or similar social whispers. His 'chamber-fellow,' Curle, tells him, for instance, that Sir Thomas Bodley, the founder of the Bodleian Library, courted and won his rich wife in her garden, whilst a rival suitor waited in her house and 'held his cardes' for him, and he makes a note of the information; and his laundress is impertinent, telling him: 'I was brought up as my frends were able, when manners were in the hall I was in the stable;' and this piece of homely information is jotted down as well. One observation informs us that the game of shuttlecock was the favourite amusement at court, and that the making of shuttlecocks had become almost a trade in London. Further on we read: 'This afternoon, a serving-man, one of the Earl of Northumberland, fought with swaggering Eps, and ran him through the eare.' On one leaf are notes of two marriages—the first being that of the Countess of Essex to the Earl of Clanricarde, 'a goodly personable gentleman, something resembling the late Earl of Essex;' the second, that of the son of the Lord Keeper to the 'Countes of Darbys daughter.'

We must content ourselves with this indication of the character of the contents of this curious diary of the young student.

A COUNTY FAMILY.

CHAPTER XIII.—THE MIST OF BLOOD.

PERHAPS one of the secrets of the happiness of this happy isle (which let us call Formosa) was, that there was no regular post; no pestiferous missives waiting on the breakfast-table to introduce us at once to a world of cares. Letters came, of course, but at no stated times, and only as convenience offered—that is to say, when a sailing-packet, or even a pleasure-boat, happened to come over from the neighbouring and larger island, between which and England intercourse was direct and constant enough. If the winds were violent, or contrary, correspondence was intermitted for whole weeks together; while, as for public matters—things such as the newspapers chronicle—the inhabitants of this blessed spot knew nothing whatever of them until they became matters of history, and cared nothing for them even then. The Norman Conquest was the last event of general interest that had any particular bearing on Formosa and its affairs.

The arrival of this occasional sailing-packet, of which the mistress of the inn had spoken, was quite an event in the island. It generally brought over a crowd of excursionists; such of whom as sea-sickness had not too much prostrated, dispersed themselves all over the place, to the admiration of the natives. It was hard to say which was most astonished by the aspect of the other—the visitors (mostly imported from London into the larger island by a steamer, for which the little harbour of Formosa offered no accommodation) or the aborigines. The former of necessity brought their own provisions, and picnicked on the shore, or in sheltered hollows of the downs; the latter (or at least the juvenile part of them) stood round at a respectful distance, listening with rapture to the popping of the pale-ale corks, and hoping that a goodly store of empty bottles would presently reward their patience, as it commonly did: if not the rose, they had been near the rose, and smelt very strong of it; and the water that the native urchins poured into the same, was held to be almost beer, and drunk with due approval.

On the present occasion, the news of the coming packet had spread through the three miles and a half which constitutes the length of Formosa, and the mile and half to *six feet* that forms its breadth. From many a sheltered farm or cottage, nestling in its few yards of Devon-like lane, trooped forth the island folk towards the harbour; and Mr William Roberts and his wife went with them. Calm as was the day, it was pleasant to see the little vessel, as it neared the land and met the recoiling waves, bury its prow beneath them, and rise and dip again, till its wet decks shone in the sun, and to hear the predictions, uttered in the Formosa tongue, concerning the condition of the expected voyagers. Youth at the stern, and Pleasure at the prow—or *vice versâ*—or amid-ships, have never yet reached that island shore without a preparatory tossing; and to-day formed no exception. But, to the great disappointment of the natives, there was no excursion-party this particular morning on board at all; the packet was only laden with stores—some to stock the seigneur's house—which is quite a mansion for these parts—and some for the landlady of the inn. 'And, by-the-bye,' said the skipper, as he made over her property to the latter lady, 'the postmaster asked me to bring this 'ere for some gentleman who is staying at your house, I believe;' and with that, he handed her a letter, directed to '*William Roberts, Esq., Formosa, Channel Islands.*'

'Didn't I say, Bill, that I thought you would get a letter this morning?' exclaimed Mrs Roberts, as her husband took the epistle, and stood with it in his hand, regarding the superscription with much dissatisfaction.

'Well, and what if you did? It's no great treasure now it has come. It is not from Richardson with the rest of the dibs, as I half hoped it might be; it's only from the old woman;' and he roughly disengaged his arm from his wife's fingers, and tore open the envelope with contempt.

'But what does she say, Bill?—Good heavens,

Digitized by Google

how strange you look! Are they all well at the cottage? Nothing is wrong with Nelly, I do trust?'

She peeped over his shoulder—her fear of her husband lost for the moment in her anxiety to learn the news—but he pushed her back with his elbow before she could read a line, and thrust the missive into his pocket.

'You mind your own business, will you? The letter is mine, not yours; and just because you are so prying, you sha'n't see it.—No, there's nobody ill—*there*, I 'll tell you that much; and there 's no news at all, at least that you have anything to do with.—Now, go home. You make all these idiots as curious as yourself. Go home, I say; I wish to be alone.' And with that he turned upon his heel, and walked hastily towards the little tunnel that led into the interior of the island.

The violence of his language and demeanour had attracted quite a little crowd of wondering folk about them, and among them the kind-hearted woman of the inn.

'I am afraid, ma'am,' said she simply, and in imperfect English, 'that that was bad news I gave your husband, since it has put him out so.'

'Yes, that was it,' replied Mrs Roberts eagerly. 'It took him so by surprise, that he was scarcely master of himself, poor fellow.'

'He need not have been angry with *you*, however, since you didn't write it. But that 's the way of the men. When the nets break, or the fish don't come, it 's always us wives who suffer for it.'

This remark seemed to be so philosophic and noteworthy, that the speaker translated it into the local tongue for the benefit of her fellow-countrywomen who stood round, from whom there at once broke forth unanimous demonstrations of assent.

'Yet my good man is a better one than he, thank God!' said one with a glance at Mr William Roberts' retreating figure.

'You are right, Annette,' said the landlady, 'for if ever there was a pig and a coward it is that one, and this poor unhappy creature has to bear with him.'

Mrs Roberts was fortunately wholly ignorant of the Formosa dialect, so that for all she knew the sympathy expressed in the faces around her extended to her husband as well as herself; without the least idea of undutifulness, therefore, she nodded and smiled gratefully, by way of reply, and then made her way, like an obedient wife as she was, to the house she had so lately quitted.

In the meantime, the rapid strides of her late companion had carried him far away into the solitude he desired. The six feet of soil to which, as I have said, the breadth of Formosa did at one spot dwindle, was, in fact, the summit of a lofty ridge, which connected, as by an isthmus, one portion of the island with the other, the smaller, which was hence called Little Formosa, as though it were an independent territory. This narrow pathway, which might have been defended by half-a-dozen men against a host unprovided with firearms, formed, in fact, a sort of natural bridge, and was one of the most remarkable of human highways. It was nearly five hundred feet long, and totally unprotected on either side from precipices that sank sheer into the sea at least an equal distance. Across this Roberts made his way, not without tremors, and sat down beneath the shadow of a huge rock on the further side. Wrapped as he was in his own selfish thoughts, the solitude and grandeur of the scene around him had yet some effect even upon his sordid mind. The distant and unknown continent to eastward, the illimitable sea on north and south, and the perilous track he had just traversed, and which seemed to cut him off from his fellow-men, struck him with that sort of awe which perhaps the devils feel who believe and tremble. His mind, like theirs, was full of evil; and yet the news of what was certainly a great piece of good fortune had just arrived to him. With one more look around, to make sure that he was alone, he set himself to read the letter, whose tidings he had gathered but from a single glance. These were couched in affectionate terms indeed, though the form of expression touched him not at all.

'My dearest Willy—At last our dreams have come true, and we are rich folks for ever! I write this letter from Redcombe Manor, the home of your fathers, and the place, dear boy, which you will one day inherit. That thought, Willy, is the one that has been uppermost in my mind ever since this glad news came. Henceforward, I feel sure you will be no cause of sorrow to your parents. You will have no temptation to do wrong, and you will be grateful to God, who has thus henceforth placed you above temptation. My heart is very full, Willy. I write this under the roof where, fifty years ago, I was but a servant, and now I am the mistress of it all. But my own altered position is nothing compared with the change that is awaiting you. It is this, above all things, for which I thank Heaven on my bended knees. Your father has forgiven you, and all will be now well—I feel, I am sure it will. You will give your enemies—those who must now needs be jealous of you, I mean—no opportunity of evil-speaking for the future. You will be a new man. Come home, then, darling, to wealth and happiness, and your loving mother's arms. Let us be a united family. Bess will be welcome too. It is not for me, of all people, to make objections to her upon the ground of her low birth, although, of course, under the circumstances, it seems a pity now that your marriage took place, since any girl in the country would be proud and happy to wed you. But be sure you give Bess my love, and Ellen's. It has been decided that Ellen's match is to be broken off with John Denton. She is to be the bride, your father says, of some great man, perhaps a lord. I am all in a whirl, and scarcely know what I write; but I know this, that until I see my boy here, I shall take no pleasure in the splendour and plenty that surround me. Come then, come home, my darling, to your loving mother,

Mary Blackburn.

'Of course, I direct this letter, as usual, but you will henceforth bear your own name, and, I am sure, will never again'—the 'again' was carefully crossed out, but William Roberts deciphered it, and it made his brow grow very dark—'will never disgrace it. We give out that you have been abroad—for your health.'

Of all the contents of this epistle, next to the news itself which it conveyed, one sentence affected the reader most, and indeed seemed to stand out from the rest, as though it had been written in some different colour; and yet it had probably been set down by the writer with less

Digitized by Google

thought than she had given to any other part of the composition, since it was in truth a mere incontrovertible statement of fact: '*Although, of course, under the circumstances, it seems a pity now that your marriage took place.*'

'A pity!' muttered William Blackburn, as we may now call him: 'it is a Curse which will cling to me for ever. That woman will be a millstone round my neck. To think that such a withered, white-faced jade should stand for ever between me and this good luck!—"*Any girl in the country would be proud and happy to wed you.*"—Of course she would; but what's the use of that when I'm married already? Miss Ellen foresaw this when she coaxed father over to give his consent to it. She's a cunning fox, if ever there was one; but I will be even with her yet. She thinks to make some splendid match, quite different from mine, does she, and to look down upon her uncle chained to this log, this drudge!' His passion was frightful to witness. He clenched his fist, and shook it at the broad bright sun in impotent malice. He scowled at the smiling sea, that lay so far beneath him that he could scarcely hear it lap upon the crags; and as he did so, a darker scheme than any that had ever yet crossed his brain came over it. It made his cheeks pale and his frame tremble, as though with sudden cold; and from mere dread of dwelling on it, he took up the letter again, and read it half through, stopping at that same paragraph which seemed to him now to be inscribed in letters of blood. 'A pity to have thus thrown himself away! Yes, it was indeed a woful misfortune to have tied himself to this faded fool; but was it necessarily an irremediable one? Suppose she were to die!'

A cloud came between earth and sun; and William Blackburn started up in terror, for, for the moment, he thought the shadow of some spectator was upon him reading what he read, and somehow cognizant of the thought he thought. But he was quite alone. No eye of man was on him; no sound nor trace of man was to be heard nor seen. About a solitary pinnacle of rock that stood in the sea, like the steeple of some church submerged, a cloud of sea-fowl clanged and clung afar off; but there was no other sign of life; not a sail flecked the sea, nor pennon of smoke above a steamer's track marred the clear sky.

'Suppose she were to die!' She was thin and pale enough to be near death; while he, on the other hand, was robust and strong. She had always been ailing ever since he had known her, and that was of itself a trouble and a nuisance, and very hard upon any husband, surely. But creaking doors hang long, and how many years might she not last? Years? Nay, if once he took her back with him to Redcombe, would not mischief be done enough to last for many a year. What young girl of family and fortune, such as this letter spoke of, would care to be the second to such a first?—the natural daughter of some turfite, and whose mother (for all he knew) might be alive even yet, and turn up some day to cloud his prospects still more darkly. Once let it be known that he had become rich, and his wife was likely to find relatives enough and to spare. Uncle Dean was not a nice sort of connection to begin with, and knew a great deal more about his nephew by marriage than was convenient. Richardson himself had known the girl years ago. She would prove a link with the very set with which, above all things, it was necessary for him to break off. Then there came into his mind, unbidden, a certain story of a man and wife, who, being poor and miserable, had agreed to die together, the one being in earnest, and the other not. The woman, who dearly loved her husband, was anxious to escape with him into some other world which might be less cruel; but the man desired to remain in this one, only to be quit of his wife. It was decided that they should take some instantaneous poison, sitting back to back, so (as the man suggested) they might not watch each other's dying agonies; and the wife died accordingly; but her cunning mate did but pretend to take his portion, and lived on, a free and unencumbered man.

This tale had struck him when he first heard of it, and he had often recalled its details; but now he seemed to see the crime enacted as in a picture, and he recognised the features of the woman well—for it was Bess.

Once more, as if to escape from his own thoughts, he applied himself to the letter. Thousand devils! what was this? He could scarcely read a line. Was his sight failing? A thick red mist, almost as red as blood, seemed to pervade all things. His very hands were damp with it, and he held them close to his eyes to convince himself that it was not really blood upon them. The ocean had disappeared from beneath him; the sea-fowl had ceased to scream. Something, he knew not what, such as he had somewhere read of, must have happened to his brain, and he was going to be very ill. He would go back to Bess at once, who knew something of doctoring, and was, at all events, an excellent nurse. He rose and groped his way towards home. How dear it seemed to him now, that place where kindly hands and loving tenderness was awaiting him, if only he could but get there! His alarm about the state of his health was so absorbing, that for a few minutes he forgot the perilous nature of the path he was pursuing, when suddenly a light breeze touched his face, and the red mist, which was only a sudden sea-fog of intense thickness, which the sun-rays coloured luridly, but strove to penetrate in vain, was lifted for a moment like the corner of a curtain, and shewed him where he was. Upon either side a sheer precipice, and before and behind him that unprotected track he had even shuddered to tread in the broad daylight. He saw the white foam gleaming, and the cruel jagged rocks pointing up at him hundreds of feet below, and then the curtain dropped again. To go on, to go back, in that palpable darkness, was equally to die. Even to stand where he was, with his brain turning round—for this time the blood was really rushing to his brain—and his knees knocking together, as they did, in the extremity of his terror, was almost as perilous. But he slowly sank down on his knees, and stretching himself out at full length upon the narrow way, clutched its rocky edges with both hands. 'I never meant to kill her; I swear I never did,' murmured the wretched creature in his agony; for it seemed to him, indeed, as though Hell was gaping wide for him. 'She has been a good wife to me, better than I deserve; and why should I wish her dead!'

Had it not been for the deep humiliation of the moral spectacle which he thus afforded, anything

Digitized by Google

more ludicrous than the position of Mr William Roberts it would be impossible to conceive. He resembled, more than anything human, one of those vermin which we see stretched out and nailed to the barn-doors by some inartistic gamekeeper. Nay, in contrast with the sublime grandeurs that lay around him—in the awful presence which Nature shewed—he looked more loathsome and grovelling than any such mere creeping thing. And there he lay, for nearly an hour, until the veil was lifted from the face of the sun, and earth and sky and sea once more rejoiced in the summer noontide. Then he rose, though trembling still, and made his way to safety and what was by comparison the mainland, where he relieved his feelings by a long string of execrations.

Again he sat down, and conned the letter, the contents of which one would have imagined he had by this time learned by heart; but so far was this from being the case, that he suddenly struck it with his hand, and leaped up with a curse, as though some adder had lain hidden in its folds, and bitten him. 'What's this?' cried he aloud, and pointing to the date at the top of the sheet, which had hitherto escaped his notice. '"September," she writes here, and this is August! Why, I ought to have received this news a year ago.'

CHAPTER XIV.—IT IS AN ILL WIND THAT BLOWS NOBODY GOOD.

Of course, folks do occasionally receive letters a little late, if one may believe the correspondents of the *Times*, who write with such indignation to complain of no less than three-quarters of an hour's delay in their suburban delivery; the nature of things compels, also, some to come to hand considerably after date, as when a missive arrives from the Underworld (as it often does), the writer of which may have done with either hemisphere four months before we get it, and learn the poor soul's intention to 'come home' for good by the next mail; but the delay of eleven months in the transmission of a missive from England to the Channel Islands was certainly quite unaccountable, notwithstanding the irregular postal arrangements of Formosa. What might not have happened at Redcombe Manor between the time of that letter's dispatch and of its arrival! was the thought that now drove its recipient almost frantic. And why, when she received no answer, did not his mother write again? Perhaps the old woman was dead, and his father and niece had been left to carry on their schemes against him without any opposition! Ellen might have married by this time, and secured an ample settlement at his own expense; or the old man might have died, and left her his sole heiress!

One thing only presented itself to his mind in the shape of comfort, if such a word as comfort can be applied to such a mind. If he had been so long kept in ignorance of matters at Redcombe, they also—the folks at home—were equally in the dark with respect to *his* affairs, nor were they curious, as he was, to learn what during the intervening period might have happened. He had not the character of a good correspondent; indeed, his mother and Ellen both knew him far too well to expect to hear from him about anything, while his father appeared to entertain no interest in him whatsoever. It would, therefore, not astonish the family that he should have delayed to communicate to them the intelligence of any occurrence, no matter of what importance. And, perhaps, in reply to this same letter, and before he appeared at the Manor-house in person, he might have certain news to send them of some moment.

Should this news be true or false? was the question which, his first burst of passion having subsided, Mr William Blackburn was now meditating as he strolled slowly homeward. It lay within his own power to make it either true or false, and the reflection that in the one case he would be telling a lie did not, we may be sure, affect the balance by a feather's weight. He had chosen purposely an indirect and unfrequented route across the fields, and his devious footsteps presently brought him to a very singular spot, which would, anywhere else but in Formosa, have been held in great esteem as a local lion. A huge circular hole, descending into what was shore at low tide, and sea at high, lay immediately before him. It was set in a green field, and the edges of the dreadful place were gay with wild-flowers—but it looked all the more terrible for these peaceful accessories. The noise of the waves, when the tide was up, as now, could be heard even on so calm a day at a great distance off, like muffled thunder; and in storm, the roaring of the imprisoned sea there pervaded the whole isle; but not in the wildest tempest had its foam been seen above the chasm. It boiled and raged as in some mighty caldron, but it could not boil over, by reason of the depth of the place, which was many hundred feet. To this abyss the approach was wholly unprotected, since it had generally a warning voice of its own, that no one could fail to hear. Attracted by the sound, although he had heard it many a time before, Mr William Blackburn once more assumed that abject attitude which became his character so well, and crawled on hands and knees to the very brink. He had been told a legend of some small spaniel, which had been caught by the tide in this awful spot, making its way to the surface and escaping; but it required faith indeed in whomsoever had once looked down 'the well-hole' to believe such a tale. The feat could never have been accomplished by any wingless creature. Whatever living thing on four feet, or on two, might have been so imprudent as to venture in there while the rising tide was near the mouth, must, without doubt, have perished; while, if a man fell over from above, he would either be dashed to pieces on the rock-strewn floor, or drowned, and presently carried out to sea, never to be beheld again. And 'how easily,' thought Mr William Blackburn, 'if he were curious, and not careful, a man *might* fall over this unprotected rim—or a woman!'

This line of thought, which, when he commenced it a few hours ago, had given him some disturbance, and later, even remorse, was now pursued by him without scruple. It was no longer startling, since it was not new; and as for that brief access of regret at having entertained it, he considered himself to have been taken unfair advantage of in the matter—to have been actuated by bodily fear, under which influence the law absolves us from all promises, and much more therefore from mere mental resolutions. There are many men of this same description, and whose ideas perhaps only require the same circumstances to flow in the same

Digitized by Google

hideous channel. Mere Egotists—though, fortunately, the sufficiently momentous occasion does not often tempt them—are always prepared to carry out their principles to the end. They regard the supreme Providence as another Ego, with whose will their own is sometimes unhappily at variance; but they hope to have their own way, on any really serious point, nevertheless. Moreover, Mr William Blackburn was not altogether singular in his secret belief, that there was not such a very great inequality between these two egos; not, indeed, in importance (albeit the sense of his own importance was overwhelming, and outweighed that of all the rest of the human family), but in power. That is to say, although when sick, or at sea (or lying on his stomach, with a precipice on each side of him), he was ready enough to acknowledge his inferiority, when in rude health, and standing on *terra firma*, it seemed to him (notwithstanding he would have been slow to acknowledge it) that himself and the Supreme Government of the Universe were upon pretty equal terms. Whatever may be false in the philosophy of persons of this description, they are all eminently practical. The absence of the gentler emotions and all soft influences from external nature, as well as (in the present case at least) the moral deafness to all charms of literature and art, leave their mind free, and clear, as it were, its decks for *action*. Thus, many a more powerful intellect, in the contemplation of such a deed as that with which Mr William Blackburn's brain was busy, would have embarrassed itself with *pros* and *cons* of a more or less sentimental sort, even after the question was virtually decided. But it was not so with him; having once settled the matter, he could give all his attention to details. He took out his watch, and calculated how much time he had to *complete his arrangements* before leaving the island, as he had resolved to do by the same packet that had brought him the letter. He did not like trusting himself, even in that calm weather, in a fishing-boat, since storms arose so suddenly in those treacherous seas. There was, he had noticed, a good deal of unlading to be done, and he knew the skipper had relatives in Formosa whom he would probably visit, so that it was almost certain the vessel would remain until late in the afternoon. He had, therefore, three or four good hours to spare.

There were two considerations, however, which troubled him a good deal. The tide would soon be going out, and leave the well-hole bare and open to observation both from above and below; so that if an accident, such as he anticipated, were to happen to anybody before evening, there would be some chance, however small, of its being discovered. This was certainly unlucky. Secondly, he bitterly regretted having acted so roughly towards his wife in the presence of so many people on the beach that morning. This might be construed by them as a serious domestic quarrel, instead of the very usual incident that it really was, and, in case of her immediate disappearance, might excite suspicion against him. These two circumstances gave him considerable uneasiness, and even caused him to waver in the resolution he had formed. Yet he could not put off the matter in hand for a more seasonable opportunity; his impatience to reach Redcombe Manor was too feverish and absorbing; and there was no knowing within a week or two when the packet might come again. Moreover, although so entirely free from sentimental feelings, there was something unpleasant to him in the idea of sharing the same bed and board with one whom he had thus predestinated to disappear; and if, after his plan had been effected, no matter how satisfactorily, he should be fated to be left for several days and nights alone at Formosa—within hearing of this well-hole music too—that he foresaw would be very unpleasant also. If Mr William Blackburn occasionally shewed himself careless of the interests and feelings of others, it must be confessed that, in his own affairs, he was provident and considerate in a very high degree.

He had not dismissed this idea of procrastinating the matter in a hurry; his flesh had crept a little, but his judicial mind had given the proposition fair play. He had thought of sending a letter by the packet, to tell his mother that Bess had been dead these three months, before putting in an appearance at the Manor himself. But, notwithstanding the extraordinary seclusion of the island, and the mutual ignorance of its inhabitants and those of the world without respecting one another, he had felt this was a too dangerous game to play. Having therefore decided on his own immediate departure, there was no time to be lost in the arrangements. Would it be better—would it excite suspicion, or lull it, to secure his passage by the packet at once or later? He was already calculating the consequences of the act which he had resolved to perpetrate; and perhaps he turned his thoughts thither the more readily, since otherwise they would have busied themselves with the act itself, which was not an agreeable topic, and from which, to say truth, he shrank. It must be understood that the idea of disembarrassing himself from his life-companion was by no means a new one to Mr William Blackburn, although, until that morning, it had never taken any practical shape, and far less that terrible one which he was thus so averse to contemplate in detail. He had been married for many years, and had long regretted the circumstance. He had got tired of his wife with the most fashionable speed, and even before he had spent that dowry of a hundred pounds which had been one of her chief attractions to him. She was by no means a lady whose character might have formed the back-bone of a moral tract, but she was a great deal too good for Mr Blackburn, and he resented it. She annoyed him, as we have seen, by defending certain members of his family from his reproaches, and thereby indirectly accusing him of ingratitude. She had not sympathised with his transgressions of the law, had always warned him of what came of them, and, worse than all, she had proved herself a prophet.

True, she had that mysterious fondness for him that women so often entertain for absolutely worthless scoundrels, but that, he reasoned, was but his due. Moreover, it had its disadvantage, for it made her jealous. She was no longer pretty nor young; and although she must needs have been aware of her deficiencies in that respect, she had by no means evinced a dutiful resignation upon one or two occasions, when she had reason to suspect him of transferring his affections elsewhere. In short, she had been a clog upon him at all times, and one, which so far from his getting accustomed to, had increased in weight and inconvenience yearly; and now that a new life had suddenly unfolded itself before him,

Digitized by Google

which, but for her, must needs be all prosperous enjoyment, he had determined to free himself of her once for all. The opportunities which Formosa afforded for this purpose were such as he would certainly never meet with again; and it seemed such a pity not to take advantage of them. The time would never again be so opportune, nor the risk—and he hated risk—so small. This beautiful island had never been shocked by the spectacle of a coroner's inquest—which was greatly in his favour, to begin with—and he had every reason to hope that it would be spared that calamity upon his account. In the worst possible case, what was more probable than that a devoted wife, deprived for the first time of her husband, should commit suicide; or that a lady, partial to wild-flowers, should venture too near the brink of the well-hole! In the best and most likely event, the sea would keep his secret safe for evermore. Thus much, in apology, or prudent reflection, crossed and recrossed Mr William Blackburn's mind, as he once more turned his steps towards the harbour, where the little packet was still lying, as he expected, without any sign of immediate departure. The skipper and crew had gone ashore, leaving but one man on board, whose face was unknown to him.

'What time do you sail?' inquired the intending voyager with an indifferent air.

The man looked up at the sky before he answered, but this the other did not observe, for his eyes were cast down upon the pebbles, with which his feet were busy, though his ears were on the stretch for the reply. 'At four o'clock, at latest,' answered the sailor. 'Are you going with us, sir?'

'Yes. Send up to the inn in an hour's time or so for my luggage.'

'Very good, sir. You and your good lady will have the ship all to yourselves to-day, for there is no other passenger.'

'My good lady, as you call her, is not coming,' answered Mr Blackburn: 'I shall be alone;' and he turned angrily upon his heel. How should this meddling idiot know that he had a wife, or think it necessary to allude to her? It was just a specimen of the way in which he and she were tied together, and it was high time he got quit of her indeed!

He hastily climbed the hill, and crossed the little strip of purple moorland that lay between him and home. From the verge of it he could see her sitting on the lawn, with something in her hand, which was probably some foolish story-book, such as she was fond of, full of murders and the like that never really happen. Her back was towards him, and she could not hear his footsteps on the grassy lane; he drew quite near on the other side of the tall fuchsia-hedge, and plucked at the blossoms nervously. He could now see that she was not reading, but that her fingers were busy with her lace-work, and this vexed him. He had, somehow, rather that his wife had been idling away her time, as usual, than be working for him; at the same time, he did not wish to appear displeased. He had a nod and a smile for her when she looked round at last and caught sight of him. She rose and came towards him hastily, and with a bright face: it was so very seldom that he regarded her so favourably, that she forgot in an instant his angry parting on the beach, and cried out with triumph, holding out the lace: 'See, Bill, how hard I 've worked! We shall be quite rich people soon at this rate!'

He tried to keep his smile, but his lips twitched uncomfortably, and his eyes shifted beneath her gaze.

'What is the matter, Bill?' asked she with hesitation, and a touch of fear, for her heart misgave her.

'Nothing, nothing, wench,' answered he shortly; 'some news has come from home; that 's all.'

'What! good news, Bill? and yet you do not look as though it were good news.'

'Never you mind my looks; I have got something to say to you. Let us walk a bit together somewhere.'

'Yes, Bill; I am quite ready.'

'But I am not, just yet. I have got to step in first and put up my things, for I am going by the packet this afternoon.'

'What! are we going to leave Formosa, and so soon?'

'No, and yes. I don't want you to ask questions, but—presently—to listen to me. In the meantime I am going to pack my clothes.'

'*Your* clothes, Bill, and not mine? You are going to leave me then? I know you are—for ever.'

'What a silly fool you are! It is impossible to reason with one who jumps to conclusions so ridiculously. It is necessary that I should start at once, upon business; that is all.'

'I would wait for a day or two, if I were you, sir,' said a cheery voice close beside him, which made him start and shiver. It was the landlady's husband, with some nets upon his back, returning from the shore.

'Why the devil should I do that?' inquired Mr Blackburn gruffly.

'Why, because I have heard you say that you are a bad sailor, and the packet is likely to get a pretty tossing. Look out yonder—there are white horses for you.'

And, indeed, although in the sheltered dell where they were standing, the change was almost imperceptible, the wind was rising, and had already changed the face of the sea.

'Yes, it is going to be dirty weather, sir; and you had better be quick with your packing if you really mean to go, for old Gourlay will be for up sail and starting, before matters get worse: we shall have a drop of rain too, and, indeed, it 's coming on already;' and as he spoke, a few drops pattered on the fuchsias.

'That will stop our walk,' said Mr William Blackburn slowly, with his eyes fixed, not on the gathering clouds, but upon the rising waves.

His landlord's simple phrase: 'It is going to be dirty weather,' had saved a life. The fact was, though it was still necessary that he should depart, he shrank from trusting himself to the sea in storm, with such a weight of crime upon his soul as he had contemplated, to sink him. Men often abstain from wicked actions, as well as perform them, from such apparently inadequate motives. This, however, was not Mr Blackburn's own reflection. He felt a touch of spiritual pride; a great temptation had presented itself, and he had put it away from him; there was, as it were, 'one to him' scored on the creditor side of the account, between himself and the other Ego. Indeed, it almost seemed to him that he had laid Providence under an obligation.

Digitized by Google

Like many other persons who have decided, somewhat against their own inclinations, upon a merciful course of conduct, he now felt himself more than justified in indulging his temper, and saying exactly what he chose to the unconscious object of his clemency. He had been conciliatory and pleasant when his aim was to persuade his wife to take a little walk with him in the picturesque neighbourhood of the well-hole; and now that that plan had been suddenly frustrated, he resented, naturally enough, his late unnecessary simulation of good humour. Moreover, the success of the scheme which his practical mind had at once substituted for his former one, was to be furthered by violence and passion—it was his object now to terrify his wife, as it had been to reassure her—so that his new *rôle* exactly suited him every way.

'Never mind packing my clothes,' commenced he gruffly, when they had got within doors, and she had reached down his travelling trunk from its shelf, and was about to fill it; 'I'll do that myself; sit you down upon that chair yonder, and listen.' She obeyed; and taking up the little frame, her trembling fingers made pretence to resume her late occupation.

'Curse the lace-work,' cried he angrily, as he threw the contents of his wardrobe into the trunk, and stamped upon them to make them lie close; 'is it not work enough to listen to me?'

'Yes, Bill, it is indeed.'

Her wan face and timid eyes corroborated the fact beyond all force of words.

'Since that's the case,' proceeded he coolly, 'it must be a comfort to you to think that you will not have to listen much longer. This is the last time you will ever have to do it. We are going to part company for ever, we two.'

'To part company? What have I done, Bill? What have I said? What—I take Heaven to witness—have I thought, that should make you leave me? O Bill, I love you so, I do indeed—in spite of all—do not forsake me.' She threw herself upon her knees, and strove to catch his hand, but he drew it impatiently away. 'You think you will be happier, more secure, and prosperous without me—I know you have thought so often of late—but indeed it will not be so. I love you for your own sake, as no one else, except your mother, does. I can be secret as the grave; and I can work—oh, only let me work, and be your slave!'

'I don't want your work, woman.'

'Then you must be rich!' cried she involuntarily: 'that letter must have brought the news your father has so long been pining for.'

'You are right—it has,' answered the other bluntly; 'and you shall be rich too, or at least what will seem rich to you. And you shall spend the money here, in the place you like so much, and live here always.'

'What! alone?'

'That's as you please,' said he with a brutal laugh. 'I shall never interfere with you, whoever takes your fancy; and mind you never interfere with *me*, d'ye hear? for that's the thing I'm coming to. From henceforth, you are Mrs Roberts or Mrs any name you like, always excepting Blackburn. It's better not to mince matters; I have had enough of you and to spare.'

'O my God!'

'Yes, I know exactly what you are thinking. Is this the reward of all I have done for him? &c. Well, if you choose to put it in that way, yes, it is. I married you, it is true, since that seemed to be the best thing I could do just then; but circumstances alter cases. The best thing I can do now is to become a bachelor.—Don't speak, but listen: if you ever leave this island, or breathe one word of who you really are, or trouble me by any letter'—he had finished his packing now, and turned for the first time his resolute face upon her—'I'll kill you, I will, so help me.'

'So help you *who*, Bill? Will Heaven help you to desert a faithful wife—much less to kill her?'

'I don't know; perhaps the devil may instead; but I will do it, as sure as I stand here.'

'You will never do it, Bill; you never, never could!'

'Could I not, you fool? I could tell you something that would make you believe me, if it were worth my while. At all events, hear this. When I leave this house, which may be in five minutes, or may be in a quarter of an hour, according to the time when this trunk is fetched, our two lives will be henceforth as separate and apart as though they never had been one. I shall be dead to you; and you will be dead not only to me, but to all other folks who do not live upon this island. I shall myself convey the tidings of your decease—which happened months ago—to my parents and to Ellen. It is not likely that any one else will take the trouble to ask after you; but if they do, I have my answer ready for them. To-morrow, a disconsolate widower, I shall begin to wear mourning for you. Here is money enough to last you for a month or two; and before it is spent, I shall find an opportunity of sending you some considerable sum; more than I got with you, when you were young and pretty, so that you will have no right to complain; enough, if you please, to buy yourself, even now, another mate.'

For the first time for many a day the flush of indignation rose upon her pallid cheeks—for the first time she dared to hold up her thin hand to stop his cruel words. 'Your hate is sufficient,' said she with despairing calm; 'there is no need for insult and foul lies.'

'Lies!' cried he, astounded that this worm should turn. 'Are you mad, that you venture thus to answer me? This is a dutiful wife indeed, that has been mine so long! I tell lies, do I? You don't believe me when I threaten perhaps; when I told you, as I tell you again, that I would squeeze the life out of you with my hands, if ever you cross my path or come between me and my plans in any way. Then listen to this voucher for my words. I had it in my mind this very day—and not an hour ago—to—— What's that?'

There was a knock at the door, and the landlady appeared. 'There's a sailor, sir, come from the packet for your portmanteau. He says that you must start at once, for the ship sails immediately: the skipper is afraid that a gale is brewing.'

'There is the trunk,' cried her lodger hurriedly; 'let him take it.—A gale brewing? Not much of a gale, I hope. I am ready *now*—I will not keep him for an instant.—Here, my man, make haste.—Good-bye, Bess; you will remember what I told you.' He stepped towards her, as though to give her a parting embrace, but her fixed look deterred him; he had wished to save appearances before the landlady, yet he feared what his wife's despair might embolden her to say or do. So, with a nod

Digitized by Google

of farewell, to which she made no answering sign, he took up his hat and left the house. The wind was rising rapidly, and the waves with it, and there was a noise in the air like muffled thunder.

'We shall have a roughish passage, sir,' observed his companion. 'When the well-hole begins to roar like that, it always means that mischief's brewing for us sailors.'

The colour which rage had called up in Mr William Blackburn's cheeks, and haste had kept there, deserted them at these words. What a menace would that noise have rung in his ears, had he carried out his late intention! and, even as it was, his guilty soul shook with terror. He could not now, as before, persuade himself that he had not meditated murder, for had he not been within a hairbreadth of confessing it to his proposed victim?

A MUDIE AMONG THE LOUTS.

'My lout *will* not learn!' was, some time since, the burden of the lament of an English prelate great in matters educational. In like manner—to descend from authority so high to a much more humble experience—'I shall *never* teach those louts to read!' was my exclamation, as, some two-and-twenty years ago, I sat, at the close of the day's work, seeking solace in the cup which never fails to cheer. About a year previously, I had been appointed to the charge of a greatly neglected endowed school in one of the midland counties, by the then President of the Committee of Council on Education. As the village in which the school is situated, together with several adjacent villages, is the property of the patron of the school, and as the school was entirely free to all children belonging to two villages—as, moreover, the patron provided school-books and every other requisite, setting absolutely no limit to the expense incurred to secure a good education to all classes, I put my shoulder to the wheel in earnest, seeing before me, as I thought, no obstacle to driving it in a rapid and uninterrupted career to the summit of the hill of knowledge. But, unhappily, I was exerting all my force on the *top* of the wheel, and, push as hard as I might, it remained stationary; for, fresh from a training college, I threw the whole weight of my learning upon the poor louts, who gaped at my mystifying 'ologies' in bewilderment. Thus, at the end of a year's perspiring in my vocation, I found myself just where I was at the beginning, and in the weariness of my despair, vented my despondency in that exclamation: 'I shall *never* teach those louts to read!'

'How can you expect to?' (This from my unsympathising wife, who was fondling our first-born.) 'The poor things may well be frightened at the horrid hard words you put them to read. What interest *can* they find in trying to make out a lot of sounds which have no meaning for them?'

'But they will have a meaning for them, when they once know how to apply the proper sounds to the printed words in their books.'

'Not at all, for their books are all about things they don't understand. Give them books full of pretty stories to read, or tell them a story, and then give them the book to read it from, and see if they are stupid over that! Just fancy trying to teach Trotty here to say: "Houses are made of bricks and mortar," instead of "Dadda! Mamma!" No, no; darling shall not have bricks and mortar thrown at her; there, mamma will throw her at her big-worded papa, and he shall teach her to say "Dadda" so prettily.' And, suiting the action to the word, Madam deposited the cherub in my lap with a thump, and left me to cogitate upon her advice in the intervals of our efforts to impart infantile speech. And very good advice I found it, too, especially when read by the light of our then occupation; for what were we doing but teaching our Trott to attach a meaning to arbitrary sounds, by applying them to objects of whose existence her little mind evidently had some glimmering?

So, laden with some numbers of a certain *Miscellany*, which we were taking in, we next day entered upon our labours with a determination to test our new theory. Passing a knot of the most loutish of louts, engaged in an unusually profound confabulation, we asked what was the matter, and were informed that the brother of one of them had seen 'a wild man, all hair,' in the Spinney, as he came home late the night before. It turned out, during the day, that the 'wild man' was a cow, seen by the uncertain moonlight in an unlooked-for place; but it suggested to us a tract in the periodical in question on 'Children of the Wilds;' and after a little preliminary explanation, we read one or two tales from it, and were rewarded by witnessing unmistakable indications of intelligent delight and interest overspread the usually heavy countenances around us. After the reading, we offered to lend the tract to any boy desiring to read it for himself, stipulating that each borrower should apply to us for help when he met with a word he could not make out. In this way, the periodical passed through about a dozen hands, and came back to us well thumbed, and *perfectly understood* (as proved by a searching cross-questioning) by all who had read it.

This laid the foundation of a class of 'readers for reading's sake' amongst us; and, still better, it proved the foundation of our Lending Library; for, following up this tract by other interesting tales, we soon had more borrowers than we had books to lend, a difficulty at once overcome by the Patron, with his accustomed liberality, allowing a certain annual sum for the gradual formation of a village library. This has continued to grow, until it now numbers about one thousand volumes, representing about six hundred distinct works. Incited by the interest their children took in reading the books they borrowed, the fathers and mothers of our louts began to apply for 'libraries' (a phrase coined by borrowers in the infancy of the library, and still tenaciously keeping its ground in spite of our—perhaps supererogatory—efforts to inculcate the more correct expression 'library books'), and thus necessitated the introduction of a still greater variety of reading into the library. The original periodical, however, was for many years the pet book and back-bone of the collection, as proved by the fact, that one strongly bound set has been completely thumbed to death, and the second set, equally strongly bound, is close upon death's door from over-work; while the fact that each volume of the set was borrowed, on an average, four times during the past year, proves its continued popularity. Of course, louts from the

Digitized by Google

neighbouring villages stood aghast on finding our 'Louts' Corner' deserted, and, learning how their old friends spent their evenings, *they* began to wish to borrow books, and schools multiplying under the same munificent support, the power of reading became general, the library grew into a much prized local institution, accessible to, and extensively used by the inhabitants of six parishes (whose united population amounted at the last census to 2012), who, if they choose to invest twopence in the purchase of a catalogue, can select their own books, or, if not, can have books selected for them by the librarian on the following conditions (found in each catalogue):

'*Notice.*—This library is maintained by the Duke of ——, for the benefit of the inhabitants of the parishes of ——, ——, ——, ——, ——, and ——, any of whom can borrow books, free of charge—one volume at a time only—by applying to the librarian on Mondays. The librarian will require applicants for books who are unknown to him to produce a written recommendation from the clergyman of the parish in which they reside. Books borrowed must be punctually returned at the time named in them, or a fine of one penny a week for each volume will be strictly enforced (which fines will be placed in the poor's-box of the parish in which the borrower resides); and any book written in, damaged, or destroyed must be replaced before any member of the family in which such destruction occurred will be permitted to borrow another book. Persons sending for books are requested to specify the numbers, and not the titles of the books from this list; and to prevent disappointment, several numbers should always be put down. Any expense attending the conveyance of books to and from the library must be defrayed by the borrowers.'

The time allowed for the reading of a volume varies from two to six weeks, according to its size and character: six weeks being allowed for a volume of Knight's *Old England*, Arrowsmith's *All Round the World*, bound volumes of *Chambers's Journal*, the *Leisure Hour*, and volumes of a similar size, also for Youatt's *Horse*, *Cattle*, &c., and other works of reference; four weeks for thick octavos, such as the *Heir of Redclyffe*, the double volumes of *Chambers's Miscellany;* and three or two weeks for smaller volumes. Subject to these conditions, two thousand four hundred and five books were lent out during the year 1868; being an average of nearly four readers for each complete work contained in the library. As the collection originated in a desire to supply interesting reading for the young, *fiction* necessarily occupies a prominent place in it; but works of devotion, works on emigration, domestic economy, and agricultural matters have gradually been added, until our local Mudie has become a collection of books sought after with eagerness by every class of the population. However, as with the great Mudie, so with us, fiction is most read, as proved by the following facts. *Robinson Crusoe* found sixteen readers during the past year; a volume of *Tales from Grimm* was borrowed twenty times in the same period; Wolf's *Fairy Tales*, eighteen times; *Tales of Village Children*, twenty-one times; and other tales were equally popular. Allegories also find eager readers, the *Pilgrim's Progress*, the *Vast Army*, the *Combatants*, &c. being in constant demand. Among devotional works, the Bishop of Oxford's edition of *Thomas à Kempis*, Jowitt's *Christian Visitor*, and Hall's *Contemplations* are most borrowed. *Chambers's Journal* and kindred works are read chiefly by lout's master and mistress. Regardless of the request contained in the rules, borrowers very frequently ask for a book, not by its number nor by its title, but by reference to some incident contained in it—a method of distinguishing a book satisfactory enough, as proving it is really read, but sometimes puzzling to the librarian; thus, one lout says his brother 'wants that book where a woman took a nail-passer to church in her pocket to fasten her pew-door to keep pipple from comin' in, and when she found a lot of pipple had got there afore her, she sot down squelch athout rememberin' the nail-passer, and bounced up again with a screech.' Another wants 'that book that Tom had afore harvest, about a boy who was pulled through a keyhole.' The greatest puzzle, for a time, was to suit those who asked for an 'open book,' until it was discovered that by this phrase they meant to convey the idea of a book neither a novel nor a strictly devotional work. Some will commence with the first of a long series of volumes, and perseveringly read through the entire series. Thus, a rural policeman read once completely through the twelve volumes of Lardner's *Museum of Science*, and had gone some distance through them a second time, when promotion removed him, to his regret, beyond the limits of the circulation of the library books. One young lout undertook the study of the eight volumes of Dr Hook's *Ecclesiastical Biography*, read through three volumes, and then gave in, and took to the *Sunday at Home* by way of a change.

The impatience shewn by a rapid reader who, happening to be a volume behind a slower reader, has to wait a week or two for the return of the coveted volume of some serial before he can continue the thread of his reading, is a good test of the genuine interest taken in the books. Our village Mudie has, like all human institutions, a few detractors. One mother, for instance, whose son left his home very abruptly some years ago, declared her conviction that it was 'all along of that *Roberson Crewsher*, for Jack was alleys a talkin' of goin' to furrin parts aterwuds.' As, however, he did not go into foreign parts, but remained in England, and adopted the occupation of a hawker as an outlet for his wandering propensities, and has since married and settled down as a respectable tradesman, the mother is mollified, and admits 'them libries are uncommon good things, for when her boys had got one of them they liked, they never wanted to go out anights.' Now and then a mother complains that her daughter is not so handy in helping, because 'she alleys wants to be at her library;' but as our louts' sisters are much sought after as domestics, and secure good situations, and, as a rule, keep them with credit, the mothers admit no harm is done; while both fathers and mothers alike encourage their sons to borrow books, for they say they always know where to find them of an evening when they have got a 'library.' The intelligence and unloutishness of our louts is a subject of frequent comment amongst strangers; and much of this is due to the taste for reading fostered by our little Mudie, which, as will be seen, has grown with the wants of our louts, and has been, as far as possible adapted to, while always selected with a view to raise their tastes.

It affords a working illustration of the good which may be effected by a large landed proprietor, by the judicious outlay of a few pounds annually for the intellectual improvement of the people on his estates—and is a partial solution of the great question of the day: 'How shall we elevate the agricultural labourer?'

PODDINS ON THE NEW VELOCIPEDE.

We were quietly running up to town as usual by the 10.45, Shopopolis North Branch, when Tweezer made this mild observation: Tweezer, who sits opposite to me, in the off back corner—Tweezer's corner by right of custom, as much as the American rocking-chair by the fireside at Washington Villa, Shopopolis South, or his own side of the bed in Tweezer's own domestic chamber. Silas B. Tweezer is in the advertising and general agency line, and his conversation often partakes of the red flaming poster and sensational hand-billious style. 'Observe,' said Tweezer, attracting special attention to his remarks from a female single second, with three halves, all in red feathers like young Indians—'observe where I pint my umbrellar! Space for passin' as narrer as the neck of a bottle—trains a-dashin' backerds and forrerds from all pints of the cumpiss—Branch Shopopolis—Shopopolis South—New City Line—Grand Metteripollitan—Washin' Cross—Kenninton Junction—and South-eastern Counties direct—all a-crossin' on these heer identical rails—pintsman gits spark in his eye—signal hitched—trains all due—the hull lot of 'em one jam smash; and there,' concluded Tweezer, pointing over the low parapet with his green gingham, and unconsciously quoting the Elder Weller—'there, gents, you air!'

Following the direction of the umbrella, I glanced down from our dizzy height above the chimney-pots to the busy road below. Two wagons, laden with agricultural implements, which happened to be passing at the moment, with a vast expenditure of clash and clatter, struck me with the idea that patent scarifiers would be uncommonly bad falling for a middle-aged retired tradesman rather inclined to be stout.

'The new methid of loky-motion,' continued Tweezer, replacing his umbrella, and quoting a green circular, 'combines the most puffik safety with extreme velocity; it is so simple in its mekkinism that a child can work it (vidy the infant Empirer, at this very moment a-treadlin' afore admirin' crowds at his paternel Tooleries), so ekkinomical that hosses in cuss of time will go out of date and fashin. I ellude, gents,' said Tweezer, distributing a few circulars, hitching out the corner of his season-ticket, and concluding rather hastily as we rolled in under the skylights of the Great Gun Street Terminus—'I ellude to the New Patint French Bicycle Ve-locipede, the most extrornerry invention of the age, for particklers of which, includin' prices, see below.'

After parting from Tweezer (whose offices are in Rumble Lane, City; gloomy caverns strewn with instruments of torture not unlike the caves of the giant in the *Progress*), I proceeded, ruminating, upon my way, until I came suddenly against a batch of spectators, who were admiring an enormous work of art, which adorned the hoarding of a burned-out tobacconist in Little Rattling Street. A gigantic individual, whose too vacant expression of countenance had apparently all run to whiskers, was depicted bestriding an extraordinary machine, like the longitudinal slice of a pony-carriage, with rapidly revolving wheels.

A little further on, in the same street, the shop-windows of an enterprising tradesman revealed the actual invention itself, rearing up against the window-frame, as though frantically endeavouring to get out into the crowded thoroughfare, and realise, amongst admiring draymen, its fabulous rates of speed. I have always had what is called 'a turn' for inventions; and unable to withstand this scientific temptation, I entered the shop and became the envied purchaser of French Velocipede No. 573, best make, patent break, and all the recent improvements.

Let me epitomise my probationary exercises on No. 573, glancing but briefly at the innocent astonishment of Emily and Polly Anne, and the energetic remonstrances of Mrs P., when the sinister-looking machine, at first (too prophetically) mistaken for a patent mangle, was set down at the door of Plum Tree Villa; at the subsequent impossibility of reconciling with any known law of mechanics the standing upright of two narrow wheels, one placed exactly in front of the other, with a stoutish gentleman on the top of them; at the scoffing and contumely heaped upon that individual by the juvenile population as he failed again and again in that vain attempt; at the gathering cries of those ragged clans of the streets at a later and more advanced stage of proceedings: 'Hi, hi! Jim, come along you! heer's the man on the dandy-oss, ain't his coat muddy—not at all!'—or, 'Bill! Charl'! heer's a game! old Poddy a-comin' down the hill atop of a razzir-grinder!'—at the strange foreign tricks of the cantankerous thing, doubling itself up at inconvenient times into an inextricable tangle of legs, wheels, cranks, arms, and coat-tails, lying helplessly on the ground until untwisted and set upright again by some passing Samaritan (not without cuticular abrasion and force of the English language)—merely glancing, I say, at these preliminary experiences, let me describe the adventure to which all this introduction tends, the great ride to Coppington Green.

It was a lovely morning—a velocipedean morning—roads dry and smooth as a pavement, not a cloud in the sky (umbrellas, by-the-bye, *are* not velocipedean), and scarcely a loose stone upon the highway. At the same time, the grand element of adventure—danger, the spice of enterprise, would by no means be absent on the occasion. The pits of the Shopopolis Gravel Company Limited are situated on one side of the Coppington road, and some particularly deep water-ditches on the other.

The great ride was commenced at an unusually early hour. In the first place, it was desirable to avoid the attentions of the juvenile population before referred to; and secondly, there still remained some little eccentricities of the machine unconquered, which made it desirable to leave a very wide margin of daylight for the return.

I may say, professionally, that the forward journey was a fine run. By dexterous steering, the contracted and narrow passage (some thirty feet or so) between stony Scylla on my left and chickweedy Charybdis on my right was kept well within. Vehicles travelling in an opposite direction were, fortunately for my serpentine course, remarkably scarce; and, with the exception of an

Digitized by Google

old woman of the period, with eggs, pervading the road in a red cloak and crush bonnet, and obstinately insisting on being knocked down; and a timber-wagon, built of excessively contusional material, the adventure so far was a success.

But why did the tollman at Deepditch Gate (whose shins I slightly barked in passing) inquire with such intense interest if I was a-coming back agin that way? Why did that objurgatory female propound a similar query with a fiendish chuckle of revenge? Why, ah! why? Let me continue. Duly refreshing my inward man, and giving my iron steed a lubricatory feed of train-oil, I set forth upon my homeward journey.

But, what—the first mile or so being deviously passed—what—what is that deep red tinge upon the distant road?—that moving pillar of dust, that trampling of horny feet, that ferocious bellowing of beasts and men? Gracious powers above! it is a rushing, roaring, surging torrent of infuriated beef! Herds upon herds they come, maddened by pointed goad, taunted into desperation by profane drovers, bearing down upon me and my steed like the wild buffaloes of a western prairie, displaying that unpleasant mixture of fury and terror which the hateful tribe, in their hour of excitement, are only too prone to exhibit.

Dismount? turn? Alas! those operations required an amount of time and deliberation utterly inadmissible in a crisis; indeed, I may remark in passing that the immature velocipedean labours under the well-known disadvantage of the crocodile family with regard to the latter operation.

Too late I remembered the ominous placard that fluttered against Coppington Cross! Contagious Diseases Prevention Bill, Proclamation, Victoria Regina, whereas, &c., &c. Too late I saw it all! The warning of the tollman, the mysterious joy of the overturned, the scarcity of opposing vehicles—it was *Coppington Fair!* That very day, at that very hour, were Coppington roads thrown open once more to all manner of horned beasts; and towards Coppington Green, from all points of the compass, came bovines of all colour and size, compensating themselves by an extra amount of ferocious playfulness for their long period of restriction to field and paddock.

In less time, as novelists remark, than is occupied by this description, the nearest roaring, rearing, slavering, bellowing herd approached. With an energy and promptness that only a great mind displays, I grasped the occasion, and instantly decided upon a plan of action.

The deep stony gravel-pits on the one side offered no luxurious retreat; but the water-ditches on the other were unusually full and chickweedy, and, weighted as I was with that terrible machine, offered a solution to the difficulty that could not for one moment be entertained.

As to continuing my onward course—to be thrown at the first rude contact from that delicately adjusted balance; to lie twisted and entangled in the horrible embrace of wheel and crank, whilst an unlimited number of red Devons passed over my unhappy body—I shuddered as I dismissed the thought.

My decision, as I have said, was quickly made. Hastily selecting the least precipitous of the pits to be found on so short a notice, I gave one last look to the front. The great hairy, trampling monsters were upon me, one climbing upon the other in their ferocious haste. I turned the guide-handle of the machine. Ah-h-h!

The last expression very inadequately represents the amount of wind knocked out of me by a singularly large stone at the bottom of that gravel-pit.

Whilst I was gradually recovering breath and consciousness, a crowd of drovers and other passengers gathered round me.

'A clomsy tomble, mister,' remarked the most sympathetic of the lot.

'Yes, indeed,' I gasped, affectionately feeling my legs and arms; 'I 'm thankful it 's no worse.'

'Worse! You don't know how bad it is yet, *you* don't. Worse! Why, mister, you 've agot bones abroke, *you* have.'

Gradually and slowly, I acquired a comparatively upright position. Legs and arms right so far. The machine lay twisted up into a knot (as usual) at the bottom of the pit. I felt glad to see that its confounded back was broken in two places.

'If you han't agot your bones abroke,' said the first speaker, in an injured tone, 'I mean to say you ought to have! Do you go for to expect to fall a matter of ten foot, and narry a rib het off, and narry a leg abroke, nor a deslercation, nor nothing? Why, it 's agin natur!' With excusable anger and disgust, my friend looked at me once more, spat upon the ground, turned upon his heel, and went his way, a sour and disappointed man.

Well, with the exception of a damaged rib or two, and a little more fancy needlework than was quite agreeable as connected with cuts and wounds, the matter was not so very bad after all. I even proposed to renew the journey at a more propitious time; but Mrs P. strongly objecting, I consented at last to the sale of the new velocipede, which, I regret to say, at the current price of old iron, did not add much to the family exchequer.

THE DEAD INVALID.

White in a whiter shroud she lies,
Awaiting to be borne away,
Where loving friends, with sobs and sighs,
Will leave her lying, clay in clay.

Hers was a life all pain-opprest
From its dim dawn to its surcease:
Yet though it could not give her rest,
It still vouchsafed her endless peace.

If dull Despair o'erspread her mind,
Clothed in the darkness of the tomb,
Fair, full-orbed Hope rose up behind,
And chased away the gathered gloom.

And so it is—the duskiest shade
The all-illuming sunlight tracks;
And storms in murkiest mist arrayed
Bear the same glory on their backs.

Strange glimpses of the beautiful
Abound in e'en the dreariest night;
And lives the darkest warped and dull
Are all shot through with threads of light.

POPULAR

LITERATURE, SCIENCE, AND ART.

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 286. SATURDAY, JUNE 19, 1869. PRICE 1½d.

AT TATTERSALL'S.

LONDON has but two mysteries, the Stock Exchange and Tattersall's, and the latter is in many respects a counterpart of the former. Standing, like it, beyond the pale of the law, it is governed by a committee of its own nomination, possessing the double powers of a court of law and of a court of honour. Like the Stock Exchange, too, Tattersall's has its Bulls and its Bears, its millionaires and its legs, its plungers and its defaulters. It has, moreover, its days of business and its settling days; and it may be added that Tattersall's, like the Stock Exchange, is, in its present form and on its present scale, an organised development of one of the characteristic traits of the age, a trait which is as strongly marked in the City clerk who dabbles in stocks on a salary of three hundred pounds a year, as in the noble who throws away an income of three hundred thousand pounds a year by making a book on a stable of yearlings.

What, however, strikes the visitor fresh from Capel Court is not the points of resemblance between the great institutions of the east and west, so much as those of difference, as he strolls into Tattersall's yard, and finds himself in what looks like a section of the Crystal Palace, with a long line of horse-boxes, an auctioneer's rostrum, a drinking-fountain, a fox, and a bust of George IV. This is the outer circle of the mystery of iniquity; and on a business day you will, in the height of the season, find it filled with a host of people, representing pretty well every shade of what is called sporting life: ministers of state, sprigs of the aristocracy, limbs of the law, broken-down legs trying to 'get on for half a sov.' upon the strength of a stable secret, and broken-down huntsmen, who, for the price of a glass of beer, will tell you the secret history of every horse entered for the Derby and the Oaks, and the winners into the bargain, if you have faith, and will cross their hands with a bit of gold. Here and there, too, if you know anything of the world represented by *Bell's Life*, you will find an ex-pugilist—now and then perhaps a man with a broken nose, who has won the champion's belt—button-holing a duke or a marquis; for on the turf, as under it, as Lord George Bentinck wittily said, 'all men are equal.'

If you possess the *entrée*, and can pass from this outer circle to the centre of the temple of horse-racing, you will find yourself in somewhat selecter company. The Subscription Room at Tattersall's is to the turf and the men of the turf what the Stock Exchange is to the City and City-men. It is closed to all except the initiated; and its 'price current' governs all the betting transactions within the four seas. In contrast with the Stock Exchange it is a palace. All its appointments are distinguished by an air of luxury and refinement. Tesselated pavement, stained-glass windows, a line of stuffed leather seats running round the room, you find here, partly in the form of an exchange, partly in the form of a club smoking-room, everything that the luxury and good taste of the Jockey Club can suggest for the convenience and pleasure of its members.

These, I need hardly say, are the *élite* of the turf—the flower of the motley host you found in the yard criticising the form of a two-year-old who had ruined her owner by losing the Derby and one hundred thousand pounds with it—peers of parliament, members of the House of Commons, City bankers whose scrawl on the back of a bill is good for a quarter of a million in Threadneedle Street; barristers whom you may find on the woolsack to-morrow, or in the ermine and horse-hair of a lord chief-baron; guardsmen and journalists; chamberlains of the royal household, and officers of the lord mayor's court. Here, till yesterday, you might see a boy from Eton, the heir to a great name and a fine estate, backing his opinion to the tune of fifty thousand pounds, with money borrowed at six hundred per cent. Here you may still find a Lincolnshire squire, whose wits are probably worth to him twenty thousand pounds a year, if he chooses to exercise them.

Admiral Rous and Sir Joseph Hawley are state pillars in this aristocratic republic. Their word upon a point of honour or upon a rule of the ring carries with it all the force of law to thousands,

Digitized by Google

who know them only as the great twin brethren of the turf. Lord Derby and Lord Palmerston were in their day as popular at Tattersall's as in the House of Commons; and it was by mixing with English racing-men that Napoleon is said to have acquired that thorough command over the play of his features which has given him the title, even with diplomatists, of the Sphinx. You can read nothing in the face of a thorough-bred man of the turf except perfect self-possession, shrewd intellect, and a will of iron; and you may pick those out in the Subscription Room at a glance from the crowd who are purchasing their experience at the expense of their ancestral oaks, and perhaps of something worse. Here is one of these neophytes of the ring—a companion of princes, the son of a minister of cabinet rank, with the blood of the eastern emperors in his veins. He is booking a bet of 100 to 1 to a youth with the down still on his cheeks, the son of one of the most illustrious of the Crimean heroes. In the centre of a group of bookmakers and aristocratic legs stands a young man, still, I believe, on the sunny side of thirty, who tells you with the utmost nonchalance that he has just sold an estate to a City-man for three hundred thousand pounds, to square up his book and to fight the ring. He is the representative of a long line of mailed barons who fought under the walls of Jerusalem, at Cressy, and at Agincourt—statesmen and warriors who in their time administered government and war with more than the capacity of Richelieu; and he is flattering himself with the presumptuous hope that in these piping days of peace it is his destiny to add one more exploit to the achievements of his race by breaking the ring.

That is one of the illusions of youth on the turf. There are, I believe, two or three gray-bearded members of the Jockey Club who, if put to the rack, would tell us that they began their first book thirty years ago with that impression themselves. It was the hope, till the last, of Lord George Bentinck; and even after his fair lands had passed out of his hands, the Marquis of Hastings still talked of accomplishing what the Napoleon of the turf had failed in. Short, however, of attempting to break the ring, no man who really knows how to make a book, need be altogether ruined on the turf. You may meet men by the dozen at Tattersall's who, if they chose to tell you their secrets, would tell you that their wits are worth ten thousand or twenty thousand pounds a year to them. Reduced to a system, nothing is safer than 'business on the turf.' Lord George Bentinck for years kept up his magnificent stud by his book; and Mr Harry Hill, his chief ring-commissioner, could, I fancy, tell us some piquant stories, if he were to turn to his note-books. It is said that in a single year (1845, I believe) Lord George netted nearly fifty thousand pounds upon a couple of horses alone; and it oozed out in the *Qui Tam* action at Guildford that another of his horses, *Gaper*, ran at the Derby to win a hundred and twenty thousand pounds more. In the case of the Marquis of Hastings, these *coups* of Lord George Bentinck were reversed; and if it were possible to strike a balance, I suspect it would be found that Lord Hastings lost more than Lord George, with all his victories, ever won. It is, however, by the ruin of men like the Marquis of Hastings that the ring is kept up; for without them the bookmakers must soon go to the dogs. Left to themselves, they would eat each other up, like crabs, in a couple of years; and there would be nothing left of the ring but half-a-dozen leviathan bookmakers, a crowd of paupers with their note-books and metallic pencils, and the traditions of Tattersall's. At present, the peers and the legs, the porcelain and the clay, millionaires and Yorkshire stable-boys, are all mixed up together; and as long as there are peers to be fleeced and estates to be cut up to ribbons, Tattersall's will remain what it is at present—one of the most flourishing institutions in London.

Originally, Tattersall's was a mere stable-yard and horse repository, distinguished from the general run of establishments of this kind only by the larger attendance of sportsmen. The Subscription Room is, comparatively, the creation of yesterday; and there must be scores of men yet on the turf—men who have been ruined by their speculations on two-year-olds, and men who, beginning as stable-boys, now keep their banking-accounts with a standing balance of ten thousand pounds—who, when they first consulted 'Old Tattersall' about joining the Room or making a book, were bluntly told to keep their money in their pockets; for it is an odd illustration of the caprice of circumstances, that the founder of the yard—the man under whose management the Corner attained its highest prestige, and became the exchange of turf-men—had what many of his friends thought an insane horror of a betting-book, and did all that a man in his position could do to check it, by friendly hints and suggestions to youths fresh from college, and fired with the idea of making their sporting *début* in the world. Ten years have now elapsed since Old Tattersall, after a reign of fifty years, handed over his hammer to younger, if not more vigorous hands; and in those ten years the science of betting has grown and developed more than it had probably done in the previous half-century. What Old Tattersall would have said if called upon, as his descendants have been, to knock down a two-year-old with L.2500 of forfeits on his head, I cannot say; but that fact sufficiently illustrates the daring and adventurous spirit of speculation that marks the turf-men who now meet under the shadow of his rostrum to gamble away with 'dice on four legs.' Tattersall's yard has grown with the growth of horse-racing; and it now forms the central institution of the turf, is the focus of half the gambling that is carried on within the four seas, gives the cue to every bookmaker, regulates by its quotations the odds on every race-course, and through the system of agency that has sprung up within the past few years, is open to every clerk, or draper's assistant, or stable-boy who wishes to stake half-a-sovereign. Through the action of these men—men who make betting on races the profession of their lives—a million of money is often staked, in sums ranging from ten shillings to ten pounds, on a single race; and on the eve say, of the Derby, or the Oaks, or the St Leger, Tattersall's presents a scene of remarkable animation. '6 to 1 or 650 to 100 against *Dispatch*,' '8 to 1 against *Fortunatus* or *Pearl Diver*,' '100 to 7 against *Guy of Warwick*,' '1000 to 30 against *Huntsman's Daughter*,' you hear offered on all sides of you; and in this way, in the course of a couple of hours in the afternoon, one hundred thousand pounds have been known to be invested

Digitized by Google

on five or six horses. This, in fact, is now a regular branch of commission business; and the account of what was done at Tattersall's yesterday appears in all the newspapers as regularly as the City Article and the Court Circular.

To an outsider, all this looks wild hap-hazard work, and in most cases it is so. Nine-tenths of the people who send their cheques, and post-office orders, and bank-notes to Mr Wright and Mr Sydney Smith, know nothing more about horses or jockeys than they pick up from *Bell's Life* or the *Field*. They simply invest their money 'at a venture,' acting either upon the suggestions of their own fancy, or upon the advice of Argus or Hotspur. Sir Joseph Hawley's horses are always great favourites with them. The Marquis of Hastings' were at one time. To-morrow, they will pin their faith to the colours of a Norfolk squire. These selections are the result of pure caprice; but it is remarkable how, even when acting in this way, the public acts together. Yet, after all, this is not wilder work, perhaps, in the long run than the staking money on favourites; for I believe—and experience warrants the belief—that in five years, any man with a cool head and a long purse might make enough to buy the fee-simple of Hyde Park by betting a thousand to one against all the favourites that are started for the Derby, the Oaks, and the St Leger.

The success of *Pretender* in this year's Derby will intensify the public folly, but experience proves that any horse may win, and that, in the long-run, even when favourites are run to win, the chances are vastly against them. To say that a man is making a book upon two-year-olds is, at Tattersall's, to say that a man is in a fair way to finish his career in the Court of Chancery or Basinghall Street. It is the *ne plus ultra* of gambling on the turf; and I need hardly go out of my way to illustrate its consequences, since the fact must be sufficiently obvious to every man who knows anything at all of horse-flesh, of the risks of training, of the vices of grooms, and of the foibles of jockeys.

A COUNTY FAMILY.

CHAPTER XV.—IN THE BOUDOIR.

In the boudoir at Redcombe Manor—with which pleasant chamber there was a door of communication both with Mrs Blackburn's room and that of her grand-daughter—there are seated, this autumn morning, two fair girls. One of them is its mistress, Ellen Blackburn; the other is she who should have been its mistress, and for whom it was originally decked and furnished, Lucy Waller. They are both very soberly attired, and the latter is in slight mourning. Their tongues do not go so fast as those of two young people of their sex usually do. Each has apparently her own thoughts to occupy her, as well as her needle and thread. Just now there was total silence; but presently, as they happen to look up from their work at the same moment, with a little sigh, their eyes meet, and Ellen perceives that those of her companion have tears in them.

'Dearest Lucy,' says she, 'this is very naughty of you. Did you not promise me not to fret?'

'Yes, dear, I did. I strive to bear up all I can; I do indeed. But—— Ah, you don't know!' She put up both her hands, and cleared from her forehead wearily the masses of blue-black hair that hung over her gipsy face. It was curious that Lucy, who had been nurtured so tenderly, was of so hardy a type; while Ellen, whose bringing up had been such as we have known it, was as fragile as a lily. 'I wish I could do that sort of plain work, Ellen, that you are so quick about,' observed the former. 'When one knows one is doing some good, and being of some use, the mind, I suppose, may take some interest in the business of the fingers; but as to this stupid filigree-work of mine, which papa tells me is so much more ladylike—I might fold my hands and do nothing, so far as shutting out sad thoughts is concerned.'

'And yet your papa is quite right, my dear,' returned Ellen, smiling. 'It is certainly very vulgar to employ one's self with flannels and calico. Only, as for me, I can't do anything else. I have no more idea of how to arrange those beautiful beads of yours than the butler. I had not the advantage of being brought up a lady, you know.'

'You were born one, my dear, and therefore did not need it. I wish *I* had been born a poor girl, and then—and then—but no, I would rather it was as it is, sad as it is: "'Tis better to have loved and lost, than never to have loved at all."'

'I think it must be so,' said Ellen simply. 'Even if I was never to see John again (which Heaven forbid), I should always thank God for having permitted me to know and love him.'

'And, thinking so, it would seem to you wrong and wicked, would it not, even to dream of another lover?'

'Another lover, Lucy? How can you talk so? The very idea is quite shocking. Have I not solemnly promised to be his wife—or, at all events, no other man's?'

'But if he were dead, my dear?'

'That would be just the same. At least,' said Ellen, interrupting herself hastily, 'it seems so to me now, because he 's alive. I don't like even to imagine such a dreadful thing as John's death. But still it is quite possible, surely, and by no means wrong, for a young girl whose first love has been snatched from her, on the threshold of life, to come in time to regard marriage with another man without disfavour. No one is bound to be the bride of the dead.'

'Do you really think that, Ellen?'

'Yes, I do. I do not suppose she can ever give the second the same sort of love she had to offer to the first; but she can make him a good wife, and perhaps even herself a happy one.'

Lucy looked around the little room with a sad gaze; then turned to the window, and watched in silence the soft autumn rain falling upon the croquet-ground without. Her feelings for so young a girl were not very delicately strung. Her nature, like her form, was somewhat robust; she was a good horsewoman, and had been more fond of following the hounds than even her dead lover was; she had more than once 'let off' a gun; it had even been remarked in the county at the time of her engagement, that she would make a better sportsman than her husband. But now, as she sat in the very room that her dear Dick had taken such pains to render attractive to her, and looked out upon the grounds where they had so often

Digitized by Google

walked together, and on the fields where they had ridden, the recollection of the days that were no more became too strong for her, and her tears fell fast as the raindrops without.

Presently, she turned round softly, and perceived that her companion was weeping also. It was not willingly that Lucy had suffered herself to be made friends with by Ellen Blackburn. Her own father's urgent request that she should not hold herself aloof from the new tenants of Redcombe Hall, would not have sufficed to bring about an intimacy, had it not been for Ellen herself. She had been so importunate, and yet so delicate in her affectionate sympathy, that, little by little, she had won poor forlorn Lucy's honest heart; so completely so, that the latter and her father were now guests in the very house of which a year ago she had been the expectant mistress; nor was there another heart, notwithstanding that this friendship was of so late growth, in which she reposed more confidence, or felt more certain of meeting with tender reciprocity, than Ellen's. At times, indeed, the thought that these new Blackburns, aided by their ally Death, had ousted her lover from his home, would tinge with bitterness her feeling towards the innocent girl; and, at times, the reflection, that Death had shewn himself again this woman's friend, by sparing John while he took Richard, gave her a passing twinge of jealousy. But, on the whole, Lucy did Ellen justice in her heart, and loved her, and, now that she saw her weeping with her, for friendship's sake and pity's, her soul was drawn towards her by grateful love.

She rose from her seat, and went up and kissed her tenderly. 'Sister Ellen,' said she, 'your unselfish sorrow reminds me, by contrast, of my own selfishness. I had forgotten, until this moment, that I had some good news for you.'

'What! about John?' exclaimed Ellen brightly. 'I am sure it must be about John!'

'Yes, darling, it is; and may it never be your lot to be placed, as I am, out of the reach of such good news. I must tell you first that I found it in this letter of papa's this morning, which he gave me to read for quite another reason. Ever since—ever since last year, papa thought it would be "good for me," as he called it, to employ my mind, so I have filled the post of secretary to him, which my poor mother held, and know almost as much of his affairs as he does himself.'

'How pleasant it must be to have a father's confidence,' said Ellen.

'That depends, dear,' returned Lucy sighing. 'It is *not* pleasant when almost every post brings tidings of disappointment and disaster. But there, that is between us two—I was wrong to say as much, even to you.'

'But is not your papa rich? I understood he had very extensive commercial transactions. It is surely only a matter of how much gain! And what does it signify, if one has but enough to live on?'

'To live on and *pay one's debts*, my dear. That is also important.'

'O dear, dear; I never dreamed of that!' exclaimed Ellen earnestly. 'Cannot grandpapa help you? He has plenty of money now, and I know he has a great respect for Mr Waller.'

'He has at present,' observed Lucy cynically. 'But since I have been a woman of business, my dear, I have learned what wins the respect of one man for another, and what loses it. No, my darling, you cannot help us, thank you; although, if you were to breathe a word of this, you might injure us very much. There—I am growing selfish again. See, here is the good news I spoke of. It is only those half-dozen lines that will have any interest for you; the rest is all estimates and calculations about the Mosedale Reservoir. Papa is the chairman of the Company, and they say that the great basin is insecure. In that case, it would cost a vast sum to repair it. The matter seemed very important, though this letter from the chief-engineer has made papa more at ease.—There is the place where he mentions Mr Denton.' Lucy pointed with her finger to these words: 'I do not attach the least importance to the "crack wide enough to admit a penknife," and from which no water issues. I have no doubt it arises from the inner part of the embankment, between the puddle-wall and the water, subsiding a little, owing to the water penetrating it, and thereby making the top of the embankment incline inwards! It is certainly not worth your while to fetch me out of Wales to look at it; but to ease your mind, I will send a substitute, who will understand the matter as well as myself. I adjure you, like the man in the Scripture somewhere, not to despise him on account of his youth, which is a fault that is sure to mend, and really Mr John Denton seems to have no other fault. He is the cleverest—and what is of much more consequence—the most diligent young fellow with whom I am acquainted, and will make a mark in the world much bigger than the crack in your Mosedale Reservoir. I have known him but a few months—we are employed on the same line here—but I am proud to call him my friend.'

'O Lucy, how kind you are to let me see this. Mayn't I cut it out?'

'No; certainly not,' answered Lucy laughing. 'The idea of such a thing! Why, that letter has to be shewn to the Board of Directors at the next meeting, and "filed," and all sorts of things. It will be so much the better for Mr John Denton, for papa says there's nothing like pushing one's name about everywhere. Mr Flywheel is a first-rate man in his profession, and his praise will be a fine advertisement.'

'And what a nice man he must be!' mused Ellen. 'And what a good judge of character! He says John has no other fault but youth.'

'And even that is not so much amiss,' observed Lucy gravely, 'when a cruel grandfather compels us to dwell asunder. Why, even in ten years' time, you will be quite a couple of chickens still, you two!'

'Ten years, Lucy! How coolly you talk of such a terrible thing.'

'It is not a lifetime, darling,' said the other sadly; 'though I hope you will not have to wait so long. But, at all events, we must get your grandfather's consent to let you see him when he is with us, for he will certainly stay at our house when we return home.'

'At *your* house, Lucy? Oh, how good of you!'

'Not at all, my dear. According to what Mr Flywheel says—and I must add, that we have had a pretty good account of the young gentleman from another quarter' (here she nodded roguishly at her blushing friend)—'the obligation will be on our side. And besides, the chief-engineer (or his substitute) must, of course, be his chairman's guest; that's a mere matter of business.'

Digitized by Google

'Alas! to think that he will be so near, and yet that I shall not see him,' sighed Ellen. 'My grandfather is very kind to me, as you have seen; but in this matter his heart is not to be touched. It was not so once; but money has made him hard.'

'There are many things that have the same effect upon men's hearts, Ellen, as the petrifying spring at Curlew Hall has upon whatever is put under it. There is money, as you say, for one thing; and there is the want of money. And it is not only grandfathers who are thus afflicted, but fathers also.'

'But surely your kind genial papa would never behave to you so cruelly? He seems to have no will of his own, but only yours.'

'Ah!' sighed Lucy in her turn, 'you are a dear little simpleton! Let us talk of something else.—Have you found out what is the matter with dear Mrs Blackburn? She seems more sad and absent than ever. I spoke to her twice this morning, and she never answered me. Do you think she can be well?'

'Yes; she is well enough in health, I believe. She tells me, too, that nothing has happened to distress her; but it is evident there is something wrong. Even your papa, who is such a favourite of hers, cannot now win a smile from her.'

'Yes,' said Lucy bitterly; 'papa always finds out the subject which is most pleasing to everybody, and converses about it as if it were his own favourite topic. He talks to you about clever folks who, from a humble position, have raised themselves to eminence by their scientific talents; he talks to your grandfather about ancestry and the great advantage of blood (which, I have heard him privately remark, has no value except to make blood-puddings); and he talks to Mrs Blackburn about her "Willy."'

Ellen had it on the tip of her tongue to reprove Lucy for this cynical talk concerning her father, and to remark what a desirable and unselfish possession this gift of interesting one's self in other people's views must be, and how popular Mr Waller justly was in consequence; but that last remark of her companion's put all these ideas to flight. The subject of 'Willy' had never been broached between the girls before. It was distasteful to Ellen on its own account; and besides, her grandfather had strictly enjoined upon her not to speak of it, unless when silence might be even worse policy than speech. This unexpected stirring of the skeleton in the cupboard sent a cold chill through her, for she felt at once that her companion had a meaning in it. Lucy was far too clever a girl not to know that the topic of 'Willy' was an unwelcome one, and too much of a gentlewoman to give gratuitous embarrassment, and far less pain.

Ellen did not speak, trusting that her silence might be a sufficient shield; but this was not to be. The first shaft had not been shot at a venture, and the second came home direct.

'Who is this Willy, my darling?'

'Willy? Why, he is my uncle William; my grandfather's eldest son.'

'I know that much, of course; and I know besides that he is his mother's pet. But why does she never speak of him, as other mothers do of their favourite sons; and why does his father never mention him at all?—I do not ask this from mere impertinent curiosity, Ellen; I hope you know me better than to suppose that. But yet, if there is any valid reason why you should be silent—any family secret, for instance, which you ought to keep, consider my question as unasked. One has no right to demand a confidence, and least of all if it compromises others.'

'Nay, indeed,' answered Nelly hastily; 'there is nobody to compromise in the matter. I never speak of Uncle William, because—because my grandfather has forbidden me to do so. They are unfortunately not on good terms.'

'And on which side lies the fault?'

'Well, on both sides, for I think my grandfather should be more forgiving. Uncle William committed a great error. He acted very, very ill, no doubt; but he has been punished for it.'

'It seems so odd,' mused Lucy, 'that your grandfather should have been at Redcombe a whole year, and yet that nobody should have seen his eldest son. You have no idea how people talk about it.'

'Indeed,' said Ellen. 'Well, they will see him soon, for he is coming home next month. He has been absent from home these five years.'

'Abroad?'

'Yes; out of England.'

'What is he like, Ellen? I mean, to look at.'

'Well, some people think him handsome. I confess I do not. He is of middle age, tall, and powerfully built. His features are not bad, but their expression is a little harsh. He is somewhat wilful, I fear; but there are many allowances to be made for him.'

'Ah, I see,' said Lucy gloomily. 'I daresay, in his youth, he was a good deal spoiled by his mother.'

'Perhaps so, dear; although, of course, I cannot speak to that, he being so much older.—The weather seems brightening, Lucy; what say you to a walk across the moor?'

Ellen spoke not only with distinctness, but with a certain incisiveness as well, as though she would have got quit of the subject. Yet once more her companion returned to the attack.

'I cannot say you have painted your uncle very pleasingly; but ugliness, like beauty, is happily often but skin-deep. Doubtless, this "Willy," upon whom his mother dotes so, has a kind and tender heart.'

'He has at least an impressionable one,' observed Ellen evasively, 'since he fell in love, and married young.'

'Married!' exclaimed Lucy, laying down her bead-work upon her knees. 'You astonish me! How long, then, has he been a widower?'

'He is not a widower at all, my dear; his wife is alive.'

Lucy Waller drew a long breath. 'I am tired of this telling of beads,' said she. 'You were proposing a walk; let us take one, by all means, while the fine weather lasts, even if we cannot get so far as the moor. How pleasant is the sunshine after rain!'

Ellen had never seen her friend in such good spirits; and coming with such suddenness as they did upon depression deeper than usual, she could not help noting how applicable Lucy's last remark was to herself as well as the weather. The cloud that had settled on the young girl's life, for once was lifted high, and how pleasant was her smile after those tears!

CHAPTER XVI.—AT THE RESERVOIR.

Redmoor is the vast plateau of heathery waste, underneath whose southern promontory nestle Redcombe Village and Manor. A health-giving and glorious spot at all times—for even in winter the fir-woods (thanks to old Walter Stanhope of Curlew Hall) on north and east enable one to stand and admire the wide prospect in comparative shelter—but in summer-time the moor is rare and beautiful indeed. The soft, strong air that is almost always abroad upon it, is then laden with the scent of the fir, and sweeps over a prairie of purple and (where the gorse grows) of gold. The highway, along which we accompanied Anthony Blackburn on his return to his old home, divides this gorgeous table-land in twain; but now that the coaches are off the road, and all the world is drawn to and from Mosedale by the steam-horse, it has become but a local track, and there are but few passengers. When the two girls had reached the top of the winding hill that led up from the village, and could command the whole expanse of the moor, there was not a moving speck upon this road to be seen. In the extreme distance rose the circular embankment, that ought by rights, in order to have harmonised with the general tone of the landscape, to have been a Roman encampment, but which we have seen to attract old Anthony's notice as an erection of quite a modern date. On the east lay the vast plantation in the centre of which stood Curlew Hall; but from their present stand-point the house could not be seen, nor, save for the faint smoke-wreath that hung over distant Mosedale, was there a sign of human habitation anywhere.

'Now that we *are* on the moor,' said Lucy, 'and the clouds seem to have cleared off for the day, why should we not get as far as the reservoir? He will not be there yet a while, my dear; but still it will be an immense treat to you, I know, to visit the spot which will presently be gladdened by his presence.'

'Of course I should like to get there,' answered Ellen simply; 'but I am afraid it will tire you to walk so far.'

'Tire me!' echoed the other. 'I like that notion. Do I look as if I were likely to be tired by any walk that *you* could take, miss? Why, you are a lily, a mere fragile, delicate lily; and I—I'm a tiger lily.' Lucy laughed aloud as she said this. She was still in the same excellent spirits with which she started, and the fine fresh breath of the moor perhaps had added its sprightly influence. 'See! now we have caught the turret above the Hall, and there's the flag flying! Why, Mr Stanhope must be at home.'

'I think not,' returned Ellen, 'or else my grandfather would have heard of it. He is much attached to Mr Stanhope.'

'So I have heard,' said Lucy, looking askance at her friend, whose unconscious gaze was intently fixed upon the slowly rising mound. 'Mr Stanhope too, on his part, it is said, is fond of riding over to Redcombe. It is seldom one sees so much friendship between men of such different ages.'

'Yes, indeed,' answered Ellen absently. 'How far do you suppose it is from here?'

'To the lodge-gate, not a mile and a quarter; but to the house at least two miles. I don't think, however, we ought to call without a male escort.'

'Call, my dear! call where? I am speaking of the reservoir.'

'You may have been *thinking* of it, my dear; but we were talking of Mr Stanhope and Curlew Hall. It is very ungrateful of you to take so little interest in so handsome and agreeable a young gentleman, especially when he has so exerted himself to please you.'

'He is certainly both good-looking and polite,' returned Ellen gravely. 'His nature, too, seems to me to have been an excellent one; but it has been sadly warped. How could it be otherwise, since his only calling has been the turf.'

'And what do *you* know, O most sober and severe of women, about the turf?' asked Lucy in some astonishment.

Ellen blushed scarlet, as she had reason to do. Lucy saw the blush, but mistook the reason. 'Ah, that is dangerous,' said she slily, 'to own that a young man has a fine nature, which has been warped; for the admission involves both respect and pity. Now, if I were to tell Mr Denton, what mischief I might make! I hope he is not of a jealous disposition?'

'No; at least not very,' added Ellen, for she thought of that day on Slogan—only a few months back, and yet, as it seemed, so long ago—when John had expressed something like jealousy of this very man. 'But, indeed, I have never given him the slightest cause.'

'That matters nothing, my dear; and besides, I am not quite so sure of you,' said Lucy archly.—'What cavalier is this who comes riding through yonder gate at headlong speed? Who is it but Mr Herbert Stanhope, of whom our grandfather is so enamoured! Why, you Machiavellian creature, you must have known he would be here to-day, and invited me hither on purpose.'

'Indeed, I did not; I knew nothing about it,' answered Ellen, with ludicrous earnestness. 'I hope he will not see us.'

'That is very likely to happen, my dear, upon Redmoor; and particularly if you turn your face from him in that way. The ostriches do something of the same sort, and with the same result. Look! he has turned out of the high-road, and is already making for us! Alas for poor Mr John Denton!'

It was a gallant figure—both man and horse—that came galloping gaily towards them over the purple moor; the rider's hat was doffed as he drew near, and he sprang from his saddle before he reached them, and led his steed by the rein.

'I am fortunate indeed,' said he, 'for if my proposed visit to Redcombe Manor had been at a more fashionable hour, I should have missed you both, it seems. I did not know that young ladies ever ventured out before luncheon.'

'Your experience of them must have been limited; or else, and which is more probably the case, your acquaintance must be among very great ladies indeed,' said Lucy laughing. She and Stanhope never met without some sharp passage of arms; but she gave the young man cordial greeting, nevertheless, and covered with her own easy manner the embarrassment of her companion, which would otherwise have been evident enough. 'And to what are we dull Derbyshire folks indebted for Mr Herbert Stanhope's unexpected return among us?' inquired Lucy, after due inquiries and salutations.

'With two such fair reasons before me,' said

Digitized by Google

Stanhope bowing, 'I do not think that question need be answered. I came up, however, upon business—matters concerning "my Curlew Hall estate," as Moffat delights to call it, as though I had a dozen others, and this particular one was not mortgaged to as many people. I arrived from the south coast only last night.'

'By the south coast, Mr Stanhope means Goodwood race-course, Ellen,' observed Lucy in explanation.

'Miss Waller is always right,' said he, with a smile which caused him some effort to wring from his lips. 'Except Mr Moffat, she knows more about every one in the county and their affairs than anybody. I sometimes think that she must lend money on mortgage herself.'

'I should be a great deal more popular than I am if that were the case,' returned she keenly. 'Gentlemen would then be riding full gallop Mosedale way instead of towards Redcombe.'

This was a hard hit—what is technically called 'a facer'—but Mr Stanhope's good-humour appeared to be imperturbable. 'Now, that is really very unfair,' said he: 'it is quite true that I was about to pay my respects at the Manor; but I was well aware that my old friends, the Wallers, were at present the guests of my new ones, the Blackburns, and I hoped to receive a welcome from both.'

'Lucy seems to me to be most unnecessarily severe upon you, Mr Stanhope, this morning,' said Ellen kindly. 'I am sure that Mr Waller, as well as my own folks, will be delighted to see you.'

'Now, I call *that rather* severe,' observed Lucy sententiously. 'It is almost a hint that the gentleman is *de trop* with us.'

'I am sure I never meant it to be so,' said Ellen earnestly. 'How can you be so rude, Lucy?—We are going to the reservoir, Mr Stanhope, and if you can spare time, I am sure we shall be glad of your escort.'

'You are most kind to say so, Miss Blackburn, and I only wish the reservoir was more distant.'

'He wishes the reservoir farther!' cried Lucy; 'and perhaps us too. But there, I forgot—Ellen does not understand slang. Her mind is so correct. She is not a sporting character, like you and me, Mr Stanhope; she interests herself in practical science—engineering. That is why we are going to the reservoir. They say there is a crack in it large enough to admit a penknife: only think!'

'I am sometimes inclined to believe that there is a crack in Miss Waller's brain of about the same size,' said Ellen, stung into sarcasm by her friend's merciless banter; and all three laughed aloud.

Lucy Waller and Herbert Stanhope had been friends from childhood; but even when in the nursery, their tastes being too similar perhaps for mutual agreement, they had sparred and quarrelled with one another. His jesting remark respecting her knowledge of her neighbours' affairs was well founded, at all events as respected his own. She was well aware that Herbert Stanhope was very hard-up, and she suspected that he was meditating an alliance with her friend for the sake of the fortune which everybody knew she would one day inherit. These mercenary views were become just now, for a certain reason, particularly repugnant to Lucy, and hence the unaccustomed severity of a tongue which to men (with one single exception) had been always sarcastic.

Redmoor Reservoir, although it might not add to the picturesqueness of the spot where it was placed, was a fine work in its way. It was so large that it had almost the appearance of a lake, although by nature it had no such resemblance. It was formed by throwing an embankment across the gorge, through which a moorland stream, ambitiously entitled the river Curlew, found its way into the deep Mosedale Valley. From the dam-head to the embankment, this sheet of water extended for more than a mile, and it was nearly half a mile across. It was deeper also (in some places eighty, and in others ninety feet) than most natural lakes. The embankment, which formed so striking an object upon the moor, and which could be seen for thirty miles from the valley, was a hundred feet in height, and five times as long and as thick. A mighty weir carried off the overflow, and so, in a somewhat contemptuous manner, the poor little Curlew was given back its own again, and hurried on complainingly down its own well-worn channel. Before this wrong had been done to it, it was scarcely possible to imagine a more charming spectacle, and even now it had great attractions. The gorge, indeed, down which it used to leap so gloriously was done for—dammed; the reservoir enveloped it wholly with its winding-sheet. But hills rose on both sides to some elevation, and from them rivulets carried their tribute waves to the larger stream, through rocky and even wooded channels. To look from the embankment across this great artificial water, and on to Redmoor in its autumn hues, was a fair sight; but to gaze in the opposite direction, towards Mosedale, was to behold an extent of landscape such as few mountains of thrice the elevation have to shew: the great and fertile valley, with its green pasture-lands and yellow cornfields, and the vast and growing city in its midst, to which they daily ministered, albeit it ungratefully did its best, with smoke and cinders, to mar their loveliness; though, on the other hand, at night, when these were clothed in darkness, it was Mosedale which in its turn shone and flickered with its hundreds of never-dying fires. Then, though you could not mark the lines of rail that spread on all sides from the hungry town, like threads about a spider's web, you could see distinctly the plump white puffs above the engines, and the long laden trains that laboured out and in. Beyond the town the valley widened out, and tufts of wood that were fair copses, and swelling mounds which were great hills, diversified its surface; and here and there the gilded vane of a church steeple caught the sunlight, and here and there the sail of a river-boat. Indeed, it was the river which formed the chief and loveliest feature of the view; for, standing as it were by its very cradle, one could watch it, if not quite to its grave the sea, through childhood up to full-grown age: at first a narrow thread, but always deep, because confined within precipitous banks, with scarcely room between them and the flood for mills, or even cottages; and then a broad bright stream, that meekly bore the freights men put upon it; and then a thread again, that lost itself amidst the misty hills.

'What pretty farm is that upon the little island yonder?' inquired Ellen, to whom the scene was new.

'Curlew Farm, Miss Blackburn, at your service,' answered Stanhope; then, as if in answer to a curving smile on Lucy's lips, he added: 'to

Digitized by Google

picnic at whenever you please. So much at least I can promise, its mortgagees notwithstanding; although it is they, and not I, who would suffer in case this crack you speak of should widen and the reservoir burst.'

'What a grand sight it would be,' exclaimed Lucy, 'if the thing were to happen!'

'You would not think so if you were at home at the time,' said Stanhope: 'Mosedale itself would not go scot-free, if this water-devil here was once to break loose. While as for the farm yonder, and the mill, and that cottage of yours, Miss Blackburn'——

'That cottage of mine?' interrupted Ellen.

'Well, your grandfather's cottage, then: his brother Richard the fisherman built it, and a very charming little place it is. It is hidden from us because of the bend in the stream; but that would not save it, if this small Niagara were to thunder down any fine fishing morning. They say there are nine hundred millions of gallons in this lake here.'

'How many pints is that, Mr Stanhope?' inquired Lucy. 'You seem wonderfully well up in the subject; and we are rather interested in the matter ourselves; are we not, Ellen?'

'I am certainly interested,' returned Ellen quietly, and with a shade of discontent in her tone, 'in the possible fate of grandpapa's cottage, as well as in that of Mr Stanhope's farm. But I hope there may be no real danger. I am sure I see nothing of the crack they speak of.'

'No, nor I,' said Stanhope. 'It is very likely only a dodge to get money out of the Company for a survey—a mere trick of some engineer. Those scientific gentry are not above a job.'

'Oh, but, indeed,' observed Ellen hastily, 'that is not the case at all in the present instance, for, as Lucy knows'—— She hesitated, blushed, and stopped, while Lucy's laughter rang out merrily.

'I know nothing at all about it,' cried she. 'Don't appeal to me. All I have to remark is, that it is now noon, and if the liability of scientific people to jobbery is to be discussed here, we shall not get home by one o'clock; and there's a beautiful grouse-pie for luncheon, for Mrs Blackburn told me so herself.'

As the three turned homewards, Ellen made the remark, that though they had seen so vast a prospect, it was singular that no human being had enlivened it.

'The reason is,' replied Stanhope, 'that about the dwelling-places on the Curlew there is absolutely no space for a man to shew himself, out of his own house; while, where the stream grows wider, it is too distant to distinguish human objects; and as for the moor here, with the exception of you two adventurous young ladies, I have never seen anything human upon it.'

'Then there is a monster in human form, if at least it is not a man,' observed Lucy, pointing to some stationary object on the road; 'and, if I am not mistaken, we shall presently see the caravan out of which he has escaped.'

And indeed, while she was yet speaking, a one-horse conveyance emerged from the fir-woods, behind which lay the steep winding hill, up which most persons preferred to walk by a short way that offered itself to foot-passengers, and to wait for their vehicle at the summit.

'It must be some one about to visit the Manor,' remarked Stanhope, making a telescope of his fingers.

'Or else the reservoir,' said Lucy, with a comical look at her friend.—'Has he a scientific appearance, Mr Stanhope?'

'I don't know as to that,' returned he; 'but if I have the same long sight that I used to have, I make him out to be a very queer customer. If he is going to the Manor, I hope it is not to wait at lunch, for he has a most appetite-appeasing countenance; but as for partaking of it, that is out of the question: I will bet ten to one he is no gentleman.'

'That is a dangerous prediction,' remarked Lucy. 'Only suppose if he turns out to be a friend of Mr Blackburn's or of my papa's, after all! My papa knows some very queer people, I do assure you.'

'Perhaps he is a friend of *yours*, Miss Lucy, for he is certainly coming this way, as if to speak to us;' and indeed, after a short conversation with the driver of his fly, the stranger left his vehicle in the road, and began to make his way across the moor, with the evident intention of intercepting them.

Mr Stanhope and the young ladies all watched the coming stranger with some uneasiness, for which each had reasons of their own. The young squire dreaded lest this man should be the emissary of some Turf creditor, who, like Sir Arthur, might be desirous of making private terms with him, to which, however favourable, he would be unable to accede. Lucy Waller was not without apprehensions of a similar kind with respect to her embarrassed father; and Ellen Blackburn was filled with a vague terror, that was only too soon to take a tangible shape. She knew at the first glance that it was not John Denton; and before the newcomer had arrived within speaking distance, she recognised him not without a shudder.

'It is either a Ranter from Mosedale, who wishes to convert us,' whispered Stanhope, as the burly form, in its ill-fitting suit of black clothes, and crowned with high-craped hat, drew nigh, 'or a begging-letter impostor with a petition.'

'Hush!' said Ellen, in low and somewhat frightened tones; 'it is my uncle William.'

TRAMWAYS FOR THE SUBURBS.

SHALL we encourage tramways in the suburban roads stretching out on every side of our overgrown metropolis? And if not, why not? There certainly seems no cogent reason why this kind of accommodation should not be afforded. Things are not so beautifully managed just at present as to render the public indifferent to further improvement. Cabby was very aggravating a few months ago; and is often aggravating. He talks about forcing the authorities to do this and that for him, under penalty of wreaking awful vengeance on the travelling public by refusing to carry them and their luggage to and from railway stations; and it is not pleasant to be threatened in that way. It may be that the duties and taxes imposed upon him and his horse and his four-wheeler, or his Hansom, have been too high; indeed, our financial ministers seem to admit as much, by some of their recent revenue manipulations. But then oats are somewhat cheaper; and if tramways would act as a partial check on cabby, so much the better for tramways.

Digitized by Google

Then, again, our omnibus system is sadly in arrear of other towns and cities. Look at Manchester and Liverpool, at Birmingham and Leeds, at Edinburgh and Glasgow; the omnibuses there are longer, broader, higher, better cushioned and seated, better lighted and ventilated, more easily entered and ascended, better driven and conducted, than ours here in London. The racing and the nursing, whenever a competing 'bus-owner springs up, are other bad features in the system. Paris, among other continental cities, eclipses us altogether in omnibuses; not only in the quality of the vehicles, but in the lowness of the fares, which would put ours to shame. When an Anglo-French company bought up six or seven hundred of the London 'buses, and established a gigantic monopoly, there was at anyrate this hope—that we should have Paris improvements to compensate us for the disadvantages of monopoly; but such has not been the case: we have the monopoly, but not the improvement. One of our public censors, more irate than the rest, declares that the omnibuses of London are 'dirty, frouzy, ramshackle packing-cases on wheels, which would disgrace the capital of a third-rate power. There is nothing to recommend them. They are neither swift nor orderly, nor well appointed nor clean. Passengers at alighting are observed to have quite a *chevaux de frise* of dirty yellow straw attached to trousers or dress. Some of them have no doors; so that the rain and snow and biting winds pelt in among the passengers as freely as if they were unsheltered. The inside seats are curiosities of hardness, the frouzy plush being apparently stretched over macadam of great knobby power; windows have stuck until they have become fixtures; while the knife-board is reached by bits of iron which bark our shins.'

Nor do our suburban railways—at least on the south of the Thames—tend to restore the equanimity of the Cockney. It is not agreeable to be charged so many ninepences instead of so many sixpences, for the daily journeys between one's suburban home in Surrey and one's warehouse in Wood Street or Mincing Lane; and it is not rendered any more pleasant by the fact, that those companies which are least likely to be affected by competition are precisely those which shew the greatest tendency to raise our fares.

People tell us there is a chance now of obtaining tramways on some of our roads; and the question is, whether such tramways would be a wholesome check upon saucy cabbies, grasping 'bus-owners, and monopolising railway companies. Our past failure in this matter ought not to discourage us. Mr Train laid down a tramway, a few years ago, from Westminster Bridge to Kensington; the adventure broke down; but it is now known that the shape and arrangement of the rails were not what they should have been. Moreover, certain eccentricities in the promoter of the scheme tended to bring it into ridicule; and we all know how powerful a weapon ridicule may become in discouraging an adventure. We must look to foreign countries, and to English cities and towns beyond the limits of the metropolis, to see the real working of the tramway system when fair-play is given to it by the proprietors, by the road-engineer, and by the public.

At Copenhagen, there is a Tramway Company, who take up this matter as a source of profit, just as our railway companies would do. The tramways are in much favour with the public, and are said to have improved the value of house-property in the streets through which they run. There are ten miles of them in length already in operation, and five miles more to be constructed. One of the lines passes over a bridge no more than ten feet wide. When the rails were first laid down, some inconvenience was caused by the skidding of the wheels; but now a grooved rail is used, which obviates this evil. In 1865, when there were about three miles of this tramway open, there were a million and a half of passengers carried; in 1866, on rather less than double that length, the number was about two millions and a half; by the year 1868 the number had increased to nearly three millions on seven miles; and now the traffic is at the rate of four millions. These are very high numbers for a city containing only one-seventeenth part as many inhabitants as our big burly London. The tramway carriages employed hold about forty passengers each. The police have powers to regulate the traffic as between tramway vehicles and general vehicles, to obviate confusion and collision. The company have a concession for forty years, and divide eleven per cent. on their capital. There is a clause in the concession to the effect that, if the tram-carriages cease to run for three months, the company must remove the rails and repave the roads.

At Geneva there are about four miles of tramway, of course in some of the principal streets only—or rather, the principal suburbs. The carriages are large, and are so well liked by the Genevans that the former road omnibuses have been withdrawn.

We might go on to notice what has been done in the tramway line at Vienna, at Brussels, and at Hamburg—where the trams also go over a very narrow bridge; but it will be more useful to bestow a little attention on America, which is essentially the land of tramways. In New York there is one street which has as many as seven parallel lines. They are so much liked, that cabs are almost disused in the streets through which the tramways are laid. At Providence, in Rhode Island, there are about fifteen miles of street thus provided, which (among a population of sixty-five thousand) carried three millions and a half of passengers in the year 1868. The company have a concession for forty years, and realise a dividend of seven per cent. on their capital; they have the exclusive right of using the rails, with some special reservation in the case of the corporation. At Halifax, where the inhabitants at first shewed some dislike to the system, tramways are now very popular. Their length is twenty miles; and one of the lines goes through a street only twenty-six feet wide, with a traffic very much like that of our Thames Street; there is a double line of tram, and very little difficulty has arisen out of the combination of road and tramway traffic in the same street. The company easily keep their own portion of the road in repair. Philadelphia, Baltimore, New Orleans, Havana, Mexico, Santiago—all have adopted the system, with the unquestioned sanction of the public. At Valparaiso there are six miles of tram, some of it double. The line runs along the whole length of the city and port, through streets having an average width of about thirty-one feet. The line is very tortuous, and some of the curves very

Digitized by Google

sharp. The company keep in good repair a portion of road on both sides of their line.

Now for our own country. Birkenhead is quite satisfied with its tramways. Mr Train started them; but Mr Wiswell, in 1863, greatly improved the line by the use of a new kind of rail. The system is four or five miles in length; and the inhabitants generally agree in opinion that there is neither danger nor difficulty in ordinary vehicles crossing the rails. Birkenhead's opposite neighbour, Liverpool, is adopting the system, with an improved form and arrangement of rail. Some of the Pottery towns are following the same example. Whoever has gone from the Portsmouth Railway Station to South Sea pier, to take the steam-boat to the Isle of Wight, will admit the ease and comfort of the tramway arrangement now adopted, compared with the road system which preceded it. At Swansea, we can personally vouch for the capital tramway ride round the margin of the beautiful bay, from the busy town to Oystermouth and the Mumbles; the vehicles are large, roomy, light, cheerful, well ventilated, and roll along with a remarkable freedom from shaking and rattle. On the pier at Southend—that pier which stretches out into such infinite space, and is honoured by a visit from two steamers every summer day, the tramway does useful work. When a steamer is known to be approaching, Dobbin, with a train of open vehicles attached, trots along a tramway on the wooden pier; and this thing at least is certain — that when the carriages contain (which they sometimes do) as many passengers and as much luggage as would fill three of our London omnibuses, Dobbin goes along without any manifestation of over-fatigue or mental disquietude: he knows the work he has to do, and does it well and quietly. The same is the case on the pier at Ryde.

The question, then, fairly arises, whether we may not judiciously make another attempt to establish tramways on some of the roads branching out of the metropolis? Would the good results counterbalance any slight inconveniences, and would it pay as a commercial speculation? As to the particular plans recently brought under public notice, we have no special concern with them here, since we are only treating of general considerations; we may, however, just mention some of them, to shew the direction which matters are taking. One scheme comprises four groups, all connected at certain points, and all accommodating the Surrey side of the water: namely, from Westminster Bridge, through Lambeth, to Batterses Road; from Southwark Bridge to Newington Butts and the Borough High Street; from this last-named line to Kensington and Camberwell; and links to connect the Westminster with the Southwark bridge groups. Other schemes take Waterloo Bridge into account, and propose to accommodate Pimlico and Vauxhall on the one side, Peckham and Greenwich on the other. Then, north of the Thames there are lines projected from Upper Holloway to Finsbury Square, Whitechapel High Street to Stratford-le-Bow, &c. Any one of the several plans may be taken as a type of all in constructive features. It seems to be generally understood that Train's system failed in part through the faulty planning of the rails. They were five inches and a half broad, and projected an inch and a quarter above the general level of the road. This projection was the cause of many accidents. The rails now proposed to be used will be level with the road, and will be imbedded in the granite of the paving; while the groove (to take the flange of the tramway carriage) will be so narrow that the wheels of the smallest road vehicle cannot be caught in it. The rail, besides this groove, will have a corrugated edge; and outside it there will be a granite curb eighteen inches wide. The foundation of the rails would be on sleepers imbedded in concrete. The gauge will be the same as that of our national system of railways—four feet eight and a half inches. The rails will be secured to the sleepers by the aid of tie-rods. The weight of the rail will be forty pounds per yard. It is proposed either to place granite curbs on both sides of the tramway, or to macadamise the whole road, at the choice of the parish authorities; and we ourselves see no reason to doubt that the suburban roads might in this way be kept in better general repair than they are now. It is worth bearing in mind that, since the abolition of the tollbars around London, the omnibus companies wear out the roads without paying in tolls to repair them; the householders defray these repairs by means of parish rates; and there is fair ground for supposing that, if the tramway system were adopted, the expense of repairing those particular roads would in part be borne by the tramway companies.

Then, as to the carriages, we are told to expect omnibuses, sixteen feet long in the body, by six feet eight inches broad over all. At each end there will be a platform for driver and conductor; and a break at each end will supply the means of stopping the carriage within its own length—a thing never achieved by our ordinary road omnibuses. Inside, there will be a space of two feet between the knees of the *vis-à-vis* passengers—a vast improvement on the present stuffy, crowded arrangement. Each carriage will be constructed to accommodate twenty outside passengers, who will be able to ascend to their seats with a degree of ease which we may well desiderate. The speed, including stoppages, is to be about six miles an hour—certainly not a reckless one in these go-ahead days. The companies are willing to submit to a parliamentary maximum of fares—in this, as in other matters, deviating from the present omnibus system; while, at certain times in the morning and evening, for the accommodation of working-men, the fares will be lowered to a halfpenny per mile.

When, mechanically, there are so many advantages clearly obtainable, it will be hard if obstacles of other kinds should prevent us from having a much needed addition to our means of metropolitan locomotion. The mechanical advantages have been very well put forth in one of the daily journals. 'A tramway carriage stands in much the same relation to ordinary omnibuses as that in which a railway train stands to a mail-coach of the olden time. It rolls smoothly along a rail, instead of jolting over the stones. It makes a journey along the streets quiet, restful, and pleasant, instead of being noisy, tiring, and disagreeable. It is easier for the horses to draw, easier for the driver to stop, easier for the passengers to get in and out, and easy to read or talk in. Its gliding movement makes the streets quieter, saves horse-flesh and wear and tear of roads, makes lower fares not only possible but remunerative, and reduces

Digitized by Google

the wear and tear of daily journeys to their minimum. A wide, spacious, and well-cushioned carriage, with an easy step by which to enter at either end, and a light but convenient staircase by which to reach the top, with ample headway inside, and room to walk between the rows of passengers, with break-power which can stop it within its own length—the tramway omnibus is all that an old-stage omnibus is not.'

JINNY'S THREE BALLS.

IN THREE CHAPTERS.

CHAPTER II.—JINNY'S SECOND BALL.

'I have no one but you!'

JINNY'S dressing for the ball was a feverish affair indeed, and when she took a final survey of herself in the glass, a burst of tears was the result. 'I look so—so ugly,' she sobbed; '*he*'ll be ashamed of me.' And then she scandalised her clumsy attendant by adding in a low piteous tone: 'If I'd only prayed to be pretty all this time, I might have been made so by now.'

However, she had to choke down her tears (it was well, for she had not the rare art of crying becomingly), for the fly, which Dr Irving paid, was at the door. She had no loving, last inspections to go through; her aunt had been in bed an hour, and their one maid had 'no opinion of Miss Jinny.' Besides—awful thought!—she might keep *him* waiting. So she ran down-stairs, jumped into the fly, with breathless fervent thanks to Dr Irving, and was on her road to paradise.

The moment of alighting, of finding her arm instantly in his, of being led into a whirling world of lights and music, and all wonder and beauty; of flying with him down a long vista made by shining dresses and uniforms, seemed to Jinny ever after (such a brief earthly 'ever' as hers was!) like an incredibly glorious dream. She could not speak, nor clearly see what went on around her; could only breathe out the weight of her happiness in long sobbing sighs, till the first dance was over. Then she looked up at him with such mingled rapture and devotion that he was moved and half-frightened, and exclaimed: 'By Jove! you absurd little thing, what is it? What are you making those big eyes of yours bigger, if possible, about?'

'It is all so delightful!' she answered, clinging closer to his arm. I think that night Fitzpatrick found it delightful too; for Jinny, dressed all in white, with a tall 'mother-of-pearl' comb in her brown hair, and the unfailing black velvet round her throat, looked her best (though she had not thought so), and was stimulated to unwonted powers of repartee by a certain playful tenderness which peeped out in her 'friend's' manner, by certain small attentions too, that seemed to her guileless mind very serious and sweet signs. At first, perhaps, she danced with too hearty enjoyment to be graceful; but the passion of happiness, for which her stagnant existence had ill prepared her, acted like physical fatigue. She soon sank into a state of silent and exalted bliss, too great for words or gestures of delight; only her poor little face beamed, a great still radiance lit her round eyes, till they seemed gazing at paradise; and whether she sat at Fitzpatrick's side, or danced with him, or looked up in his face as he bent over her, there was a fond, helpless, clinging confidence in her attitude that told the same tale: 'My sun, my strength, my life, how should I live without thee.'

But the moment came when all this bliss was to end, and for ever, if she had but known it. Unhappy child! it was perhaps her very own silly hand; silly, because it forgot all else in his clasp, that wrote the first letter of the fatal 'Finis.' When she was cloaked, when Dr Irving had gone to see about the fly, Fitzpatrick staid with her, and told her he should see her home. 'We can drop the old doctor,' he said, gazing into her face with a very kind smile, and pressing her hand to his side. 'And then *I'll* see my guest home. That'll be quite the right thing to do, eh, Jinny? Won't it, little one?'

She nodded vehemently; he felt her droop and lean against him with a movement of trusting love he could not misinterpret.

'Are you tired, darling?' he asked, with a vague impulse of caressing gratitude. 'Not tired of me, you wicked little child?'

'Oh, how could I be!' she sighed; and then Dr Irving came to announce the fly, and acquiesce sleepily in Fitzpatrick's little arrangement; and they three got in, and were driven off.

'Good-night, my dear; sleep well,' said Jinny's chaperon, with a curious doubt and tremble in his voice, and a curious suspicious glance at her companion.—'Take care of her, sir; she's alone.' Then he got out, and pattered up the path to his dreary little cottage, without ever a look back at the clear stars just waning in the early morning grayness, though dead-and-gone memories were wakening in his dull breast.

Fitzpatrick was quiet enough during the rest of the drive, though he did not draw back from the girlish figure that leaned against his shoulder; though he took the thin hand that was so wofully ready to be taken, he refrained from putting his arm round her, or speaking more words of love. Slumbering honour was stirring a little; Jinny was so utterly and awfully in his power, he was for the time more afraid of her than of the most self-possessed prude in the world.

But this was not to last; when the fly had set them down, and rattled away, Fitzpatrick still lingered, and stood close to her. The sky was growing from deep blue to warm pearly gray; the stars fading tranquilly out; a soft air stirred the shrubs in the little garden, and blew a long tress that had lost its curl against his cheek, and sighed a tender little song in Jinny's ear. The sky, and the wind, and the flowers were very sweet: in that July night, society, society's restrictions and obligations seemed worlds off. He forgot for a moment that he had given his heart elsewhere; he forgot that Jinny Lake was ugly, and simple, and poor; could only spoil his worldly career, and never satisfy the fastidious cravings of eye and mind. He only realised, looking down on that innocent face, shining with a soft glory of believing love, that he was all her life to her; had moulded her every thought and deed since their first meeting, that here was a worshipper who, disowned and rejected, no after power and success could ever give back to him.

'O Jinny,' he began painfully, and stopped.

Then she found words at last—words piteous through trust, not through doubt.

'Oh, I do, do love you! You won't leave me,

Digitized by Google

will you? I have no one but you. Indeed, indeed, I could not live!'

Her head had fallen on his shoulder; her large eyes were lifted, wet with tears; in the faint starlight he saw the half-smile of fervent happiness on her lips, and bent and kissed them—kissed that smile away from them.

'And I love you too, my own, dearest, little Jinny,' he murmured.

She lay quiet on his breast till he saw fit to release her, which he did presently with a troubled: 'I must not keep you in the night-air, my child. Give me another kiss for "Good-night."'

She was very obedient; she trusted him so: her lips were put up like a child's; she never asked whether he would come on the morrow, nor *when*, nor wanted promises and asseverations, as some women do.

'Good-night, my darling,' he said, turning away.

'Good-night, good-bye,' said Jinny, crying happily. Then she gathered a late rosebud, and gave it him; and he taking it—her first gift of love—with tender and gallant thanks, left her.

She leaned her bare arms on the top of the little gate, and looked at him, picking his way daintily across the stony road; once he turned, and took off his hat, and she kissed her hand many times, fondly. She staid there a long while, staring in vague, passionate thankfulness at the blushing sky, rehearsing over and over again in her own mind his words, his kisses, his kind looks—wishing the morning sunshine would come and bring him back; for would he not be with her always and for ever now, since he had said he loved her, and *his* love could not forsake or lie, whatever they said in story-books!

How she would obey and please him in all things! how hard she would try not to be awkward and foolish any more, to move and speak gracefully, as he said girls should move and speak, to learn the music and sketch the scenes which Fitzpatrick had admired. She would go out that very day, later, and try and copy a barn, with a group of birch trees behind it, and then begin to practise a new valse. Well, it seemed very hard to leave the spot his recent presence had made lovely, to turn away from the magical morning glow breaking over the distant wood, from the low twitter of the little birds in the nearer trees, and shut herself up in her ugly little room.

But she should take her fairy gift of joy with her there, close to her heart, never, never to leave it more, except with life, and what outer dreariness could matter now? 'Nothing, nothing matters!' she whispered to herself, fondling her own hand because he had held it in his, as she laid her head (such a dizzy throbbing head!) on the pillow; 'I can never be unhappy again!'

Morning came; Jinny gave her aunt an account of the ball, in which Fitzpatrick figured prominently enough, but she did not repeat his words. She had a vague notion he would want to see that lady himself; and if not, why, there was plenty of time to tell the sweet secret that was, as yet, her very, very own—no sharer in it.

So she drew, and practised, put on her prettiest dress, and then began to think it time for Fitzpatrick to come. She was not a bit exacting; but he had said he loved her, and she judged his love by hers.

She sat in the window waiting, or ran down the garden path, heedless of sun and dust, to look out at the gate, from morning to sunset. She strained her eyes till it was black night, and came back into the room with sad reluctance, but without the faintest touch of fear or distrust.

He did not come the next day, nor the next to that. But why drag out such a story? He did not come at all. Weeks—months passed. Through all the glaring summer, passers-by never missed the slight unformed figure crouched in the window-seat behind the faded green rep curtain, or standing at the little gate with its blistered paint, one thin hand shading the round soft eyes that stared yearningly down the dull road, and blinked back the sad tears that would rise sometimes, or pressed against two simple lips ever in a piteous quiver of expectation. People learned to notice her—notice the two muslin frocks she wore—blue and lilac 'week and week about,' growing more limp and faded each time; the heavy hair she soon ceased to dress with care and pleasure; the plain face that was plain again now, and had a startled feverish wildness in the great wistful eyes. She did not care if it was fine or dull, whether the sun scorched or the rain chilled her: if the maid brought her a cloak, she would huddle it round her abstractedly, or perhaps let it fall. It did not much matter—nothing mattered now, she repeated with dull iteration, not until he came.

I cannot tell her feelings; I can only say she loved him better than ever, if she believed in him so utterly no more. She might have thought him ill or dead; only one of the tradesmen, who sometimes went to the town where his regiment was quartered, had seen him at intervals, apparently quite well and cheerful. She thought he must have some good reason for keeping away, as he did it; perhaps he wanted to see if she really loved him.

She was patient; and waited because she could do nothing else—she knew none of his friends, and she dared not try to find out indirectly about him.

Still less, at first, did she dare to write to him; she had heard him condemn so severely a lady who had taken some such step; but as his maxims of propriety faded, as the yearning to see him widened and deepened in the woman's heart, her fears forsook her. Four months after the July dawn that saw their parting she wrote him a letter, which, abrupt and ill dictated as it was, had the pathos of a hundred impassioned appeals in its helpless pleadings. Twenty times it was written out in Jinny's best hand, and torn up; completed, it was after all a brief and simple epistle:

MY DEAREST CAPTAIN FITZPATRICK—Please will you tell me if I have done anything to vex you, for I am so very unhappy because you do not come. I know the young ladies you know do not write to gentlemen; but I have only you, and cannot help writing; and I will never do it again. Indeed, indeed, I do love you so very much, and am till I die your own JINNY.

Why did he not come? Poor Jinny! The question that perplexed her so was easily answered.

The morning after the ball, the evening glamour over, he took himself to task. He had gone too far with a child he never meant to marry—a good, affectionate, ugly little girl, whom it was absurd to suppose could ever be his wife. He was truly

Digitized by Google

very sorry to part from her, to lose her foolish flatteries and lavish sympathy; but for her sake, even more than his own, things must go no further. It would not do to have farewell scenes, for he knew he was soft-hearted, and could not bear to see a woman cry. There were no presents to be sent back; one poor little rosebud he did indeed, with a sigh, fling into the grate; but the music he had given her, poor little soul! she was welcome to keep—even to play it to some cad of a fellow whom she would end by marrying. He became a little plaintive on this text, thinking of little Jinny's loving ways; but was soon consoled by an invitation to stay at a specially 'jolly' house in the neighbourhood, where there were lots of horses and pretty girls. That was Fitzpatrick's epitaph for his last amusement.

Jinny's letter, coming when he was on leave, first gave him a fit of the blues, and then made him quite angry it should have had such a power—so ill spelled, written, and expressed an epistle.

He tore it up, angry with himself and her, stamped about the room, and made a wholesome resolution to be careful of country-town innocence for the future.

After this ebullition, his spirits returned, and he soon became, to use his own phrase, 'as jolly as ever.'

'By Jove, cunning dodge that letter!' he laughed to himself. 'But it's no go, my little friend; we are not quite so green as you fancy. If I ever console myself about the old trouble, it won't be with you.—Ah! what a girl that other was; such a lot of style, and go, and pluck!'

Alas! if Jinny could have seen the reception of her first poor little heart-utterance, her love-letter written when love, on one side at least, had long been over!

CHAPTER III.—JINNY'S THIRD BALL.

'You did not know what you were doing, did you?'

One day Dick Jones ran over to the town to visit some friends who were staying there. Returning from his call, as he walked down the High Street, a timid voice arrested him. He turned round, and saw, sad in the gleamy winter sunshine, a wan young face with great yearning eyes in piteous search of his, a white, pinched mouth, and dark hair pushed carelessly back under a shabby brown hat.

'By Jove! Fitzpatrick's Miss Jinny,' he cried, shaking her cold hand heartily. 'But, I say, you've been ill, haven't you? Oh, poor girl, you look awfully seedy!'

'I am not ill,' said the soft voice, trying hard to be steady. 'At least, I shall be well when—when *he* comes back—Captain Fitzpatrick, you know. Is *he* well? Where is he?'

'Oh, Fitzpatrick's all right,' the good-natured officer answered soberly. 'He's on leave, but coming back for our ball, you know.'

'Your ball,' said Jinny hesitating, and with the ghost of one of her old painful blushes rising to her cheek. 'I wanted—wanted to ask—if—I thought perhaps—— O Mr Jones!' She broke down, and put her hand over her eyes, sobbing.

'Go on, go on,' said Jones, distressed and sympathetic. 'Hang it, I'll do anything.'

'I did so want a card for your ball,' she murmured, looking up tearfully. 'I have a sovereign—I could pay—oh, I wouldn't ask if I wasn't—wasn't—*wretched!*' And she cried again.

Mr Jones did not hesitate a moment. 'Pay? Bosh!' he exclaimed. 'You shall have tickets, certainly—you and that old fellow, the doctor. You should, if I had to sell my—my—grandmother. Only look here; don't you cry like that, you make one feel so horridly queer. Now, I say, that's *worse!*'

For Jinny had seized both his hands, and was trying to kiss them, a ceremony no one had assuredly ever performed towards this excellent officer before. He released himself, and departed, promising to send the tickets; and he was faithful, though he could not stay for the ball himself: he wished he could—'For I'm sure the poor little soul wants looking after,' he thought. 'O Fitz, you're a sad fellow; you've done a cruel job here, I'm afraid!'

Which 'Fitz,' all unconscious of what was hanging over him, had become very cheerful, and much on the alert. *She*, 'that other girl,' was coming to the ball, and, perhaps, who knows—as he had been so constant. Such a pretty girl—no end of style and pluck. Old Dr Irving had been away a long time, and only came back because he received an imploring note from Jinny, begging his escort for the ball—came indeed, but just in time to call for her, and take her there. So he knew nothing of the town gossip—of how Jinny Lake had lost her lover, and wore the willow openly, and how that lover was consoling himself.

This ball was no brilliant dream, but a tissue of dreary, cruel realities: this ball had no firm arm for her to lean on, no winning eyes, no fervent lips, to look and smile on hers, no bold gay voice to whisper patronising praise or kind instructions in her charmed ear, no envious feminine glances nor amused masculine ones, to follow her. Not that she had cared about those latter, save as confirmation of the happy truth, that seemed truth *then*, at least. She went down the room on her old friend's uncertain arm, trying to smile and talk to him, but looking wildly round, and starting at every passing voice or step. She had read something about a gambler's last throw, and she thought to herself this was hers. If she won it, oh, what might not be!—if she lost it, well, everything would be over. She must go away somewhere into the dark, and die: he might be sorry then, just a little, and believe she loved him—him *only*.

Her last throw—miserable little gambler! she was preparing for it, as, with flaming cheeks, the eager liquid glitter in her round eyes, restless gestures, and wild little laughs and exclamations, she stood by Dr Irving's side. A fossil plesiosaurus and a living butterfly could scarcely have presented a greater contrast; the life in him nearly burned out, the life in the other leaping, throbbing, racing, in a passion of fear and love, at a fever heat.

Alas! she did not look her best—she had not thought of trying to look her best—her dress was dowdy and unbecoming, her rapid movements and flushed anxious face did not become her either.

'Where's your young officer?' asked Dr Irving presently. 'Before, he was here to meet you.'

'Oh, he is coming, coming,' said Jinny, faithful in her faith. 'He is so kind.'

Nevertheless, she waited long and vainly. But, towards the middle of the evening, a slight quick figure, the profile of a big moustache and a glossy

Digitized by Google

cropped head, caught her eye. Her heart came up in her throat, and strangled the cry that rose there; the floor dipped, and the ceiling came down, she thought. But she made a violent unconscious effort, and, recovering herself, stared with fixed entreaty at her false lover. Poor Jinny! she frightened his weaker nature by the very intensity of feeling that might have moved a stronger, as she stood with her neck a little stretched towards him, her quivering hands half open, as though waiting to clasp his, her large eyes aflame, as if each had a separate life, whose only object was his love, her lips starting with the quick leaps of her heart.

He glanced at her, then averted his eyes, inclined his head carelessly, and disappeared among the crowd.

A choked 'Oh, Captain Fitzpatrick!' pursued him, but it was too faint and sobbing for him to hear.

'My dear, hadn't you better go home?' said Dr Irving, with a heavy pitying look, pressing her hand a little.

'I don't want to,' she answered abstractedly, straining her eyes after the lithe figure gliding through the throng.

'You see, you don't know any one—and—hadn't you better?'

'No, no,' cried Jinny impatiently, and in a voice of despair: 'leave me alone!'

So he ceased his entreaties, seeing too plainly that this frail vessel of hope would soon shatter itself against the rocks of inevitableness, and be at rest.

And Jinny thought that was not her last throw, after all—she had one more left. One more: to get near him without his perceiving it, and speak to him before he could turn away. She would wait and be very patient, but she *would* speak that night; for, who knew? they might never meet again—*she* might die, or he go far away. She got away from Dr Irving (he was not hard to elude), and wandered about; but Fitzpatrick seemed to have disappeared. She was beginning to feel sick and hopeless with her weary search, when the gay familiar tones fell on her ear. She was in a passage leading to the supper-room, and his voice came from thence: to where that voice, calling her fond names no longer, could yet speak, she went blindly, unconscious that the old doctor followed her.

The room was empty of all but two when she stood in the doorway, and looked in: two, and who were they? A young lady, fair and pretty, and coquettish, beautifully dressed in pale blue satin and blush roses, with pearls round her white throat and in her ears, and dazzling golden hair dressed high, with showers of ringlets falling from it: a young lady in whose face wretched, awkward, foolish Jinny saw not only beauty, but wit, and earnestness, and *love*, who was smiling a soft complacent smile, and glancing up with a look half impertinent, half fond at her companion—who was evidently her lover.

Her companion—*her* lover? No, Jinny's—Jinny's by a thousand tender words, tender glances, tender thoughts, by those two passionate kisses in the dim sweetness of the July dawn, by all he had taught her which she could never unlearn, by the life which had no being save in his love, now.

And her captain, tender and true, was leaning lovingly over this new girl, saying soft things in her ear, with a look of such utter satisfaction, joy, and rest as he had never worn yet; and now, taking a slender lovely hand, and kissing it worshippingly, and now—it could not be!—holding her in his arms to his heart.

Jinny felt very tired; she thought she could hear her own heart moaning inly, because it was so lonely and so cold; her hapless eyes seemed strained wide open by cruel fingers; her lips got white, her knees wavered, her chest and her throat burned like fire. But she could not look nor move away, till, suddenly, Fitzpatrick's eyes met hers. Fresh from his recent triumph, beaming and tender, yet so familiar, she could not endure to see it. She threw up her arms with a stifled cry of agony, and staggered towards him. Then she thought something within her snapped and crashed; a strange sense of quietness, a numbness of death chilled the fiery pain, her strained eyelids relaxed, and she turned away, and came back waveringly to Dr Irving. She did not care to look any longer, nor to hear what those two said. She knew it was all over with her; she did not care for anything, since God let such cruel things as this be, except to be quiet, and away from all the people; to go back, and lie down in the dark.

'I am *so* cold. The light hurts my eyes,' she said; and he, in silence, gave her his arm, and took her home. He was very sorry; but what could he do? Perhaps, after all, the worst was over, since she was so quiet. She could not come to much harm now.

She bid him 'Good-night,' and went up to her room very quietly; undressed in a dazed mechanical way, and lay down. Even then she did not cry, or moan, or toss about. She lay open-eyed, without stirring a finger, staring into the darkness. So the maid found her when, as the morning sunlight streamed into the room, she came in full of questions about the ball, which Jinny did not hear nor answer at all, except when the woman mentioned Fitzpatrick's name. Then she stirred, and made a little sound of tired impatience, and turned away from the light.

She could not be persuaded to eat, nor get up, nor even sit up in bed. She shook her head when a book was offered her; she heeded the servant's indignation no more than the wind whistling outside; her aunt's message made no difference to her.

At last, Wilkins, the maid, got frightened, and sent for Dr Irving. He came, felt the poor child's pulse, looked at her tongue, asked whether she had 'any pain anywhere'—to which she shook her head—and then stood drearily staring at her. 'She 's low,' he said. 'Wants tonics and cheering; but there 's nothing to lie in bed for.—Will you get up, Miss Jinny?'

She shook her head again, with a look of aversion.

'Why not—eh? Nothing ails you, you foolish little girl, does it?'

Then Jinny looked up with a dim scornful smile, and spoke at last: 'I think my heart is broken,' said she. 'And, please, I want nothing.'

Irving shrugged his shoulders, and went out. There was nothing to be done; Jinny could not well be dragged out of bed, or have food forced down her throat. Some soup and wine were, however, given her in the course of the day, but with no rousing effect. She did not speak, nor cry, nor give trouble; nothing seemed to pain her except the sunshine, from which she turned wearily away. Her aunt had been bedridden for years, and besides, could not realise Jinny's strange state.

Digitized by Google

So Jinny lay unvisited one day—two, three, five, seven, ten days. Then the doctor came again, looked very serious; and staid a long while, trying to rouse her. He talked of the ball, of Fitzpatrick—praised, blamed, reviled him; but even that once dear and powerful name was powerless now—her lips never quivered, her fixed eyes never moved.

He had her lifted out of bed, and supported (she was too weak to stand) to the window. She only shuddered a little, and seemed impatient to be disturbed. And Irving said, if she shewed no signs of mending, another doctor must be called in.

In a week she had not mended, she was worse; and the physician summoned to her gave the astounding news that she never would mend—news which chilled awfully those who had done their duty by her with indifference and almost with contempt.

'Miss Jinny' would never get well—to tease and trouble with her many wants, her awkward performance of the little tasks that fell to her share, her long foolish dreamings, any more. She was beyond all that—beyond the long watch and the vain waiting; for ever beyond improvement and deterioration alike.

Wilkins, the maid, when she had cried over the sad truth, sobbed out a confession that she did not think the poor child 'fit to go.' Of late, Wilkins said—oh, all last year—she had seemed to give over saying her prayers and reading her Bible: she had not seemed to listen or care when she, Wilkins, read it to her. The two doctors had not much to do with this, but they were sorry and disturbed. They did not guess what little messenger, soulless and dumb, was doing God's work with poor Jinny's wandering soul.

As she lay there, dimly wandering through the past year, one bitter thought, momently more intense, grew in her mind, that no one could ever love her—not her aunt, not Wilkins, not her dear captain, not even He who took up and comforted the forsaken—that therefore she was lost for ever—while with this strangely mingled the remembrance of her lover's last kiss. 'No one cares for me!' she moaned. A low soft cry answered her, something tender and warm touched her cheek. That cry, that touch, went to her very soul, though it was only the cat, whose kitten had died, and who was mourning it in her way. 'O Kitty, Kitty!' she cried, 'do *you* love me after all?' And then the tears came forth, and ran down her cheeks, and she wept for many hours.

Wilkins need not have troubled herself about her state of mind; the cat was the best missionary to poor Jinny, who had been a little heathen in all save the forms of religion till now; and then she was very near death, and so saw things with wonderful clearness and truth, though she had no words to speak of them.

Her one great fault had brought a far greater anguish, and was bringing fast upon her the peace the world could not give. She was very sorry for all she had done wrong, and prayed humbly for pardon for her idol worship—prayed that no punishment might come on the idol's head for her own silly weakness. Finally, almost at the last, when she had kissed the cat's head, and had said: 'Pussy, I hope you will have another little one to comfort you,' and it had been taken out of the room, she asked whether she might send a message to Captain Fitzpatrick. 'Tell him I wasn't angry, and I don't mind now. And give him my dear love—tell him, if he will come, I should like to give it him myself. You know,' she said to the old doctor, taking his hand with a weak smile, 'I'm not like Kitty—no other can comfort me for *him*.'

And Dr Irving, seeing her calmness, and with a certain stern wish that Fitzpatrick should behold his own work, went and did her bidding.

It was a startling thing to be snatched suddenly from the sunny-scented boudoir, where his lady-love sat singing bright little French songs to him; to stand beside the death-bed of another, loving and true, whom he had done to death through her too tender trust—stand in the still, darkened room, with no sound save her last laboured breathings, alone with his victim. Though, as he followed the doctor through the familiar gate, this thought troubled him, the remembrance of Jinny's blind adoration rendered it less terrible. She would either adore him still, he believed, or else reproach and rave at him in a way that should do much to justify his desertion. Yet his light step was sober, as it paused at her door, his bright eyes wavering and troubled, for Fitzpatrick's heart and conscience were not dead.

'Jinny,' said Irving, 'will you see him now?'

'Is he come?' said Jinny. 'O please.'

Fitzpatrick entered gently, prepared to comfort, soothe, feign his old love, if need be; for she might die happier if so deceived. But the instant his gaze fell upon the bed, his hopes, his visions of keeping still the old superior position vanished. Jinny was grown a woman, was his first thought, and almost beautiful—could not love him humbly now, as she used to do, nor trouble him with over-praise. She was white, and thin, and plainly dying; her mouth was drawn, and wore a sweet smile of conquered pain; her big eyes looked bigger than ever, and had a steady peaceful shining, an almost divine radiance that brightened all her face. The very faint movements of her hands had a strange significance and dignity—Jinny would never more be rude or shy—awkward, silly, hoydenish, little foolish Jinny would never more believe and be betrayed, trust and be forsaken, cry, or trouble, or wait and weary, again. That was all over. It was Fitzpatrick now who had no words, who was awed, almost frightened, who needed her sweet welcoming gesture before he could venture to approach. Once his slave—a queen was more approachable; once his toy—now almost an angel of God; once praying pardon so piteously for small errors or none—*now*, why her very love, if love it was that made her summon him, seemed only the far-off pity and pardon of a glorified saint. He hesitated, a dark red flush covered his face, his eyes fell as he came near her, he dared not even ask if she forgave, but broke down and sobbed at the first word.

'Oh, don't cry like that,' said Jinny, stroking his hand with both hers very tenderly. 'Never mind; you are sorry—you did not know what you were doing, did you, dear? It was my fault; I wrote I couldn't live without you, and I *am* dying, you see. But indeed, I don't care. I am quite, quite happy.'

'Oh, by Jove!' cried Fitzpatrick, the tears running down his cheeks now. 'Sorry? I should think so! You make me feel what a scoundrel I've been. I'd sooner you shot me than be so sweet, and, and talk in this way.'

Digitized by Google

'But I must,' Jinny murmured in her weak voice. 'I couldn't be cross the last, last time.' Then she pointed to a chair by the bedside; and Fitzpatrick sat down silently, humbled, repentant, self-hating, as he had never in the course of his easy life been before.

Jinny spoke again presently, with a little sigh: 'You are going to be married, aren't you, to that young lady in pink and blue?'

'Yes, I believe so,' answered Fitzpatrick, hanging his head; he had almost added, in the depth of his remorse, 'not unless you like it.'

'Ah!' said Jinny, sighing again, 'I hope you will be happy; but, my dear captain, you won't make any one else think you love them, and then leave them, will you?'

'Never again,' answered Fitzpatrick under his breath; 'I shall never forget this, nor *you*.'

Poor Jinny, she was past blushing; but she smiled a little, and her dim eyes brightened in the old fond foolish way at his words.

Then she sank into silence, and lay quiet, holding his hand, and looking dreamily at the fading sunset red beyond the window—an early sunset, like her own. Fitzpatrick rebelled against it: he could not bear to see her lying there with a weak smile of patient fondness flickering across her lips, or a sharp gasp and quiver of pain shaking her slight frame.

'Jinny,' he asked hopelessly, 'won't you get well? What's the matter with you?'

She did not tell him, as she told the doctor, that her heart was broken, nor that it was so, as she told herself, by his desertion—she was meek and childishly tender now, as she had always been.

'No, dear,' she said faintly; 'I'm going to die.'

'O Jinny,' he muttered in a wild way, 'if you could live I'd be different to you, I swear I would.'

'No; you love some one else, my dear captain, and you must be good to *her*. I know—I know I wasn't fit to be your wife. But everything is right now.'

It was getting very dark, and a strange trembling awe crept over gay Captain Fitzpatrick's soul as he sat alone with his innocent victim, her frail fingers clinging round his hand, her failing breath on his bowed face.

She was going to die, and for his sake. Her hand was getting very cold in his this minute, but she murmured something faintly.

He bent his head to hear the question.

'Isn't there a new moon?'

'Yes.'

'You ought to wish, oughtn't you? I remember I did; but Christ's will is better than our wish, isn't it? Dear, I feel so weak; so—so'——

'I'll call the doctor. O Jinny!'

'No; don't call any one; I only want you. Don't go: I'm not afraid. Only say "Our Father" to me.'

He tried, but the first word choked him utterly, and Jinny began to whisper it herself. She soon ceased, and lay quite still for a while. Then, suddenly, she sat up, and groped in the dark.

'Where are you?' she panted. 'I'm afraid.'

'I'm here, quite close,' cried Fitzpatrick in terror. But she was thinking of him no longer, and he quailed. In the dark, he heard her nestle into the pillow, murmuring something that sounded like: 'So, so tired—all alone—so glad to rest;' and heave a long, satisfied sigh. He thought she was dead, and felt a strangely bitter pang that she had not said 'Good-bye.'

But little Jinny was faithful in death as in life. Her weak hand felt over his face, and tried tenderly to wipe away his tears. Her voice, which now he strained his ear to catch, though once he had listened to it so heedlessly, murmured in a fond, pitying sigh: 'Don't mind; don't cry, love. Please God, comfort and bless my'——

And before Fitzpatrick could credit and understand that this prayer was for him, Jinny herself was comforted, and lying in arms that could never grow cold or false, or let her go, as his had done.

He kissed her quiet hand timidly before he went away, and could hardly believe it would never stroke his cheek, or try to detain him as it used to do, any more.

He felt unwontedly heavy and sober as he left the mournful house, as though he had left there a bit of the world's brightness.

Soon, there was a little white cross in the churchyard under the old willows—the willow no one could taunt her with wearing now—and a simple inscription:

JINNY. Aged 16 years and 10 months.

'He shall gather the lambs with His arm, and bear them in His bosom.'

Old Dr Irving, standing long after by that little grave, muttered to himself sadly: 'Whom the gods love, die young;' for though the first year there was a bunch of lilies and snowdrops upon it, the second it was forgotten.

GOOD WISHES.

I KNOW but that your face is fair,
So fair, it well might task my wit
To write the sweetness smiling there
In utterance meet and music fit;
Your heart, I have no share in it;
Your home, I am a stranger there;
Yet think not that I care no whit
For one so gentle and so fair;
Cold were the heart that wished you less
Than smiling days and happiness.

Youth fills your girlish path with flowers;
May Age with blossoms strew your way;
Love gilds, I guess, your present hours;
May he for ever with you stay;
Young sorrows lightly fleet away;
Your tears are yet but April showers;
May Age's griefs no longer stay,
Nor darklier cloud your evening hours.
Dear daughter, friend and girl and wife,
May Love home with you all your life.

What more a pen can wish you here
Of good, may it to you be given—
A quiet mind, a faith sincere,
That makes this earth a lowlier heaven;
And when your age shall sigh for heaven,
And find this life no longer dear,
May hope alone to you be given,
And death for you have not a fear;
An angel here, your exile past,
Smiling, regain your home at last.

POPULAR

LITERATURE, SCIENCE, AND ART

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 287. SATURDAY, JUNE 26, 1869. PRICE 1½d.

THE COMFORTERS OF THE MODERN JOB.

We are always taught to believe that adversity, taken, as the doctors say, in moderation, is on the whole a useful stimulant, and valuable if merely as a change; and it is difficult for any who have observed the evils of a long-continued course of prosperity, of whatever kind, to doubt the truth of the dogma; of course, we limit its application, as we do that of most doctrines of the kind, to our neighbours; but as Mr Brown thinks of Mr Jones that a slight check in his career would 'do him all the good in the world,' while the latter says it would 'do Mr Brown no harm,' their common friend, without ill-feeling towards either, may fairly pray for a small draught of this moral quinine for both.

But he must not stop here: if he wish thoroughly to discharge his duty to his fellow-creature, he must complete the remedy for which he has prayed; he must call upon Messrs Brown and Jones, and condole with them on the chastisement with which Providence has seen fit to afflict them; for not until he and such as he have done this will the beneficial cup of misery be filled to the brim.

There are several ways in which this charitable deed may be performed; but, with that instinct which seems to guide any duty which becomes a pleasure, Eliphaz will be pretty sure to choose the tone best fitted to heighten the effect which he views with such unselfish delight.

First, there is the severe 'serve you right' tone; but this must be carefully used, as none but inferiors or very meek people accept it so gratefully as might be expected. Indeed, though exceedingly useful in its way, it is a dangerous manner to adopt, and requires great caution; an ill-advised selection of the subject to be operated upon has been known to result in a decided snub, or even—such is the ingratitude of mankind—in an enforced and rapid exit from the afflicted house. Provided, however, that it is safe to make use of this application at all, little skill is needed; it consists simply of a diluted version of the words 'brought on her / his / your self.'

Far more subtle than this method of consolation is that of the friend who 'had always been afraid of it from the little he saw.' This, you see, in the very act of implying superior wisdom, forms an exceedingly good corrective to your own blind want of foresight and care. You were a fond mother perhaps, trying to reclaim by kindness a vagabond son, and had fancied that the blow which you had succeeded so long in warding off would be at least as unexpected to others as it was to you. But no: Eliphaz saw it long ago; possibly he 'always told you so.' You do not remember his doing anything of the kind, in fact he always seemed to you to agree that the prodigal was going on much better. Suggest this, and you only add another drop to the tonic; how could he risk the loss of a dear friend by hinting at what he guessed? So that you, by your own selfish pride, only assisted the mischief after all.

Then comes the friend who tells you that it 'might have been worse,' as if this self-evident fact ever diminished the first agonies of a great grief by a single pang. This is the man who steps up to you when a Hansom has just knocked you down and broken your leg, and bids you be 'thankful you weren't killed.' He is great at misfortunes which cannot in any sense be said to be your own fault; because the arrow might have wounded you somewhere else, he almost thinks you ought to be thankful to the archer for hitting you at all. This is a most invaluable dose of consolation, for it will annoy your average mortal as much as anything to hear that the woe which he has been bewailing so deeply is considered quite a commonplace one after all, and that the morbid satisfaction which he had hitherto derived from pitying himself was founded merely upon his own inability to appreciate degrees of suffering. It has also another advantage; it will almost invariably appear to be just, though disagreeable, since nearly all troubles seem worse than they are until we actually begin our fight

Digitized by Google

with them. So that, although we may be obstinately unphilosophic enough to refuse any satisfaction in the matter, regarded from any point of view whatsoever, we cannot deny the apparent truth of our friend's unpleasant observations. We are seldom calm enough to point out that, if we once enter the wide field of possibilities, we *might* have escaped altogether. Granted, that all our money might have been lost by the breaking of that bank instead of half, still, if we had chanced to invest it elsewhere, all might have been safe.

Unless we can contrive to put a stop to this objectionable mode of treatment at the outset, the versatility of our tormentor will be practically unlimited. Be our misfortune what it may, he will always be ready, under pretence of affording us comfort by the contrast, to shew us some unhappy fellow-mortal whom he fancies worse off than ourselves—in all probability, merely from ignorance of the whole circumstances of each case. The strange anomaly in the line adopted by this comforter is, that although, in common with the rest of his brethren, professedly guided by religious principles, he yet begs us to take heart by observing the afflictions of others—the true spirit of the pagan philosopher. Here again, however, the flaw probably escapes in the indignation of the moment, and as we must take physic, we gulp it down silently with the rest.

But most refined of all is the operator who bids you 'look upon the bright side.' It seems such a fine idea to persist in shutting your eyes to the black cloud that is breaking over the heads of you and all you love best in the world, and in squinting round the corner for its imaginary silver lining, that one feels a sort of foolish respect for the audacity of one's optimist friend. He is the man with the very new hat and pleasant smile, who pays you a visit in Whitecross Street to tell you 'it will all blow over soon, old boy; you must get you a clerkship somewhere' [you used to fill up half-a-dozen every year yourself]; 'and I see your wife's off home to the country already, so she'll be all right.' In minor calamities, he it is who dilates, after that bank smash, on the pittance you have left; or, after the street accident, on the goodness of your prospective wooden leg.

If by any tone the well-meaning friend can insure the full chastening effects of adversity, this is certainly the one to adopt. None of its details seem to escape him; and by inquiry or suggestion, he reproduces to the minutest touches the whole picture that we would so willingly forget. He gauges with the accuracy of an expert the difference between 'now' and 'then,' and all under the plausible pretext of looking at the 'bright side.' By all these means, employed according to his estimate of your calamity, can this comforter of the modern Job insure the trial of patience which is so valuable a use of adversity; but if he be a married man, he has a yet stronger one at his command. Let him stay at home, and delegate to his wife the mission for whose fulfilment he feels himself responsible. To every dart with which he could supply her she can add a sting.

She needs not to guide her conversation by any artfully selected tone, nor bind herself to any fixed plan of action. So much greater is the tact of a woman, that while a man, by an unintended word of kindness, will often undo the good of all the manner which he has so studiously affected, a woman will be unconsciously perfect in her part, and will attain, by her intuitive attention to the smallest details, the full effect at which she aims.

Observe the perfect way in which she comes into the room for that first call upon your poor dear wife after your unfortunate descent in the world. Her obtrusive want of observation seems to say: 'I won't pain the Blanks by appearing to notice the shabbiness of this miserable little hole; in fact, it might be kinder to praise any of the most glaring contrasts to their former condition.' So she goes to the window, and remarks on the prettiness of the unhappy yard which replaces your beautiful flower-garden, and thinks 'it must be so nice to have it all under your own eye.' Then, too, what a relief to have only one servant: really they are such nuisances that she often wishes she had no more herself. She inquires with the greatest concern whether you don't find how extravagantly your housekeeper must have carried on your *ménage*, and says how fortunate it is that your dear Isabella has such domestic tastes. And so she can run on for half an hour, taking the most amicable and lively interest in your affairs and plans, and jarring at every turn on the most tender of your recollections and regrets. If she would only talk and behave as she would have done in days gone by; if she would but forget for a moment that she need ask about details, however kindly, that she never thought of before; if she would not now and then stop short in the middle of a sentence, as if fearing to hurt your feelings by going on; if her sympathy were only less obtrusive in its delicacy! Her assumption of concealed pity irritates you far more than the selfish incivility of the dandy friend who cuts you in the street, just as whispers and footsteps on tiptoe are more annoying to the invalid than louder but more natural sounds. And when she has come and gone, you may give a sigh of relief, for you have swallowed the last drop in the cup of your bitterness, and your Nemesis is at length tired of avenging your former happiness. Most of our miseries would be tolerable, were it not for the comfort administered to us by our friends.

THE PROPHETIC PISTOL.

A WAYSIDE REMINISCENCE.

'And that,' said I, 'is pretty nearly all that I have to tell you.'

The above words formed the peroration of a synopsis of several years' travelling, communicated by me to a fellow-passenger from Helsingfors to Stockholm, as we leaned over the side of the good ship *Viborg*, and watched the countless groups of rocky islets, crested with green foliage, which arose on every side from the smooth transparent sea. My auditor was a long, lean, wiry American, with a cold clear eye, and a look of indomitable firmness in every line of his pinched sallow face, which gave him the aspect (to quote from a pugnacious friend of mine) 'of a man you would like to be back to back with in a row.'

'Wal, stranger,' remarked he at the close of my narrative, 'yu hev bin about a bit, I reckon; but yu hain't seen much, and what's more, yu hain't *done* much neither.'

Digitized by Google

My dignity was somewhat ruffled by this plain-spoken criticism; for I privately regarded myself as a second Sindbad, on the strength of a moderate acquaintance with the majority of the countries which figure on the tourist's visiting list. Moreover, my listener had himself provoked my communicativeness by a series of searching questions upon every point of my personal history, from the colour of my grandfather's hair to the amount of pocket-money allowed me at Rugby. Consequently, there was perhaps a shade of acrimony in my tone as I replied: 'I've done what I could; but of course everybody can't have as many adventures as you.'

'Wal, yu air about right thar,' returned he, taking my words literally; 'I've seen a few things in my time, I reckon; but, mark ye, it's 'cause I've looked about me, and fixed for doin' somethin' wharever I went, 'stead o' trailin' about with my eyes shet and my hands in the pockets o' my panteys, like some folk. Now, I'll tell yu how yu Britishers travel; yu jest foller the railway track right square from one big town to another, and see the opera-houses, and the theayters, and the promenades, and sitch like; and o' course yu meet a heap o' riffraff, and mayhap get yure eye-teeth drawn a leetle too slick; and a'ter devotin' three weeks or a month to seein' a country with some millions o' people in it, yu come back and write a tarnation big book to say, "that air country ain't no great pile o' punkins a'ter all; the critters thar air all lazy and shiftless, and good for nothin' but to cheat and tell lies—and no wonder, seein' they're only cussed furriners, and hain't got the inestimable blessin' of a free British constitootion." That, now, stranger,' he concluded, with the paternal superiority of a missionary instructing a Hottentot, 'that's the way *yu* go to work; but, yu observe, 'tain't the right way, nohow yu kin fix it.'

'And how did *you* go to work, then?' asked I, wishing to divert the current of this flood of extempore criticism.

'Wal, I fixed to *do* somethin', and I *done* it; leastways, a man that's been a teamster in the Rocky Mountains, a gold-digger in Australey, a sailor in the Injine Ocean, a storekeeper at Shanghai, a newspaper editor at San Franciskey, and an agent for one notion or another in every country of Europe, mout say he'd done somethin', I guess, if he had a mind to.'

'And have you really done all that?' asked I, somewhat startled at the catalogue.

'Reckon I hev; I've been kinder movin' round ever sin' I was as big as a molasses-jar, and I ain't done yet. Guess I'm like John Brown's soul in the old song—I "go a-marchin' on" pretty consid'able, and it'll take a while to tire me of it tew.'

'And do you always travel alone, then?'

'Reckon I do; leastways, what *yu'd* call alone. I've got a bosom-friend here, though,' added he with a strange chuckle, putting his hand into his breast-pocket; 'and he's done me more'n one good turn in his time, so I tell ye. Yes, sir, he has that; and what's more, he speaks or holds his tongue jest as I please, which 'tain't every man as 'ud do!'

And with this enigmatical preface, he produced a small but very handsome revolver, fitted with a spring-bayonet, and ornamented about the stock with eleven studs of silver, arranged in the form of a square, which would be completed by the addition of a twelfth.

'Ain't *that* a friend, now, stranger?' said the Transatlantic exultingly; 'and good friends we've been, him and me; I never mistrusted him but once, and that war down in Australey, when I war gold-digging up Turon way. Two fellers cum to my tent one night, 'cause they'd hearn as I'd a heap o' gold thar, and they thought o' bein' so kind as to relieve me o' the 'sponsibility o' guardin' it. I hearn 'em creepin' in, and o' course the fust thing I did war to slap all six barrels into 'em, jest to giv 'em a hint not to call a'ter visitin' hours. I hearn a screech, and then a pattin' o' feet runnin' off; but it war tew dark to see anythin', and all the rest o' that night my feelins ain't to be 'scribed, nohow!'

'Ah, you were afraid you had killed one of them, I suppose?' said I, pleased at this solitary touch of humanity in my grisly acquaintance.

'Killed! why, darn it, stranger, d'ye want to insult me! No, by Jingo! I war 'fraid I'd *swissed* one on 'em! and to hev my own re-volver miss at close range, a'ter bein' true to me for so many years, war more'n I could bear!' (The pathos with which he said this was indescribable.) 'I felt *partic'ler* cheap all that night, so I tell ye; yu mout hev bought me for a cent, any time 'fore mornin'. But as soon as it war light, I cum out, and thar I seen one feller lyin' dead beside the tent-door, and a track o' blood all whar t' other had run off, jest like a strick o' molasses 'cross a buckwheat cake; and, says I: "Thank Heaven, I've hit 'em both!" and the weight that war took off my mind in that air moment—stranger, thar ain't no 'scribin' it!'

The real fervour of his tone as he uttered the last sentence, with all the air of a good man whose conscience has just been relieved of some overwhelming burden, cannot be conveyed in words.

'I daresay yu'd hardly guess, now, stranger, that I fust saw this re-volver in a vision; but I *did*, though, stare as much as yu like; and the way it happened war jest so: Father had bin dead 'bout a month, when I cum in late one night from fixin' a rail-fence that one of our oxen had smashed; and a'ter I'd sot by the kitchen-fire a spell, and done a tol'able stroke o' supper, I began to feel a leetle drowsy. I warn't not to say asleep, but jest so as if yu'd spoke to me sudden, I'd hev thought a minute 'fore I answered—when, all to once, I seen father stannin' right 'fore me, with his big straw-hat o' one side, and his high boots and striped shirt-sleeves, and his hands in his pockets (*that* war the only ghost-like thing 'bout him, for while he war alive they war mostly in some one else's), and he says to me, says he: "Cy, my boy" [my name's Cyrus Jehoshaphat Flint, stranger, and I ain't 'shamed on it]; "Cy, my boy, I've cum back from the spirit-world to tell yu suthin' yu 'll p'raps be none the wuss o' knowin'. I didn't leave *yu* much," says he, "'cause yu air safe to go 'long single-handed, whereas them two brothers and five sisters of yourn will kinder need proppin' up some, 'fore they kin stand by theirselves.—Now, yu jest listen to me. To-morrow mornin', the very fust thing, yu up and job open the back o' that old cupboard in the corner, jest 'bove the top shelf, and thar yu'll find a re-volver, the best yu ever fingered; and may Heaven bless it to yure use.—And now, kneel down, and receive my blessin'." I

Digitized by Google

war jest a-gwine to du it, when all to once I slipped off my chair, and cum the all-firedest lick with my nose agin the fender as ever I seen; and when I cum-to agin, thar warn't nobody thar. "Wal, cuss it!" says I [though that air language ain't quite proper for a member o' the church], "I hope next time father comes from t'other world, he 'll contrive to do it at a reas'nable hour, 'stead o' shewin' up a'ter bedtime, and makin' his own flesh and blood break his nose in this here fash'n." But for all that, I didn't forget what he said; and fust thing next mornin' I up and into the kitchen, and out with the back o' the cupboard, and thar lay the re-volver, as sure as ever thing war in the world. —And now, stranger, if yu don't believe that air story, here *is* the 'dentical re-volver, and yu can't go again *that*, nohow!'

Against such confirmatory evidence it would have been useless to argue; and I readily assented, only venturing to inquire the mystery of the singularly arranged studs on the stock of the pistol.

'Wal, stranger,' returned my companion, 'yu wouldn't guess the trick o' them studs in a hurry, so I 'll tell yu. Each o' them air studs on that re-volver stands for the life of a man that him and me hev clared off. There 's eleven on 'em, altogether, and I reckon that 's a pretty tol'able stroke o' work for one man and one weepun.'

Used as I am to extraordinary confidences, this cool, complacent statement fairly staggered me for the moment. 'Good Heavens!' I gasped, 'do you mean to tell me that you have murdered eleven men?'

'No, stranger,' replied he slowly and sententiously: 'yu hev got into the wrong ferry-boat in makin' that air statement. I mean to tell yu that I 've found it necessairy, at different pe-ri-ods o' my life, to rub out eleven human critters who mout otherwise hev offered the same ci-vility to *me;* and I calc'late yu don't call *that* murderin'? Thar 's one wantin' yet to complete the dozen, as yu see; but,' added he cheerfully, '*that* won't be long a-cumin', I guess.'

'The old cannibal!' said I mentally; 'he talks of killing people as if he were only collecting photographs. Pray Heaven he may not take it into his head to add *me* to his museum!'

'Thar 's one 'vantage I 've got with this weepun,' pursued the Yankee; 'I kin always tell at fust sight o' a man whether I 'm a-gwine to kill him some day or not.'

'How 's that?' asked I, not without a secret shudder, and a slight anxiety as to which way the scale had turned with regard to myself.

'Wal, jest this way: whenever I meet a man that I 'm bound to rub out bime-by, the hammer o' this re-volver 's sure to gin a sorter click—so—jest to shew that *he* knows his dooty 'spectin' that air individooal; and he never makes mistakes, *he* don't.'

The perfect air of conviction with which he said this was the reverse of agreeable; and I could not help reflecting: 'A pretty thing if this precious pistol should have happened to click when he saw *me* first, and he should think it necessary to vindicate its infallibility!' My countenance probably expressed some disquietude, for my companion suddenly broke my meditations by observing, in an encouraging tone: '*Yu* hain't no call to be skeared, stranger; he didn't click at sight o' yu, and I 'm kinder glad on 't, for yu 're good kumpny in yure way, although yu *air* tarnation green in the ways o' the world.'

As this estimate of my abilities was evidently too deeply rooted to admit of refutation, I let it pass, merely inquiring whether the fatal augury had ever proved false.

'*Never*, stranger,' he replied emphatically. 'Yu can't 'spect *prophecy* to go wrong, and that air weepun 's a prophet, jest as much as Dan'l or 'Zek'l. I won't say that I wouldn't hev bin glad, *one time*, to catch him slippin'—and reezun good tew; but you mout as well 'spect Gin'ral Grant to be 'fraid, as this weepun to tell a lie.'

'And that *one time*—what was it?' asked I.

'Wal, seein' it 's yu, stranger, I don't mind tellin', though I ain't so precious spry at talkin' on that air subject, I swar. It 's a good few years now sin' I happened on a feller who hailed from a village on the Mississippi, called "Burnt Clearin'," 'cause of a big fire they 'd hed thar once on a time; and we froze together powerful, and war jest like brothers all to once. Wharever one went, t' other went; whatever one did, t' other did; and if this un hed a dollar, that un war good fur fifty cents on 't, least thing. We went down river to Noo Orleens, and up to Philadelphy by the cars, and east'ard to Charleston on a tradin' spec; and I tell ye, we fotched up the dollars right smart. I saved him from bein' chawed up by a b'ar that looked plaguy angshus to make his closer 'quaintance; and he saved me from bein' drownded in flood-time, when my canoe got turned over agin a snag; and altogether, stranger, yu mout hev tuk us fur David and Jonathan cum alive agin. But all the while thar war one thot hangin' in my mind like a risin' clond in summer, that spiles the look o' the hull sky—and that war the recollection that my weepun, fust time he ever seen this feller, hed *gin a click*.'

The cold clear tone of his voice at these last words, slightly tinged with sorrow, was such as a compassionate judge might use in pronouncing sentence of death; and to me (guessing as I did what was to come) it had a sound indescribably dreary and ominous. 'I used to try and laugh myself out o' that air fancy by sayin': "Whatever 's possible, *that* ain't! Why, to think o' our quarrellin' 'ud be like a man cuttin' hisself in half, and fightin' right hand agin left." But let me talk as I liked, the thot stuck in my head like a nail in a new log, and wouldn't go away. And at last, stranger, the time cum when it war *more* 'n a thot. One year, early in the fall, we were down in Kansas, tradin' about in spots, and makin' a pretty tol'able haul; till one day we 'greed to tote up the profits, and make a fair division, 'cause next mornin' he war startin' off to Burnt Clearin' to see his folks, and I war bound to make tracks for Boston on some business of my own. Wal, evenin' cum, and a'ter lickerin' up a spell, to ile our brains fur the cipherin', we began totin' up. But somehow or another, we couldn't come to a right settlement o' our two shares, nohow we could fix it; and what with the licker we 'd hed, and the worry o' cipherin', we both commenced to git rayther savagerous. At last, up he jumps, and hollers out: "I 'd not hev bin so thunderin' keen upon this hyur trade if I 'd known that my pardner war nuthin' but a darned mean flint-shavin' thief o' a Yankee!" At them words a shiver run all through me, like them 'lectric fixins that book-larned folks tell on, and my right hand

Digitized by Google

flew out as if somebody moved it, and fotched him a lick 'tween the eyes that brou't him down like a pine in a clearin'. (He war a fine feller, bigger 'n me some way, and all the way out as hard; and, by Jingo! 'twar a reg'lar pleasure knockin' him down.) Up he got, lookin' mighty wrathy; and says he: "It 'll take a leetle burnt powder to put away the smell o' that air blow—cum out into the forest." The sun war settin', and everythin' war dead still, as if waitin' to see what we'd do. I follered him out readily 'nuff, for I war cool as an icicle, now I know'd the job hed got to cum through; but when I seen the dyin' light streamin' down the shadowy arches of the forest, and the everlastin' trees stannin' up tall and grand, and whisperin' with all their leaves, as if God war speakin' through them in His own Temple of Natur'—by Hevin', stranger, I cum very nigh feelin' as if I war p'raps doin' wrong!

'Wal, *that* feelin' didn't last long, I reckon. The fust click o' them locks (we'd 'greed to load only three barrels each, to save time)—the fust click o' them locks war like the smell o' roast meat to a starvin' man; and when I toed my mark at fifteen paces, I felt as comfortable as if I'd bin sittin' 'fore a big fire with a glass o' whisky in my hand. We both cracked off to once: I got a scratch on the left side, and a bit o' his sleeve went flyin' jest below the shoulder. "Better luck next time!" says I; and the second load went off. He'd aimed higher this time, and the pill skiffed my ha'r, and knocked off my hat; but jest in the same moment I seen him turn half round, and go ker-chunk right on his face. I run in upon him, like a fool, forgettin' that he'd got one shot left; and he hoisted hisself on his elby, and let slap, jest tetchin' my thigh as I cum on (his hand war shaky, yu know, or he'd not hev made sitch a bad shot); but that war his last card, and then I know'd I hed him.

"Ole feller," says I, "I 've kinder won the hand this time, thar ain't no dodgin' it. So, 'fore yu go under, hev yu any messidges to leave?"

"Wal," says he, "thar 's a gal at Burnt Clearin' that I war pretty bad on last fall—Kezia Harper, next door to the meetin'-house—guess you mout gin her this hyur locket, if 'tain't outer yure way."

"She 's as good as got it already," says I, puttin' it in my pouch.

"Thar 's a feller in the next village, Nathan Hickman, that they used to call 'Straight-eye'—I war to have fought him this fall; yu tell him why I can't cum, for no one didn't oughter think I war 'fraid."

"If the coon says a word agin yu," says I, "I 'll grease my boots with his liver. Is thar arything else?"

"Wal," says he, "I guess that 's about all."

"Good-bye, then, ole feller," says I; "bless yu!" And with that I clapped my pistol to his head, and blew it as small as corn-shucks.'

'Good-Heaven!' said I, revolted at this cold-blooded butchery, 'could you not have spared the man's life, even then?'

'Stranger,' replied the old slaughterer, with indescribable dignity, 'if yu want to find a critter so cussed mean as to hurt a man's feelins by sparin' him a'ter he'd been whipped in fair fight, I guess yu 'd better not come to Cyrus Jehoshaphat Flint!—Now, then, I calc'late we 'd best be lookin' a'ter our fixins, for them 's the spires o' Stockholm shinin' yander.'

And, so speaking, he turned upon his heel, and vanished into the cabin.

'OURS' IN JAPAN.

Two young officers of H.M. 9th Regiment have beguiled the tedium of their homeward voyage by the joint-composition of a volume, which, if neither profound nor expansive, is very amusing to its readers, and creditable to its authors.* If any one should feel inclined to compassionate the hapless victims to the exigences of the military service of their country, destined to foreign quarters in Japan, this narrative will dispel the gentle emotion. The young gentlemen are not to be pitied; there is no doubt that they get on uncommonly well, and contrive to create quite an astonishing amount of resemblance between life in or about Yokohama and life at Aldershott. Hunting, shooting, racing, billiards, theatricals, horse-dealing, and brandy-and-soda are as much institutions in the one locality as in the other, and the climate and cleanliness are incomparable. True, they were seventeen thousand miles away from home; but they rode, ate, drank, shot, made merry among themselves, and got on remarkably well with the inhabitants, which is to the credit of both parties, and is rather exceptional in the history of the mutual relations between our military countrymen and 'natives,' as, with a happy knack of generalisation, they are in the habit of designating two-thirds of the human race. In a careless, happy-go-lucky kind of way, these young officers saw (and observed, which is not always synonymous) a good deal of the country and the people; and a more clear and comprehensive notion of Japan, as the dwelling-place of a civilised people, and as a very beautiful and productive country, may be gained from this light volume, in which the exuberance of animal spirits abounds, than from the many more grave and purposeful records in which the subject is systematically handled. All the impressions were fresh, and made under fortunate conditions, for our authors had just come from Hong-kong, where a particularly sickly season had been aided by the scandalous over-crowding of the ingeniously ill-situated cantonments, in producing much illness and death in the regiment.

Their eyes had rested last upon the barren hills of Kowloon and Hong-kong, and were now refreshed by the wide-spreading panorama of the curved coasts and beautiful wooded slopes of the shores of Japan, and their attention riveted by the venerable, white-headed old mountain, Fusi-yama, which stands alone, an isolated sentinel, never off duty. The grandeur, the dignity, the solitariness of this mighty, symmetrical mountain are so impressive, that, after living some time among the Japanese, one begins to share their veneration for it. In all strange countries, the absolute novelty must for a time at least, if the traveller be possessed of any taste and intelligence, keep off *ennui;* but in Japan, it would appear that ennui can never get a chance, for the novelty never

wears off. The people are a perpetual study; their intricate and, to us, odd civilisation, is always developing to the perception of the stranger in queer unexpected ways, and their absolute difference from every other race in the world making itself evident. The liveliest curiosity must therefore attend a residence among them; and to the calm observer, not bent on obstinately philanthropical schemes for improving a nation whose representatives told us with such deliciously calm politeness, after a thorough investigation of our 'system,' that they preferred their own in every particular, except the shoeing of horses, their condition must be very satisfactory. Considering the tumultuous condition of the world in general, it is very pleasant to know that anywhere on the face of the earth there are people so happy and content as the natives of Japan, of whom the writers give the following pleasant general description: 'Their manners are polished in the extreme, and, as a rule, they are exceedingly good-natured, and have a keen sense of the ridiculous—rather too much so, for we believe that if the most dutiful son, possessed of the greatest filial piety, were to see his father dying before his eyes, he could not repress a laugh, if the old gentleman were to do it at all in a comical way. Their rules of etiquette are strict and complicated, and extend to the lowest classes. Two coolies meeting each other in the street, if they are personally acquainted and off duty, will, before they commence a conversation, bow, simper, and smirk in the most grotesque manner for several moments; and on leaving each other, will repeat the same performance. This looks rather ridiculous, when we consider that the probable tailor's bill of each of these gentlemen for the half-year is the following: "To one rag (summer suit complete), 3 cash." What a difference from the "Ulloa, old cockywax; wot 's yer little game?"—the kind of salutation in vogue among the corresponding class of Englishmen.' A meeting of two Japanese swells is described as something wonderful to behold. Japanese politics, the authors declare, are things which nobody can understand; but this probably means that they did not try to understand them—at first, that is; they have some interesting particulars to divulge later on.

Soon after their arrival, and before they had seen much of the beautiful country, an invitation arrived for them, by the courtesy of the governor, to be present at an execution at the Japanese prison at Kanagawa. They went, and this is what they saw, and describe without any of the offensive levity with which military men are too apt to think it proper and professional to write of the taking of human life. 'When within a mile of our destination, we fell in with an immense crowd of people, and on inquiry, found that the criminal, who was even now being paraded on horseback through the town, would pass here on his way back to the prison and his fate. Remaining where we were, we soon saw the cortège approaching, and even at a long distance could distinguish a solitary figure raised above the level of the crowd. As they neared, and then passed slowly, we had ample opportunity of looking closely at the procession. First came two men bearing placards raised on poles—the one proclaiming the nature of the crime for which the offender was to suffer, and the punishment he was condemned to undergo; the other inscribed with his name and native place. Immediately following, rode the doomed man, tied to his horse, with his arms tightly pinioned behind him, and a rope fastened to his waist, held by a man who walked alongside. Never had it been our luck before, and we trust it may never be again, to behold a creature in God's image reduced to such a state. With a skin parched, blanched, and shrivelled; features worn and distorted; eyeballs glazed and sunk; his cheek-bones appearing to be forcing themselves out; and his withered arms hanging nerveless at his side, the wretched being strove hard to bear himself bravely, and to behave at the last as became one of his race. As he passed, his eye lit on our party, and he called out, with a scornful laugh, for "the foreigners to come and see how a Nippon could die."'

The Englishmen followed to the prison, a building of wood, in which prisoners are made to undergo every kind of cruelty and neglect. The horrible modes of punishment resorted to by the Japanese laws are justly reprobated by the writers, who, indeed, cannot endure to dwell upon them. Fortunately, this particular prisoner, though his crime was thieving—one visited with horrible and devilishly ingenious punishments—was not to be tortured on this occasion, only to be killed; and as a preliminary, they gave him, on his arrival at the prison, a good meal, which he ate with extraordinary appetite, talking to those around him, and first politely bowing to the foreigners, whom he immediately afterwards cursed. 'When half an hour had elapsed, it was intimated to him that his presence was expected, and, with the assistance of an attendant on each side, he walked into the execution-ground, and was placed, kneeling and sitting on his heels, in the universal Japanese posture, behind a small hole, dug out for the reception of his head. Some ten yards in front of him, and separated by a rope running across the square, sat the presiding Yakonin and the prison authorities, calmly fanning themselves; and beyond these, again, were the six or eight foreigners who had been admitted. The prisoner's arms were then pinioned behind his back, but before the cloth was tied over his eyes, he requested that a minute's grace might be allowed him. This being granted, he raised a weak, quavering voice to its highest pitch, and screamed out: "My friends!" Immediately, an unearthly chorus of wails answered the poor wretch from his friends outside the walls, none of whom could be seen from the interior. "Friends!" again shouted the unfortunate man; and after each sentence the same thrilling response was sent back to him. "I am about to die, but think not that I care!"—a horrible attempt at a laugh following the last words. "Do not mind me. It is quite indifferent to me. Look out for yourselves. Syonara!" (good-bye); and with a deeper and more prolonged wail, the crowd answered "Syonara!" He then signalled to his guards that he was ready, and submitted quietly to the operation of blindfolding. The executioner, who had been standing by his side—with the greatest *sang-froid* pouring water on the keen blade of his long two-handled sword—now stepped up, and carefully adjusting his head a little on one side, and in such a position as to hang exactly over the hole in the ground, signed to the officer that all was prepared; but before the latter would give the signal—and while the wretched being before us was momentarily expecting his death-stroke—

Digitized by Google

he inquired of Mr L——, with every mark of politeness, if the English officers were ready. Of course, he quickly answered "Yes," and the word was given; when, without raising his weapon more than a foot above the neck of the condemned, the executioner brought down his heavy blade with a plainly audible thud, and the head dropped instantly into the hole prepared for it. . . . . Immediately the head fell, it was seized, carefully washed before the features could get set, and put into a bag. At the same moment, two men jumped on the body, and by means of squeezing and kneeling on it, strove to drive all the blood out of it while it was warm, which being as much as possible effected, it was rolled up, tied into a bundle, and carried off.' This dreadful scene was far more terrible to the English beholders than the informal, hap-hazard Chinese executions, on which occasions the criminals laugh and talk until the last moment, and meet their fate with *genuine* unconcern.

The Japanese horses hold an honourable place in these records. They are rather dangerous animals, and as little to be trusted as the Bettos, a distinct tribe, affected to the care of the horse. The Bettos are not at all ill-looking men; their activity is wonderful, and their strength great. They wear no clothing, but are tattooed in an extraordinary fashion all over their bodies.

A trip to Daiboots, where the great idol of the Japanese worship is to be found, is one of the chief incidents of this narrative. The way lay through beautiful scenery, with the wonderfully diversified colouring in which Japanese scenery surpasses any in the world; and past many of the 'tea-houses,' concerning which so much has been written, which these gentlemen declare to be utterly untrue; while they dilate upon their extreme comfort and dainty cleanliness. It is not easy to imagine a ride of many miles through Devonshire-like lanes between groves of camellia trees, many of them forty feet high, whose place is afterwards supplied by the crimson azalea on a correspondingly gigantic scale. The rice and barley are in full ear, and the landscape presents a rich mixture of green, crimson, and gold. Quiet, quaint thatched homesteads abound, with children playing in front, and women sitting at their spinning-wheels. Perfect peace and contentment reign; and this is the land where men fly kites (without metaphor), where the houses are made of paper, and the whole country is a volcanic eruption. Troops of pilgrims are on the road to Daiboots; and the English party fall in with some wonderful conjurers, and, calling a halt, make them go through their performances.

At Kamaharu, they stopped to visit the temples, which are similar to all others in Japan in form, but surpass every other in size, number, and costly carving. The entrance to the sacred grounds consists of three arched stone bridges, in the willow-pattern style, over a moat covered with lotus-plants and water-lilies. So very nearly a semicircle are these bridges, that the travellers had to make their way over them holding on to the sides—of course, the Japanese walked over them comfortably in their straw shoes. A gateway forms a second entrance; and there they were shewn two sacred ponies, whose fate is much to be commiserated. Perpetually caparisoned in a most grotesque style, they are never taken out of their stalls, or even allowed to lie down, being slung from the roof of their stable. Thus they are supposed to be ready at a moment's notice for the god of war, should that deity take it into his head to ride about. Daiboots is a huge bronze figure forty-three feet high, of a Buddhist god, who is represented sitting cross-legged, and with clasped hands. The approach to it consists of a splendid avenue of trees. Daiboots, it appears, has been photographed and sketched from various points of view; but one of this party, ambitious of novelty, climbed over a railing, and 'took' the venerable old gentleman in rear, when he presented anything but an imposing appearance, having two windows in the small of his back, for the purpose of ventilating his interior. Daiboots is a famous divinity, and his votaries flock to him all the year round.

The writers are admirers of the Japanese ladies, declaring that, 'fair-skinned almost as their sisters of the West; small, but neatly, nay, almost faultlessly shaped; their flowing robes displaying in its own gracefulness the model that nature has adopted, and which none of the meretricious deceptions of civilisation can improve upon; with pretty captivating manners, and a language musical and soft as Italian, the laughter-loving nymphs of the Rising Sun have many and powerful charms.' The graceful dress and the invariable cleanliness and neatness of the entire population, the delicate and tasteful appointments of the houses, in which there is hardly any furniture, and the simple and innocent recreations of the people, combined with their complacent, but not bumptious self-satisfaction, offer a very pleasant combination; and if it were not for the occasional risk of being murdered, Japan must be a very desirable place to live in. The latter consideration is a drawback certainly, especially as the danger may be excited by such an incentive as the arousing of the patriotic feelings of the audience at one of the interminable Japanese plays, inducing an ardent desire to exterminate the foreigner, and preserve the sacred soil of the country intact, or from failure to understand and execute the requirements of etiquette on the approach of a Daimio.

Among the 'sights' of Yokohama is 'Curio Street,' composed entirely of shops for the sale of Japanese curiosities, ranging from trumpery camphor-wood boxes to the finest specimens of exquisite fans, delightful gold lacquer cabinets, and antique bronzes, which are of great price. Curio Street must be a pleasant place to lounge and look about one in, especially as a stranger may go into one of these shops, and after staying an hour, if he likes, looking at and examining every article, and turning the whole shop almost upside down, may go away and not make a single purchase without any fear of having a rude or uncivil look cast at him. In return to his 'Good-day,' the 'Syonara' from the proprietor, and probably all his little family—they always have on hand a good supply of small children—will be as cheery as if he had bought a thousand ichiboo cabinet. (An ichiboo is a coin, value about eighteenpence.) They will, even after he has expressed his determination not to buy, offer him a cup of tea. It is very strange to read of the alteration a few years have made in Japan, of the utter break-down of the old system of exclusiveness, to learn that the Japanese are imitating European customs and adopting European dress; and that every mail

from Yokohama carries a number of Japanese gentlemen on their way to Paris, as if they 'hailed' from New York. When we remember the geography lessons of our youth, which taught us that nothing was known of Japan, except that no subject of that mysterious empire was permitted to leave it, the following anecdote has a strange significance: 'We were on board the P. and O. steamer one evening before her departure, and were introduced to sixteen Japanese of all ages, from fourteen to thirty, all belonging to the same party, and all provided with note-books and pencils, sitting in the saloon round the stove, taking notes on everything they saw and heard, at a rate which threatened soon to leave them without a single blank spot in their books. They all spoke a little English, and by way of opening the conversation with us, one of them remarked, evidently prompting himself from his note-book: "Lon—don—is—a—ver—y—big—place, sir." We allowed that, and informed them that it was as big as Yedo or Osaka. At this they shook their heads incredulously, but thought it worthy of a note. . . . . "What are—its—chief—products, sir?" asked the little one of the party, who spoke like a young geography. It was on the tip of our tongue to enumerate a list of such articles as balloons, gig-lamps, chimney-pots, &c.; but a suspicion that this juvenile seeker after knowledge had already the proper answer down in his note-book, and was only asking us for the purpose of proving the correctness of his note, restrained us. We wished them good-bye, and a pleasant voyage, "which," we added, "was a long, and very often a tedious one;" and we left them all busily engaged, entering with great pains in their note-books: "The voyage from Japan to London is a long, and very often a tedious one!"' This sounds very funny, but there is an estimable side to it; and it is pleasant to find young men starting to explore a new world in a spirit of earnestness and interest, and, after an unaffected fashion, implying the possibility of their finding something under the sun to occupy their attention other than the flavour of their cigars and the condition of their moustaches.

The manufacture and flying of huge and gorgeous-coloured kites, and dexterous playing with battledore and shuttlecock, do not seem to us either manly or entertaining sports, but they are profoundly delightful to these people, who are at once so cunning and so simple, and the English officers came to take pleasure in them. A curious custom prevails all through the country, a little later than the kite-flying season. Every Nippon, high or low, to whom a son has been born during the preceding twelve months, testifies his sense of the blessing by hoisting, on a bamboo pole, in front of his house, a huge paper fish, which remains in that position, flapping and fluttering, for the next three weeks. Looking down from a hill on a village or town, it is a curious spectacle to behold several hundred huge monsters of the deep fluttering in the air.

Japan is wonderfully rich in legendary lore, and every mountain and wood has its familiar spirit, either good or evil, but more frequently the latter; and some of the popular superstitions are painful and troublesome, notably the belief, that the departed revisit the scenes of their life in this world in shapes of different animals. One day, an old man, whom they knew, came to the English officers, in a state of great depression, of which they inquired the cause. He told them he had lost his little son, Chiosin, and that his wife and a lot of old women, her friends, were worrying him to death. 'Every beastly animal that comes into my house,' he said, 'there is a cry amongst them all: "Chiosin, Chiosin has come back!" And the house swarms with dogs, and cats, and rats; for they say they are not quite sure which is Chiosin, and that they had better be kind to the lot, than run the risk of treating him badly. The consequence is, all these brutes are fed on my rice and meat; and now I am driven out of doors, and called an unnatural parent, because I killed a mosquito which bit me!'

If any of our Japanese visitors see the dwellings of the poor in England, or, indeed, if they merely observe the aspect of the places through which they must pass in their journeys, how profoundly disgusted they must be at what they have come to. This is what they leave: 'Every Japanese, no matter how low his station, how small his means, how small his dwelling, prides himself upon its exquisite neatness. Cleanliness is universal. The matting on the floors of the poorest habitations is scrupulously clean. The utensils, mostly made of wood, are scoured and polished perpetually, until they always look as if they had just left the hands of the carpenter. We have sometimes staid at farm-houses for a few days, and in the event of a scarcity of tables, have not had the slightest objection to having our meals laid out on the floor, and partaking of them sitting *à la Turque*, or lying at full length.' Sport in Japan is very good, and there is no lack of excitement, as fires are perpetually occurring, which is not surprising where all the houses are made of paper, and nobody thinks anything of leaving a lighted torch against the wall. Wrestling is a favourite national sport; and the authors' description of the training and the performances of the huge wrestlers, who are enormously fat and heavy, is more curious than pleasant. So is their account of the mode and *matériel* of eating in Japan. But one dwells with unalloyed pleasure and wonder on the pictures of the unsurpassed scenery of the country, and especially on the most charming description in the book, that of the summer residence of Prince Satsuma, and the gardens, 'such as you read of in the *Arabian Nights*, but never come across in European real life.' They are three miles in extent, a perfect labyrinth of taste and beauty; and to look at them is to be forced to acknowledge that the best of our miniature landscape-gardeners are generations behind the great masters of the art in so-called barbarous Japan.

A COUNTY FAMILY.

CHAPTER XVII.—A DISCONSOLATE WIDOWER.

THE moment was not altogether propitious for Mr William Blackburn's introduction to the family circle; but even allowing for that circumstance, his voice and manner were not calculated to produce a favourable impression.

'Well, Miss Ellen,' said he, taking his niece's hand with more roughness than affection, and looking suspiciously at Stanhope, 'you don't seem over-glad to see me, nor over-ready to introduce me to your friends.'

Digitized by Google

'You took me so by surprise, uncle; why, I did not even know you were in England.—This is Miss Lucy Waller, who is now staying with us at the Manor with her father; and this is Mr Herbert Stanhope of Curlew Hall yonder.—How glad grandmother will be to see you!—How is dear Aunt Bess?'

'She is dead, Ellen.' The would-be widower heaved a sigh and pointed to his hat-band. 'She went to rest some weeks ago, poor thing!'

Without being an accomplished hypocrite, Mr William Blackburn had that sort of power of dissimulation which suffices with our criminal classes to impose upon chaplains in jails; he could use the conventional phraseology of religion, and pull down the corners of his mouth.

'Uncle or no uncle, he *is* either a Ranter *or* a begging-letter impostor,' thought Stanhope.

Ellen, greatly shocked by this unexpected news, was weeping behind her handkerchief. Lucy Waller, who had suddenly grown very pale, echoed mechanically: 'Poor thing!'

The widower fixed his eyes upon her with what he intended to be a smile of gratitude: 'You have a feeling heart, young lady, as well as a lovely face. Forgive me, but you remind me—— Ellen, dear, does not Miss Waller remind *you* of her that 's gone?'

It was with the utmost difficulty, and only by causing the horse which he was leading to violently jerk his bit and rein, that Stanhope could conceal a burst of merriment.

'How dreadful is this news! Oh, why, why did you not write and tell us?' cried Ellen, plunged in grief, and unconscious of her uncle's remark. 'The last time we heard of her, she wrote so hopefully, and seemed so happy in that'——

She was about to say 'that island,' when a frown from the widower stopped her. 'The south of France did seem to agree with her at first,' said he, 'but it soon failed to do her good. It is a sad story, and we will not talk about it now.'

'Your uncle has been many years out of England, has he not, Ellen?' inquired Lucy, after a somewhat awkward pause, during which the newcomer glanced askance at both his niece's friends—at the man, with jealousy; at the girl, with furtive admiration.

'Yes, for just five years.—Have you not, uncle?'

'Upon my life, I cannot tell whether it is five or six.'

'The *dolce far niente* of the sunny south makes time pass so imperceptibly away, does it not?' remarked Stanhope.

There was no touch of banter in the tone, and of course Mr William Blackburn could not judge how uncharacteristic was this platitude of him who uttered it; yet he looked up with quick suspicion ere he answered: 'Well, I don't know as to that; it was dull enough.'

'Then, for your part, you like England better than the continent?' said Lucy.

'Just so, miss; and English ladies better than all foreign ones. Why—not that I am one to flatter, but I have not seen a face like yours, which does one such good to look at, for these last twelve months.'

'I thought you said the late Mrs William Blackburn was so very like Miss Waller,' observed Stanhope drily.

'And if I did, sir,' answered the widower angrily, 'I am not aware that I addressed myself to you. But since you have done me the favour to listen to me so attentively, *you* may also *remember* that I expressed the wish that the conversation should not again revert to so distressing a subject.'

'I am sure, Uncle William,' interposed Ellen, 'that Mr Herbert Stanhope is the last man intentionally to wound another's feelings: he is a great favourite of your father's, who, I am sure, would wish you to be good friends with one another.'

'Who wants to be anything but good friends?' inquired Mr Blackburn with surly irritation. 'All I object to is the being taken up so short in every word one says.'

'I am exceedingly sorry to have taken you up short,' observed Stanhope gravely. 'It was only that I was so interested in that fortuitous likeness between the ladies, of which, however, I will take care to speak no further.'

'Is this fellow staying at our house along with this girl?' inquired Uncle William in a hasty whisper of his niece.

'No; he only joined us on the moor,' answered she in the same low tone. 'Pray, do not be uncivil to him, uncle.'

'Uncivil, begad! Do you suppose, you stuck-up little fool, that I don't know how to behave myself like a gentleman? I will let him know, though he does seem so sure of having you upon his side, that he must also win my good word if he is to continue to be welcome at Redcombe.—Mr Stanhope,' continued he, raising his voice to a tone that he flattered himself was dignified, 'my niece has been telling me that you have been so good as to form the escort of these young ladies; it is no longer necessary, however, to trouble you further, since I am about to accompany them home.'

'You overrate the trouble, my good sir,' rejoined Stanhope coolly; 'and you are unaware of the promised recompense. I am now going to Redcombe Manor to eat grouse-pie; since, as I presume, Miss Blackburn, you have not rescinded your invitation on account of your uncle's arrival. There will be enough for him and me also, will there not?'

'Yes, indeed there will,' said Ellen earnestly. 'Uncle William, who has been so long away from us, does not understand, Mr Stanhope, that you are not a chance acquaintance, but a friend and neighbour of ours, whom his father and mother are always pleased to see.'

'Yes, yes, sir; it 's all right,' said Blackburn, who had seen a look of disgust steal over Lucy's features, which he was conscious of having caused. 'I am not one to refuse to own when I am in the wrong, and far less to bear malice. Let me shake your hand, sir. You were speaking of grouse-pie—are there ever any grouse upon this moor?'

Full of his amicable purpose, Mr Blackburn crossed over to Stanhope, who was walking on the other side of his horse, so that the animal now intervened between the two men and the young ladies. 'I am sometimes short-tempered, Mr Stanhope, but always devilish sorry for it afterwards. Let by-gones be by-gones. We will presently drink a glass of brandy together, to our future friendship. It seems to me that there is some likelihood of our being not only friends, but relatives, eh?' And into his new friend's white waistcoat he playfully dug a dirty thumb-nail, to enhance the keenness of his remark.

For perhaps the second time in his whole life,

Digitized by Google

Herbert Stanhope blushed: he was not without scruples (as we have seen) concerning the part which he had set himself to play; and to have been detected in it thus early by so gross an observer was humiliating indeed. His right hand closed upon the rein he held with quick and strong clutch, and for one single instant Mr William Blackburn was in immediate peril of measuring his length upon Redmoor.

'You are very observant of human nature, sir,' was, however, his smiling reply. 'We poor English folks are no match for you who have seen so many men and cities.'

'You are right there,' answered the late inhabitant of Formosa; 'nothing's like mixing with the world. Still, one can't know everything all at once just by looking at people; and—— We've overwalked the ladies a bit, so that they are out of earshot—who is this Miss Lucy Waller, eh? I have not seen such a deuced nice-looking girl since'——

'Hush! Yes; I know: since you were a widower. Well, she's Miss Ellen Blackburn's companion. Teaches her all sorts of useful accomplishments, potichomanie, and to knit beads for purses'——

'The deuce she does! Why, I thought she was an heiress! How comes her father to be staying with my people, then? Is he a drawing-master, or what?'

'No, not exactly. They are both much respected in the county.—But, hush! She is coming up with us.—I must apologise for *Roland*, ladies; but he is not accustomed to walk in such fair company. He is too fast by half.'

'Like master, like horse,' observed Lucy, laughing.

'Do *you* like fast men, Miss Waller?' inquired Mr Blackburn, stepping to her side.—She had already been far from favourably impressed with him, but there was something in his manner now that was unmistakably insolent. She did not, of course, understand that this was caused by the conclusion to which he had just been led, that she was in a dependent and subordinate position; but she noticed a marked change in the style of his address, and shrank from it.—'You pretty girls always do like rakes,' he went on in a confidential tone, that was in itself, under the circumstances, an impertinence; and he stuck his heavily craped hat upon one side, and thrust a careless hand into his pocket, to convey the idea that he also could be a rake, should love demand so great a sacrifice of personal character. In justice to Mr William Blackburn, we must remember that he had not, in reality, to bewail the recent demise of an attached consort, and may be so far excused for his buoyant behaviour; but to Lucy Waller, who, of course, credited his tale of woe, this sudden philandering on the part of the mourner—as unexpected as the curvetings of a hearse-horse—was inexpressibly repugnant, and her countenance did not fail to shew it.

'Ah, you are cross with me now, I see,' observed Mr William, whose good opinion of himself and his personal attractions was certainly not inferior to their merit; 'but I think you would be kinder, if it were not for these other folks being by. We shall be better friends in a day or two, when we come to understand one another, I feel sure.—Now, how do you get on with the governor?'

'Sir? I have not the least idea to whom or what you refer.'

'Oh, I say!—come, that's being a little too innocent. Why, I mean your emp—that is to say, my father of course. How does the old hunks treat you? You need never fear my telling him, for he and I have never hit it off together; indeed, I went abroad entirely to get out of his way. And just fancy; until three days ago, I never knew that that young interloper, Richard Blackburn, had popped off the hooks, and so let me into my rights at last!—I suppose, by the way, that is the Manor-house lying yonder?'

Lucy could not have spoken to save her life; her countenance, if he had looked at it, must (notwithstanding even *his* gross self-esteem) have shewn him contemptuous abhorrence—loathing; but, wrapt in the sight of his newly acquired property, he took heed of nothing else.

'A very tidy place, upon my life,' said he approvingly. 'I daresay you find it snug enough yourself, even in your position. Then, think what it must be to be master there; and I shall be master soon, you know, for it's quite impossible the old cock can keep upon the twig much longer; as for the hen-bird, I had just as soon she staid on as not—she's devoted to me, she is. And if I chose to say I will marry this or that girl, no matter who she was or how poor, she would never gainsay me; she always knew better than to oppose herself to anything I wished—I will say that for the old woman.'

'Are you speaking of your mother, sir?' inquired Lucy, her face as pale as a corpse, her eyes staring at the house that was once to have been her home.

'Of course I am—of old Mother Blackburn, as I have no doubt you call her, when you and your father get alone together. That's quite natural—nobody cares for old people; whereas, with young ones, at least young girls, it's altogether different, especially when they are pretty ones, like you.' He cast from his wolf-eyes a glance intended to be sheepish, and she met it without shrinking; he sidled towards her, and she stood her ground. 'Now, look at that *other* couple,' he continued, motioning towards the pair in front, who, deep in talk, were walking slowly on, unconscious that their companions had halted: 'she is not half such a fine girl as somebody I have seen to-day; and, indeed, in my opinion, is a sickly little fool, without a pennyworth of spirit, although, I daresay, she takes it out of *you*, Miss Lucy; and yet, only look how he cottons to her! Not that he has only eyes for her looks, I'll be sworn—he thinks she is going to be an heiress. But there's many a slip between the cup and the lip; and I daresay you won't be sorry to see it in her case. Young ladies, for all their kissing and hugging, are seldom very fond of one another, especially when one has the upper hand. But for the future, you have got me upon your side—remember that:

> Oh, fair Lucy Neal,
> Oh, sweet Lucy Neal,
> And since you've got me by your side,
> How happy you should feel.'

And Mr William Blackburn accompanied this skilful adaptation of a popular melody with the nearest approach to a tender glance which he could compass—an unmistakable leer. Some young women would have fainted on the spot, or gone into hysterics; others would have smacked his face. But Miss Lucy Waller only looked at him

Digitized by Google

with much the same sort of shuddering curiosity that belongs to folks who visit the Reptile House in the Zoological Gardens for the first time. He was repugnant to her, of course, but she had her reasons for being well pleased to see each cruel coil and deadly fang exhibit themselves so openly.

'We had better walk on, sir,' said she; 'I hear some one coming.'

And even while she spoke there issued from a by-lane into the road immediately before them, a handsome red-faced old gentleman, well and gaily dressed, but with his hands clasped behind him, and his eyes fixed upon the ground. He came on, deep in thought, without noticing that he was not alone, until he almost touched the pair, then looked up with astonishment and annoyance. 'Hullo, how came you here, and who is this—person, Lucy?'

'This is Mr William Blackburn, papa,' said she in distinct tones. 'We met him, Ellen and I, upon the moor; he has, it seems, returned home somewhat suddenly.'

'How strange—how very strange!' exclaimed the old gentleman cheerily as he held out his ample palm. 'What an unexpected pleasure you will afford down yonder, sir; your dear mother can scarcely speak of any one else!'

'And yet she can't have had much to say upon that subject, neither,' answered the other gruffly, 'since she has not written to me for a twelvemonth.'

'Is it so long indeed? But you have been abroad, I hear; and when one shifts from place to place upon the continent, roving, as I do not doubt was your case, from one spot to another in search of beauty or of pleasure, the postal delivery becomes exceedingly uncertain.'

'Just so,' assented Mr Blackburn drily. 'You talk like a book; like one of those conversation books as folks take abroad with them—all question and no answer. But I am not agoing to be pumped by anybody—so, there.'

'I am afraid you are a little too deep for us country-folks to fathom, even if we were inclined to be inquisitive,' returned the old gentleman, smiling good-naturedly, and stroking his double chin.

'That's just what the other one—him they call Stanhope—said, so I suppose it's right,' replied Mr William, with an air of vulgar triumph. 'I'm equal to hold my own in the world, I daresay, with most folks.'

'What sagacity can do, I do not doubt you have effected,' observed Mr Waller; 'but fate is sometimes too strong even for the most able. You seem to have been in trouble yourself lately.'

'In trouble!' cried the other, turning pale and speaking very passionately. 'What the deuce do you mean by that, sir?'

'Nay, sir; I meant no offence: I only feared, from the crape about your hat, that you had suffered some bereavement,' explained the old gentleman smoothly.

'Oh, ah! just so. I have. I forgot that I was sailing, as it were, under—what do you call it?—the black flag. Yes, sir—a sad loss. I was telling your daughter about it as we came along. My poor Bess has been taken from me these many weeks.'

'Receive, sir, my respectful sympathy,' responded the old gentleman, wondering within himself who Bess could be, and whether it was possible that this remarkable creature was in mourning for some favourite mare. 'All pleasure has its alloy, and you could scarcely hope that this long-looked-for return to Redcombe Manor, your introduction to wealth and station, should be altogether without its drawback. Permit me, sir, to be the first to congratulate you upon this day and its prospects. I esteem it great good fortune to be at the Manor on so auspicious an occasion.'

'This *certainly* must be the drawing-master, or some poor devil of that sort,' mused Mr William Blackburn, 'or why should he be so confoundedly polite? I am not quite sure whether he's not taking a liberty in speaking to me at all. But for his daughter's sake I'll let him go on. He must have a deuce of a salary to afford to rig himself out like that; the idea of his having a frilled shirt; why, he's better dressed than I am! Such a gift of the gab too as the beggar has!—"A great good fortune," and "this auspicious occasion," indeed—why, he'd talk a dog's hind-leg off. Upon the whole, however, I am glad to have met him, for he'll make that first coming across the governor easy—the idea of which I don't much relish—I daresay he will be like a bear with a sore head, because I have come back without his leave, as though his only son and heir were to stay any longer upon that blessed island, while he has been in clover here, guzzling and swilling of the best, I'll warrant, for the last twelve months. But now I *have* come, I'll make up for lost time, or else my name's not William Roberts—I mean Blackburn.'

'I see Ellen and Mr Stanhope waiting for us at the garden-gate, papa,' said Lucy coldly; 'had we not better join them?'

'Why the deuce don't they go on, and let the governor know that I am coming?' observed Mr William with irritation.

'I should think the driver of your fly, who should have arrived this half-hour, would have spread that news,' said Lucy.

'Yes, but then he does not know it,' answered the newcomer, biting his lips. 'One can't be too cautious in a general way about one's self and one's affairs, and I told him I was only a visitor.'

Father and daughter exchanged a rapid glance, the former of humorous amusement, the latter of keen contempt.

'If my humble services can be of the least use to you, Mr William Blackburn,' observed Mr Waller, 'pray, command them. You are naturally desirous of sparing your parents such a sudden shock; they are neither of them young people, and joy may be almost as dangerous as sorrow when it befalls so unexpectedly. Shall I take upon myself to be your herald, and break the tidings of your arrival to your father and mother?'

'The old woman is of no consequence whatever,' answered Mr William thoughtfully. 'But, upon my life, if you would just step on ahead and tell the governor that I am here, I should feel really obliged to you. You see it was my mother who wrote, and not him, and I ought to have got the letter a year ago; and altogether it's deuced awkward.'

'Your hesitation does you honour, sir. Some sons would have rushed into their father's presence without the precaution dictated by your thoughtfulness. I cheerfully undertake the task of envoy. In ten minutes I will answer for it you will be

Digitized by Google

received with open arms, and without the embarrassment of a domestic scene.'

And with that Mr Waller nodded gaily, and trotted on ahead, with the confident air of a stout and sagacious poodle who has possessed himself of his master's walking-stick, and is carrying it home in his mouth.

CHAPTER XVIII.—DRAWING THE BADGER.

Mr Blackburn senior was in that snug little back apartment so popular with his deceased brethren, smoking a pipe, and sipping some light liquor, which might have been water, except for the suspicious circumstance that there was a spoon in the tumbler, when Mr Waller broke in upon his privacy, all smiles. He was, however, a privileged visitor in that chamber, and had seen the squire partaking of that same refreshment at somewhat early hours before. It was singular enough that this old man, who, in his poverty, had been so scrupulously temperate, should in his days of prosperity—and especially in these later ones—have taken up with so reprehensible a habit; and the circumstance had set the wits of his astute friend to work to discover its cause. Why do men indulge in drink? he had inquired of himself. Because they have always done it, and like it; or because of some trouble, the thought of which they wish to drown. The first, from 'information received,' as the detectives say—and no detective was ever more keen in gleaning information that could possibly advantage him than Mr Waller—was not, he knew, the case with his venerable friend and host. In the second, therefore, must lie the explanation. Now, what trouble could possibly affect a gentleman with four thousand a year in land and no debts? This was a question which, with all his astuteness, and indeed in consequence of it, Mr Waller had found it very difficult to answer. At fifty years of age, his study of human nature (which had been unremitting) as a thriving man of business, as a jobbing member of parliament, and as a speculator heavily dipped, had led him to the conclusion, that mankind were divided into two classes—Good and Bad; that is, into men whose names were good for a bill, and those whose names were bad for a bill. The former were happy; the latter were always full of trouble. But Mr Blackburn was certainly not in the second category, and yet he had taken to drinking gin-and-water before lunch.

Mr Waller had not had the opportunity of discovering whether trouble had caused his hostess to adopt a similar remedial treatment; but Mrs Blackburn also had evidently of late suffered under some mental distress, though that was of less significance, since women, he had observed, had the faculty of distressing themselves about matters very unimportant, because wholly disconnected with finance; moreover, in her case, this worry of mind had only lasted a very few days, probably since her husband had thought fit to communicate to her the cause of his own annoyance.

This puzzle had baffled the ex-M.P. (he had lost his seat for Mosedale at the last election through certain injurious commercial reports concerning him which had crept into those rascally newspapers); but now that he had seen Mr Blackburn junior, he had a shrewd suspicion that he had hit upon the solution of it, or at least upon the right scent of the solution. Not only, thought he, has the Squire quarrelled with his son, but there has been some good ground for quarrel; that sulky cub must, at one time or another, have thoroughly disgraced himself, which explains also Mrs B.'s doting fondness for him (since the moral cripple, like the physical, is always the mother's favourite child), as well as her enforced reticence upon that darling theme.

Altogether, Mr Waller congratulated himself exceedingly that he had taken that charming autumn walk along Violet Lane, the better to reflect, in solitude and leisure, over the affairs of a certain Insurance Company in which he was a director, and concerning which, in that morning's paper, there had appeared a disagreeable advertisement, calling upon the shareholders and policyholders 'to communicate with the undersigned with respect to taking measures for mutual protection.' He was accustomed to fish in troubled waters, and the motion of the craft (however crazy) in which he happened to be embarked rarely seriously inconvenienced him: if it should even have gone to the bottom, his natural buoyancy was such that he would perhaps have felt little personal fear; but, at all events, if anywhere in the cloudy atmosphere that had long environed him a gleam of sunshine shewed itself, it was always sufficient to put him in spirits; and such a gleam had, in his opinion, appeared to-day in the return of this prodigal son. As for the company he might have been keeping, or the sort of husks which might have formed his meals during his exile, that mattered but little to Mr Waller. Had he not already established amicable, nay, confidential relations with this young man? and (what was better) had not his daughter apparently done so likewise? He had talked with Lucy more than once of this unseen mysterious scion of the House of Blackburn, and especially upon that very morning—which had brought such news of coming storm as had made him more than ever look out for harbour—had he dropped a hint or two, which she had certainly understood, if they had not met with favour, of the desirability of her cultivating this gentleman's good graces. Mr Waller was ignorant of Mr William's being a married man; he loved his daughter as much as, or, at all events, next to himself; and of course—or else what was the use of experience?—he knew better than she possibly could know what was best for her. He would doubtless have been pleased to find Mr William Blackburn with somewhat higher traces of civilisation; but still, argued he with himself, it is astonishing what improvements can be effected in a man, however dull and brusque, by a clever wife; and how much better such marriages often turn out in the end than those of mere sentiment.

'Glad to see you, Waller,' said the old Squire cheerily, in reply to that gentleman's apology for his intrusion. 'It is no use my asking you to take a glass, I know (though it's the wholesomest thing in the world, in my opinion); but you will smoke a small cigar before luncheon?'

'Just a whiff or two, thank you,' returned Mr Waller (who entertained, and justly, the very highest opinion of the virtues of tobacco for soothing and smoothing); 'but I did not come to sponge upon your cigar-box, I do assure you. I have got some news for you.'

'Then I am sure it's good news, or you would

Digitized by Google

not be the man to bring it,' said Mr Blackburn smiling. 'I have a very small experience, to be sure, in the matter, but you seem to me, for one of the calculating sort, to take such cheerful views of everything. Now, there's Moffat, who is as great a schemer as yourself, he is full of complaints and difficulties; but you, you are the pink of a business man.'

'Let us say the rose colour,' rejoined Mr Waller laughing, 'for I own I like to look on the bright side of things; and when they turn out badly, I forget it, and start afresh. The two best rules in life are these: "What's done can't be undone," and, "It's no use crying after spilt milk."'

'Then it's not good news after all,' returned the old man—'eh?'

'Yes, it is; or at least it ought to be. I have just come upon Miss Ellen and my daughter in the road leading out of Violet Lane, and who do you think they had with them? They're bringing him home to lunch, only I've got the start of them. Now, guess.'

'*I* know,' replied the old man placidly; 'and I am not at all surprised. And you're quite right, in my opinion, in calling his return good news; for, with all his faults, I like the young fellow uncommonly, and am always glad to welcome him to Redcombe. It's Herbert, of course?'

'Well, Stanhope is with them, as it happens; but there's somebody else also—somebody that has a better right here than even a friend and neighbour—somebody that you have not seen for —— Good heavens! what is the matter, Blackburn?' The old man had dashed his pipe on the ground, and started to his feet.

'You don't mean to say that scoundrel of a son of mine has dared to come back without my leave?'

'My dear friend, pray, calm yourself. Mr William Blackburn has indeed come back, and very hearty and well he is looking; as fine a young fellow as you would wish to see. But, as I understood him to say, he has returned home in consequence of a letter from his mother, which has been unaccountably delayed in transmission.'

'I will soon see whether he is lying or not,' observed the Squire, ringing the bell with violence. 'I have had reason, and good reason, to be much dissatisfied with my son, sir; and if he has not been invited hither—and I believe he has not—I will not see his face, nor shall he set foot within my house.—Mottle, tell your mistress that I wish to see her here—at once—*immediately*.'

'My dear Blackburn,' said Mr Waller soothingly, as soon as they were left alone, 'let me adjure you, as a man of the world, not to give way so to passion before a servant. They exaggerate any family disturbance so abominably. And, pray, do nothing rash as respects your son. He is here now, with or without leave, and there's an end on't: the least said is the soonest mended.'

'If that fellow, whom I have forbidden my house, has returned to it of his own head, sir, he goes back again whence he came, though he were ten times my son. And if my wife, contrary to my express injunction, has written to him before the term which—which—I assigned as the just limit of his chastisement—— But here is my wife!'

'Shall I leave the room, Blackburn?' asked Mr Waller hesitatingly, and looking from the stern face of the Squire to the pale and frightened countenance of his hostess; 'or shall I stay here, as the warm friend of both of you, and one who has your common interest at heart?'

'I shall be obliged by your remaining here, Waller,' answered the old man, who, although looking the picture of implacability, had now regained the control of his feelings, and was sorry for having lost it. 'I have been hitherto silent about this subject, because it was an unpleasant one; but since it has thus forced itself upon your notice, there is no reason for further reticence.—I have sent for you, Mrs Blackburn, to ask whether, in despite of my particular commandment, you have invited William hither?'

'O Anthony, pray, forgive me,' cried she passionately. 'Oh, I knew this would happen!—Ask him to forgive me, Mr Waller! It was not my fault, but that letter which I wrote a year ago; he knows the one I mean; I missed it from my desk the other day.—I had been looking at it, Anthony—only looking at the outside, and thinking how pleased our Willy would have been to get it—and I left it addressed and sealed upon the lid, and the maid found it there when I was out, and thinking it was meant for post, she put it in the letter-box. I did not dare to tell you, husband; but that is what has made me of late so wretched: the fear of your displeasure, not with myself, but with my poor boy.'

'There! you see there is nobody in fault, Blackburn,' exclaimed Mr Waller triumphantly, 'with the exception of some officious domestic. I have more than once had letters posted myself in that way by my servants, in compensation, I suppose, for their so often forgetting to post those that ought to have gone.'

'I told you to burn that letter, woman,' said the old Squire, with difficulty suppressing a groan.

'You did, Anthony, and so far I am in fault; but it was my only comfort to handle and look at it, and to think of the joy which it would give to Willy when it did reach his hands. You gave me permission to send it in a month hence, you know; what difference then can a few weeks make?—Oh, speak to Anthony, Mr Waller, for you know so well what to say, and, alas, I can think of nothing except my boy!'

But the ex-M.P., more sagacious than his impassioned hostess, held up a finger for silence. The Squire was leaning thoughtfully upon the mantelpiece, stroking his long beard with a tremulous hand; and it seemed to his observant guest that he had grown grayer and older within the last quarter of an hour; the fire in his eyes had quite died out, though the shaggy brows were still knit above them.

'To come just now,' ran his bitter thoughts, 'upon the very day that that young man has returned here, unable any longer to resist dear Nelly's charms. How like his evil choice in everything! Stanhope is proud, and will never brook his rudeness, even if he should see nothing worse in him, hear nothing worse of him. These dead brothers of mine, who treated their own flesh and blood so ill, had no such son as this to curse them, and why should I have? Three weeks hence, three days hence, and all might have been well. But he must needs come now by misadventure—it seems as though it was fated to be so—and Heaven only knows what ruin he may not bring with him. And yet to drive him from my door would be to excite suspicion of I know not what, something

Digitized by Google

almost as bad, if that were possible, as the thing itself! It is no use crying after spilt milk, says my smooth-tongued friend yonder; and I must, it seems, perforce adopt his advice; but first to give him so much of my confidence as may put a stop to further inquiries.'

'Mr Waller,' exclaimed the Squire frankly, 'you and my wife have conquered, although I must confess I feel it difficult to submit; and since you have so kindly interested yourself in a matter that is so entirely a trouble of my own, it is only right that you should know its exact nature.'

Mrs Blackburn started, and glanced imploringly towards her husband.

'Yes, Mary,' continued he; 'the truth must come out sooner or later; and through Mr Waller's lips it will receive, I know, a more charitable interpretation than if told by any one else.—My son, sir, has displeased me in various ways, I may almost say from a mere child; and when he arrived at manhood he crowned his wilfulness by an act, for which no subsequent good behaviour—of which, however, I am bound to say he has shewn no signs—could atone. Without asking my permission, he made—I do not say a disgraceful, but certainly, considering his possible expectations, a most unsatisfactory and unsuitable marriage.'

Across Mr Waller's face there flitted a momentary expression of disappointment—almost of despair; and for once the ready river of his speech refused to flow.

'And yet poor Bess has her good points,' observed Mrs Blackburn, intensely relieved at the limited extent of the Squire's disclosure, and good-naturedly disposed even towards the woman whose unlucky existence interposed between her son and the best match in the county.

'One moment, my dear friend,' observed Mr Waller with a serious air, as the Squire moved slowly towards the door. 'Do I understand Mrs Blackburn to say that the young lady—your daughter-in-law—was called, in the abbreviation of affection, Bess?'

'I believe so,' said the Squire coldly.

'Yes, yes, she was,' answered Mrs Blackburn eagerly. 'What of her? I love her dearly, for she is certainly most devoted to my Willy.'

'Alas, madam, she has now reaped her reward for that'—Mr Waller cast his eyes slowly upward, past the fishing-rods and the stuffed trout, to the smoke-stained ceiling of the little room, and added impressively—'up yonder.'

'What! is dear Bess dead?' cried Mrs Blackburn, shedding genuine tears. 'How truly sorry I am, for poor dear Willy!'

'She is dead, dear madam; and the happiness of your son at his return is sadly clouded by that circumstance.'

'Humph!' said the Squire, who was thinking that he might have spared himself the revelation of at least one humiliating domestic circumstance, although it was a minor one. 'And when did this happen?'

'To judge by his deep mourning, I should imagine but very recently,' said Mr Waller.—'You need not grieve, madam, for one who, from your description of her domestic virtues, is doubtless'—perhaps the stuffed trout had discomposed him upon the first occasion, for he now fixed his eyes upon the empty fireplace—'is doubtless in perfect security; while, on the other hand, since the innocent cause of your son's transgression has been thus removed, I do hope, my dear Blackburn, that you will forget his past, and hopefully regard his future.'

This peroration, so often received with favour, when used in his capacity of chairman of some Company whose shares were at a discount, or as director of some railway which had not as yet declared a dividend, did not have its usual success upon the present occasion; the audience he was addressing (if we may so term the Squire) had for once a less good opinion of the concern in question than he entertained himself. Mr Blackburn did not even vouchsafe him a reply, but walked slowly out of the room, with trembling limbs, but head erect, in the direction of the front door. Before he reached it, Mrs Blackburn overtook him, trembling also, although from another cause, and clasped his hand.

'Anthony, dear Anthony,' she whispered, 'don't be hard upon him, now that he is in sorrow. This may have changed him altogether, for all we know, and he may live to be a comfort to us yet.'

Through the open door, was borne upon the summer wind a coarse low chuckle, and a voice upon the terrace muttered harshly: 'Well, clever as he may be, miss, it seems to have taken him a deal of time to draw the badger.'

Mr William Blackburn was sitting upon the balustrade of the terrace, between two stone vases of red geraniums, swinging his legs, and tapping his teeth with the handle of his umbrella, as though applauding the humour of his last remark. If his attitude and bearing were not artistically graceful or in harmony with his surroundings, he looked tolerably at ease. Stanhope and the two young ladies were standing by him, and intrenched, as it were, in that position, he seemed to himself pretty secure against the paternal ire. The longer the enemy was held in parley, the better (notwithstanding his allusion to his tardiness) he augured of his ambassador's success, for it was plain that the latter had at least persuaded the Squire to listen to what he had to say in his principal's favour. The evident fear in which Ellen stood of him, and even the quiet scorn with which Lucy received his observations—for he translated that as cautious reserve in the presence of the others—had given him more and more of confidence; and, above all, he had refreshed himself since we last saw him with a pull at that flask which always lay in the side-pocket next his heart. And yet, when his father and mother appeared hand-in-hand at the front-door, so immediately following that *jeu d'esprit* about the badger, that they could not have failed to hear it, Mr William Blackburn looked a good deal embarrassed, and descended from his elevated position in a hurried and undignified manner.

His mother, however, with one cry of joy, ran forward and folded him in silence in her arms; and thus, as it were, in sanctuary, he remained for a decent interval rallying those native powers of impudence and assurance which the inopportuneness of the moment had put to flight.

'How are you, William?' said the Squire, holding out his hand. 'We are sorry to see you in so sad a garb.'

For an instant the idea flashed upon him, that the misfit of his clothes—which he had purchased at a ready-made shop as he hurried through

Digitized by Google

London—formed the subject of the paternal remark, but fortunately his eye fell upon his black gloves, and he remembered that he was in mourning.

'Yes, indeed, sir,' replied he—and it was curious how even his feigned sorrow took egotistic shape—'I have had a very sad time of it lately. Poor Bess has been gone these three weeks. I was so cut up, that I had not the heart to write about it.'

'Poor dear boy!' ejaculated Mrs Blackburn fondly. 'What a trial it must have been! Was she ill long? I trust she did not suffer much?'

'Not much,' returned the widower; 'not so much as I did in seeing her suffer. I never left her night or day, as you may be sure. She sent her best love to you and Ellen; and her duty to you, father.'

'We must do all we can to cheer you, Willy,' said Mrs Blackburn. 'There is no need to mourn for so good a soul, as Mr Waller here has just been telling us, except upon our own accounts in having lost her.'

'Not lost, but gone before,' interposed that gentleman deferentially. He had followed his host and hostess to the scene of reconciliation, and now offered this neat quotation (which he had read on a tablet in the church during last Sunday's sermon) with the air of one who dispenses some comfortable liquid upon a silver tray. An embarrassing pause ensued; and Mr Waller continued more cheerfully: 'As I came through the hall, my dear madam, the servant was about to announce lunch, and I told him that I would save him that trouble.—You must be hungry, sir, what with your long journey and your walk across the moor.'

'Well, I could pick a little, and that's a fact,' observed Mr William; 'though it's long indeed,' added he with some precipitancy, 'that I have had an appetite for anything.'

He was about to offer his arm to Lucy, but Mr Waller nudged him so sharply towards Mrs Blackburn, that he could not mistake the hint.

'Lean on *me*, mother,' said he; 'for though you are looking well enough, you are not so young as when I last saw you.'

'I shall grow young now,' returned she tenderly. 'I have not felt so happy for fifty years as I do this day, Willy.'

The rest of the party—Mr Waller with his daughter, and Stanhope with Ellen—followed them into the house, with the exception of the Squire, who remained alone upon the terrace, pacing thoughtfully to and fro, and muttering to himself at intervals—like minute-guns over that dead hope which, though unowned, had after all perhaps held a place within his heart—some sentences such as these: 'No change, nor chance of change;' 'As bad and base as ever;' 'Rotten to the core.'

THE MONTH:

SCIENCE AND ARTS.

The Society of Arts are attending to certain matters, in which they may reckon on public support. They have appointed a committee to work at the reduction-of-postage question, with particular reference to small parcels and printed matter; and this committee is working, seeking co-operation at home, and information abroad from those governments which have already adopted lower rates for printed matter and parcels. Another subject taken up by the Council is Cab Reform, which they intend to discuss fully; and another is an improved form of steamer for crossing the Channel between France and England. This is much wanted, for it is discreditable to our mechanical and nautical skill that passengers cannot cross from Dover to Calais in blowing weather without being drenched by the sea. Why should they not be as well protected from the weather on the deck of a steamer as in a railway carriage? It is of no use to answer that passengers can go below. Travellers do not like going below to be stifled.

A remarkable instance of the effect of pine-trees on the soil in which they grow has been published in the Woods and Waters Reports of the north of France. A forest near Valenciennes, comprising about eighteen hundred acres of scrub and stunted oak and birch, was grubbed up in 1843, and replaced by Scotch firs (*Pinus sylvestris*). The soil, composed of silicious sands mingled with a small quantity of clay, was in some places very wet; it contained two or three springs, from one of which flowed a small stream. The firs succeeded beyond expectation, and large handsome stems now grow vigorously over the whole ground. It was in the early stages of their growth that the remarkable effect above referred to was noticed. The soil began to dry; the snipes that once frequented the place migrated to a more congenial locality; the ground became drier and drier, until at last the springs and the stream ceased to flow. Deep trenches were dug to lay open the sources of the springs, and discover the cause of the drying up; but nothing was found except that the roots of the firs had penetrated the earth to a depth of five or six feet. Borings were then made; and six feet below the source of the spring, a bed of water was met with of considerable depth, from which, it was inferred, the spring had formerly been fed. But in what way its level had been lowered by the action of the firs could not be determined, and is still a matter of speculation. But the fact remains, and may be utilised by any one interested in tree-culture. For years it has been turned to account in Gascony, where the lagoons that intersect the sandy *dunes* have been dried up by planting the *Pinus maritimus* along their margin. Hence we may arrive at the conclusion that while leafy trees feed springs, and maintain the moisture of the soil, the contrary function is reserved for spine or needle bearing trees, which dry the soil, and improve its quality. Our War Office might perhaps do well to take note thereof, seeing that the forts now building at the mouth of the Medway shew a tendency to sink into the soft marshy soil. If the ground can be consolidated by plantations of the maritime pine, it would be good economy to have them planted.

A paper read at the Institution of Mechanical Engineers, Birmingham, is interesting to all concerned in the iron trade, for it treats of *further Utilisation of the Waste Gas from Blast Furnaces*. A few years ago, all the gas that rushed from the top of the furnaces was absolutely wasted: then experiments were tried, and it was found that a portion at least of the gas could be intercepted and made to heat the boiler of the steam-engine. Then, in the Cleveland district (north-east Yorkshire) bigger furnaces were built, seventy-five feet

Digitized by Google

high instead of forty feet, in order that the gas might be further economised by passing through a taller column of the material to be melted than it did in the low furnaces. This upper stratum of material absorbs heat from the gas, is somewhat softened thereby, and is of course melted with a less expenditure of fuel when it descends to the bottom of the furnace. The saving thus effected amounts to rather more than four hundred-weights of coke for each ton of iron produced. Hence it will be seen, that in the manufacture of iron, an important economy has been achieved by results of intelligent observation; and we have the more satisfaction in making these facts known, as we understand that experiments are still continued with a view to further advantage.

As an example of economy to be effected by engineering, we mention that a suspension-bridge, to be called the Cornwall Bridge, is to be built across the river Hudson, forty-two miles above New York. The total length will be 2499 feet, and the clear span 1600 feet. By this bridge the railway from the mining districts of Pennsylvania will be connected with the New England States, and the New Englanders will save four shillings a ton on their yearly consumption of four million tons of coal.

As mentioned in our last, the railway from the Atlantic to the Pacific is now completed, except that some of the bridges are not yet built. One of the largest, 2800 feet long, is now erecting across the Missouri at Omaha. Including seventy feet below the treacherous bed of the river, the iron cylinders on which it is to be supported will be 139 feet in length. From New York to San Francisco the distance is about 3400 miles, the fare at present about L.31, and the time of the journey from one place to the other will be a week. They must be very enterprising passengers who at present undertake such a trip, and very robust if they find themselves alive at the end of it.

The granite rocks which have so long impeded the navigation of the arm of the sea between New York and Long Island, are now being blasted. Proper apparatus is erected for working a drill under water by steam. The drill bar at its cutting end is an inch and a half in diameter, and has nineteen diamonds embedded in its face. When in motion, it makes from three hundred to five hundred rotations a minute, and in that time, such is the cutting effect of the diamonds, the hole is sunk an inch and a half. A number of holes, consequently, can be drilled in a day. A diver then descends, charges them with cartridges of nitroglycerine, which are exploded in the usual way. We recommend these particulars to the authorities of British or Irish ports where rocks encumber the channel, as a good practical suggestion, which may be turned to account in the interests of navigation.

The Royal Cornwall Polytechnic Society have published the Report of their last annual meeting, with particulars of new mechanical inventions exhibited thereat. Among these was a pyrometer, intended for use in a baker's oven, which indicates the exact amount of heat, and thus enables a baker to save the bread from spoiling; and an atmizometer, or evaporating gauge, for shewing the amount of evaporation from the earth's surface, comprised in a cylindrical wooden vessel mounted on a spring-balance. Water is poured into the vessel until the balance is brought to zero: then, on exposure to the sun and air, the amount of evaporation can be observed to the thousandth of an inch.—Another invention was an improvement in the Cornish pumping-engine, which comes into use when any part of the machinery breaks. A cushion of steam is then suddenly thrown on one side of the piston, and thereby the force of its blow is broken.

In the same Report it is stated that the Wheal Vor Mine, in the parish of Breage, has yielded more than L.3,000,000 worth of tin and copper; and that, in order to mitigate the distress occasioned by the falling off in mining produce, a project is being talked of for the establishment of pottery-works in Cornwall.

Let wine-drinkers be on their guard, for certain clever chemists in Belgium have started the manufacture of mock-champagne and other light sparkling wines on a great scale. Aided by patent machinery, they can produce the wine for sale at a franc a bottle, and gain a profit of seventy-five per cent.; and it is stated that hundreds of houses on the continent will soon be ready to supply customers.

An experiment was made in February last to ascertain the time of sending a telegraphic signal along the wires from San Francisco to Cambridge, Massachusetts, and back, the double distance being 7200 miles. The time was one-eighth of a second!

FROM A HUSBAND.

Fonder, tenderer, ever fonder,
But increase my love can know,
Here on earth, hereafter yonder,
Love with me must ever grow;
Loving you, it must be so.

Dearer, dearer, ever dearer;
Loved in youth for that fair face,
Now my heart has seen you nearer,
That first love to this gives place,
For your soul's diviner grace.

Ah! how sweet was that young passion,
Caught from fairness, O how fair!
That fed full even from the fashion
Of the dress you deigned to wear,
When your beauty sunned the air.

O the life-quake then that shook me
When on me seemed turned that gaze,
When hair, brow, speech or laughter took me
Captive with a dumb amaze,
Dazzled with your beauty's blaze.

Time that charm has not marred blindly,
If his touch a harm has wrought,
Still some rarer beauty, kindly,
Every fondling year has brought,
Softer, dearer to my thought.

How much more than youth was seeing
Now I love, with heart grown wise;
Now the whole dear perfect being
I have fitlier learned to prize,
Clear at last to the soul's eyes!

Dearer through joys, cares, and sorrows;
Known, how well! through smiles and tears,
Now I feel that all the morrows,
Hopes and pleasures, labours, fears,
Bring but knowledge that endears.

No. 288. SATURDAY, JULY 3, 1869. PRICE 1½*d.*

ROBERT'S CAPITAL HIT.

IN THREE CHAPTERS.—CHAPTER I.

My mother-in-law and I were sitting in her best parlour—not that it was much to boast of, but she thought a great deal about it, and covered it up with anti-macassars to that extent, that nothing short of collecting them in a bundle, and burning them out of hand, would ever have got them effectually off my mind. We were not sitting in the best parlour for our own comfort, or because the windows opened upon a little garden, which, though dreadfully prim and formal, could not help being fragrant in that beautiful month of May, and which would have had the afternoon sun shining on it just now, in a perfectly delightful manner, but that my mother-in-law, in the interests of her drab and yellow Brussels carpet, had hastened to pull down the dark yellow holland blinds. We were not even sitting in the best parlour because we were expecting visitors. I should not have objected to that, for all our visitors entertained the best parlour superstition also; and we should have been 'despiseable,' like Harvey Birch, if they had ever got a glimpse of our ordinary occupations, or seen any more lively literature about than Johnson's *Lives*, Baxter's *Saints' Rest*, Hannah More *passim*, and the county history. We were sitting in the best parlour for *its* good, not our pleasure or dignity—'to air the room,' as my mother-in-law said. 'Fires are occasionally necessary, of course,' she would say; 'but they don't do altogether. People should always sit in their best parlour once a month or so, to take the chill off.' Whence she derived this notion, I do not know; but she entertained it, and stuck to it, and in the best parlour on this particular day we were sitting, 'to take the chill off.'

My mother-in-law was a good-looking woman for her age, which was fifty-five. She was tall, strongly built, and terribly healthy. She had a great deal of very heavy gray hair, which she wore in deep bands, like watch-pockets, upon her forehead; and she never deviated from one kind of cap, severe in form, and laden with lutestring ribbon of a harsh dull shade of purple. She was always well dressed, in a certain tasteless fashion which she considered the only mode proper to women at her age, not to be departed from, without a compromise of propriety, not to say morality; and a more self-sufficient woman than my mother-in-law never existed. Women more ignorant, no doubt, there have been, and are; but I hope not many who prize and pet general ignorance as she did, and are so arrogantly vain of their possession of certain specialities of knowledge. I do not want to make her out at all more disagreeable than she was, or to deny her the good qualities which she possessed; nor am I 'down on her' for that generally conclusive and satisfactory reason that she *was* my mother-in-law. I speak quite fairly; and, indeed, I need not complain, for she liked me quite as well as she liked Robert. Robert was (and is) my husband, Robert Heron, of the firm of Shaw and Heron, solicitors, said by their friends to be 'rising' young men, but who certainly had not done anything remarkable as yet, in an upward direction.

'Though I say it who ought not,' is a customary deprecatory phrase when one member of a family praises another; but I never could see the meaning of it. Who is so likely to know the good that is in any individual as those nearest to him, and who see most of his life? Who, then, has the best right to announce the results of that contiguity and supervision? Society permits people's relatives to abuse them, does it not? It is not in the least shocked at *that*, is it? Very well, then, I am not going to be bullied and put down by society for praising my husband; and I maintain, on the contrary, that no one has *so much* right as I to declare that Robert was (and is) the best of men, and a very fine-looking one also. I do not see much change in him now. His beautiful blue eyes are not so bright, perhaps; but they are just as deep and as soft, and they have just the same look for me in them; and I don't think his being slightly bald is any defect at all. Every one admits that baldness is intellectual.

Digitized by Google

I distinctly remember a hairdresser, a really clever man, who knew at a glance that I never used pomatum, telling me it was caused by the activity of the brain. This was most true in Robert's case, I am sure. However, he really had almost too much hair at the time I am telling about—beautiful, dark brown, curly; and as it was not the fashion then to crop the hair until the skull shewed through in patches, and all the bumps asserted themselves unpleasantly, but it was worn rather long, I assure you he had quite a captivatingly sentimental look; and as he had rather low spirits naturally, many people suspected him of being poetical—I mean, of actually writing verses. But this was a mistake. He never did. Of course, he could have written beautiful poetry—if you could only know the things he has said to me in that very identical best parlour!—if he had liked, but he never did. I am wandering away from my mother-in-law all this time. I know I am apt to get tiresome when I begin to talk about Robert; but I will endeavour to avoid it. I will merely say that he was very good, and very handsome, and very clever; and that if any woman of my acquaintance says she has a better husband, I can afford to let her say it, for I don't believe her.

Robert and my mother-in-law did not get on together very well. Strange to say, he was not her favourite son; and John, who was always quite uninteresting to me, was. But John was a prosperous man, and remarkably like her in his ways and ideas; while Robert had not the knack of getting on rapidly, and did not in the least resemble her. He was considered to be a striking likeness of his father, the late Mr Heron, whom I believe to have been a thoroughly good and estimable man, but whose memory was not warmly cherished by his widow and her eldest son. He had not left them as much money as they expected. He had been rather unfortunate for some time before his death, and that was held to be a perfectly sufficient reason for that event being regarded with resignation. John was married to a woman with a large fortune (for people in our position), with an imperial nose, a mouth like a shark's, big feet, and *such* a temper! Robert used to say he would not have married Mary Anne Barton for a million of money. John, however, had done it much cheaper than that, and I really do not think he ever knew how disagreeable she was. He was afraid of her; and it was just as well. There are many men for whom it is very good that they should be afraid of their wives. John was one of them. But it was very singular that our joint mother-in-law was also afraid of 'Mrs John' (nobody ever called her Mary Anne), and was accustomed to speak of her as 'fine' as to her *physique*, and 'superior' as to her intellect. I did not mind. If Mrs John was a 'fine' woman, give me insignificance; if she was 'superior,' give me mediocrity. Robert was quite of my opinion, and Mrs John knew it. She had a mighty contempt for me; first, because I am small and pale, while she is of stately stature, and has the kind of complexion which people describe as 'a great deal of colour;' secondly, because I am of a contented disposition, and do not form any visions about Shaw and Heron attaining 'the top of the tree;' thirdly, because I am afraid of all servants; and, lastly, because I did not bring Robert more hundreds than she brought John thousands of pounds. All very sound reasons for despising me, and I should not think of disputing them; but Mrs John imparted them to my mother-in-law, who adopted them, and that was not pleasant.

My mother-in-law lived at Clapham, and looked like it. I don't mean like the dwellers at the Clapham of the present, with its enormous railway 'junction,' with ever so many hundreds of trains a day running through it—no two authorities agree about the number—its unlimited resources of bewilderment for the unaccustomed traveller, its handsome shops, and its alarmingly Catholic features and institutions. I allude to the Clapham of the past, when the highly respectable chocolate-coloured omnibuses, which fared soberly to and from the *Plough Inn*, were the sole mode of conveyance for the vulgar; when the grave houses in their solemn gardens looked out upon the severe solitude of the common, and heavily laden wagons stopped on the other side, that the big lumpish horses might drink at ungainly wooden troughs, curiously inspected the while by cheerful vagrant dogs who had never heard of Mayne or muzzles. I speak of a time when you might as well have looked for a mosque as for a music-hall at Clapham, and when, judging by appearances, the higher branches of commerce in that suburb were confined to Berlin-wool and baskets; when Wilberforce was remembered as a local tradition, and there were green fields out Stockwell-way. It is not very long ago either, a much shorter time than any one would believe, who has not seen the wonderful changes which a few years have worked in London; but the Clapham people of that date had looks and ways peculiar to themselves, a grim respectability, a weekly-bill-paying-with-inflexible-regularity, and comfortable-investment-in-government-securities expression in their faces, raiment, and residences, which was exceedingly depressing to the outside world of strugglers, contemptible people, who did not always know the exact amount of their resources, and were sometimes uncomfortably uncertain about how they were to be 'realised.' Of the former class, though not 'in the very first line' of it, was my mother-in-law. She was not by any means a rich woman, even for a period which rated wealth by a much more moderate standard than that of the present; but she was 'well to do,' and she looked it. Security, not of the barrel-of-flour and cruse-of-oil order, but of that more satisfactory to the modern mind, which expresses *itself* by dividends, a happy absence of sympathy with anything so weak and stupid as anxiety and poverty, and the calm consciousness of being a good manager, were the characteristics which my mother-in-law's appearance impressed upon the observer.

I did not like Clapham, and I cannot assign a better reason for disliking it than that my mother-in-law lived there, and I had to live with her. If any of my readers think I could not *have* a better, I pity them. They too have suffered. The necessity for this family arrangement was a sore subject with us all, and especially with Robert, for it could by no means be denied that it had originated through his means. We had begun comfortably enough, much more so, our older and wiser friends told us, than was good for two young people, who had been so imprudent as to think so much of love and so little of money. It would vex me even now, when things are so different with us, that I

Digitized by Google

can smile at the recollection of Clapham, and its prim best-parlour gentility, to tell you about our own pretty little house at Hampstead, and all the small devices I had for its adornment, and how very happy we were in it for two whole years, though my mother-in-law always thought it extravagantly kept, and Mrs John used to sniff at the furniture, and look uncomfortably too large for the rooms.

Mind, I am not prepared to admit that it was a fault, but it certainly was a peculiarity of Robert's that he liked speculation. 'A little bit of a venture,' as he would call it, with a jocose persuasiveness which took all dangerous meaning out of the word, to my ears. Tales of the celerity with which fortunes had been made, every new method of making them quickly, had interest and attraction for him. I knew this arose from the vividness and versatility of his intelligence, but his mother called it a taste for gambling.

'It 's a more decent way of gratifying it, my dear Martha,' she said once, when Robert had been just a little unlucky, 'than going to those horrible places which I have been told are defiantly called "hells" by the impious persons who frequent them; but it 's quite as dangerous in the long run, as you will find out some day, when he has brought you to ruin with his coal mines and copper mines, and such-like nonsense.'

Well, he did not exactly bring me to ruin, but he brought me to something not very far from being as unpleasant—namely, to giving up our own house, and going to live with his mother. This was the only form in which she would help him; to have done so in any other, she would have held to be 'encouraging' him. It was not very easy to bear, I must say; but then to endure it with fortitude was the only way in which I could assist Robert out of the difficulty he had got into, and that was not much for me to do. He had to bear all the brunt of life; it would have ill become me to have objected to my share of the smaller worry, especially as it was my money which he had lost in that unlucky 'little bit of a venture'—happily, not quite all, but the greater part of it—a circumstance which I carefully concealed from my mother-in-law, but which Mrs John divined by dint of that 'superiority' of her intellect, which, so far as I have observed it, mainly exhibits itself in finding out things which people particularly wish to conceal. This divination led to much laudation of the superior wisdom of herself and her friends in the arrangement of her money matters, and exultation in the 'settling' of her fortune so securely on herself, that, as she plainly put it, 'if John were to turn into as great a fool as Robert to-morrow, *she* could not come to any harm.' And, indeed, I believe the settlements in question were so drawn up, that the deadliest suspicion and animosity might have been supposed, by observers, to have existed between the contracting parties. I was thankful that they said these things to me only, and I used to try and get over them before Robert came home from the City, and generally succeeded in keeping the small annoyances of the day pretty well out of his sight. He found out, however, soon after we went to Clapham, that I was looking rather pale and thin, and would have involved me in a great deal of trouble by making a fuss about it, only that I begged him to remember what a dislike his mother had to delicate people, and how, whenever anybody was suspected of being nervous, she always recommended the administration of something which that unlucky individual especially disliked. So I prevailed on him to take no notice of my paleness and thinness, and promised to grow very fat and rosy in the autumn, when we hoped to be able to escape from Clapham, and get away on a little tour, but only of strictly Cockney dimensions, all by ourselves.

It was not a pleasant life, and there were such anxieties and efforts in it, that I look back to them now with a feeling of wonder at having lived through them so well, on the whole. But I had a little philosophy about me, and though I was not strong-minded or dogmatic in other respects, I had one fixed belief, to which I adhered practically. I held then, when I had a great many troubles, and I hold now, when I have comparatively few, that a woman who has married the man whom she loves, and respects with all her heart and conscience, and has never seen the least shadow on the brightness of their mutual love, is not to be pitied for any trouble or struggle which she may be called upon to bear. Every one must have his or her share of the heritage of sorrow; but the woman who is thoroughly, cloudlessly happy as a wife, and does not fully recognise and realise her supreme good fortune, even though it wear the form of unrelieved poverty, must be very ungrateful, and very foolish. I never entertained this belief more strongly than during our Clapham experiences, and, indeed, I found pretty constant occasion to recall my faith, and confirm myself in it.

One trial which recurred, not very frequently, but often enough to be irritating, was visiting Mrs John. She lived at Kingston-on-Thames, and, I am ashamed to say, I never could be brought to appreciate the beauty of the place. All the 'villas' had an offensively rich look to me: not that I was envious, but I always think when one is either normally poor, or in incidental difficulties, there is something depressing in the contemplation of comfortably secure, safely growing wealth. Robert could not understand my sentiments on this point, and found in those very 'villas' many proofs of the wisdom of 'ventures' little and great. This one had come by his villa and all it represented by mines, the other by railways, a third by steamers, a fourth was a well-known contractor, who did the most sporting things, and a fifth was the sharpest man going, and had done wonders on the Stock Exchange, through his happy facility of foreseeing 'what they were up to' in continental countries. But I did not like Kingston a bit the more for all that; and not one of the small efforts I had to make continuously, cost me so much as the visiting Mrs John's fine, cold, distressingly new house, where money and patent floorcloth seemed to be always palpably present, and where I never was permitted to forget that Robert had been 'so very imprudent' about that Grand Junction Canal business.

My mother-in-law and I invariably went on these formidable excursions in a heavy lop-sided brougham, which presented a mysterious appearance of having once been a carriage of another and a clumsier form, and having been inartistically compressed and otherwise altered. It had very narrow windows, and slanting cushions, and doors which it was exceedingly difficult to open, and next to impossible to shut. It was drawn by a

Digitized by Google

heavy, ugly, lop-sided horse, with a bare patch on one of his sides; and the driver was the most ill-tempered man I ever saw in my life, even on a coach-box. This vehicle was an object of extreme aversion to me, chiefly, however, because John paid for the use which we made of it, and no doubt made a very cheap bargain with Mr Thompson, the livery-stable keeper. How I used to enjoy my omnibus drives with Robert, when I went into the City to do a little shopping, and when he would become quite animated in describing the kind of carriage he fully intended to keep for me, when one or two little things he had in view should have 'turned up trumps!' Robert mixed his metaphors sometimes, it must be confessed, and I did not like to hear him use any expression connected with gambling. It almost sounded as if my mother-in-law might possibly be right. Next to the visits to Mrs John, I placed our best-parlour days in the category of small inflictions. Whether it was the varnish, the anti-macassars, the influence of art, as exemplified in six awful pictures pervaded by a cerulean tinge, and misrepresenting the bay and city of Naples, or the dreary literature which described a kind of cart-wheel pattern on the shiny, inlaid round table, that inspired my mother-in-law to be preternaturally unpleasant on such occasions, or whether it was her self-enforced abstinence from reading the newspaper and mending her stockings (neither occupation being considered suitable to the dignity of the best parlour), I cannot say. The fact was so; and when she aired her best parlour, I aired my best resolutions.

It was afternoon, and I had got on very well so far. I had brought no unbound books, and none but 'company' work into the best parlour. I had sat contentedly bolt upright upon an uncomfortable chair, so as to avoid crushing the clean anti-macassar; I had abstained from the use of a footstool adorned gorgeously with a blue worsted parrot, for a similar reason. I had in every respect been as conciliatory as possible; but the time had appeared unusually long, and the moment at which I might put on my bonnet and go to the *Plough Inn* to meet Robert—a pleasure I enjoyed every day and in all weathers—seemed unattainably far off.

I think there is a great deal of varied eloquence in sniffs. The derisive, the contemptuous, the incredulous, the condemnatory, the deprecatory, and the warning sniff, must be familiar, and, I should suppose, aggravating to every one. I never knew such a proficient in the practice of the sniff, in all its varieties, as my mother-in-law; and she had contrived, on this occasion, to run through the whole sniff gamut, until really I felt so nervous and so cross I hardly knew how to bear it. The postman's knock was quite a relief; though my mother-in-law was not a pleasant person about letters, requiring to see at least the outside of every one which came to the house, and putting on an expression, more or less meek, according to her mood, of being aggrieved, when she was not made acquainted with their contents. Two letters were brought in, handed to her, and duly inspected by her, and then she pushed one over to me. It was from my sister, who was very chatty and confidential with me about everything, especially about a love-affair of the most imprudent and unpromising kind, being an engagement between herself and a lieutenant of marines, with nothing but his pay at present, and no reasonable expectations for the future. Nevertheless, I was much interested in this charming idyllic affair, and believed that a little poverty would do Gerty no more harm than it had done me; but I was not at all desirous of introducing the subject to the notice of my mother-in-law. She did not like my family; she included them all under the opprobrious denomination 'worldlings;' and some people being kind enough to think Gerty and myself rather pretty, she objected to that opinion, declaring that we were not her 'style.' A glance at Gerty's letter shewed me it was a long one, so I looked over the first page, and then put it away in my pocket; a proceeding observed and resented by my mother-in-law, who performed a sniff of a novel and wholly exasperating kind, and took up the second letter with a contemptuous smile. 'For Robert, I see,' she observed; 'and very like a prospectus. No doubt it is one. Some mine in the moon, a railway at the bottom of the sea, in which he will do well to invest his large amount of floating capital. Be sure you give it to him, my dear; it would be a pity to deprive him of an opportunity for indulging his taste and improving his circumstances.'

My mother-in-law was epigrammatical at times, but only under the influence of spite.

Much nettled by this speech, I broke open the letter in question, a proceeding which produced another sniff of the same kind as before. 'Any letters addressed to Robert *here*, I have his leave to open,' I said.

'Oh, indeed.'

The horrid thing *was* a prospectus; or, perhaps, I should rather say it was a scheme for the formation of a company to work a gold mine in Brazil, situated in the richest district of the gold-bearing country, and which could be purchased, owing to peculiar circumstances, on surprisingly advantageous terms. This communication was not printed or lithographed, but written, in a very plain clerk-like hand, and was headed 'Private and Confidential.' But I did not think anything of that; lots of things had come to Robert with a similar injunction, which could have no other meaning than that they were to be as public and as little confidential as possible. I gave the open sheet of paper into my mother-in-law's hand, and she eyed it curiously.

'So it *is* a prospectus,' she said: 'I thought so. Robert must be pretty well known to have a taste for ruining himself and other people, or they would not be giving him notice of the villainies that are on hand in that place.' She always spoke of the City as if it were one vast recognised den of thieves.

'He has not been very fortunate himself,' I ventured to observe; 'but I don't think Robert has ever injured any other person by his speculations.'

'I don't know, I'm sure; but I don't hold with speculation—I never did. I can't understand why people shouldn't be content with their own proper business and their lawful gains. Gold mines indeed! Can't they let the places be, in those distant countries, as God Almighty made them. There's been more robbing and murdering since those "diggings" and mines came up, than there ever was in my time before them, I can tell you.'

This was a view of the subject with which I could not contend, so I said nothing.

Digitized by Google

My mother-in-law continued: 'And as to getting any good out of speculations without doing other people harm, I don't believe a word of it. All the profits which go into one set of pockets *must* come out of another set, you know; there's no getting over that, you know; and for *my* part, I don't consider it honest.'

I felt uncomfortable, though I confess I had generally little respect for my mother-in-law's opinions, and less for her reasons; but I had said something not unlike this to Robert on one occasion myself, and he had taken, somewhat ineffectually, a good deal of trouble to make me understand that there are speculations, and speculations; some to which the argument, that one could gain only by another's loss, applies but too clearly, and others by which all concerned may make legitimate profit, as, for instance, in this very case of a gold mine. I did try to plead the difference, but in vain; I produced no effect upon my mother-in-law beyond inducing her to declare, more emphatically than before, that she 'did not hold with speculations,' and that they were 'all villainy together.' She concluded by prophesying that Robert would never stop until he had brought himself and me to the workhouse, and that then he would be satisfied. Which seemed improbable.

It was not Robert's time yet; but I was so tired, this best-parlour day had been so more than usually trying, that I pretended to mistake the hour, and set off to meet my husband. After a long desultory stroll, I saw the familiar chocolate-coloured omnibus nearing the *Plough*, and stood still at the corner as usual, while Robert descended from the sober vehicle, and joined me. Robert has a very sweet and sensible expression of countenance, but it is not gay—no, certainly not gay—mildly cheerful, perhaps, which I like (how I detest a simper or a grin, the usual expression of people 'blessed with high spirits!'); but to-day, he had a decided smile in his eyes and on his lips, as he tucked my arm under his, and walked away with me.

'Martha, my darling!' said he, 'I have a bit of good news for you.'

'Have you, Robert?' said I. 'What is it about?'

'It is about a gold mine,' replied my husband.

WESTWARD HO!—TO THE PACIFIC.

THE last sleeper is laid, the last rail spiked down, of the railway which the Americans have completed across the whole breadth of the United States' dominion.

Let us understand the full significance of this announcement. The railway-makers on the other side of the Atlantic tell us that, before many months have passed, we Britishers will be travelling through their country to get to the vast Pacific Ocean—that we shall abjure Cape Horn and the Cape of Good Hope, the Isthmus of Suez and the Isthmus of Panama, and take the overland route across America to California, whence steamers will conduct the trade to Japan, China, New Zealand, and Australia. But there are reasons for thinking that our Trans-Atlantic cousins somewhat misinterpret this matter. That the trade of New York, Boston, and the other Atlantic cities of the Union will largely take this route, is probable enough, especially as considerable success has attended the establishment of lines of steamers from San Francisco across the Pacific to eastern Asia; but the conditions of the problem are different when we are treating of Europe. Even if we allow only ten days to cross the Atlantic from Liverpool to New York, and six days to cross America from New York to San Francisco, there would be no gain over our P. and O. route from England to China. The time would be almost exactly the same to Shanghae (forty-three days); it would be eight days more to Hong-kong (forty-seven days against thirty-nine); and ten days less to Yokohama in Japan (thirty-eight days against forty-eight). Further south, an examination of the map and the time-tables tells us that, while the new route will be shorter than the old to New Zealand, it will be longer to Australia, and so much longer to India as to place competition altogether out of the question.

Nevertheless, the Atlantic and Pacific Railway is a great and grand thing, for which the Americans justly deserve the credit which they claim. As soon as the Mexican war had placed the Washington government in possession of Texas, New Mexico, and California (somewhat more than twenty years ago), a railway across the continent from the Atlantic to the Pacific began to be talked about. It was known that the Rocky Mountains would have to be crossed at some point or other; it was known that the total length of line would have to be measured by thousands rather than hundreds of miles; and therefore the undertaking would necessarily be vast in relation both to cost and to engineering. Almost immediately afterwards, gold was discovered in California, and this discovery naturally increased the desire to establish good road-communication between the states of the Union east and west of the Rocky Mountains. No wonder that it has taken twenty years to achieve this result, considering the manifold difficulties that surrounded it.

In 1853, Congress empowered the government to take this matter in hand. The first task was to make explorations and surveys, as a means of determining in what latitude the mountain-range should be crossed. The United States' possessions, in this longitude of the American continent, extend north and south from latitude thirty degrees to latitude forty-nine degrees—about thirteen hundred miles in a straight line; and therefore ample scope was afforded in selecting the line of route. These explorations and surveys were continued until 1857, and the results embodied in many bulky volumes presented to Congress. One result of the examination was, to shew that the Rocky Mountains are in many places flanked by easier slopes than had before been supposed, and are crossed by many passes of comparatively small altitude. Six routes especially were reported on: 1. From the Red River in Eastern Texas to somewhat low down in California, crossing the Rocky Mountains about latitude thirty-five degrees. 2. From Port Smith on the Arkansas to St Pedro on the Pacific, crossing in latitude thirty-five degrees. 3. Crossing the range about the latitude just named, but beginning at Kansas City on the Missouri, and ending at San Francisco. 4. From Kansas City due west to the mountains, which would be crossed about latitude thirty-eight degrees. 5. From Omaha or Council Bluffs to San Francisco, crossing at latitude forty-two degrees. 6. From the extreme waters of the Mississippi, near Lake Superior, crossing the Rocky

Digitized by Google

Mountains about latitude forty-seven degrees, and so to Columbia River and Puget Sound. At first, the Washington government leaned towards the southernmost of these six routes; but political and engineering considerations gradually drew attention towards other quarters. About the time of the breaking out of the Civil War, railways were already finished from New York and Boston to Chicago, and from Philadelphia and Washington to St Louis (at the junction of the Missouri with the Mississippi); and hence arose a struggle between the great cities whether Chicago or St Louis should be the starting-point of the Pacific Railway. Chicago carried the day, the line to pass through Nebraska Territory instead of Kansas, and to be constructed by two distinct companies—the Union Pacific eastward of the Rocky Mountains, and the Central Pacific thence westward to California. It is the opinion of many Americans that the Kansas line would have passed through a more fertile country, and would have been more central; indeed, our go-ahead cousins already say that *one* railway from ocean to ocean will not satisfy their wants.

The government aid to the Pacific Railway is very important. In the first place, a right of way is given through the several states and territories, free of cost. In the second place, a most valuable strip of land is *given* to the companies, one mile in width along the whole length of the railway, amounting to twelve thousand eight hundred acres per mile run: available for cultivation, building, manufactures, or any other purposes for which it may be suitable. In the third place, the companies may use, for the construction of their lines, any coal, timber, or iron that may be met with on the way. And in the fourth place, loans are made by the state of half the capital required, at a certain rate of interest—the whole to be repaid in the course of thirty years. In return for these great items of assistance, the government requires that the railway and telegraph lines shall be kept in good order; that government dispatches and munitions of war shall have preference of transmission, if required; that the government shall pay for such services by cancelling an equivalent amount of loan, instead of in cash; and that the companies shall lay by a sinking fund each year out of their net receipts, to wipe off gradually the rest of the debt.

This grand undertaking is now virtually finished. There are eleven hundred miles on the east of the Rocky Mountains, and seven hundred on the west—all this beyond Omaha, which is itself many hundred miles beyond the Mississippi. The available capital is about one hundred and fifty million dollars, equal to thirty million pounds; but the line has not cost nearly so much, there being a considerable surplus applicable to the construction of branches and other works. From Omaha the line runs along the Platte Valley in Nebraska Territory; it ascends to the dividing ridge by easy gradients, but the country traversed is rather wild and sterile; the ridge is crossed at an elevation of 8262 feet above the sea-level, and then the Laramie Plains are entered, a kind of upland plateau. These plains have the Sweet Water gold-diggings on the north, and those of Colorado on the south—a position which promises a great future for the railway in these regions. Mr W. A. Bell, who has visited the whole district, says on this point: 'The miners, whose wants are very great, require all the necessaries and such of the luxuries of life as they seek to be carried to them by rail. A non-producing population, say, of a thousand miners, as well on account of their migratory habits as their many requirements, is a larger source of revenue to a railroad than six times the population depending upon agriculture—even if we disregard altogether the transportation of ores, an item often of the greatest importance.' Beyond the Rocky Mountains, the line traverses two hundred miles of rather desolate country, through Bitter Creek and Green River. Then comes the Wahsatch belt of mountains, after which it enters the basin of Great Salt Lake. The railway does not go nearer than thirty miles to the celebrated city of the Mormons; but we may rely upon those enterprising people obtaining a branch-line as soon as it suits their purpose. Next comes a region in which silver mines are being discovered more and more every year; then the Sierra Nevada; and then a continuous descent to the Pacific at San Francisco. This last is the most difficult part of the line; for the engineers had to manage about seven thousand feet of descent in little more than one hundred miles.

Mr Bell gives an amusing account, by an American writer, of the energetic way in which these works have been carried on. 'The whole organisation of the force engaged in the construction of the railway is military. The men who go ahead, locating the road, are the advanced guard. Following these is the second line, cutting through the gorges, grading the road, and building bridges. Then comes the main line of the army, placing the sleepers, laying the track, spiking down the rails, perfecting the alignment, ballasting the road, and dressing up and completing for immediate use.' Never before was known such a rattling mode of laying down a railway as was adopted in the Salt Lake and Humboldt basins, during the latter part of 1868 and the beginning of 1869. 'A light car, drawn by a single horse, gallops up to the front with its load of rails. Two men seize the end of a rail and start forward, the rest of the gang taking hold by twos, until it is clear of the car. They come forward at a run. At the word of command, the rail is dropped in its place, right side up, with care, while the same process goes on at the other side of the car. Less than thirty seconds to a rail for each gang, and so four rails go down to the minute. The moment the car is empty, it is tipped over on the side of the track, to let the next loaded car pass it, and then it is tipped back again, and sent back flying for another load. Close behind the first gang come the gaugers, spikers, and bolters; and a lively time they make of it. It is a grand anvil chorus that those sturdy sledges are playing across the plain; it is in triple time, three strokes to a spike. There are ten spikes to a rail, four hundred rails to a mile, eighteen hundred miles to San Francisco.' In this way the writer arrives at a calculation that more than twenty-one million blows with sledge-hammers will have been given to the spikes which fasten down the rails of the Great Pacific Railway. Most of these blows, in the section westward of the Rocky Mountains, have been given by Chinamen, who were engaged ten thousand at a time by the energetic Californians.

An important question for England and her

Digitized by Google

colonies is: How will these vast American railways affect us? The Chicago and Salt Lake line is open, or nearly so; the Kansas line is being pushed on so rapidly from St Louis towards the Rocky Mountains, that there is a fair chance of our seeing a South Pacific as well as a Central Pacific Railway. But besides these, the Americans are looking with longing eyes towards a North Pacific line, running throughout its whole length almost close to the British boundary, and through a very fertile country. We lately noticed the expected transfer of the Hudson's Bay Company's territories to Canada; and now the question arises about this north route to the Pacific. We fear that the slowness of colonial proceedings will leave us far in arrear of Yankee go-aheadism. We have to settle whether the Hudson's Bay Company's territories will really pass into the hands of Canada; then, whether the other confederated colonies will work heartily with Canada in any schemes for developing the vast region; then, whether Vancouver and British Columbia can be prevented from falling into the power of the United States; and lastly, whether the capital necessary for new railways, canals, and roads is to be provided by the imperial government, by the colonial governments, or by joint-stock companies. Unquestionably, much time will pass before all these preliminaries are disposed of; and there can hardly be a doubt that the Americans will try to get any new route in that region to pass through their own territory instead of ours, if possible. That the Fertile Belt is in *our* part of America, and that it would form an admirable route of travel from the Atlantic to the Pacific, is admitted; but, it is not impossible that we may wake up some fine day and find our American cousins seizing the Fertile Belt itself, on some pretext or other, and beginning the railway which we have supinely neglected. This Fertile Belt lies between Lake Superior and the Rocky Mountains, and is watered by Red River, the Assiniboine, the Saskatchewan, and several beautiful lakes, the chief of which are the Lake of the Woods, Rainy Lake, and Lake Winnipeg. At present, the Belt is cut off from easy access by a stony region; but a road of two hundred miles would obviate this difficulty, and then the Belt itself would be easily traversed either by road or railway. So remarkably do the rivers and lakes connect themselves with the great lakes of Canada, that there is water-communication from the mouth of the St Lawrence to the remote end of Lake Superior, and from the Lake of the Woods to within a hundred and fifty miles of the Rocky Mountains. The gap between Lake Superior and the Lake of the Woods is the two hundred miles of distance above mentioned. There are a few rapids and shoals, it is true, but these might be so far improved as to be no interruption to navigation. The Belt, containing something like a hundred thousand square *miles* of rich fertile land, leads almost in a straight line to the Leather Head Pass, one of the lowest and most easily accessible in the whole range of the Rocky Mountains. Those who have read Lord Milton and Mr Cheadle's volume will remember their description of this pass; the ascent was so easy that the travellers did not know they had reached the top until they noticed that the streams flowed towards the west. But a water-communication by means of the rivers and lakes would not alone suffice. What is wanted to place British America on anything like a par with the United States, would be a railway extending from Canada to British Columbia, through the Fertile Belt, and over the easy pass of the Rocky Mountains. It has now been clearly ascertained that this route is peculiarly well fitted for a railway, both on account of its easy gradients and of the facility for supporting and employing a large and busy population. Once let such a railway be formed, and not only would there be this busy hive of industry gradually collected under the British crown, but there would be a new mail and commercial route established across the Pacific to China and Japan, from the magnificent harbour of Esquimault in British Columbia. It sounds formidable to talk of a travel-route across a continent three thousand miles wide (which is about the distance from the Atlantic to the Pacific in these parts); but there is already magnificent steam-communication on the St Lawrence and the great lakes, leaving a comparatively easy country beyond to be 'exploited' by the railway engineers. There is not, in the whole range of British enterprise, a present scheme more worthy of attention than this. Almost every inducement, political and commercial, tends that way; and it will be a great shame to us and our American colonists if the citizens of the United States should be allowed to absorb *all* the routes from the Atlantic to the Pacific.

EDMUND KEAN.

The transitoriness of fame is one of the best worn subjects on which human tongues and pens have ever been engaged. The ultra-transitoriness of the fame of the actor is an especially well-worn section of that subject, and yet there are few pleasanter or more popular books than the biographies of the great players of a period which we are never tired of contrasting with our own, in certain aspects, to the disadvantage of the latter. Under the Protean masks of the actor, we like to see the man; and perhaps for the very reason that his achievements are ephemeral, because to him death means annihilation as an artist, we have great curiosity about him, as he lived and was, off the stage.

Biographies of every sort are generally written by partisans; biographies of actors are commonly written by enthusiasts, and Mr Hawkins's *Life of Edmund Kean** is no exception to this rule. But it is all the pleasanter reading for that, carrying one along with quite a gleeful sense of the thorough good will, the ardent belief, the passionate admiration of the writer. One can understand that the task of writing the life of Edmund Kean must have been full of pain; that the contrast between the intellectual and the moral nature of the great tragedian must have been constantly present; and that the effort to exhibit his genius in its full grandeur and brilliancy must have been very hard to maintain in the inexorable presence of his hopeless and many-sided perversity. Happily, the effort is well sustained; and though it is not possible to forget how bad a man Kean was, Mr Hawkins forces us to realise, much more fully, his greatness as an actor.

* *The Life of Edmund Kean, from published and original Sources.* By F. W. Hawkins. London: Tinsley Brothers.

Fate and fortune were terribly against the clever, unruly boy, with an 'Italian' face, and dauntlessly vagabond propensities, who inherited some 'good' blood, but whose birth was illegitimate, and whose maternal ancestors were remarkable for their misfortunes. George Saville Carey, his grandfather, struggled all his life long with poverty, and played many motley parts upon the stage of life. He never gained more than a bare subsistence, and was indebted to charity for a decent funeral. Henry Carey, his great-grandfather, was a lyrical and dramatic writer of some reputation — he is the reputed author of the *National Anthem;* but he was always in difficulties, and constitutionally melancholy—a combination which led to his committing suicide.

Edmund Kean's mother seems to have been as worthless a specimen of her sex as ever lived to bring disgrace on a son, to whom she was always an unnatural parent, and whose hard-earned prosperity was considerably marred by her 'turning up.' The conduct of this wretched person was such as to suggest the doubt whether Edmund Kean really was her son, and the suspicion that to Miss Tidswell, who gave him food, shelter, and some measure of affection, that title, so unlikely ever to prove a distinction, really belonged. Anne Carey was as bad as a daughter as she was as a mother. She ran away from home at fifteen to join a company of strolling players, and in the intervals of business figured as a hawker in the streets of London. Here Aaron Kean, an architect, saw her, and took her under his protection, but abandoned her after the birth of her son, who came into the world under most unfavourable circumstances in every respect, on the 4th November 1787, in a lodging-house in Chancery Lane. His mother took care of him until he was three months old, and then left him to the mercy of anybody who might exercise that virtue in his favour, which some one did for two years, of which there is no record. One November night in 1789, a poor man and his wife found the little child in a doorway, cold, starving, and forsaken, and took him home with them. His mother came shortly, and demanded her 'property;' and then the drama of Edmund Kean's life began, a drama as strange and wild, as full of human passion and misery as any he ever played in later, and shook men's nerves, and wrung their hearts by his rendering of its emotions.

He was a beautiful child, with graceful limbs and fine black eyes, destined afterwards to emulate the 'wonderful eyes' of 'little Davy;' and at three years old he lay at the feet of Sylvia and Cymon, as Cupid, in a ballet by Noverre, at Drury Lane. Then he was placed in the hands of a posture-master, to be tortured into pantomimic possibilities, but the beautiful child was too young, too delicate, and the graceful limbs were distorted, so that they had to be placed in iron supports. Their symmetry was restored; but Edmund Kean's shortness of stature was caused, says Mr Hawkins, 'by his mother's persistence that he should continue his work at the theatre, the irons being at the same time attached to his body.' He was totally ignorant, until a few decent people, attracted by his beauty and intelligence, subscribed to send him to a little school in Chapel Street, Soho. But the spirit of restlessness and insubordination was rising in him now, and when less than eight years old, he told his mother he meant to go to sea, whereupon she beat him lustily. This decided him; and the tiny child, with a bundle and a stick, set out—the original of David Copperfield—to walk to Portsmouth. He did it, though, encountering no Aunt Betsy, and shipped himself as a cabin-boy for Madeira. What a story to be compressed into eight years! Edmund Kean was forty-six years old at his death, but can he be said to have died young? The story of his childhood and boyhood is too terrible, too degrading, too much charged with poverty and struggle, with every depressing influence, and above all, with close contact with all that is hard, base, and unfeeling in human nature, to permit one to think of him as a young man at all. In this childish adventure there was a wonderful indication of the character and the future of its hero. One shrinks from the picture of the suffering, lonely, over-taxed child, all unused to pity, yet raging in his pain, and driven to the most desperate resort of deception and preternatural cunning which surely ever presented itself to the tender years of childhood. There is something acutely painful in the wonderful fear and pain-taught cunning which enabled Edmund Kean to assume deafness and lameness so perfectly as to deceive his captain and the whole ship's crew for two months, and in the amazing strength of will and nerve which gave a child not yet nine years old the power of so controlling his emotions as to remain apparently deaf to the tremendous noise of a tempest in which the ship was all but lost. There is also something demon-like in the following picture, in a few lines: 'Arrived on shore, he tendered his gratitude to those who carried him from the ship by a sudden and vigorous execution of the College hornpipe, and disappeared among the ramifications of Portsmouth before his custodians recovered from the stupefying amazement with which they beheld this extraordinary transformation.'

The child tramped back to London, to find himself homeless and destitute, his mother having gone off on her wanderings again; and he knocked, as a desperate venture, at the door of his uncle, Moses Kean, mimic, ventriloquist, and general 'entertainer.' This queer person, not at all a bad fellow in his way, received his prematurely scampish little nephew kindly, and introduced him to his own humble by-paths of dramatic art, and then to Shakspeare, as performed at Drury Lane. Moses Kean, his uncle, Mrs Price, his mother's sister, and Miss Tidswell the actress were his friends, patrons, and the arbiters of his destiny. They sent him to a day-school, and in the evenings 'Tid' taught him the mechanical principles of the actor's art, D'Egville taught him stage-dancing, and Angelo made him 'cunning of fence.' From Incledon he learned to sing, and nature had gifted him with ear, taste, and voice. He was very clever, very quick, very industrious in a fitful way, but wild, mischievous, and ungovernable; and he displayed terribly soon that inclination for dissipation, which afterwards made his career such a painful story to contemplate, and turned all his greatness to a mockery and a shame. At this period of his life, the future Lear, Hamlet, Richard, Othello, was in the constant habit of running away from his friends, performing acrobatic antics for halfpence in the streets and at public-houses, and was, on one occasion, actually found by Miss

Digitized by Google

Tidswell tarred and feathered in St George's Fields, and dragged home by her, by a rope fastened round his waist. They locked him up, but he escaped, at the risk of his neck. They soldered a brass collar round his neck, with the inscription: 'This boy belongs to 9 Lisle Street, Leicester Square. Please bring him home;' but he tied a handkerchief round the collar, and was free. At length he got an engagement to play child's parts at Drury Lane; and as Arthur, when John Kemble played King John to the Constance of Mrs Siddons, was uproariously applauded. What a long, dreary, heart-sickening interval and struggle lay between the success of the child-actor and the splendid triumph of the young man, almost done to death by failure, by want, by heart-sickness and misery, who was to achieve such a reputation upon that very stage, when hope had been so long deferred that he said: 'If I succeed, I shall go mad!'

When his uncle died, and he was thrown entirely on the bounty of Miss Tidswell, he abandoned his acrobatic pursuits, and took to serious study of Shakspeare, especially *Richard III.*, and conceived some notion of his own wonderful powers, together with the lofty and novel ambition to restore fidelity to nature to the stage. Then comes the episode to which Mr Hawkins, with pardonable special pleading, attributes the sharp, sudden, and very decided turn towards evil of the boy's character. He was warmly 'taken up' by Mr and Mrs Clarke, wealthy people, at whose house he gave recitations, and enjoyed decent society, and the delightful sense of being appreciated. A paradise opened its gates to him awhile, the neglected child was cared for, the struggling genius developed. Mrs Clarke instructed him in various branches of literature, and he taught himself to play upon the pianoforte, to compose music, and construct little plays. His manners became gentle, his natural tastes developed. Had this care, this comfort, this training lasted, Edmund Kean might have been a very different man. But they did not last, and the end of them came thus: 'Some visitors at the house at Guildford Street were arranging to go to the theatre, and on Edmund's name being included in the list of the playgoers, a gentleman inquired—"What! Does *he* sit in the box with us?" "Certainly," was the reply. The doubt implied in the question was too much for the sensitive boy. He rushed out of the house, and it was not until three weeks after, that he was found asleep on a dust-heap, near Mrs Clarke's house, ragged, squalid, and footsore. He stated that he had tramped to Bristol, with the intention of shipping himself to America; but that, as none of the seafaring men would take him, in consequence of his apparent weakness, he bent his steps back again to London, and, after enduring every variety of wretchedness on the way, he had fallen exhausted on the spot where they had found him. Mrs Clarke's interest in the player-boy ceased, and a benefit having been made up in order that his departure might not wear a look of dismissal, he was again thrown on the charity of Miss Tidswell.' It is evident from this incident that Edmund Kean had a bad temper, and was entirely wanting in reasonableness; and dispassionate readers will not blame Mrs Clarke very strongly for losing her interest in the player-boy, who acted towards her like an ungrateful lunatic, because he had received an affront with which she had nothing to do. They will also find it difficult to discern in Kean that 'inherent gentleness of disposition' which Mr Hawkins assigns to him, and which he says 'had aroused him to a consciousness of the superiority of the new life over the old one, so that, finding his cherished hopes of permanently clearing himself from all trace of his former associations were destroyed, that he was again reduced to the level of a street Arab, and that he should be forced to mingle again with the lowest of the low, he became filled with bitterness, which eventually resolved itself into an implacable aversion to rank, wealth, and refinement.' This is a strictly one-sided view. It was not so much what Edmund Kean hated, as what he loved, which was deplorable.

The Shakspearian prodigy became a tumbler at Bartholomew Fair, giving imitations of a monkey and a nightingale; climbing, like a squirrel, a ladder balanced on a man's chin, sliding down to the ground, and gliding away in wonderful mimicry of a snake; playing Tom Thumb to a strolling Queen Dollalolla; performing startling equestrian feats in the ring, in the course of which he broke both his legs; undergoing every conceivable kind of drudgery, and being mixed up with the very dregs of society. We follow him back to Lisle Street after this escapade, and find him studying Shakspeare under Miss Tidswell's superintendence, and startling everybody by his originality; then rushing off to Portsmouth, on the strength of a report of his mother's being there, without any money beyond his bare subsistence on the journey. Ann Carey was not at Portsmouth, and the boy had apparently no resource but begging his way back to town. He would not beg, however, and this was what he did. 'At fourteen years of age, and with nothing but his good looks to recommend him, he hired, on credit, a room in one of the Portsmouth inns, for the purpose of giving an entertainment; and in a performance consisting of selections from *Hamlet*, *Richard III.*, and *Jane Shore*, interspersed with a series of acrobatic evolutions and some exquisite singing, he achieved such a success that it was repeated on the next day; and after paying expenses, found himself in possession of three pounds.' This delightful earnest of future success determined his career; and he studied and worked with a desperate perseverance which is one of the most interesting traits in his character. He recites Rollo's address to the Peruvians; gets an engagement to play leading parts at the York theatre for twenty nights; and astonishes 'Tid' by his entirely original and subtle conception of the character of Shylock—audaciously setting at naught the great Kemble and Cooke traditions. With his engagement at York, his life as a strolling player began. He soon joined Richardson's troupe, and found his mother, who improved the sentimental occasion by inducing him to carry her pack of pomatums, hair-brushes, and other hawkers' goods for her, and help her to sell them. She also proposed that he should hand over all his earnings to her. But he would not submit to this: a quarrel ensued; he gave Miss Carey a sketch of his opinion of her, and she dismissed him with an emphatic curse! What an episode in a young man's life! It may truly be said he had few chances for good allotted to him.

His success as a stroller was immediate. Richardson discovered that he had picked up an 'extraordinary genius;' the boy was commanded to

Digitized by Google

Windsor, to give his 'recitations' before the king, and amply justified the expectation entertained. Within a week, he was withdrawn from Richardson's company, and a mysterious period of his life began. Mr Hawkins maintains that Edmund Kean was educated at Eton, which is denied by Mr Procter and Mr Leman Rede, and of which there is no reliable testimony, unless the great tragedian's very indifferent Latin and equally defective English composition (he had an extraordinary fancy for introducing bad Latin on all occasions) be accepted by cynics as more than presumptive evidence. The point is not important now; but it may be supposed that he could not have been placed at Eton by Miss Tidswell; and if not, who was to do it? The boy was friendless except for her, and moneyless except for his small salary. Trustworthy information turns up in his eighteenth year, when we find him playing, at Dumfries, low comedian in Moss's company; anon at Northallerton, then at Gloucester; in short, going the ordinary rounds of a strolling player, but manifesting genius, originality, and versatility so extraordinary as to be often bewildering to his audiences. His talent was of the most brilliant and attractive description, but it would be difficult to imagine any temper more repulsive. There is an element of savagery, of moody, brute-like ferocity in many of the anecdotes of Kean at this time, when his great powers were maturing, and his perceptive faculties were being brought, by constant use, to the perfection of skill, quickness, and accuracy. He mastered every subtlety of human expression, every indication, intonation, gesture of human passion in this period of insignificance, and never lost faith in the coming of the time when he should reveal himself as the master of his art, the greatest interpreter to men of the greatest genius among mankind. 'He studied and slaved,' his wife said afterwards, 'beyond any actor I ever knew.'

In his twentieth year, he married Miss Chambers, an actress, but of respectable family, then in her twenty-ninth year, and was dismissed by Manager Beverley, on the pretext that the attraction of Kean, little as it was, would wane when it was discovered that he was no longer an unmarried tragedian, and that the lady was a mere encumbrance. Then began a life of terrible suffering, privation, and disappointment, destined to last six years. The story is a miserable one in every aspect—the pair were in abject poverty always, in actual want frequently. But Edmund Kean was determined to win; his resolution, his courage never flagged, his intense study was never relaxed; and though he was addicted to drinking from his boyhood, the vice did not hinder him. A curious instance of his sound judgment is given in the fact that, when playing at Birmingham, at a salary of a guinea a week, he refused Stephen Kemble's offer of an engagement in London, replying that his powers had not yet arrived at maturity, and that it would not do to perfect himself beneath the critical eye of a London audience. Here is one story of this terrible time. 'At four o'clock one July morning, Kean set out from Birmingham, having closed with an offer from Manager Cherry of Swansea. Two hundred miles to be travelled over on foot, and Mrs Kean likely to become a mother before the journey is half accomplished. Kean would fain have left her in Birmingham, but there was a furious pack of unsatisfied creditors in that town, and the unfortunate lady was compelled to accompany her husband. Travelling twelve miles a day, and eking out their scanty funds by giving recitations in gentlemen's houses, they arrived in a fortnight at Bristol, and crossed in a boat to Newport. Passing through Cardiff, Cowbridge, and other towns, they eventually reached Swansea, where they obtained a little tiled parlour and bedroom for eight shillings a week.' Here their first son, Howard, was born; and here Mrs Kean underwent, no doubt, much suffering of many kinds, for her husband was reduced to playing secondary characters, his temper was furious, and he was habitually what Mr Hawkins, with the tender euphemism of a biographer, calls 'unsober.'

Then came more strolling, including an Irish tour—during which Charles Kean was born at Waterford—a Scotch tour, and a weary tramp from Carlisle to York, where a despairing effort to get up an 'entertainment' having no success, seemed to overwhelm the wretched man. His wife, so badly rewarded for her faithful friendship, her heroic endurance, her constant sustainment, her bitter sufferings—his wife, the victim of his drunken ferocity in their obscurity, of his heartless infidelity in their better days, could no longer cheer him. Utter want oppressed them, and only charity saved them from starvation. 'On one occasion, a bitter curse upon his perverse destiny broke savagely from his lips. For a moment, the heroic courage with which Mrs Kean had borne up against the adverse tide abandoned her also, and sinking down upon her knees she looked upon her children, and offered a heartfelt prayer that God might see fit to terminate their sufferings and her own by death. The husband and father recovered himself, kissed away his wife's tears, and murmured: "I will go on; I will hope against hope."' He did hope; he did try; he resumed his ramblings, and played at Weymouth Hamlet and harlequin, the latter with more unequivocal success than the former, and his magnificent Othello with no appreciation at all. A frightful failure at Guernsey, and a cruel attack upon him by the newspapers, then came quickly on the heels of his many misfortunes; but now the tide was about to turn. He came back to England, and at Dorchester fell in with his old friend, Dr Drury, who actively interested himself on the nearly despairing actor's behalf with the Drury Lane committee. But Dr Drury did not tell him what he was doing for him, and in the meantime Kean had accepted an engagement from Elliston to play melodramatic characters at the London Olympic for four pounds a week. The terrible necessities of his position drove him to the sacrifice of his cherished ambition at last, just at the moment when it was about to be realised. The complication of circumstances at this period of Kean's life is highly dramatic and touching. The sparkling cup was to come to his lips indeed, but dashed with what bitterness! Slights from the theatrical powers; disputes with Elliston and Arnold, solved only by abject entreaty, on Kean's part, dread, misgiving, and, worse than all, the death of his beloved child, Howard. In all the story of Edmund Kean's brilliant, lamentable life, there is nothing which engages one's sympathies for him like the love and grief he shewed for that child.

Digitized by Google

Things were at the worst, the promised arrangement seemed quite hopeless, when, on the 22d January 1814, Edmund Kean went out from Cecil Street with utter despair in his heart, meditating suicide. An acquaintance met him, and congratulated him upon a certain announcement, of which Kean was ignorant, and which ran thus:

THEATRE-ROYAL, DRURY LANE.

This Evening, *Illusion*

After which, *Two Strings to Your Bow;* to which will be added the new splendid Comic Pantomime, called

Harlequin Harper, or a Jump from Japan.

On Monday, *Othello*, with the Pantomime.

On Tuesday, *The Castle of Andalusia*, with the Pantomime.

On Wednesday, Mr KEAN, from the Theatre-royal Exeter, will make his first appearance at this Theatre, as Shylock, in the *Merchant of Venice.*

There was no heralding of this event, no puffing of the poor struggling actor, who had many enemies, and very few friends. He stood on his merits alone, that 'little man in the capes,' when on the 26th January 1814, Edmund Kean took the world by storm, and realised the fixed purpose, the unchanging ambition of his life. The story of that wonderful achievement, of that magnificent success, is the best known incident in stage-history. As a reminiscence, its sequel has most power now to please. Kean left the theatre, hardly heeding the obsequious congratulations of the green-room. 'In an almost frenzied ecstasy, he rushed through the wet to his humble lodging, sprang up the stairs, and threw open the door. His wife ran to meet him. No words were required; his radiant countenance told all; and they mingled together tears of true happiness. He told her of his proud achievement, and in a burst of exultation exclaimed: "Mary, you shall ride in your carriage; and Charley, my boy"—taking the child from the cradle, and kissing him—"you shall go to Eton; and"—his face changed, his joy passed away; he murmured in broken accents: "O that Howard had lived to see it! But he is better where he is."'

In the career of the actor, from day to day, henceforth, there is growing prosperity, there is increasing brilliancy, wealth, fame, popularity; the admiration of the great, the learned, the rich, the powerful; the sincere tribute of the masses to his wondrous genius, evidenced in the flocking of enthusiastic crowds to the theatre. The erstwhile street Arab was an honoured guest in the noblest houses of the land; but his tastes did not lie in that direction. He hated 'that tinsel-covered mass of envy, hatred, and all uncharitableness—polished society.' He erred on the opposite side to pride and ostentation, being rough in manner, and regardless of fashion in dress. The *Coal Hole Tavern*, Adelphi, had charms for him not found in the saloons of Holland House, where he had to encounter noblemen, of whom he said: 'They talk a great deal of what I don't understand—politics and other abstruse matters; but when it comes to plays, they talk such infernal nonsense.' He cordially liked Byron, not so much for his genius perhaps, as for other qualities of the noble poet which resembled his own, and atoned for the offence of his being a 'lord.'

It is pleasant to find that Kean did not forget 'Tid' in the days of his prosperity, and not surprising to learn that Nance Carey did not forget him. She extracted an annuity of fifty-one pounds from her son with much celerity, and set spurious relatives upon him continually with more or less success. He was kind, considerate, and generous to the friend of his wretched childhood, who was destined to nurse him in his last illness, and to mourn, doubtless as no other could have mourned, with sincerity over his grave. A vast quantity of criticism exists on the numerous characters played by Kean during his wonderful career, all interesting to read, though, of course, to us, discoursing of a great abstraction. The splendid and the base run parallel in this great and despicable man's character, and the reader cannot cease from wondering how the lower impulses of his nature gained such ascendency over the grand inspirations, the marvellous insight, the exquisitely delicate perceptions of his intellect. His domestic history is so painful, that one wishes only a theatrical memoir of him had been attempted, for, though 'Mary' did ride in her carriage, and 'Charley' did go to Eton, Edmund Kean was a bad husband and father, and those who like to think, undisturbed, of the genius which interpreted, and which may be almost said to have enriched Shakspeare, will do well to take leave of him at the end of his ninth season, when the measure of his splendid achievements was full. The disgraceful episode of Mrs Cox, his separation from his injured wife, his utter abandonment to low excess, his eccentric, indeed absurd expedition to America, and adventures among the Hurons, a period of wildness only to be explained by the charitable hypothesis that he was—'a little m——, you know,' as Miss Flite puts it, are all of the most miserable complexion.

In January 1827, he reappeared at Drury Lane as Shylock, and Dr Doran thus graphically describes the occasion: 'A rush so fearful, an audience so packed, a reconciliation so complete, acting so faultless, a dramatic enjoyment so exquisite, I never remember. Nothing was heeded; indeed, the scenes were passed over until Shylock was to appear, and I have heard no such shout since as that which greeted him.' But that overwhelming 'welcome' from thousands of voices greeted, not, as the people and the critics thought, the incomparable player still in all his former vigour. The actors knew better; they saw the unnatural exertion, stimulated by the tremendous excitement, and knew that Kean was a failing man. That 7th January was an epoch in his life, and in the history of the stage; never again was such a performance witnessed; that was his real farewell to all his greatness. Inequality marked all he did afterwards; his strength failed, and, in plain English, he drank incessantly. He became moody and morose, wan, haggard, and, but for the piercing brilliancy of his eyes, unrecognisable. He became a prey to remorse, and in fact, though he had yet some years to live, and though there were occasional resuscitations of his former achievements, there is nothing more in his life on which one can dwell with any pleasure. The degrading vice whose slave he became has no mercy; everything must give way before it; truth, honour, and gratitude have no place where it rules. The ruin of Mr Grattan's play—his friend, true, steadfast, immovable—by Kean's coming on the stage incapably drunk to perform his part of it, is one

Digitized by Google

of the most revolting incidents in this melancholy and repulsive story. There was one more reconciliation, besides that with the public, for Edmund Kean—a reconciliation with his deeply injured wife. When life was closing for him, when he had sunk into a loathsome state of disease, when he had abused every gift of nature, and found that his punishment was not to be escaped, he wrote to his wife: 'DEAR MARY—Let us be no longer fools. Come home; forget and forgive. If I have erred, it was my head, not my heart, and most severely have I suffered for it. My future life shall be employed in contributing to your happiness; and you, I trust, will return that feeling by a total obliteration of the past. Your wild, but really affectionate husband,

EDMUND KEAN.'

It is difficult to perceive Mrs Kean's share in the 'folly;' but a fuller *amende* was not to be expected from such a man. Of course, she *came* home; and the meeting between the two was very affecting. But there remained very little more life for Edmund Kean. He died on the 15th May 1833, and then there was no 'home' for the widow. The cottage at Richmond and its contents were the property of Kean's creditors, for he who had made two hundred thousand pounds in England alone, died insolvent. Mrs Kean was handsomely provided for by her son; and Nance Carey survived Edmund Kean only eight days. What became of the immense sums he received, no one knows. He was very lavish of money always, and threw it away recklessly when he was drunk; but it takes a great deal of lavishness to waste the fortune which he wasted. He was splendidly generous; this is one of the traits it is delightful to remember and record; he never held his hand when any need or suffering was to be relieved, general or individual; he was a noble benefactor to his own profession; he gave large sums to the starving Irish; and the poor loved him. It has been said, eloquently and truly: 'In all romance, in all literature, there is nothing more melancholy, nothing more utterly tragic than the story of the career of Edmund Kean. So bitter and weary a struggle for a chance, so splendid and bewildering a success, so sad a waste of genius and of fortune, so lamentable a fall, can hardly be found among all the records of the follies, and sins, and misfortunes of genius.'

A COUNTY FAMILY.

CHAPTER XIX.—AN EXCELLENT MEMORY.

THE sight of Redcombe Manor, with its park and grounds, when William Blackburn's greedy eyes first lit upon them from afar, had, as we saw, somewhat quelled his insolent spirit. The prize had seemed to him too great to lie within reach of his itching palm, just as at first a stake of unwonted magnitude appears to the gambler too great a stroke of fortune to befall him—an unlikely thing to win. But, as in the gambler's case, now that the first great obstacle—his father's opposition and disfavour—had been smoothed away with such apparent ease, his hopes rose all the higher for his late depression; all seemed to lie within his grasp. The evidences of the wealth about him—which would surely at no distant date be his—inflated him with vulgar pride. The absence of his father from the luncheon-table removed what little check might have been imposed upon his behaviour; and with every glass of wine he swallowed, he grew more confident and coarse. With a shiver at the heart, Lucy Waller contrasted this boastful ruffian with him who had once sat in his place, and dispensed hospitality at that same table in so different a fashion. Ellen herself regarded her uncle with little less aversion. He had grown positively rude to Mr Stanhope, and she felt genuinely grateful to the latter for the restraint which she well knew he was exercising upon himself for her sake and for that of her grandmother. His nature was fiery, and his wit keen enough to suggest such a retort as would have disconcerted even his half-drunken host, and covered him with shame; but he spared him. Mr Waller, whose age might have fitly entitled him to reprove, or at least repress, and who was very skilful in the management of men, kept an unusual silence, and even seemed, to judge by the gracious manner in which he received the newcomer's rough sallies, to encourage them. As for Mrs Blackburn, it is probable she scarcely caught the meaning of much that dropped from her son's lips; it was enough for her to know that he was in good spirits, and she rejoiced accordingly.

When the somewhat protracted meal was over, Stanhope asked permission to ring for his horse to be brought round; and when this was done, and the animal appeared before the terrace, he took his leave. The Squire had departed elsewhere, and the young man could not well help treating his son as his *locum tenens;* so, when he had bidden farewell to the rest, he held out his hand to William.

'I will see you to the gates,' returned the latter gruffly, taking no notice of this gesture; and he walked on in moody silence beside the horse and rider until they had turned the angle of the house, and were out of sight of the others. Then he stopped, and laid his hand upon the rein. 'Look you here, Mr Stanhope, or whatever your name is; I have something to say to you, once for all.'

For the second time that day, Herbert Stanhope's fingers involuntarily tightened their hold of the handle of his riding-whip. 'I never permit my bridle to be touched, sir,' said he quietly; 'that is also once for all.'

William Blackburn's swarthy face turned ashen pale, and he let go his hold; but his voice slackened not one whit in its imperious tone as he rejoined: 'Neither your horse nor you will be here again, I reckon, as you have been wont to be. I know you, sir, better than you think. Horses have done you much harm. You are not so rich, though you do live at Curlew Hall, but that a wife with money would be agreeable to you. Yes, yes. You have had nobody here until now to deal with but an old man already in his dotage, but henceforward it will be very different—do you understand? Then, listen to this: I do not choose my niece to be married at present—nor to you at all.'

'Indeed, sir,' returned Stanhope coolly. 'Have you any other commands to communicate?—your wish, as you may easily imagine, will always be my law.'

His contemptuous smile, even more than his

Digitized by Google

mocking words, stung the other to frenzy; but repartee was not his strong point.

'You are vastly clever, Mr Stanhope, but you will find you have met your match—another sort of match than that you expected here.'

'I am not clever, Mr William Blackburn, but I have a most excellent memory. I may say, indeed, as is said of the royal family, that I never forget a face that I have once seen, and I have seen yours before to-day.'

'Never you mind that,' rejoined the other doggedly, but not without a change of colour; 'you will henceforth not see it very often, at least at Redcombe Manor.'

'I am not so sure of that, my good friend,' said Stanhope, taking out of his pocket a small book, and referring to it with much deliberation. 'Let me see: yes, it was in the same year that *Donnybrook* won the Derby, when I was quite a lad, that I first saw you—at Chester.'

'I never was at Chester in my life.'

'That's strange; for if you never were, it was your twin-brother whom I saw brought up before the magistrates for horse-poisoning. You were bribed to nobble the *Khan* for the Chester Cup. I sat on the bench with my father, and remember the case perfectly well. You were in with Richardson and that lot, but they could only bring the thing home to *you*. Instead of using arsenic, you tried (not from motives of humanity, I'll be sworn) some corrosive sublimate, which you put in his oats, and so only sickened the horse. There was another charge against you for cutting the sinews of some horse that was entered for another race—but that fell through. But I well remember—for I was interested in the case, and watched it after you were committed for trial, you got five years—*and they are not over yet*, Mr William *Roberts!*'

'It's a lie!' gasped the unhappy wretch through his white lips.

'That is—of course—what it occurs to a fellow—of your stamp—to say,' observed the other, carefully lighting a cigar. 'You have the misfortune to be not only a vile knave, but a gross fool. You don't even know when you are beat, you stupid cur!'

The relics of the other's Dutch courage oozed away to the last dregs as he replied, with his evil face cast down, and his heel denting the soft gravel savagely: 'What, in the Fiend's name, is it you want of me?'

'There, now, that's common sense, my man, and the nearest approach to reason which I have yet seen in you. What do I want as the price of my silence?—for not saying what I know about William Blackburn, alias Roberts, the man that poisoned the horse at Chester? Well, of course, I shall want lots of things.'

'Then, *you* shall not have them!' exclaimed the ruffian passionately. 'Do you suppose I'm going to put myself in your vice, to be screwed up as tight as *you* please, all my life long? No; do your worst. Supposing all you say is true (and I don't say it is—mind that), what harm can you do to me? Even, according to your own shewing, if I *have* done anything amiss, it's paid for—ain't it?'

'Well, not just yet: you had five years, you know, and they are not quite over; you must be out on ticket-of-leave, and are therefore still under the supervision of the police. You wince at that; but really you ought to feel obliged to the foolish clemency of the law, which permits a gentleman of your class and character to be at large a single day before the date of his discharge. You have not, perhaps, studied the discussion upon this matter in your late retirement, but I assure you that the papers have been full of it. How you must have greened the chaplain, and how easy he must have been to "green!" However, you certainly have, as you were about to say, been punished, and may consider yourself a free man. The law has been avenged, but not society. We can't admit horse-poisoners into county circles, my good sir; we can't allow them to marry into county families, my excellent friend—that is to say, if the crime is known. On the other hand, so long as the secret is preserved, they may do almost anything they please. Having brought the argument thus far, your sagacity is surely sufficient to permit of your drawing the deduction, that my silence must at any price be secured.'

The force of contempt and bitterness could no farther go than in the young man's air and tone; but the fact was, that he not only despised the wretch before him, but also himself, for being under the necessity of making terms with such a creature. It is easy enough for a fool to be indignant with the vices to which he is not inclined, and to be blind to his own shortcomings; but Herbert Stanhope was no fool, and could not play the hypocrite with his own conscience. No one knew better than himself how vile was the part that he had undertaken to play in the house of his friend and neighbour; and the few words that William Blackburn had remarked upon it had secretly stung him far more keenly than all his sarcasms had affected the other. He had been, from the nature of his pursuit, acquainted with many a scoundrel, and had often had a common interest with them; but he had hitherto contrived, in that respect, to keep his turf experiences and his own private life distinct and apart from one another. At that very moment, he was justly liable to disgrace and outlawry among a certain set of persons with whom he had chosen to cast in his lot. He did not spare himself at all in the view he took of that matter, but his ways outside the betting ring had been always those of a gentleman. For the first time, he now found himself, in what might be called his Home relations, about to become hand and glove with a villain. If William Blackburn's crime had not been one connected with the calling in which he had himself gone so far astray, he would not have been so bitter against him; but we are as fanciful in our moral as we are in our physical disease, and he loathed him because he appeared to mirror some distorted and odious image of himself. 'Well, your answer, sir?' exclaimed he harshly, as the other continued his excavation in the gravel without a nod. 'Or, shall I ride back and tell your father that I must decline the invitation he has given me to pass the next few days at the Manor? since, though I am sorry to lose his friendship, I cannot permit myself to share the same roof with a felon.'

'No, no,' said the other, with an affectation of frankness; 'you can come if you like, of course. There is no need for us two to quarrel. You have only to hold your tongue, and you will have my good word with Ellen. The old man will cut up well, and there will be plenty for her as well as

Digitized by Google

for me. I am sorry I was so rough with you—there, a gentleman can't say more than that. Henceforth, we'll work together; that's a bargain, and here's my hand upon it.'

'There's no necessity for that,' rejoined Stanhope coldly. 'And perhaps it will be as well, since you shewed such temper just now upon the terrace, that we should not appear in public on the best of terms with one another. You can grunt "How do you do?" instead of shaking hands, I daresay. I shall be here to-morrow for a day or two. Good-bye.' And with a careless nod, Stanhope slowly rode away along the avenue, without once turning his head. Had he done so, he would have seen his late companion still standing on the same spot, and watching him with wolfish eyes.

'If I only had him in the well-hole at Formosa,' muttered he through his clenched teeth, 'and could watch from above the rising tide, and see him climb, and cling, and slowly drown; or, better still, if he could scramble near the top, and think he should be saved, and come within my reach, so that I might make him lose his hold—then, and not till then, should he and I be quits.'

CHAPTER XX.—THRUST AND PARRY.

As Stanhope passed through the lodge gate, he beheld, to his surprise, and not with pleasure—for he was by no means inclined just then for company—Mr Waller standing on the turf by the roadside, and evidently waiting for him. He had come from the terrace by a shorter way than through the avenue, and would have intercepted him in any case; but not a little time had been taken up by the parley with William Blackburn, and the look with which the ex-M.P. received him was pregnant with curious inquiry. 'What on earth have you been doing, Stanhope? I began to get quite alarmed, not indeed upon your account, but upon that of our friend in the black dittoes. Have you been horse-whipping that wretched cub, or what? He was certainly very rude to you.'

'As to that, he was rude to everybody; and upon my life, Waller—though, under the circumstances, it was not for me to interfere—if I had been a relative of any lady at table, I should have felt it my duty, at all hazards, to have put a stop to it.'

'Well, the fact is it was a deuced delicate business, my good fellow. In the first place, the man was drunk, and remonstrance is not only thrown away in such a case, but sometimes makes matters much worse. He might have got angry and "said things," you know, before the women; then, again, if there had been a row, his father must have heard of it, and it would have ruined the poor devil altogether. They're not the best of friends, you see, as it is, and one would not have liked to have widened the breach, would one? It is about this very matter that I want to have a few words with you. I think we should give a chance to this just returned prodigal. If he *is* a beggar on horseback, we ought not to let him ride to the deuce.'

'Why not?' asked Stanhope coldly, looking hard in the other's face. 'I have been riding in that direction myself these five years, and you have never attempted to stop *me*.'

'But you have not ridden so fast as this man, my good sir,' added Mr Waller smiling, 'although I daresay you have outrun the constable. Besides, you are not the sort of man to take the advice of a neighbour, however well meaning it might be.'

'Then you think that gentleman yonder'—and Stanhope pointed contemptuously over his shoulder with his whip—'is one more likely to listen to reason?'

'No; not exactly that: he would not be easily led; but I think he might be *driven*, that is, if one knew, *as you do*, what sort of goad was efficacious.'

'*I* know? How can I possibly know?'

'My dear Stanhope, why should you attempt to deceive me? If you have not been horse-whipping this fellow—which I confess I thought you had, by the expression of your face—you have certainly got the better of him in some way or another. How does a man obtain a mastery over a fellow-creature wilder and more savage than himself?—By a stick. You have not employed a material one; you must therefore have used a moral one. Mr William Blackburn is not a person to have been swayed by mere eloquence—for I have tried that with him myself—it is plain to me, therefore, that you have made him afraid of you. You are his Rarey—the tamer of this wild animal; and to become a Rarey, you must possess a secret.'

'My dear Mr Waller,' returned Stanhope with an amused air, 'your logic is most admirable, and I am quite sorry to think that you have only a poor country-gentleman like me to listen to it. I have never doubted your sagacity, nor has anybody in these parts ever ventured to do so: at the same time, I have heard a whisper, now and then, which is not quite so favourable to your disinterestedness. May I inquire—in case, that is, you intend to ask *me* any more questions—how this matter can possibly affect *you*? Forgive me if I cannot easily believe that the welfare of Mr William Blackburn is your sole consideration.'

'My dear young friend,' said Mr Waller blandly, 'I am sorry that at your time of life you should be so suspicious; a circumstance, however, which (as foreign to the generosity of your character) I attribute to your connection with the turf. I cannot help what evil tongues may say of me; though I am sorry their slanders have entered ears which I had hoped were friendly to me. I solemnly assure you I have no underhand motive in this affair whatsoever. I have no great interest in the young man, perhaps, although at the same time we should remember he has been severely tried.'

An irrepressible smile flitted across Stanhope's face.

'Gad! perhaps he *has* been tried!' thought Mr Waller.

'You and I,' continued the ex-M.P., 'have had no experience of poverty, and of the temptations to which it is exposed. We were brought up tenderly, and taken care of until we could take care of ourselves. This man, upon the contrary, has had a hard life of it from the cradle. I am no humanity-monger, as you well know, but I think we should look with charity upon such cases. I give you my word of honour that I honestly believe there may be good in this rough fellow; that if he only has a fair chance he may still turn out a respectable member of society; and it is my fixed intention to do my best to make him so.'

'Upon my life, I begin to think Waller is in earnest,' thought the young man; 'but then, he is such a very clever fellow.'

'And yet, my dear Stanhope, as I have confessed, my interest in this unhappy person is very small as compared with what I feel for his parents.

Digitized by Google

They are both, as we know, kind and hospitable folks. Anthony Blackburn comes of as good a stock as yourself—one which we all respect—and his wife is in her way an excellent creature. If this son of theirs goes to the dogs, his father will die of vexation (from the shame of it), and his mother of a broken heart: and again, let me ask you, by the way, is not the very circumstance of her devotion to him a proof that there is some good in the man? The Squire, it is true, has no such affection for him, but the main point is that the happiness of both of them is, for whatever reason, equally bound up in his future. His disgrace would destroy them, as well as do grievous harm to that charming young lady, their grand-daughter. You must surely go with me thus far, my dear young friend?'

Stanhope nodded with a grave smile.

'Well, these excellent people have been good enough to repose some confidence in me.'

'Now he is going to put a little water in the pump,' mused the other, 'in order that he may coax out of it whole bucketsful.'

'They have reposed no confidence in *me*,' observed Stanhope drily.

'No; but you have obtained some information from the fountain-head: let us put our two sums together, and add them up. It fell to me, as you know, to break the news just now of this William Blackburn's arrival to his father. He was terribly put out by it. I never saw a man more moved, that is, with anger. His behaviour was such that he thought it right (in explanation of it) to acquaint me with the cause of his displeasure. It appears that this lady, who has so lately died, was a person whom Mr Blackburn strongly disapproved of, as respected her position in life, and that his son married her contrary to the Squire's wishes.'

'But now that she is dead, my good sir, I see no reason for a continuance of this ill feeling between father and son, and nevertheless it still exists.'

'What excellent sense you have, my dear Stanhope! It was only because I knew you to have so great a faculty of observation, that I made up my mind to tell you this much—which I should otherwise have certainly treated as a confidential communication. Stanhope will be sure, said I, to find out for himself that this marriage with "Bess" was a *mésalliance*. I can do no harm by the revelation; and with this fact to go upon, we may, as common friends of the family, take counsel for their benefit; and here we are laying our heads together accordingly. Now, since besides this marriage, there must have been something else to make the old man so bitter against his only son, the question is: What was it?'

And the ex-M.P. smiled good-humouredly, and patted the mane of his friend's horse, as though he would have elicited the views of that sagacious animal, as well as those of his rider, upon the matter in hand.

'*You*, of course, Stanhope know all about it.'

The suddenness of the inquiry, accompanied by the rapid looking up of the speaker into the young man's face, disconcerted him so, that if he had contemplated any deception, it would have been put to flight; but he had entertained no such design.

'Yes, I do,' said he frankly; 'at the same time, Mr Waller, you must excuse me, if I claim for myself the same privilege which you confess you would have exercised. You say you would have considered it a breach of confidence to tell me what you have just communicated, had it not been within my own power to guess it. Now, you, on your part, have *not* guessed what it is which has caused Mr Blackburn and his son to be on such bad terms with one another; and notwithstanding my high opinion of your sagacity, I will add that I do not think it likely you *will* guess it. This is surely a sufficient reason for my silence: but besides, the matter in question was not revealed to me in tacit confidence only; I have passed my word to keep it as a secret. Under these circumstances, I need not, I am sure, say to Mr Waller: "Do not press me to break my word."' And Stanhope gathered up the reins from his horse's neck.

'One moment, one single moment,' exclaimed the ex-M.P., in accents which, though intended to be cheerful, could not quite disguise his chagrin. 'You may be sure I shall not ask you to do wrong. But—only to relieve my mind—just tell me this,' he looked furtively round and sank his voice to a whisper: 'I know this unfortunate man has been in sad straits, but—he never *stole* anything, did he?'

'What a horrible idea!' ejaculated Stanhope. 'He certainly did *not*. If such an assurance be any satisfaction to you, you are very welcome to it.—And now, good-day.'

'Then it must have been poaching,' whispered the other earnestly. 'I am perfectly convinced that it was poach'——

But Stanhope touched his horse with his heel, and with a good-natured 'No, no, Mr Waller, that won't do,' trotted away without another word.

'A very obstinate young man,' murmured his discomfited inquirer; 'and a secretive young man—which is a bad sign. I'll lay my life, however, it was poaching. How sharp the fellow took me up when I asked him, on the hill yonder, if he had not been "in trouble" lately; and again, did I not see Stanhope smile when I talked of the man's having been "severely tried." I daresay he was punished severely. The game-laws are most oppressive, and a disgrace to the country, as I always intended to say in the House of Commons. I'll write a pamphlet against them, and give it to William Blackburn to read; then I shall easily find out the truth. Though it was certainly poaching. Upon my life, I am afraid he has been in jail. That's what comes of "Justice's justice." Poor fellow! Why, I know lots of people who poach habitually, but then they're rich men; which is very different. From what the Squire said, it was evidently quite an early peccadillo; I daresay merely a boyish folly, which it was cruel in the law to so chastise, and still more cruel in his father to resent so long and bitterly. Yes, yes; it was a mere frolic, I feel sure.'

Mr Waller's face wore its usual smile, as he re-entered the avenue, in the middle of which it, however, grew once more serious, as he stopped and muttered to himself: 'Eh gad, I hope he did not kill a keeper, though!' Then, adding briskly: 'Let us hope he only shot him in the legs,' he hummed an air, not very correctly, from the last new opera, and hurried gaily on.

In the croquet-ground were Ellen and Lucy with their mallets; they were by no means pursuing the game with the usual ardour of young

Digitized by Google

ladies, but rather made it serve as a cover to conversation. Here follows the substance of their talk since luncheon.

'Well, and what do you think of him, Ellen?'

'My dear Lucy, what a question! You know it is not the first time that I have seen him.'

'That is scarcely an answer.—It is my green ball to play, is it not?—You must confess, at all events' (thud), 'that he did his best to make himself agreeable.'

Ellen sighed, and missed a hoop.

'You are thinking of something else, my dear, or you would not play so badly,' remarked Lucy, holding up her finger reproachfully. 'I shall think it my duty to tell Mr Denton, I shall, indeed. Supposing even that meeting on the moor was accidental'——

'What *do* you mean, Lucy?—I thought you were speaking of my uncle.'

'Indeed, I was not' (tight croquet, and ball sent to the confines of the grounds); 'I am talking of Mr Stanhope. You are aware, I suppose, that he was making love to you?'

'He certainly was not, my dear; I deny that there was even the appearance of it—but it so happens—in fact, he knows all about me and John.'

'Ah!—You have one more ring to go through with that blue.—Then all I can say is, I don't understand it. You know, I suppose, that he has the reputation of being on the look-out for a fortune; and that his estate is much embarrassed?'

'I have heard that he is dissipated and extravagant.'

'I don't know about dissipated, though he is doubtless extravagant. People are always apt to believe the worst.'

'But I thought he spent all his time on race-courses.'

'Did you?—Come, I've hit that green at last' (viciously). 'Not all his time, surely, because there are times in the year when there are no races.'

'I'm sure I don't wish to be hard upon him, Lucy; though I thought *you* were very severe with him on the moor, talking about his debts and his poverty.'

'It was evident that you sympathised with him, my dear; and it is a sort of sympathy which is very dangerous. As to him, I saw at once that he had made up his mind to have your forty thousand pounds *down*—or whatever it is. He is come down here to get it, that's certain.'

'My dear Lucy, how can you say such things? I have told you the truth; he is perfectly well aware of my engagement.'

'And how came Mr Herbert Stanhope to be "perfectly aware" of such a delicate circumstance? But perhaps that is a secret?'

'No, indeed; he has been very intimate here—with papa more so than any other neighbour; and—and they have been used to talk quite confidentially.'

'Oh, I thought your grandpapa did not know that you *were* engaged?'

'My dear Lucy, what is the matter with you? You know, as well as I do, that my heart is in John's safe keeping. But, even supposing it were otherwise, nothing would ever induce me to marry any man whose pursuit was racing.'

'Well, I never heard that Mr Stanhope was a blackleg; although I have heard all sorts of malignant things about him. I have known him from my childhood, and he's not, I assure you, such a wretch as you seem to think him.'

'A wretch! Lucy? Indeed, I think nothing of the sort. But with respect to racing—it is a thing of which I confess I have a great horror.'

'How wicked you must think me, then, my dear,' laughed Lucy, 'for I once made a little book on the Derby myself, stood to win eighteen pair of gloves (all with double buttons); and I don't think it very much demoralised me.'

'It does some people,' returned Ellen gravely.

Lucy took her green ball with infinite pains, and hitting fair (which was rather unusual with her) through three hoops before she spoke again:

'Is your uncle William fond of race-courses, Ellen?'

'I think so; at least he used to be so, long ago.'

'Have you any reason to believe that he and Mr Stanhope ever met before, Ellen?'

'None whatever. Why do you ask the question?'

'Because, at luncheon, I noticed Mr Stanhope looking at your uncle more than once in a sort of puzzled manner, as though he were trying to recollect something about him. It may, however, have been only my fancy.—Is not that somebody calling "Lucy?" Yes, it is papa's voice upon the terrace. Dear, dear! just as I was close to the post, and almost 'a Rover.' I daresay he wants me to write something for him before the post leaves; if not, I will be back directly, my dear.'

And off she ran. She did not come back, and Ellen continued to knock the balls about and muse.

'What *could* have been the matter with Lucy, at first so testy and almost cross, and then again in such high good humour? What must she think—what must everybody think of Uncle William and his behaviour? And yet it was not that which had put Lucy out, but something, as it would seem, in her own (Ellen's) conduct. What had she done to annoy her? Did Lucy guess at what had already happened between Mr Stanhope and herself? If so, Lucy must be aware that any attentions he might now pay her must be simply those of respectful friendship. If not, cognizant as she was of her engagement to John, that knowledge should have been sufficient to acquit Ellen in her friend's eyes of any charge of encouraging this man's addresses. But indeed, why should Lucy concern herself about the matter at all? and, above all, why behave so inconsistently with respect to Mr Stanhope? She had abused him to his face in a manner that had been quite embarrassing to her (Ellen); and now she not only refused to hear a word against him, but even suggested imaginary attacks upon his character, for the mere pleasure of controverting them. Then, how she must have watched him at luncheon, to get that idea into her head about him and Uncle William having met before! Was it possible—— But no; while playing in the very croquet-ground that had been laid out to please her by dead Richard Blackburn, and in a spot so pregnant with tender memories, it could surely *not* be possible, and yet it was very strange.'

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 289. SATURDAY, JULY 10, 1869. PRICE 1½*d.*

THE LAST 'RUSH' IN VICTORIA.

A 'RUSH' is the term applied to a new set of gold-diggings; and a very expressive term it is. It is a rush of men—of mining men, of trading men, and of speculative men—a rush of cattle, of horses, of sheep—a rush of all sorts of animals and all sorts of things suddenly let loose, and coming down pell-mell on to a particular spot of the earth's surface.

Finding myself in Melbourne early in January last, I determined upon a short run into the interior; and availing myself of one of the Victorian railways, I started for Sandhurst, a town about a hundred miles north of Melbourne. My intention was to have taken the rail on to its terminus at Echuca, where it meets the Murray, and there to have embarked on one of the steamers which ply on that river. On making inquiries, however, at Sandhurst, I found that this project was impracticable; at that time of the year, the boats were not running, there not being sufficient water in the river to float them. My first thought was, what to do in order to amuse myself. Strolling, then, outside my hotel, my eye is attracted to a large handbill posted up at Cobb & Co.'s office, who are the great coach-proprietors of Australia. The word 'Rush' is printed in large characters, and is the most prominent feature in the bill, which announces that a six-horse coach proceeds daily to 'the Spring Creek Rush, distant forty-five miles; fare seven shillings and sixpence; through in six hours.' I had no sooner digested the contents of the bill than my mind was made up to book myself by the very next morning's coach.

Meanwhile, I took a walk through Sandhurst. Sandhurst is a pretty good-sized town, with a population of about fifteen thousand inhabitants. Like most towns in Victoria, it is the product of a rush, which took place, I believe, in 1854; and it is calculated that at one time it could boast of between twenty thousand and thirty thousand inhabitants. It is just like any other Australian town. Very wide dusty streets, very imperfectly filled in on either side with buildings—plenty of slop stores—plenty of 'bars' and 'hotels'—great only in the size of the letters which proclaim their names; a public park with anything but green grass, or shady trees, or water in it; a theatre; and two newspapers. The town is laid out as though it were some day to be the metropolis of the world, and the ludicrously low buildings at the corner of the preposterously wide streets seem to proclaim what a farce the notion is, and look as though they were set down there for the sole purpose of keeping up the joke.

Next morning at 7 A.M. the coach came round, and the passengers who had been waiting at the corner of the street dashed at it to secure places. I contrived to obtain a seat behind the driver. The coach, which is best described as a sort of cross between an elongated English stage-coach and a continental *diligence*, was crowded, some half-dozen of the passengers finding their seats on the roof. We are off with as little delay as possible, and with as good a team of horses and as good a driver as you could wish to see—we are jolting and rocking over an Australian by-road, if road that can be called which is in reality little more than a space of ground, generally railed off on either side, and allotted to the passing backward and forward of vehicles. Such at least was our road, and on either side was the low scrub which originates the term 'bush,' with here and there a 'hotel' or a shanty. A line of telegraph is along the side of the road, and every now and then there is a homestead, and a little agricultural land. My travelling companions seem very quiet, in fact they have just the distant silent manners which distinguish our countrymen. Next me is a German, who is the first to talk; and in front is a Dane. Gradually the German and Dane get into conversation, and the one says that he has been many years in the colony and never seen any rush like this one (that is, the Spring Creek rush). 'It reminds one of the old days of 1851,' he says in his enthusiasm. We pass flocks of sheep and herds of goats, and some heavily laden carts and private conveyances, all bound for the same goal as ourselves. The goats,

Digitized by Google

the German informs me, are an excellent speculation, for they require but little food, and will sell for from two pounds to two pounds ten shillings per head.

Our first change was at the township of Campaspe, seventeen miles out. We pulled up opposite the *Raglan Hotel*, a low brick building, with a bar and a side-room, built as though it were intended to be the corner of a street of houses. Opposite was the *Campaspe Hotel*, and there were a few little shanties in sight. These and one policeman make up, to all appearance, the township. We have one drunken miner, who gets down at every 'hotel' or shanty at which the coach stops, in order to have a drink. All those who have any experience of coach-travelling will have observed that there is always one drunken man on the coach—the source of diversion to some of the passengers, of annoyance to others, of anxiety to his friends, and of endless trouble to the driver. He always loses his hat, and the coach has to stop while he picks it up. He is never ready to get on the coach in proper time, and yet he is always provokingly present, or 'coming,' or to be heard of, and so there is never the faintest chance of getting rid of him. I never could make out about this one drunken man. Why is he always there?

At mid-day we arrived at a small town called M'Ivor, where we changed coaches, and, waiting for an hour, had a capital dinner at a comfortable and good hotel. Heathcote, as M'Ivor is more properly called, is thirty-two miles from Sandhurst, and is pleasantly situated with hills behind it. From this point we were despatched in two smaller coaches, and, leaving the enclosed straight road, we took to a 'bush-road,' which signifies, being interpreted, no road at all. The character of the 'bush' had materially altered; for now there were nothing but gum-trees, and there was almost an entire absence of underwood. These gum-trees are a very distinctive feature of Australian scenery. Bare, haggard-looking trees, with tall gray-and-white stems, and scant foliage, they look quite desolate as they stand up out of the parched ground—just as though they were on the point of dying for want of water. Driving four or six horses through the bush is no easy matter. It requires great determination and skill in the coachman. He has first to avoid one gum-tree, then another, and often he slips in between two trees, where there is just room for the axles to clear without touching either side. During this portion of the journey, I was inside, and we were all at first kept in a constant state of terror lest the rickety roof should fall in upon us; for there were three or four miners on the top of it, and it swayed about fearfully. I had here an opportunity of seeing more of my fellow-passengers. They proved to be an agreeable set of fellows, and there was an absence of rowdyism about them which was to my mind very remarkable. They were like sober-going English workmen. They chatted, and *chaffed* each other, and their talk was of this and that man, what he had done, and how, &c.; but there was not the swearing, or obscene language, or drunkenness I had expected. The dust was something frightful, nearly blinding one. We passed a township called Costerfield, where quartz mines are at work getting gold and antimony. We also passed numerous 'hotels' and shanties of all kinds, at some of which water was being sold (at twopence, I believe, per glass). At length, at about five o'clock, the first few shanties of the Rush became visible.

In a few minutes we passed a turn, and pulled up before the *Criterion Hotel*. There was the new town—a wide long straight street, with the oddest collection of little shanties and huts on either side of it. There were stores and 'hotels' without number—absurdly diminutive, and with absurdly large names stuck over them. The *Golden Age*, at which I put up, is a specimen. It is a little shanty of canvas and wood. A bar, and a slip off it, and a dining-room behind, make up the whole of the accommodation. Then there are 'concert-halls' and billiard-rooms. Over many of the buildings, flags are waving; and altogether, looking down the street, you have one of the quaintest scenes you can conceive. There are, it is computed, from ten thousand to twelve thousand people at the Rush, which is put down as being about nine weeks 'old;' that is, nine weeks since the *lead* of gold was established. The first coach to the Rush was started on November 25th. At that time there were not four hundred people there. A six-horse daily coach was started on the 2d December, which, for the last month, had been taking up from forty to fifty passengers a day. There is now also a coach running direct from Melbourne, and it is said that all the places on it have been booked for a fortnight to come. While the coaches to the Rush are loaded with passengers, but few return, which would seem to indicate that those at the new diggings do well. Fancy a town of ten thousand inhabitants springing up in ten weeks! And not an unimportant town either; for it can boast of its five banks and its newspaper. I think two have in fact been started. And the Melbourne *Argus* and *Age* have a branch-office there. And it has its 'valuable frontages' for sale, and 'eligible sites' for business. And gentlemen advertise for 'other gentlemen of capital to join' them 'in a remunerative undertaking.' There is of course a telegraph office and a post-office, and a police magistrate; but there is not as yet a paving and a lighting committee. So the 'street' consists of white sand overlaid with dust exactly four inches deep; and as you walk *through* it, you step even more noiselessly than through thin fresh-fallen snow. The huts and shanties are made, some of wood, with galvanised iron roofs, and some of bark; and there are some odd little bark tents, and there are some canvas tents, and some rough huts, made of branches of trees. The bark is taken from the gum-trees round, and seems hard and durable.

They understand well the laying-out of these towns in Australia; and everything is done on a system. As soon as a Rush is established, a government surveyor is sent down, and surveys for a street. Any person who takes out a business-licence, the cost of which is five pounds per annum, is 'entitled to an allotment of ground having a frontage of thirty-six feet, by a depth of one hundred and fifty feet.' He has then to pay the fee to the surveyor, and this makes up the total of his land expenses. As the place increases, these frontages become in some cases very valuable, and are sold and bought freely. Some uncertainty, however, always attaches as to the position of the main street; for the direction of the *lead* of gold

Digitized by Google

may alter, and then the street will be sure to follow it.

The miner's rights are thus arranged: Any man who intends mining has to take out a miner's licence, which costs him five shillings. He can then peg out a space of ground of an extent fixed by the legislature. Two men are entitled to a space seventy feet square, where the sinking exceeds fifty feet, as it does at Spring Creek. There are certain regulations to insure the genuine working of the *claims*, in order to prevent their being taken up as mere speculations; for instance, the claim must 'be in full work within forty-eight hours of the time of marking,' or it is deemed an abandoned claim, 'and may be awarded by the warden to any other miner.'

Behind the street, I saw the different sinkings in full operation. The process is very simple. A shaft is sunk, about six feet long, and two or three wide. A simple windlass is set up, and one of the miners goes below, while the other tends the windlass above, drawing up the auriferous earth in a bucket. One of these miners informed me that he had been at the Rush for seven weeks, and had already sunk two shafts unsuccessfully. His present working was, however, proving productive. The utmost quantity of gold produced at the Rush was two ounces to a cartload of earth. One ounce was considered very good, and even half an ounce would pay for working. The chief cause of the expense of working at Spring Creek is owing to the want of water. My informant was paying nine shillings per cartload to the puddlers for carting the earth to the water where it is washed. The water was three miles off, and this, through the heavy sand, would be no trifling distance. Owing to this expense, and in hopes of a supply of water being eventually brought to the Rush, many of the miners were stacking their *wash-dirt*, as the earth is called. I was told that the very utmost two men could work in one day was one cartload of earth, and that gold was fetching three pounds eighteen shillings per ounce.

With the exception of water, which was selling at the rate of twopence a bucket, everything appeared to me to be tolerably cheap. Meat was at fourpence-halfpenny per pound, and bread at ninepence per quartern loaf. Slops were very cheap and plentiful. Notwithstanding the dearth of water, 'drinks' were at sixpence each; and I paid one shilling for each meal I had, which, although the fare was rough, cannot be considered to be extravagant. In fact, it appeared to me that trading had been if anything rather overdone. There seemed to be abundance of competition in every department.

The evening was very quiet. There was a 'Cheap John' selling wares of all kinds, and attracting a crowd around him, and apparently doing a good business while amusing the bystanders with his jokes. Next him was a man selling plums at three pounds for one shilling. Then there was an individual with a table before him, and a pen and ink upon it, and he was calling upon people to sign a petition to the government praying for the establishment of waterworks (water might easily be brought from the river Goulburn, eleven miles distant). 'Now then, gentlemen, sign for the water. Any one not signed for the water? Come along, gentlemen; come along.' Beyond, was a concert-hall, and I could hear an *artiste* singing at the top of her voice; but I could not see inside, for the place was crammed to suffocation, and a few people standing on the tubs outside just to get a peep in. I heard but little foul language, and did not see a single drunken man. There was at this Rush the same entire absence of rowdyism which I had noticed among the diggers coming up on the coach; and the fact that the whole town of twelve thousand people is kept in order by eleven policemen, seems to me to speak volumes for the good behaviour of the people. The demeanour, in fact, of the miners appeared to be that of steady sober-going men, working for their daily bread. How far this has been the case at other rushes, I have it not in my power to say; but I did hear one man observe that these were the quietest diggings he had ever been at. It suggests itself as a plausible hypothesis, that gold-mining in Australia has now been reduced to a sort of science, which was certainly far from being the case in the early days of Australian gold-discovery.

I slept, or rather made believe to sleep, that night on a table in the *Golden Age*, and was not, I own, sorry to get back the next day to the *Shamrock Hotel* at Sandhurst, to wash off the 'rush' dust in a hot bath, and to get a night's rest between clean sheets.

PATTER.

'PATTER' is a verb that has known better days. Chaucer used it to describe the rapid utterance of a speaker, who, 'rising with his subject,' as we say, jaculates a stream of words quick and sharp, as though his crowding thoughts made a rush for his mouth, and elbowed their way out helter-skelter. Now-a-days, the poor verb has come down very low—a poor outcast, turned literally into the street, nearly naked, and shorn of all its meaning. The monotonous drawl of the professional beggar—the glib talk by which the cheap Jack and the showman get their living on the highways, and the cries of the streets—patter is come down to mean only these. 'Clo—clo—O' clo!'—'One a penny, two for tuppence, all hot cross-buns.'

> If you 'll bring your rags untoe my oort,
> I 'll find the money to pay you for 't.

These are patter. The poor word wanders the streets now with its twin-brother—for those who patter with their mouths always patter the pavements on foot.

Saturday night in a country town is a great night for patterers, who pursue their (very literal) calling in the street. If every night were a Saturday night, the patterers, who depend on the voluntary system, would earn more money than many a stipendiary curate. The puzzle is, what becomes of them all the rest of the week, for they are gone from the streets as entirely as last year's flies, though certain as the latter in July to buzz into life again next Saturday.

Threading one's way through the crowd in a long lane of greasy streets, impeded by barrows of nuts and oranges, and stalls of itinerant venders of miscellaneous quackeries, all lit up with flaring paraffine lamps, that give a lurid air to the griminess, the voices of the patterers create an indiscriminate hum, like a great headache. Bit by bit,

Digitized by Google

becoming accustomed to the hum, one can presently pick out the voices.

Here is a great hulking blind man—blind, that is, like Zobeidè's calenders, of one eye; the other eye strictly attending to business. His voice is harsh, nasal, and saw-like, as he twangs out, much as if it were the chorus to a comic song: 'Please to lay out a hapney with a poo-wer blind—with a poo-woo-er blind—with a poo-woo-woo—with a poo-wer blind.' His affliction has been so far 'profitable' as to enable him, by the sale of very bad bootlaces, to keep almost out of debt at the *Queen Mab* public-house, where he subsists, when he is at home, mostly on raw spirits.

Then the nutseller breaks in: 'Oh, my lord, here's nuts! only look at 'em! O lord, here's a shovelful for a hapney!'

Another blind man—with a tray of lardy cakes—a sleek and genial blind man, sings his patter to a drawling chant. It is this: 'Please to buy a nice hot cake of a poor Christian blind;' but the waggish boys having for years mocked his drawl, and transposed the words of his appeal, he humours them, and obtains patronage, by singing it wrong too: 'Please to buy a poor blind cake of a nice hot Christian;' and, 'Please to buy a nice Christian cake of a poor hot blind.' It sells his cakes.

The street-doctor always draws. The ready flippancy with which he delivers clinical lectures on anatomy, makes his hearers feel as though he had their insides at his finger-ends. 'There's not a lady or gentleman here present,' says he, 'but is probably in need of medical advice, if they only knew it. And how can ladies and gentlemen know it, if not acquainted with the internal structure of the human frame? And how can they be, unless they make it a study? You feel a shooting pain for an instant in your head, arms, or legs—it's gone—you take no notice—your biliary ducts may be stopped, your veins and arteries choked up with impurities like common sewers—and you go off like the snuff of a candle, all for want of not taking advice when you didn't want it, because it is too late when you do.—This young man'—taking a small boy from audience—'has in his system no less than twenty-seven miles of veins, arteries, nerves, ducts, muscles, fibres, and sinews, as depicted on the canvas to my right. I can see by his hi that his biliary ducts is stopped where I point to in the picture with my stick. He mayn't know it, but that yaller in the corner of the hi tells me in a moment.—Is his parents now present?' A woman in a shawl is shoved to the front.—'Now, mum, I don't tell it you to alarm you, but merely as a person who has got his reputation to keep and his bread to earn; look after that young man. I'm never deceived in what I sea. If you like to take a pennyworth of pills on my recommendation, I shan't be ashamed to see you next Saturday. Bees-wax and honey combined—ground ivy and dandelion root.'

There's the man who sells the wondrous grease-removing, stain-eradicator, in penny tablets, and who likes to get butcher-boys' collars and caps on which to display its wondrous powers. He has a tray-full of his penny cakes on a rickety stand, lighted by four tallow-candles, wrapped round with brown paper, to prevent their guttering in the wind. Notwithstanding he has cleaned some half-a-dozen collars and caps gratis, the small audience shew signs of shuffling away without purchasing. Gazing rather spitefully at his wasting candles, he makes one final but useless appeal to the people, and then says with determination: 'Now then, will you buy, or won't you? Because if you won't, just say so, *and I'll blow my lights out*—if I don't ——' And executing this fearful threat, he performs the happy dispatch to another and perhaps a better sphere of usefulness at the other end of the street.

My favourite patterer is a man with a face of sickly sallow brown, an immense comforter round his neck, and a long-tailed—I may say many-tailed—coat, for it is ragged. He is attended always by a fat baggy woman in a cloak. The man's voice is solemn and deep, the woman's, harsh and creaking, especially when she means it to be most persuasive to the public. They go about with a travelling galvanic battery, and administer artificial 'pins and needles' to the street public. The man mouths the long words with infinite relish as he describes, in a kind of cadence, the benefits he offers for a penny.

'This powerful little machine,' says he, 'entirely free from shock, is a sure cure for toothache, shortness of breath, gout, ague, rheumatism, nervous ability' (*sic*), 'and diseases of the digestive organs.' Then much quicker: 'Relieve the ed, clear the eyes, cause the blood t' circ'late in prop manner. Is there any other party would like to try the slow, mild, and pleasing sensation at won penny?'

When a patient is on the rack, he dilates on his sufferings, and enlarges on his agonies, by way of encouragement to the rest of the public. It is also to be noticed, that if the patient is a boy of ten years old, he describes him to the public as 'the young man;' but if a boy of fourteen, he refers to him as 'the gentleman.'

'The gentleman will take notice' (or 'the young man,' as it may be) 'that the signal for stopping the power of this beautiful little machine is given by the word "Woe!" The gentleman will remember, that at the word "Woe!" the wole of it will be immediately stopped.' (Aside to boy): 'Now you young stoopid, don't you go a-letting go the handles when you've had enough of it, but just say "Woe!" Do you understand?—Very well, then; lay hold.' (Aloud to the public): 'The slow, mild, and pleasing sensation is now passing through the gentleman's system at a pressure of ten degrees, giving the greatest of satisfaction' (turns the button). 'The gentleman is now enjoying the electric fluid at a power of *twenty* degrees—now of THIRTY' (the gentleman is holding his breath with the 'enjoyment,' his teeth clenched, and his eyes staring wildly)—'now of FORTY' (the gentleman's hands clutch the handles very tight, and tremble up and down with the slow, mild, and pleasing sensation, while his feet dance under him). 'The gentleman is now going to enjoy the full power of this invigorative little machine.—Remember the word "Woe!" sir.' But with woe unutterable depicted on his face—with 'Woe!' screeched from a mouth formerly paralysed by pain, and now suddenly opened in panic, the boy drops the handles, and the 'wole' of it is immediately stopped.

Very often, two 'gentlemen' or 'young men' partake together of the 'slow, mild, and pleasing sensation,' under agreement that the one who first cries 'Woe!' is to pay for the woes of both.

The last time I saw the travelling shock-

Digitized by Google

merchant, he was assuring a poor drabbled woman, in answer to her inquiry, that his machine was invaluable as a curative for headaches 'when people had been out on the loose.' So she fetched her husband, and treated him to a pennyworth. He bore it meekly, with a resigned and somewhat sodden aspect. When it was over, he said he thought it had done him good; and he went and had twopenny-worth of gin.

ROBERT'S CAPITAL HIT.

IN THREE CHAPTERS.—CHAPTER II.

'ABOUT a gold mine, Robert!' I said. 'I don't think I like the idea much. Of course, I am very ignorant about things of the sort; but it *does* seem to me that if there's anything good in the way of gold mines going, it would not be likely to come your way. I hardly think you are what you and Mr Shaw call "big" enough for that kind of thing. Are you, Robert?'

I said it timidly, for this was one of the few points on which it was rather easy to vex Robert, and I did not like vexing him on any. He took it very well, however, and gave my arm an affectionate little squeeze, which was very reassuring, as far as convincing me that he was not annoyed with me went, but which also made me feel that he was what his mother called 'new-fangled' with the scheme, and that I should not find him easy to be persuaded.

'Not in the ordinary way, my dear, certainly,' he answered. 'You are quite right in supposing that really good things of this kind are not thrown in the way of little fish; but this is quite a special thing, and my having a chance of getting a pull out of it is entirely due to Wainwright.'

'Who's Wainwright?' said I.

'Why, don't you know? John's brother-in-law, or, rather, John's sister-in-law's husband.'

'Yes, yes. I remember now. But is he a safe person to have anything to do with, Robert? John and Mrs John don't seem to like him.'

'Did you ever know them seem to like anybody who was not prosperous and important? Did you ever hear John or his wife speak well of anybody who was so unlucky as to have been obliged at any time to ask them to do him a favour? Not that Wainwright ever wanted or got anything from John; but that Mary Anne's first husband, who married her, as Wainwright married her sister, without a sixpence, and was a jolly good-natured fellow, "stood to" Wainwright when he had very hard lines of it; and Mary Anne looks upon every shilling given, lent to, or expended upon any other person, as a direct injury to her. I believe there was some jealousy at the bottom of all this. I believe she took it into her head that poor Williams thought he had married the wrong sister, and Wainwright the right one, and the notion did not improve her temper.'

'I can't wonder at that,' I said, for the *esprit de corps* was aroused in me, and I could think it rather hard, even on Mrs John, that her sister should be preferred to her. 'I don't blame her for being angry at such a thing as that—any woman would be, and ought to be, that's more.'

'Don't be vehement,' said Robert laughing, 'though it's decidedly becoming; and let's take a turn on the common. We need not go in yet; I want to tell you about this. It was all nonsense, all temper on Mary Anne's part; poor Williams had no such stuff in his thoughts; he restricted himself dutifully to making money, and keeping the peace with his wife. But Mary Anne can't bear Wainwright—though it was through him she first knew John—and she snubs him, and neglects her sister. However, Wainwright and I have become great friends lately, and he has got a good deal of business to do for Dorrison, the contractor, speculator—I hardly know what to call him.'

'You mean the man who seems to be a director of everything—extract of meat and patent stoves, ships' signals and tasteless medicines, street railways, humane chimney-sweeping, and gas that does not cost anything, and is warranted not to consume the air or smoke the ceiling.'

'You seem to have followed Mr Dorrison's career pretty closely, Martha. Yes, that's the man. He is wonderfully clever; but his luck surprises me more than his ability. He goes at all sorts of things, and they all succeed, at least as long as he has anything to do with them. Wainwright has tacked himself on to Dorrison's skirts; and though it was rather risky, it has turned out pretty well. There are very pretty pickings for a solicitor with nothing surprising in the way of practice, in the desultory business of a man of that kind. Wainwright is a very good fellow, has a great regard for me, and is inclined to help me, besides, as I believe, because John snubs us both.'

'And how is he helping you in this matter of the gold mine?'

'Thus,' he replied. 'The gold mine in question, which has a very big name, no less than Campo de los Angelos, belongs to an eccentric sort of fellow, a man called Disney, who has seen life enough to fill a century, and gone through adventures enough to stock a circulating library. He is a very queer fellow, quite a character, and, I daresay, anything but a good one—not in the least a gentleman; sometimes with heaps of money, which he spends with absurd recklessness; sometimes in great straits, or, as he elegantly calls it, "up a tree." He was in this last condition when Dorrison got hold of him, through Wainwright, and discovered that the embarrassed Californian was the possessor of the gold mine of Campo de los Angelos, but had mortgaged it, and mismanaged it in all sorts of ways—had, in fact, "bedevilled it," as people say of things which are brought into a mess by pure human stupidity. Thereupon Dorrison proposed to buy the mine, on very advantageous terms for himself, to get up a company to work it, and to free Disney from his present embarrassments. He has been living about in Paris, and Naples, and London, and now he wants to get off to New York, but cannot, for want of money, and so Dorrison has got hold of him. There's no doubt about the value of the mine; and I am convinced it will be a splendid thing; and Wainwright is going to give me a capital chance with it.'

'In what way?' I asked. I confess, I felt very uneasy; and I suppose that feeling made itself audible in the tone of my voice.

'Now, I know you are frightened, little woman,' said Robert kindly, and giving my arm another squeeze, so apparent, that two schoolboys, who were passing by, grinned expressively at one another, indicating derisively that they considered us as 'keeping company.' 'But there's nothing to

Digitized by Google

be afraid of. I have never had such a chance as this one. Wainwright has introduced me to Mr Dorrison; he is a curt business-like man, with rather bad manners, but straightforward enough. And I rather think he has taken to me.'

'I should think so, indeed!' I remarked parenthetically.

'He cannot spare Wainwright to look after this affair, there is so much on hand just now in London, and he wants to settle it with Disney as far as he can on the quiet—there are some men, in Dorrison's own line, who would try to cut him out, if they knew how hard up Disney is—and he is going to send me to Paris, to look into the state of his affairs there, ascertain what his debts really are, make the best arrangement I can with his creditors, and get him to conclude the sale of the mine off-hand. Disney's house and furniture in London have just been sold, and his creditors here are getting savage. Wainwright will buy up the debts here, and I hope to do the same in Paris.'

Robert was so much elated, that I do not think he remembered what unpleasant news it was to me that he was going away, to leave me with his mother, in suspense and anxiety. I did not remind him of that aspect of the matter, however. But I did say: 'I cannot think it quite a right thing, Robert, to speculate on the folly and embarrassments of people. If this Mr Disney wasn't in money troubles, Mr Dorrison would have to pay much more for the mine than he will now have to pay. Don't I understand you so?'

'Precisely,' said Robert; 'but it is all quite fair, notwithstanding. I don't deny that it seems hard, but that's all in the way of business. Disney wants to get rid of the mine—must get rid of it, in fact, as the only way out of his difficulties—and it suits Dorrison to buy it at the price; it wouldn't, if it were dearer. Now, if I can manage the affair well, I shall be handsomely paid, and shall have secured Dorrison's interest for the future, to say nothing of my chance when he brings out the company.'

'The company? What company?'

'Why, the Mining Company, to be sure. He will do the thing on a grand scale; and, rely upon it, shares in the Los Angelos Mine will be very hard to get, very soon.'

'But you will get some?' I asked in a tone which, I was conscious, was not jubilant.

'O yes; that is part of the bargain; and, Martha, if it turns out very well, it would be a splendid investment for that five hundred pounds!'

'No, Robert!' I said vehemently. 'You promised me you would not touch that. When we had to give up our house and everything, you promised me you would leave that money in John Hackett's hands, and that no one but myself should draw it out. You told me you would leave it entirely out of account in any plans for the future, that I should have the security of feeling that that money was always there, and so we could not come to very signal grief.'

'It seems to me,' said Robert, 'that you are rather given to expecting that we shall come to signal grief.' He said it, smiling at me, and with the utmost good humour, so that I felt a little ashamed of myself. 'But, if you don't like it, and you feel so strongly about it as all this, the money shall not be touched. I will not ask you to rely on my judgment again, until I have had the chance of proving to you that it is reliable.—But now, about my going to Paris? You won't mind it much, will you, darling?'

'Certainly, I shall not mind it. I know you will not be away longer than you need; and I shall be quite satisfied to make the best of it, if it is to be.'

It may seem very surprising and foolish that we should have regarded a journey to Paris as a matter of any importance, but we were quiet, unfashionable people, perhaps even behind *our* time, which was ten years (which is a century) behind this present epoch, at which Robert and I have just executed a European tour with perfect composure and satisfaction. After we had talked a little more, and Robert had told me he was to have his final instructions on the following day, and to start on the third, we went homewards. My mother-in-law was not so unpleasant, I thought, as she had been all day. Best-parlour parade being over, we dined in the ordinary sitting-room, and she did not contradict or sniff so much as usual. She did indeed announce an impending visit to Mrs John, which was rather dreadful, and for the day of Robert's departure also; but I did not mind it. I was thinking about the gold mine, and Mr Disney, and what queer things 'business' and speculation were, and how strange it was that women should ever really wish to be practically mixed up in such affairs—of how much nicer it was to stay at home comfortably, and be taken care of, and just have enough money to settle all the books every week, and to feel perfect composure at the advent of the tax collectors and landlord's agent, together with other thoughts of a like commonplace, feminine, and unambitious character.

My mother-in-law took the announcement of Robert's intended journey tolerably well, for her. 'Legal business' was a legitimate, if not an expansive explanation of its object; and when she had expressed disapproving astonishment that English lawyers should not find business enough in their own Christian country, and her conviction that no good ever came out of meddling with foreigners—ideas on which Robert offered no comment—she relinquished the subject.

'The great point,' Robert repeated, after he had talked about Mr Disney and Los Angelos as long as he could keep his eyes open, 'is to get the start of every one else. We have it so far; but a chance like this cannot long be kept quiet; and I understand Disney is just the kind of man to blab about his affairs to everybody. It is a good thing he is not in London, or Dorrison's offer would be known all over town, and there would be scores ready to outbid him.'

'Would Mr Disney sell the mine at all to Mr Dorrison, or to anybody, if he were not in difficulties?' I asked.

'To be sure he would. Don't make yourself unhappy with the notion that we are taking advantage of the miseries of a fellow-creature in distress, to get valuable property out of him at an alarming sacrifice—it is nothing of the kind. Disney is one of those reckless, wild, semi-savage, reckless, irrational fellows who seem to be a peculiar product of this age, but perhaps have existed before it, who never keep to anything, and are no sooner embarked in a project, than they want to throw it up, and go into something else. Disney would have been safe to sell the mine at anytime, only

Dorrison would probably not have bought it, and I should never have had this chance.—Have you any further scruples, Martha?'

'Certainly not,' I replied. And, indeed, I had not. I never really suspected that Robert would lend himself to any transaction in the least of an equivocal nature, but I was glad to have it explained to me. It is to be hoped all women are not so stupid and so timid about things of the kind as I am. How I longed to say to Robert that I wished he could get a certain sum for his services, in this matter of the gold mine, a nice sum, to be paid regularly in instalments, the first instalment at once! I always wanted everything to be a certainty, and to be paid at once! I never had any opinion of shares; I had never known them to do anything but go down, just when it was most desirable that they should go up. But I did not venture to say what I felt on this occasion.

About that sum of five hundred pounds which had been alluded to in the course of Robert's confidences to me, I had better be explicit in this place. I have already said that I had had a very small fortune to bring to Robert when he married me, and that he had been unfortunate in the uses to which he had put it. Our marriage had been an unceremonious affair, truth to tell, a very self-willed affair, into the particulars of which I do not choose to enter, because there are eyes in the head of a certain exceedingly precious little individual, very bright, beautiful blue eyes, which may rest upon this simple narrative, and which I should not wish to meet with the record. Not that anything self-willed, disobedient, ever so slightly mutinous or froward, is to be apprehended from the possessor of those bright blue eyes; oh, dear me, are not our children paragons of all perfection, flagrant examples of the avoidance of every pit into which the feet of their parents have stumbled! Nevertheless, I am not going to set down in black and white how Robert and I married without settlements, because I don't intend that any young persons in whose matrimonial prospects I may hereafter have an interest shall do likewise. There are very few Robert Herons going, in this day, to the best of my knowledge and belief. That five hundred pounds, however, had nothing to do with the little fortune I brought Robert, and which he disposed of, to the best of his judgment, but unfortunately, owing to the odious wickedness of the unprincipled people who misrepresented things to him so infamously. This money was a legacy, left me a short time after my marriage, and when we were already in money troubles, by my Uncle Nicholas, my mother's only brother. He did not bequeath to Gerty any legacy; Uncle Nicholas knew about her engagement to the lieutenant of marines, and highly disapproved of it. He did not know that Robert was in pecuniary difficulties, or I do not think he would have left me the five hundred pounds, for he liked moderately prosperous people, and had an honest good-humoured scorn for those who did not 'get on,' in his sense of the word. By the time this money came to me, I was thoroughly frightened, and we had made up our minds that our house must be given up, and the Clapham arrangement entered into. And here I wish to record that Robert had not the least notion of what it cost me to agree to and carry through that arrangement, and that I do not believe any man ever does or can realise the sufferings of women in such matters. The money was not enough to get us out of our difficulties, and yet it was enough to tranquillise my fears, and give us a feeling of help at need, of a stay in the background. Robert left the money in the hands of Mr John Hackett, an old friend of my father's, and explained to him that it was to be kept in trust for me, and considered exclusively mine. 'As much your own as if you had not married me without a settlement,' Robert said smiling; and I felt very much relieved by the arrangement, and very happy about it.

Nothing that had passed about the gold mine made me understand so fully how much Robert's mind was running upon it, and the confidence and ardour with which he had taken it up, as his allusion to this five hundred pounds, his hinting at its employment in the enterprise. I was glad he had abandoned the idea, though I certainly regretted having spoken so sharply about it. He went off into the City the following morning in very good spirits; and I made the few preparations necessary for his journey as cheerfully as I could, under the grim and gloomy superintendence of my mother-in-law, who was not, I could not help thinking, altogether free from a suspicion that there might be a little pleasure in addition to 'business' at the bottom of this trip of Robert's. Thinking this, I ventured to say I hoped Robert would have time to see something of Paris, would, in short, enjoy himself as much as possible. But she did not like that view of the case. Business was business, and pleasure was pleasure, and for her part she did not 'hold with' any Christian Englishman's amusing himself in foreign parts, away from his wife. I will do my mother-in-law the justice to say she stood up for the rights and privileges of women, and was a stanch stickler for the domesticities.

In the evening, I went to meet Robert as usual. The weather was beautiful; the trees in full leaf; a light shower had newly sprinkled the roads, allayed the dust, and brought out all the early summer fragrance. I had often heard how beautiful Paris is in May, and was very glad Robert was to see the fair city. He was, as usual, punctual; and, as usual, we walked away together. All was right: he had had a final interview with Mr Dorrison; had received full instructions, and was sanguine as to the result of the negotiations he was empowered to carry out.

'Disney is a very troublesome fellow, I am sure,' he said. 'I expect to have much trouble in bringing him to the point. People say you never get quite the truth out of any man about his debts, and I suppose he is no exception. He is eccentric too; crotchety and slippery to the last degree. And Dorrison seems to think we shall be very lucky if we do not find him coquetting with us, and then, at the last moment, throwing us over for somebody else.'

'But I thought you said nobody but Mr Dorrison was moving in this business?'

'Nor is any one, to our positive knowledge; but Dorrison thinks, from the shifty tone of Disney's letters, and certain other indications which have come under his observation, that there *is* a party in communication with Disney—no other than that queer old fellow Sloane, who lives at Sydenham, and whom we have met two or three times at John's.'

Digitized by Google

'I remember—the deaf man who mutters to himself, and screams at every one else. Is *he* a speculator?'

'Yes; and a successful one, or we should not have met him at John's. If this is the case, he has probably had a hint from Mrs John, who has, I suppose, found out, from some incautiousness of Wainwright's, what game was on the cards. I have often wondered at Wainwright's telling John and his wife about his business as he does, when he must know they do nothing but sneer at him.'

'But,' I said, 'I think that is the very reason. Mr Wainwright is a weak sort of man, who cannot bear to be sneered at, even by people whose contempt ought not to be esteemed an important misfortune; and as he knows they regard him as an idle, loafing sort of person, simply because he is not rich, he is not unnaturally, considering he *is* weak, glad to make the most of any moderately profitable business he may have to do.'

'Very likely you are right; but if so, his weakness may do mischief. At all events, it cannot be helped now, and I have not time to find out anything about it. I hope I shall not find any one in the field; but if I do, I must only outbid him, if the game be worth the candle.'

'What is your first move to be?'

'To find Disney—we have two addresses, and he's sure to be comeatable at either—and to state to the best advantage Dorrison's terms. He will clear off Disney's liabilities, give him a certain sum down, so as to start him off to New York, and agree for the payment of the purchase-money at certain dates, provided the reports which shall be made by the persons whom Dorrison will send out to inspect the Campo de los Angelos be quite satisfactory.'

'But if they are not, what becomes of all the money Mr Dorrison will have paid? Mr Disney is not likely to give it back; and if he does not buy the mine in the long-run, it will all have been spent for nothing.'

'My dear Martha,' said Robert, 'that little calculation of yours is remarkably feminine, and exceedingly wise. But the essence of speculation, and indeed of more regular business, more amenable to routine, is, that you must make up your mind to throw out sprats, if you would catch whales. Nothing venture, nothing have. If the mine of Campo de los Angelos is what Dorrison believes it to be, he will never have made a better investment in his life than the money it will have cost him to do the thing quietly, keeping it away from public competition; and if it does not, why, such small losses are all in the day's work of a man like him.'

'But, if the mine does not turn out as well as Mr Dorrison expects, what about *you*? Of course, I cannot but think chiefly of *you*, Robert. In that case, all your trouble, and your journey to Paris, and going away from me, and—and—everything, will be all no use, won't it? And what does Mr Shaw say to it?'

'Oh, never mind him. Shaw is a very good fellow, and thinks, with reason, that his best place is at the office, looking after the odd six-and-eightpences—very odd they have been up to this time, I am sorry to say. He does not want to interfere in anything of this kind. And as for me, it cannot be a loss to me, for I shall have all my expenses and a liberal fee from Dorrison, if nothing comes of it; and if it turns out well, I shall have made a capital hit.'

Something certain was to come of it, then, at anyrate. This explicit statement elicited from Robert, my spirits rose. I did not tell him so. I felt I *must* provoke him, however long-suffering he might be, by such an avowal; but in my heart I thought a great deal more of the liberal fee, which was a certainty, than of the capital hit which 'might' be made.

Robert went off on his journey the next morning; and after our early dinner, my mother-in-law departed, in the lop-sided brougham—the horse looking more than ever repulsive, in consequence of his having rubbed some hair off his tail, thereby establishing a bare patch to match that on his side; and the coachman more than usually sullen and odious. The day was beautiful, however; and as we lumbered heavily along, I enjoyed the summer weather, followed Robert mentally on his way, and felt extremely glad that one of Mrs Heron's peculiarities was a dislike to talking in a carriage. The visit was not more than ordinarily tedious. Robert's trip to Paris was of course commented upon, and loftily pronounced by Mrs John to be 'very much calculated to unsettle a young professional man;' as if Robert were a naturally dissipated and unprincipled person—not to be trusted away from the wholesome restraints of office-hours and Clapham evenings. But she charitably hoped Robert had made a profitable business connection, as he was employed by a person who required him to go 'abroad' in his service. I replied that I hoped so, that I believed Robert expected it would prove so, but said generally as little as possible—a line of tactics, on my part, which did not please Mrs John, who was insatiably curious, but induced her to remark, spitefully, that it was evident Robert adhered to the masculine belief that women were not to be trusted with business matters, and to the masculine practice of keeping his affairs to himself. I did not contend the point with her. If she chose to regard me in the light of a victim—esteemed unworthy of my husband's confidence, in consequence of the inferiority of my understanding—she might do so. I was perfectly satisfied with knowing better, and knowing also that nothing was less satisfactory to Mrs John than my imperturbable calmness on such occasions. It was rather hard on John that I declined to lose my temper, for Mrs John always lorded it over him frightfully, when she was more or less defeated in her little manœuvres; and he not unfrequently had a bad time of it when my mother-in-law and I had been to Acanthus Lodge, Kingston-on-Thames.

I did not expect to hear from Robert for two days, and I expected that his first letter would contain little more than the announcement of his arrival at Paris. In order to make things as little unpleasant for me as possible, he had promised to write such letters as I could shew to his mother, and to put all the private intelligence about the 'little bit of a venture' on a separate sheet. The first letter came, and merely announced his arrival, and that he had put himself in communication with the person with whom his client's business was to be transacted. This letter had no enclosure, and its vagueness made no impression upon my mother-in-law. It was quite in keeping with Mrs John's theory respecting the degree of confidence

Digitized by Google

in matters of business of which I was held by Robert to be intellectually worthy. But the third envelope had a tiny sheet of very thin paper, closely covered with writing, inside the ostensible contents; and I escaped as soon as I could from the breakfast-table to my own room, to peruse this document in peace.

I had not read six lines of it before I saw that Robert was disheartened. He had found Mr Disney more unmanageable, more flighty, more unreasonable than he had expected. He could not get him to settle anything definitely—he would, and he would not. He acknowledged that he must sell the mine, but it had been so badly managed as to have decreased seriously in value, and that he had been going on in so reckless a fashion that he could not hope to set his affairs right at any less cost than the immediate sale.

'All this,' Robert wrote, 'I have told Dorrison, who, by the way, has gone off to Scotland about some tremendously weighty undertaking in iron ship-building in the Clyde—and also that I am sure, from Disney's manner, that some one else has got hold of him, and he is shuffling in this way in order to see which of the two offers is the better. I have very little of the detective faculty, but I have scented so much, at all events; and I strongly suspect that when he kept me waiting an hour for him yesterday at one of his two addresses, he was seeing somebody else on similar business at the other. He is a reckless being, but at the same time slippery and uncertain. However, Wainwright knows all about his liabilities in London, and I am getting to know about them here; and if we can arrange them on decent terms, and get him to take a reasonable sum, and sign the agreement for the sale, all will be well. By one of those accidents, which I daresay are not so very uncommon, if one only knew, I met yesterday, as he stood staring up in wonder at the demolitions and reconstructions here, which are sufficiently astounding to strangers already, but are, they say, the merest faint outline of what is to be done in that way—our old acquaintance Thaddeus Flynn. Don't you remember his being at our wedding, and going to California immediately afterwards? Well, he made a fortune there, and he seems inclined to spend a fair share of it in Paris; than which there is no more convenient sphere for such an operation. The bearing of these particulars is, that Flynn is able to give me important information about the mine of Campo de los Angelos. He knows it well, says it is of immense value, and needs only honest and intelligent management to be a splendid concern—a 'safe fortune,' says Flynn, to every one concerned in it. With this additional motive for believing in my purpose, it is not a little vexatious to be balked and puzzled by Disney's queer, unsatisfactory, shuffling ways, and to feel sure that some one is countermining me. I must have patience and prudence, I suppose, but I confess I am rather tired of this uncertainty already. I am to see him this afternoon, and will report progress. I am quite sure that there is some one in the field, whose tactics are of the same nature as ours, and I am almost sure that some one has got at his information through an inadvertence of Wainwright's.'

Robert's letter worried me a good deal. I found I had been cherishing much more hope in this case than I usually felt in anything speculative. I hated the idea of his being disappointed, after all his toil and anxiety, and was not adequately consoled by the remembrance of the certainly liberal fee, and the presumably valuable connection. I was very dull all day; I could not rouse myself; I could not try to be companionable with my mother-in-law; and when the evening post brought an announcement from Mrs John, that she intended to honour us with her company on the following day, and would have the pleasure of bringing her 'two toddles,' who were two extremely odious spoiled children, to see their dear grandmamma, but begged we would not 'put ourselves out,' or introduce unwholesome pastry at tea—then I felt I could not endure it; I must get away, I must bear the next day's anxiety somewhere away from Clapham.

'I 'm sorry I shall not be able to see Mrs John, ma'am,' I said, when my mother-in-law had read out the note; 'but I am going to Sydenham to-morrow, to see my cousin, Miss Eccles.'

'Indeed!' said Mrs Heron, with a perfect performance of the sniff condemnatory. 'I wonder you did not mention the engagement before. But, I daresay, Mrs John will not mind.'

I felt quite sure she would not, and that the two ladies would have a comfortable talk over me during my absence, so I did not make any apology. The next morning, the weather being still serenely beautiful, I set off, in a chocolate-coloured omnibus, to perform the first stage of my journey to London Bridge, from whence alone, in those days, Sydenham was attainable by railway.

LIQUID FUEL.

At a time when we are threatened with the exhaustion of our coal-fields, and just as the Admiralty is at its wits' end to produce a ship of moderate dimensions capable of continuing under steam for several days together, we are offered a new fuel, in the shape of a liquid which, weight for weight, is said to be nearly three times as efficient as coal. This liquid, or rather semi-fluid oil, is a refuse product arising from the distillation of either tar, shale, coal, or petroleum. It is one of the hydrocarbons—those bodies which are, as a rule, agreeable neither to sight, taste, nor smell, but from which the chemist, with his magic power, extracts the most beautiful colours, the most delicious flavours, and the most fragrant perfumes. Their history may be said to form one of the fairy tales of science; and after having greatly enlarged our conception of the laws governing chemical phenomena, they now appear likely to cause a complete revolution in steam-navigation.

Although it is the discovery of mineral oil in America which has of late years directed public attention towards the employment of petroleum products as fuel, their existence and characteristics have been known for ages, and they are to be found scattered over the whole of the habitable world. As already stated, the particular substance now proposed to be utilised is derivable from coal itself; and there need not, therefore, be wasted in future a single ton of that 'slack,' or small coal, which at present lies heaped around the mouths

Digitized by Google

of our coal-pits, and which is even sometimes set on fire, and suffered to burn, in order that it may be got rid of. Whether the liquid in question be derived from coal or from oil, the two processes of preparing it are almost identical. The crude mineral oil and the first product obtained by distilling coal, have the same dark colour and thick consistence. This dark thick liquid is subjected to a distillation which causes it to give off, first of all, an extremely volatile spirit, known as mineral naphtha or turpentine. Continuing the operation, a light oil, suitable for burning in lamps, is next obtained. Several other oils follow in succession, each increasing in specific gravity, until at length there is left in the retort a heavy substance, thick as tar, which requires a very high temperature to vaporise it. This substance is known as 'creosote,' and under various other names; and the advantage of using it as fuel was first pointed out by Captain Selwyn, R.N., and Mr C. J. Richardson, who, in 1865, read papers on the subject before the Royal United Service Institution. Since that time, many improvements have of course been made, both in the fuel itself and in the mode of burning it. The arrangements now generally adopted are the simplest possible, no alteration being required either in the furnace or boiler, so that in the same furnace coal or liquid fuel can be used at will. A hole is made in the front of the furnace, and in this is inserted an injector, formed of two cones, one inside the other, the inner one containing the creosote, and the outer one steam, which acts as a blast, and causes the fuel to enter the furnace in a fine spray. When once set in operation, the boiler is ready to work day and night, as long as the supply of creosote lasts, the only attention required being, to so regulate the admission of fuel and steam as to make the combustion as perfect as possible. There is no smoke produced or unburned carbon deposited, and but little flame or light to be seen, except a faint blue glow of carbonic oxide pervading the furnace.

In burning coal, about twelve pounds of air must be supplied to the furnace for each pound of fuel consumed; but in common practice this cannot be done, and consequently the amount of coal used is greatly in excess of what can be utilised. The result is that a large proportion of the valuable hydrocarbons and gas goes off in the form of smoke, while a considerable amount of heat is wasted, owing to the temperature in the chimney never being less than 600° Fahr. It has been estimated that out of every five tons of coal put on board our steam-ships, one ton at least is lost, either going up the funnel as black smoke, dropping through the bars into the ash-pit as ashes and small coal, or lodging in the tubes and flues as soot. On the other hand, liquid fuel leaves no ashes, requires no stoking, and, if properly burned, is altogether smokeless; while by means of cocks fitted to the injector, it is completely under control.

From experiments made at Woolwich and elsewhere, it appears that one ton of creosote equals in evaporative effect from two to three tons of good coal; so that by adopting it, the steaming powers of any vessel would be considerably increased, in addition to the saving effected by fewer stokers being required. The importance to ships of war of being able to keep at sea for weeks without replenishing their stock of fuel, is too obvious to need pointing out; while in the case of merchant vessels, every ton less of fuel that they have to carry is not merely so much dead-load saved, but its place can be occupied by cargo, thus adding enormously to the profits of a trip. Owing to several explosions having occurred with petroleum oils, it has been stated that to use liquid fuel on board a ship would be to imperil her safety, but this objection can only apply to the lighter kinds of oil. The substance which it is proposed to burn requires to be raised to a temperature of 600° Fahr. before it becomes explosive, and being heavier than sea-water, it could at once be extinguished, if it should catch fire. The price of creosote is at present less than that of coal, but of course, as its advantages come to be recognised, this will increase, though probably not out of proportion to its superiority as a fuel.

The experiments at Woolwich, to which reference has been made, have taken place under the superintendence of Captain Selwyn, to whom the public are much indebted for his disinterested exertions to perfect the practical application of liquid fuel. The first set were made with a boiler belonging to a small steam-launch, and terminated in ample proof being given that they had not been unwisely undertaken by the Admiralty at the request of the chief constructor of the navy. Further experiments have since been made in a marine tubular boiler similar to those fitted in the *Oberon*, and with very satisfactory results. In both cases, the fuel was burned by means of an injector, as previously described. By this method, which is known as the 'Aydon' process, an evaporative effect has been obtained frequently nearly equal, and in some cases exceeding the greatest theoretically possible. This latter result is said to be due to the decomposition of the steam employed, a phenomenon not taken into consideration in the theoretical investigation. Another plan by which the fuel is first converted into gas, and then burned as it issues from a number of apertures in a coil of iron pipe, has been patented by Messrs Dorsett and Blyth, and is being used at Woolwich in a boiler-plate furnace. A similar arrangement has been adopted at Chatham dockyard for heating the 6-inch armour-plates of the *Sultan;* and instead of seven or eight hours being required, as with coal, the plates are found to be in a condition for bending after the lapse of an hour and a half. Owing to this and to the absence of those noxious matters so frequently found in combination with coal, the estimated saving amounts to something like ten shillings per ton of metal treated. Several manufacturers have adopted liquid fuel, and are now

Digitized by Google

reaping the benefit of their foresight in the economy effected. The subject is certainly one which demands careful consideration; and if the results stated to have been arrived at are correct, a new era is opened out not only for steam-navigation, but for every mechanical process in which coal is at present employed.

A COUNTY FAMILY.

CHAPTER XXI.—SNAKES IN THE CROQUET-GROUND.

IMAGINE the feelings of domestic circles resident in the Zoological Gardens upon an occasion of one of the Carnivora being let loose, by way of experiment, and permitted to perambulate the grounds like any biped visitors, and you have a very tolerable idea of the apprehensions excited in the Blackburn family by the advent of Mr William. Perhaps we should even have put it stronger. Imagine the feelings of the aforesaid circles after nightfall! Philosophical persons interested in natural history (but dwelling at some distance from the Regent's Park) would in vain protest that there was no real danger—that long confinement and abstinence from old habits of rapine would render the creature harmless. The keepers and their families, who know him best, would have a very different opinion. Perhaps, however, his own particular keeper, though agreeing with his brethren in a general way, would make an exception in this case, just as any Englishman in the Indian army thought that *his* regiment—*his* sepoys—would be true and merciful, though every other became wild-cats. The parallel between Mr W. B. and the loose beast in question would then be complete, since Mrs Blackburn was such a keeper.

Mr Waller, too, who, among other admirable qualities, enjoyed the faculty of persuading himself that everything would turn out as he wanted it to do, had considerable confidence that by tender and yet judicious treatment this poor animal, so long accustomed to the jungle, and perhaps even to human flesh, might be reclaimed—nay, rendered docile, just as was the lion in the poem, by some Una. Mr Stanhope had no such expectation, but possessed that confidence in its good behaviour (at all events towards himself) which is inspired by the possession of a pocket life-preserver heavily loaded. Lucy, for her part, regarded the creature with loathing rather than fear; but Ellen, who had more experience of its nature, feared both for herself and others, and yet could be hardly said to loathe. She had a kind and simple heart, which found it difficult, as all such do, to judge one so nearly allied to her by the same standard which she would have applied to a stranger; a weakness pardonable enough, and yet one which has more to answer for in the encouragement of offensive persons than any other human frailty.

As for Anthony Blackburn, this unlooked-for advent of his unchanged son had been a blow from which he had but just strength to rally, or perhaps even only to appear to rally. He was not one whit afraid of him, but he did not feel himself competent to cope with him alone. He was well pleased, therefore, to have Mr Waller for his guest just now; and if it was not for the same reason that he had invited Mr Stanhope to stay at the Manor-house, it was because for that he had a still stronger motive. A union between this young man and Ellen, to which he had always been favourable, had become now not only desirable in the Squire's eyes, but absolutely imperative. If Stanhope wanted money, as he had heard, then so much the better, since it would make him the more eager, and the less likely to regard impediments. And yet, what a monstrous one was this which had thus unexpectedly arisen, and was certain every day to exhibit some new objectionable feature! Even on this account, not a day was to be lost in throwing these young people together as much as possible; and besides, there was the danger of William's disgrace—the punishment as infamous as the crime — becoming known, and blasting all Ellen's future. Sooner or later, that dread secret was almost sure to ooze out, even if this good-for-nought should not some day, over his cups, himself proclaim his shame; and then how hopeless would it be for any slip of the House of Blackburn to take root in native soil, or be grafted on a neighbour tree!

If William Blackburn had begun his new life as he intended to go on with it, it was indeed a gloomy outlook. His interview with Stanhope had, it is true, counteracted the effect of the wine he had tossed off at luncheon; but that same afternoon he had taken a 'drain' or two of a stronger liquor, and after dinner he had again drunk to excess. He did not join his father and Mr Waller in the smoking-room, but staggered off to have a pipe by himself out of doors, to the great relief of perhaps both the seniors. His condition had been too obvious to be ignored even by the discreet ex-M.P., and he alluded to it in a philosophic and abstracted way between the whiffs of his cigar, as follows:

'It 's a curious thing how any excitement of the mind is fed by wine, like flame by fuel. How many persons would fall into the error of supposing your son William to be downright intoxicated, when, in reality, he is nothing of the sort!'

'I am glad to hear it,' returned the Squire bitterly; 'I thought myself that he was drunk.'

'Not at all, my dear sir: do not distress yourself with any such idea. The sense of the novelty of his position, and the rich social promise of it, are quite sufficient, assisted by ever so little wine, to have thus exhilarated the young man.'

'Young! He is two-and-forty at least,' responded the other gloomily, 'and old enough to know better.' Disparagement of this mild character was very suitable to the state of the poor Squire's feelings, for it did slightly relieve his choler; and, moreover, it was likely to prevent his astute companion from picturing to himself any graver causes for annoyance in his son's conduct.

'Still, my dear Mr Blackburn, the very ease with which Mr William became excited is to a certain extent (although I am the last to defend excess) in his favour. In the first place, remember, this is probably the first occasion on which, since his recent bereavement, he has permitted himself any enjoyment at all; and I daresay some sorrowful feelings would perforce intrude upon him, which he endeavoured by a few glasses of wine to dissipate. A more heartless man would have taken matters more coolly—at least that is my way of reading Mr William's character, and I flatter myself I know something about mankind.'

'Is it, sir?' said the Squire curtly. 'Then I confess I have not discovered all these virtues in him;

Digitized by Google

and since you have such an eye for them, I wish to Heaven he was your son instead of mine!'

'Well, we should not look a gift-horse in the mouth,' said Mr Waller gaily; 'and upon my life, Blackburn, for all these little blemishes, of which you make so much, I have half a mind to take you at your word.'

'How do you mean?' inquired the other, looking sharply up.

'Why, I mean that though I cannot become his father, I should have no sort of objection, provided the arrangement prove agreeable to a certain young lady, of whom it does not become me to speak as she deserves—I should, I say, be very well pleased to be Mr William's father-*in-law*.'

'You would permit your daughter,' began the Squire in tones that had almost as much of horror in them as of amazement—'I mean, would you really let her run such a risk?'

Mr Blackburn had an honest liking for Lucy Waller; he had only seen as much of her as a septuagenarian host would be likely to see of his grand-daughter's friend and companion, but what he had seen had pleased him. It was certain that she was a dutiful daughter, and her father's right hand (as he often boasted), and it seemed to the Squire incomprehensible that Mr Waller should be ready to intrust the happiness of such a child to one like his son William. It was true that the Squire intended his own Ellen to marry Mr Stanhope, who was said to be addicted to dissipation, or at least to gambling; but, if Stanhope had been what he knew William Blackburn to be, her grandfather would certainly not have sacrificed her future to such a man, even to promote his most darling scheme. On the other hand, it must be conceded that Mr Waller was really ignorant of William's thorough worthlessness, and took a most liberal view of his surface-faults.

'Risk,' observed he slowly; 'well, that is rather a harsh word. Of course, I must know more of the young man's character and antecedents'—here he shot a glance at the Squire, who shifted his limbs uneasily—'and, above all, must assure myself that such a match would not be distasteful to my sweet Lucy. But there is always more or less of uncertainty—a risk, if you must call it so—in every marriage; that is, unless young folks have been brought up together from the nursery, as Lucy and your late nephew were. Of course, that would have been the match most consonant with my own feelings, but man proposes (as poor Dick did), and Heaven settles things its own way. Our families, it seems, were not to be united by means of that branch—but, still, they may be united. I honestly tell you I have not much to give my daughter *down*, Blackburn—my capital is so locked up in different speculations—but she is not a pauper, and perhaps, if things turn out as I expect them to do, may some day be almost as great an heiress as your own dear Ellen.—I conclude, by-the-bye,' observed the ex-M.P. abruptly, 'that though your purpose should hold to leave Redcombe to your grand-daughter, that your son would be suitably provided for?'

'If he were to marry eligibly—such a young lady as your daughter, for instance,' said the Squire earnestly, 'I would give him—nay, I would settle upon herself—a very considerable sum.'

'That is spoken like yourself, Blackburn, and I am sure you mean what you say, although, of course, our present talk may bear no fruit whatever—we may be building the merest castle in the air; and, at all events, any such event as that we have been contemplating must be yet a great way off. Your son is bewailing a recent calamity; my daughter also is suffering, although not so recently, from a similar bereavement. When speaking, on one occasion, of her sorrow, poor thing, she even made use of the expression "widowed:" a common loss, however'—here Mr Waller, under pretence of taking a fresh cigar, applied himself to composition—'itself sometimes attracts, so great is the power of human sympathy, two bruised and tender hearts towards one another.'

'I noticed that that scapegrace son of mine paid a great deal of attention to your Lucy,' said the Squire thoughtfully. 'She is clever, and has a will of her own; but I honestly tell you, Waller, I doubt whether even she will ever make a silk purse out of'——

'Stop at "purse,"' interrupted Mr Waller quietly; 'I assure you she is a capital hand at making silk purses.'

'If the silk purse is made out of the material in question,' answered the other gravely, 'I promise you it shall be well filled. If I could only see my son respectably settled in life'——

Here a terrible scream, apparently from the garden, broke the silence of the autumn evening; and Mr Waller, with an activity beyond his years, rushed to the open window, and letting himself drop through it by his hands, hurried to the croquet-lawn, while his host made his way thither more circuitously by the front door.

For all the former's protestations to others, and specious arguments with himself, he had his own misgiving concerning his projected son-in-law, and in the instant when that sound broke forth it flashed upon him that some unpardonable rudeness of Mr William Blackburn's had evoked it, perhaps from Lucy herself. To do Mr Waller justice, he would, in such a case, have done his best to wring the neck of that only scion of the House of Blackburn on the spot, and it was with some such intention that he had made such extraordinary speed. There was, however, nobody upon the lawn save Mr William himself, who was lying face downwards among the croquet-hoops, ejaculating 'Snakes, snakes, snakes!' at the top of his voice. The ex-M.P. cast a hasty glance up at the boudoir window, which, to his great relief, was closed, and then approached the sufferer with cautious steps.

'Snakes, snakes, snakes!' reiterated Mr William.

'What is the matter, sir? There are no snakes at Redcombe,' said the Squire, making his appearance from the terrace.

'There *are* snakes, snakes in my boots,' persisted his son.

'Come, come, not in *both* boots, my good friend,' observed Mr Waller persuasively.

But by dint of violent struggles, Mr William got himself free of his boots, and pointed to the empty pair with unaffected horror.

'Do *you* see snakes?' inquired Mr Blackburn of his guest in much amazement.

'Ay, sea-snakes,' persisted his son—'snakes from Formosa, snakes from the well-hole, so tall that you can see their heads at top. Look at their tongues, their long forked tongues! They've come to tell you about it. And yet, so help me, I never did it.'

Digitized by Google

'What, in Heaven's name, does all this mean?' inquired the Squire despairingly.

'It means exactly what I told you, Blackburn, that your son's brain is over-excited; he has fallen over one of these hoops, and the shock has put him off his head. He's quiet enough now, you see. But here come the servants: just say it's a fainting-fit, and leave him to me.'

The ladies were fortunately in the drawing-room, which was on the other side of the house, and the music of the piano had drowned the sufferer's cries.

'Don't alarm your mistress, or the young ladies,' were Mr Waller's first words; 'but take Mr William quietly into his own room by the back-way.—You need not go for the doctor, sirrah' (for a groom was already starting towards the village); 'but lend a hand here, as I told you; your young master is overcome by the heat of the weather, that's all.—The case, my dear Blackburn, is quite simple, and I understand it perfectly well.'

'Do as Mr Waller bids you,' said the Squire sharply, for the serving-men hesitated somewhat to lift such a burden up; the damp white face, the chattering teeth, the protruding eyes, were all so instinct with horror.

'Gently, now—gently,' said Mr Waller; 'and you that have his wrists, hold them firm.'

It was well he gave that order, for twice upon his way the patient writhed and struggled like a madman. 'The snakes had wound about his limbs,' he said, 'and had him fast;' but at last they got him to his room, and into bed. Then Mr Waller dismissed the servants, and he and the Squire stood together alone by the bedside. William had fallen into a half sleep, full of starts and mutterings, and his eyes, which had looked as though their lids could never hide them again, were now almost closed.

'The paroxysm is over, my dear sir,' said Mr Waller soothingly; 'and I don't think we shall have any more trouble with him, poor fellow. However, I'll just sit with him a bit, while you go down into the drawing-room, and explain matters to the ladies; it is better not to trust to the servants' silence. You can say that I have some important letters to write, which will account for my absence easily enough. And be sure you keep Mrs Blackburn away from her son; say he is asleep, and must on no account be disturbed, for the fact is, in cases of this kind, the mind is apt to wander, and'——

'Is it *Delirium Tremens?*' inquired the old man huskily.

'Well, yes, it is undoubtedly a touch of D. T.,' said Mr Waller reluctantly. 'It's a very slight attack—but still, you must keep his mother away. The very best of us had better not talk of ourselves, unreservedly, before our mothers. But as for me, I'm a man of the world, and not easily shocked.'

'Nevertheless, it is my place to be here,' said the Squire gravely, 'and not yours.'

'My dear sir, forgive me; but this is madness' —began Mr Waller.

'Nay, forgive *me*,' interrupted his host peremptorily; 'this is my own house, and this is my own son, and I must have my way.'

'Very good, Mr Blackburn; I will do my best then to smooth matters below stairs. If he shews any symptoms of violence, ring for me; but if he continues to sleep on, as I trust he may, all will go well enough.'

'I understand; and I am greatly obliged to you, Waller—deeply obliged.'

'Don't mention it, my dear sir. I am delighted to have been of any use in this little matter. Such things occur every day, I do assure you, in the best families in the land; only it's better not to talk about them. Keep a good heart, my dear friend—and there's the bell within reach—and shall I bring you up the newspaper, or anything? It is weary work to have to sit still and watch, though I'm quite accustomed to it, and don't mind it in the least myself.'

The Squire shook his head to the offer of not only the newspaper, but to the implied renewal of Mr Waller's proposal to take his place by his son's pillow; and the ex-M.P. softly closed the door behind him.

'An obstinate old gentleman,' mused he, as he went down-stairs. 'If he would but have let me nurse that fellow, I should perhaps have known as much as Stanhope.—What the deuce, by-the-bye, could he have meant by Formosa and the well-hole? I must make a note of that. I wonder whether this was his first attack. By its short duration, I should think it was; and yet it was precious sharp while it lasted.—Formosa, eh? This is what comes of sending one's eldest son where French brandy is eighteenpence a bottle. Gad, how he must have soaked!'

CHAPTER XXII.—AFTER LONG MONTHS.

If Mr Waller imagined that, in default of gaining possession of the history of William Blackburn's past, the knowledge of the nature of his indisposition would still afford him some hold upon his young friend, he was fated to be disappointed; since, in the first place, D. T. was a malady not altogether unknown at Redcombe Hall, for the Squire's brother Charles had had more than one bout of it; and secondly, Mr William himself was no more sensitive about the malady in question than if it had been the gout. The very simplicity of this gentleman's character—that is, his coarse and homely habits of vice—made him difficult to deal with for the ex-M.P. (who had been accustomed to influence men in a high state of civilisation, if not of intelligence), and puzzled him, just as one ignorant of the use of the small-sword will sometimes puzzle an accomplished fencer.

When, for instance, a few days after this attack, Mr Waller expressed his pleasure at seeing the young Squire up and about again, the latter replied, with startling frankness: 'Well, I believe what you say for once, Mr Smoothtongue, for, if I had popped off the hooks, it would have spoiled a nice little game of your own, I reckon.'

If Mr Waller had had to consult his own feelings only, he would certainly not have remained, and far less have suffered Lucy to remain, a guest at Redcombe after that speech; but he could no longer afford to indulge his own self-respect, a luxury which, to say truth, he had been accustomed to more or less forego for many years. His affairs were getting into greater embarrassment daily, and no other escape seemed to offer than that he had once looked upon as an eligible course, but which he was now obliged to own to himself was in fact a desperate remedy. He had not the courage

Digitized by Google

to speak to his daughter upon the subject; but she well understood his critical position, and could perceive, he hoped, for herself the pressing necessity that compelled him to wish her to become William Blackburn's wife. Her conduct was such as to make him daily reproach himself with the cruelty of a scheme which he adhered to nevertheless; and though she had always done his bidding, it astonished him by its dutifulness. That she should evince the slightest liking for the man who, short as her acquaintance had been with him, had disgraced himself half-a-dozen times in her very presence by intoxication or bad language, and of whose conduct in the house and village there were already so many evil reports that it was scarcely possible but that some had reached her ears, was not to be expected; but it was something, and more than Mr Waller had hoped for, that she did not shrink from the young Squire with abhorrence. She allowed him, if not to pay her court, to be more gracious to her than to others, and rather ignored his clumsy advances than forbade them. These attentions, indeed, now that he understood she was not his niece's humble companion, were not so rude and undisguised as heretofore, but they were such as a young girl of spirit might have naturally enough resented, especially in a suitor whom she regarded with disfavour, and yet she did not resent them. She even listened with patience to Mrs Blackburn's dissertations upon the character of her son, which perforce did not so often take the form of eulogium (as they had done before his arrival), as of apology for his faults; and why should she do this unless she had made up her mind to make excuses for them herself.

Not only did her father argue thus, but Mrs Blackburn also, who was as anxious for the match as he, and much more hopeful of its results; and so these two at least began to believe that in due course of time the thing was likely enough to come to pass. Curiously enough, however, this belief did not seem to be shared by the old Squire, who had so early expressed his approval of the plan, or, if it did, the contemplation of it seemed no longer to afford him pleasure. He had become of late a changed and broken man, and went about like one weighed down by some burden too heavy for him to bear. Some thought that in his old age the strong will which had supported him through half a century of hardships, had at last given way, and that he was fairly cowed by the rude profligate, his son. But the observant ex-M.P. held that there was some other cause which bowed that stalwart frame, and thinned those gray hairs day by day so visibly; for, in the first place, although he manifested a great repugnance to William Blackburn, if not an absolute loathing, yet he shewed no fear of him, but flamed up on occasion against that social offender, so that the culprit shrank before his ire; and, in the second place, William behaved himself with some respect towards his father, for a reason which Mr Waller had not far to seek, and under an influence of which that manager of men was very jealous. He well perceived that it was to Herbert Stanhope that all improvements in the young Squire's behaviour were owing, and envied him the possession of that rod of iron with which he ruled, so advantageously for the general good—if not for his own. As to whether Stanhope was gaining ground in Miss Ellen's good graces or not, Mr Waller could not decide, nor was it indeed of much interest to him to know. The pair were not often, so far as he could observe, or could learn from his daughter, alone; and, indeed, with the exception of the old Squire, who shut himself up more than ever in his little room, in company only with his bottle of strong waters, the inmates of the Manor-house herded together a good deal, now the young Squire was arrived, just as small birds keep close company when a hawk is hovering. *Tête-à-têtes* were not frequent, and still less a solitariness which might be intruded upon by the unwelcome Mr William, whose presence beneath that roof had also a marvellous effect in keeping it free from occasional visitors. Nobody that had not a special reason for it put themselves in the way of meeting the new arrival, who was even in the middle of the day as likely to be in liquor as not. Even Mr Mowbray Moffat avoided the place, as indeed he had good reason to do, for he had experienced the young Squire's insolence. The house, in short, was tabooed, as Anthony Blackburn had prophesied it would be. Lucy never left it, even for the garden, unless accompanied; but Ellen, when her uncle was supposed to be safely disposed of for the morning—and the safest place was the skittle-alley attached to the public-house in the village, where he liked to surround himself with a few choice sycophants—occasionally took long walks alone. Otherwise, if he found the opportunity, he would reproach her in graceless fashion upon the preference shewn to her by her grandfather, and point out to her the infamous injustice of those testamentary intentions of which she could not be ignorant. Her only refuge against such persecution lay in a quarter to which he felt tolerably confident she would not venture, from maidenly reserve, to apply. If the good could only profit by the vices of the wicked, as the wicked advantage themselves by the virtues of the good, merit would not so often as it is be its own reward.

In one of these lonely walks of hers, Ellen found herself where she would not have been had Herbert Stanhope been at his own house, in the pine-wood that skirted the grounds of Curlew Hall. The autumn was far advanced; but in that odorous and sheltered spot, with the sunshine striking down where the clearings were, and the keen wind busy only in the tree-tops, where it made a murmur like some distant sea, it seemed to be summer still. The place had become a favourite haunt of hers of late; in its welcome seclusion, and fresh and fragrant air, she breathed more freely than elsewhere, and shook off the oppression which had settled down on almost all at home, though on herself the least, for in that atmosphere of plots and fears she fed on hope, and lived, in imagination at least, another life than that which hard fate had for the present assigned to her.

She had wandered further than usual, or than she was aware of, almost to the verge of the wood which fringed the hill above the Mosedale Valley, in a line with the embankment of the reservoir, when she suddenly came upon what was very rare in that green solitude, a fellow-creature. A man with his back towards her was sitting under a tree, with a book in his hand; he was probably sketching, for his fingers moved rapidly; but, although artists were not uncommon about Redmoor in the warm weather, it was late in the season for that migratory race. She turned to retrace her steps, but the dry twigs crackled under her tread, and he looked

Digitized by Google

round and rose. It was John Denton. She uttered a great cry of joy, and flew towards him—then stopped in wonder. His face was pale and sad, and though he could not have failed to recognise her, he did not stir a step. A strange thought took possession of her: it was not himself at all, but his wraith, come to tell her that all she had been living for was in the grave.

'John, dear John,' cried she trembling, 'why don't you speak to me?'

The tones were sad and hollow enough for any ghost, which answered: 'It is for you to speak, Ellen, not for me; you know all that I would say.'

She moved towards him, stretching out her arms. 'Dear John, what is the matter? What has happened?'

'Nothing unusual,' said he coldly, 'that is, with persons of your class. I daresay, to you it does seem nothing; but with me it is far different.'

'Are you mad, John Denton?'

'Not yet, God help me,' answered he bitterly.

'Then you will remember this, John.' She took from her bosom a little notecase, in which lay a faded sprig of heather: he had plucked it and placed it in her hand on that walk across the hills from Slogan when he had asked her to become his wife.

'I remember that well,' said he, 'only too well. Are you going to give it me back?—as ladies like yourself give back the rings and jewels of their old loves when they take on with a new one.—Oh, Nelly, Nelly! I knew that girls were weak, and that you being what you are, would be more tried and tempted than other girls; but I did not think you would sell yourself for gold, nay, for less than gold, for an old name, and a long pedigree with a fool at the end of it.'

'As true as the blue sky is above us, John, I understand nothing of what you say. Whatever dreadful things you have to tell me, in Heaven's name, speak out. What is it?'

'Is it possible that fourteen months of life among fine folks can make a woman so false as not to know it herself!' answered the other. 'Well, it is not much matter, perhaps; but what I have heard from every mouth at Mosedale is, that Miss Ellen Blackburn (who was once so humble as to think of wedding such a man as I) is plighted to Mr Herbert Stanhope of Curlew Hall.'

'That is a lie, John.'

'A lie! It is one that is more believed than truth; the whole town rings with it.'

'If the whole town had told me the like of you, John, nay, if the whole world had said it, and your lips had not confirmed their words, I would not have believed it. I *have* been tried, indeed—tried by your absence, tried by the lack of that which is my life-blood, the speech, the touch, the look of him I love, but never tempted, John; for in temptation there is some attraction, some delight, and I have never felt one touch of joy but in the thought of you.'

'True heart, forgive me,' exclaimed he, snatching the weeping girl to his breast. 'I am all unworthy of such love, dear girl; but I have been all alone in the world so long, without one word to gladden me, and with ten thousand of late to pierce my heart—and—and you know Mr Stanhope *is* staying at the Manor-house, Nelly. My very work, which was once so dear to me, has become flat and stale; I have been in this very place a score of times, note-book in hand, as now; and yet, see! nothing has been set down in it, because I could think of nothing, except you!'

'Then that is why I have sought this wood so often, John, and loved it; my heart must have known that you were here, and brought me hither. But what brought *you*, dearest?'

'Well, not so much my heart, dear Nelly,' said John, smiling, and tenderly smoothing her brown hair, 'but my business. I have been at work at the embankment yonder for some time; and while my men are at their dinner, I step in here for solitude, and to make certain calculations, the result of which (as to-day) has been often a blank page.'

'I knew you had been employed on the Reservoir, John; I went thither before you came, expressly to be able to picture you there—but I thought you had gone. Lucy—Miss Waller—told me that the affair would not keep you above a day or two.'

'Ay, that's Mr Waller of Mosedale's daughter, I suppose; but her father has misinformed her altogether. You see, Nelly,' and though his arm was round her waist, and his eyes looked lovingly into hers, it was curious how abstracted and business-like his tones became, 'it's a much more serious job than these directors imagine, and it will put out Flywheel immensely; but I can't help that. The whole concern wants looking to. I have been tinkering it up as well as I can; but it's my opinion the mischief is deep seated, and must have a much more effectual remedy, or there will be great risk when the spring comes on. For my part, I mean to state as much in my Report. But the fact is, the Company have very little cash, and don't want to be involved in expenses; and Flywheel is their engineer you see, not I. Nothing can be more penny wise and pound foolish (not to mention the danger), as it seems to me.—But there, why am I wasting precious moments, talking of these dry business matters, when the dearest girl in the world is waiting to hear me say for the fiftieth time how much I love her! And I do say it, and seal it, my own darling.'

'I like to hear you talk of your calling, John, and to see you so interested in it. I am prouder of it and of you than any one can possibly be of the things you were decrying just now, such as birth and blood. Nay, it is men like you who alone make birth and blood of any value, for who could be proud of ancestors who have done nothing?'

'A very logical view, my dear Nelly,' said the young engineer, his own cheek flushed with something of pride; 'but not one generally entertained, and especially by your charming sex. Now, I wonder what the forefathers of this Mr Herbert Stanhope, for instance, have done to make the race so much esteemed?'

'You always were jealous of Mr Stanhope, John,' returned Ellen smiling; 'and I have a great mind to punish you by praising him. He has his faults, and I fear his vices, but I can tell you, that I, in common with all at Redcombe Manor, have every day much cause to be indebted to him.'

'To him? How so?'

'Because he is the only person who has any influence over Uncle William.—You know my uncle is come back, I suppose?'

'I have heard that,' said Denton gravely. 'He

Digitized by Google

is not improved, I am afraid, if half I hear about him is to be credited.'

'He is not what one would wish him to be, John,' sighed Ellen; 'very far from it. He frightens us all sometimes—even his mother herself; he is so strange and violent. Aunt Bess is dead, poor thing; and oh, it's a sad story!'

'But he is going to repair that loss, as I understand, eh, Nelly? A widowed life does not suit him.'

'What do you mean, John?'

'Why, is he not going to marry Miss Waller? That is what they say at Mosedale.'

'Lucy marry Uncle William!' exclaimed Ellen. 'Why, what will they not say at Mosedale about marriages? O no, John; I am quite sure that is not true.'

'Well, it's odd she and her father should stay at the Manor so long, when their own house is close by; although, indeed, for that matter, Mr Stanhope does the same. Mr Waller was so good as to offer me hospitality, only he said matters of urgent importance prevented his being at home just now.'

'Yes; Lucy said you were to be asked to be their guest; but grandfather pressed them to stay on with us.'

'Indeed,' said Denton coldly. He was naturally incensed with the old people, and had not even inquired after them. 'Then you don't think the young lady is going to be your aunt-in-law?'

'Most certainly not, John. She does not like Uncle William nor his ways at all. Oh, they are such bad ways!'

'What do you mean, Nelly? Is he rude and brutal? Why do you suffer such things? Why do you remain under the same roof with such a fellow, when I have one to offer you?—not so fine a place as Redcombe, I daresay, but still fit for even a lady like you.'

'Oh, it isn't that, John. You know how gladly I would come to you—marry you, my own darling, but'——

'But what?' answered the young man softly. 'Why not be mine at once, dear Nelly? Have you not done enough, suffered enough, for duty's sake? I will not speak of my own wretchedness; but yet I suffer also. Is an old man in his dotage'——

'Hush, John, hush! I cannot listen to such words. You know how good grandfather has been to me all my life; and you must not ask me to desert him now, when he needs me more than ever—much more. I think it would kill him if I left him now. He has much, very much to trouble him. He is so changed of late, you would not know him. I am his only comfort, poor old man. Have patience with me, my own love.'

She nestled in his bosom, and pleaded with such tearful eloquence, that he could not gainsay her. 'I will try to have patience, Nelly, for yet a little longer: it cannot be very long, surely.'

'Patience and faith, darling. Promise me you will have no more doubts. I am yours till death, and no other's.'

'I do believe that, dearest.'

'God bless you for those words, John! How thankful I am to have heard you utter them. But I must go now.—No, you must not come with me, nor be seen with me. You know I promised not to meet you; and then, if Uncle William only guessed—— What's that?'

She started from his arms in terror; but there was no sound but the soughing of the wind above them.

'You are afraid of this William Blackburn,' said Denton gravely. 'I must stop that.'

'No, no, John; I am not afraid; at least, not on my own account; but something dreadful always seems impending. Do not detain me longer. And remember, dear, have faith.'

She was gone in a moment, threading the wood with a swift and noiseless step; and the echo of her latest words seemed to be taken up by the tree-tops, which whispered above his head: 'Have faith—have faith.'

THE RED BREAST OF THE ROBIN.

AN IRISH LEGEND.

Of all the merry little birds that live up in the tree,
And carol from the sycamore and chestnut,
The prettiest little gentleman that dearest is to me,
Is the one in coat of brown and scarlet waistcoat.
It's cockit little Robin!
And his head he keeps a-bobbin'.
Of all the other pretty fowls I'd choose him;
For he sings so sweetly still,
Through his tiny slender bill,
With a little patch of red upon his bosom.

When the frost is in the air, and the snow upon the ground,
To other little birdies so bewilderin',
Picking up the crumbs near the window he is found,
Singing Christmas stories to the children:
Of how two tender babes
Were left in woodland glades,
By a cruel man who took 'em there to lose 'em;
But Bobby saw the crime;
(He was watching all the time!)
And he blushed a perfect crimson on his bosom.

When the changing leaves of autumn around us thickly fall,
And everything seems sorrowful and saddening,
Robin may be heard on the corner of a wall
Singing what is solacing and gladdening.
And sure, from what I've heard,
He's God's own little bird,
And sings to those in grief just to amuse 'em;
But once he sat forlorn
On a cruel Crown of Thorn,
And the blood it stained his pretty little bosom.

The Publishers of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

1st. All communications should be addressed to the 'Editor, 47 Paternoster Row, London.'

2d. To insure the return of papers that may prove ineligible, postage-stamps should in every case accompany them.

3d. All MSS. should bear the author's full CHRISTIAN name, surname, and address, legibly written.

4th. MSS. should be written on one side of the leaf only.

Unless Contributors comply with the above rules, the Editor cannot undertake to return rejected papers.

Printed and Published by W. & R. CHAMBERS, 47 Paternoster Row, LONDON, and 339 High Street, EDINBURGH. Also sold by all Booksellers.

MOSCO'S AUTOMATON.

I HAVE got a hard and heavy head; it 's like wood. I don't think I ever think; and don't know as I ever did, except about nothing; and I often set doing that for hours at a time.

'You blockhead!' father he ses to me (which is a shipwright), 'you 're only fit to cut up into a figure-head, you great, hungry, hulking, wooden-headed lubber you!'—for he had put me to lots of trades, and it was no use; everybody said I had no head-piece—no, not for going errands, nor giving away handbills even. It 's no good dunning things into my head, for the only thing I ever could remember is meal-times. Nothing I eat hurts me, and nothing don't seem to do me any good. Nothing makes me laugh nor puts me out of temper. The only thing ever I see makes me feel like laughing is meals, and then I 've got something better to do; and the only thing makes me feel like getting out of temper is getting out of bed of mornings to chop wood; but when you *ars* out of bed, you may as well chop wood as do anything else, for aught I know. The snail gets to his bed as quick as the swallow, and don't get near so tired.

Well, there was a conjurer chap came into our town—a brisk lively sort of chap that could talk like a pump, in a regular stream. He see me loafing about, and give me an order to see his show, providing I would go up on the platform to hold some things for him. I went up, and did what he told me. It seemed to amuse the people very much, for they laughed themselves nearly into fits, and said: 'Did ever you see a man keep his countenance like him?' and, 'It 's just as if he was cut out of wood.' Now, unless a man sees something to laugh at, he has got no call to laugh—and that 's why I didn't.

After it was over, the conjurer chap come to me, and ses: 'I never see your living equal. You must be used to the public, not to mind them any more than as if you was a stone idol?'

'I never see the public before,' I ses.

'You didn't?' ses he.

'No,' I ses.

'Well, look here,' he goes on, 'I don't mind standing you half-a-crown if you 'll tell me what you was a-thinking of when the public was screaming with laughing at you.'

'Victuals,' I makes answer.

'Come and have some along with me,' he replies, 'for I think I can put you in the way of getting them regular.'

So I did.

Next day, he goes to see my father.

'Your son has a wonderful talent, sir.'

'Hang his talent,' ses my father: 'it 's a pity he can't use it on any other tool than a knife and fork!'

'A natural gift, sir, for not laughing at anything, such as I never see before out of the reserved seats. The question is, could he be depended upon always to keep his countenance as he did last night?'

'I never see him smile in my life,' father makes reply, 'nor get angered, nor put out; in fact, I never see him take notice of anything. There 's no mistake he can keep his countenance, which is a good deal more than his countenance 'll ever do for him.'

'I don't know so much about that,' the conjurer ses, 'for I 'm open to give him two pound a week and his board, if he 'll sign articles with me for twelve months.'

'And what is he to do?' ses my father.

'Nothing—except to be looked at, and that won't hurt him, I suppose?'

'Well,' father ses to me, 'is it a bargain?'

'I don't care,' I ses. So I joined the show.

The public is an obstinate lot, for when you laugh, they won't; but if you set your face against laughing, or if you 've got no call to laugh, through not seeing anything to laugh at, they will laugh like mad—leastways, so I 've found it.

Signor Mosco was the conjurer's name, or, at anyrate, the one he went by in public. He was called a pretty good hand, but I couldn't see much in what he did. I knew where the bullets went to when he made-believe to ram them into a pistol with a barrel like an ear-trumpet. I stuffed the

Digitized by Google

gold watches in the half-quartern loaves, and ironed out the ladies' and gentlemen's pocket-handkerchiefs, while he was pretending to burn them. It's surprising what little things amuse the public. I used to tell 'em so, when Signor Mosco had done one of his best tricks, but they only grinned, and said: 'Lord, how he does keep his countenance!' and, 'What a nerve he must have, to be sure!' There was the hat-trick. The tins, and the feathers, and things look a good deal when they are all thrown about, but they took up no room scarcely when I'd put 'em together, ready for use. And as to rolling two rabbits into one, what was there to surprise *me*, knowing all along very well what was become of the second rabbit, when I shouldn't have took on very much even if he *had* rolled 'em into one, except it was at dinner-time. There was the decapitated head and the basket-trick, and the magic flowers, and the woman setting on nothing, which was called Mecca. Well, I see the looking-glasses and the false bottoms, let alone the legs of the decapitated head; and, consequently, I couldn't see anything in any of it.

There was only one part of the entire performance that ever I *could* see anything in, and that was, as the bills put it: 'The Marvellous Mechanical Man or Wooden Automaton, on whose construction no less than twenty-five years have been expended, to bring it to its present perfection as the greatest wonder of the age.'

I will tell you about it.

First of all, there was a large box, or pedestal, for the figure to stand on, and containing the works, which was carried off the stage, and into the centre of the reserved seats. It had a winch, to turn with a handle like a bed-post key, to wind up the man, and when wound up made a noise like an engine getting up steam, which was the works running down. Then the man was brought down off the stage, carried upright by four strong fellows. His feet were fastened to a round wooden stand, like children's soldiers stand on, in which was a worm for the great screw on the top of the pedestal. When brought down, he was hoisted up on the pedestal, and turned round and round until screwed on. There were a great many tubes, and wires, and levers connecting the figure with the box, and sticking out round it, which looked very curious, and, besides, shewed the working parts. But a worse finished man no one ever see at a tobacconist's shop-door, which made it the more singular his doing what he did. About his neck and the back of his head the paint was wore off, shewing the bare wood; and the same with the point of his nose, which was splintered; and likewise his hands, which were glued and cracked. Signor Mosco used to explain this had occurred in packing, and that he would repair the injuries. But it seemed as if it always did occur in packing, for the injuries never were repaired. Then, as to his complexion, it would have been a disgrace to any house-painter. It was red and whitewash, varnished, and done so badly, that it looked as if you could see the grain of the wood through the paint. I've often asked Signor Mosco why he didn't paint his automaton better, but he only grinned, and said: 'How precious green *you* are, ain't you?'

Everybody who see the man used to say: 'How stupid of Signor Mosco, after making such a clever figure, not to have spent a pound or two in finishing it properly, instead of leaving it such a clumsy wooden scarecrow.'

The newspapers, too, used to speak most disrespectful of the man; like this which I've cut out:

'Signor Mosco revisited our town with his interesting exhibition last week. His remarkably skilful feats of pretidigitation were the admiration of large and fashionable audiences. To the other attractions of his entertainment, the professor of the quick-fingered art has now added what he is pleased to term The Marvellous Mechanical Man. The performances of this automaton are particularly clever, but it belies its name. It might with more correctness be termed a figure, for it is so roughly constructed as to bear no more resemblance to humanity than the effigies which are carried through our streets on the 5th November. We cannot help thinking that if Signor Mosco would devote a little more pains to the finish of his wooden effigy, and to concealing some of the cords and levers by which the life-like motions are too obviously conveyed to the limbs, the illusion would be rendered more complete.'

So far from being angry at reading such notices, Signor Mosco always used to chuckle and slap me on the back, and want to know why I didn't laugh too. I ses, very naturally: 'Because I don't see anything to laugh at.' 'Well,' says he, 'you *are* a cure, you are, and the biggest I ever see.'

But that figure only got worse, and more shabby and rickety, the more that was said about it, until at last, whenever the men used to carry the automaton to his pedestal, one of its arms would drop off. The professor always said it was an unforeseen accident, and apologised for it. But it was an unforeseen accident that used regularly to occur every evening, and get apologised for. And what was another singular thing, the worse the figure was, and the more rickety he got, the more clever people thought his performance was.

Well, when the Mechanical Man was screwed down on the pedestal for his performance, Signor Mosco would commence with a short lecture on the powers of the lever, the screw, and the pulley, and the spiral spring. He would then go and wind up the machine, with the handle like a bed-wrench. It made a great clatter, and took a long while to wind, owing to the power of the spring. When he had done, the whole concern began to go 'Cr-r-r-r-r,' and kept on going so all the time, whilst the people could see the works going round through one side of the pedestal, which was of glass. The professor would then strike sharply with his wand, and pull a cord that worked the levers of the automaton's head. 'Wake, Francisco!' ses he; and Francisco, which was the wooden figure, begins to move his head, very slow, first from right to left, then from left to right. Then Signor Mosco pulls another string, and Francisco opens his eyes, very gradually, or quick, according as the string is pulled. Then it would be: 'Raise the right arm, and salute the company;' which the figure would do, rather stiff and jerky, but still he did it. That stiffness and jerkiness of the movements (and they were all like that) was what people seemed disposed to grumble at. 'We want to see 'em a little more airy and graceful,' the public ses. 'Ladies and gentlemen,' ses the Signor, 'what can you expect from machinery?'—which was very true. 'But to

Digitized by Google

shew you the command I have over the automaton when at a distance from it, I will now return to the stage, after simply pressing a spring in the figure's back, and, sitting before the index-board connected with the figure, I will enable you to put its abilities to the test.' He sat at a small table in front of the stage, where there was a board like a draught-board, but covered all over with knobs. People were then to question the automaton. The figure did numbers and counting, by slowly jerking up its right hand as many times as was wanted. 'Yes' and 'No' he did with his head, by bending it for 'Yes,' and shaking it for 'No;' and this way he would tell fortunes and ages quite equal to a learned pig or an educated pony. Indeed, there was no end to the questions he could answer, and they were very often right, which was a wonder for machinery. Francisco used to finish up by whirling his arms round like the wooden sailors do on weather-cocks, and he would keep on till the professor touched a button and stopped the works, when his arms would remain sticking straight up, until a string was pulled to let them down, and even then they would still keep on swinging backwards and forwards for a bit. There were some people wanted the automaton to do more, but the Signor said it couldn't be done, not by machinery.

In due time, as we went round the provinces, we come back again to the town where my father lived. I was against going there at all. I told Signor Mosco so; and I didn't want him to shew the Mechanical Man there, as I told him they weren't good judges of machinery in that place. But he wouldn't listen, and so the automaton was done there the first night. We had got about halfway through his performance, and the professor had gone on to the stage, whilst Francisco was answering questions. There is mostly a crowd of people round the figure at such times, but to-night there was a wiry old man pressing his way close up to the wooden effigy, and looking into its eyes.

'Now, sir, *will* you keep your hands off that figure, if you please—do you hear me?' Signor Mosco ses.

'Mother!' the old man bawls out to his wife, taking no notice—only laughing fit to split—'mother! come here, I tell ye—I'm blowed if they haven't been and made a figure-head of our Bill!'

I couldn't see anything to laugh at, for it was two pound a week and victuals out of my pocket, let alone the exposure.

THE LOWER RAILWAY WORLD.

Of late years, the railway system has been sufficiently before our eyes, and its magnates are as household words; while many writers have, more or less vividly, depicted the driver or guard—but who is to tell of the cleaner or the labourer? No one, it seems; as the most popular sketch ever made of a driver coolly speaks of him as cleaning his engine immediately after his trip, a solecism which shocks all railway people, and asserts as a fact that which—were it possible to clean a hot engine—the driver would rather die than do.

Cleaners, be it understood, are not labourers, nor are labourers cleaners. On all railways, there are employed, in excess of almost every other working class—excepting at the great factory stations where the engines are made and repaired—a body of men and boys, whose duties are, exclusively to clean the engines, and prepare them for their trips. These duties rise from mere washing and rubbing to some of considerable importance. At the present day, when the organisation of each railway staff has grown complete, care is exercised in the selection of these youths; but some years ago, it was not so; any one was supposed to be fitted for a cleaner; and it was not uncommon to see men considerably advanced in years working by the side of young blue-eyed boys, and at much the same wages; while as for characters!—well, good behaviour in their duties could gain them one, but the majority did not bring such things with them. This is all changed now; and a recommendation is now as essential to obtain for a candidate the unsavoury post of cleaner, as for the more immediately eligible appointment of porter. The reader least conversant with railway matters will hardly need to be told that no translation from one department to another exists, and that cleaners are not taken to become porters, or *vice versâ*. Cleaners generally commence, if they join as boys, at one shilling per day, and rise by slow steps to half-a-crown per day, at which they stop, unless they are appointed 'lighters-up' or 'tubesmen,' when they receive a little more. The lighter-up is the most advanced cleaner, and his duties are somewhat onerous; the working of the trains is arranged by a rota of engines, which the lighter-up has to study; it is his duty to see that, during the night, the engines, as they arrive from their trips, are placed in order as they will be wanted, and that steam is got up in them in regular succession.

Occasionally, an engine will blow up; and as this usually takes place in or about the shed, the lighters-up or cleaners are commonly the sufferers. Without dwelling on the enormous power of steam, I may mention here that some of these explosions have been attended with the most singular effects. I have seen the clothes of a cleaner which had been blown from his back—I cannot explain how—but blown they certainly were by the bursting of an engine; and his smock-frock or 'slop,' as railway men call it, hung on the buffer of an adjoining locomotive, as neatly as though the unfortunate owner had hung it there himself. He, poor fellow, had lost his head, which, quite severed from his body, ran for many yards along the bricked floor of the shed. There is, or was recently, in one of the largest engine-sheds in England, one of a pair of braces which were blown off the wearer's shoulders, and lodged on the beams in the lofty roof: there it hung for a long time, and there, possibly, it hangs now. The poor fellow was killed—scalded to death: he did not die at the moment; but when my informants went to pick him up, he was almost naked, and the sheets of flesh came off in their hands 'like pancakes,' as they described it.

In spite of the rough lot the cleaners are of, their low pay, and very harsh discipline, strangers of a much higher grade than would be expected are often found offering themselves to join them. These are generally youngsters who have an

Digitized by Google

enthusiastic fondness for engines and machinery in general, and who hope to get into the engineering world by this humble channel—some such irresistible longing, doubtless, as that which makes boys with good homes want to go to sea. I have known young gentlemen of excellent position and good acquirements offer themselves as cleaners; but I never knew one who persevered after he had seen his future comrades fairly at work.

Foreigners occasionally will come, with introductions from some one who is probably pestered by their applications, and so adopts this as the surest mode of getting rid of them. They never join. Poor fellows, they would have a sorry time of it on our railways. This reminds me that I have never seen any notice taken of the very curious fact that Irishmen do not take to railway-work. On one of the very largest railways in England, I do not think there is at this moment an Irish driver or fireman; and for many years, at its chief working-station, there was scarcely a solitary one among the mechanics, labourers, or cleaners. A few tried it, but though they were very steady fellows indeed, they did not remain. As Irishmen are always first where sheer hard work is to be done, I wonder how it is they do not take to this kind of railway labour. Perhaps it is not always their fault.

The fascination which engines and their human satellites exercise over some minds is very great; and while speaking on the subject, I am reminded of a young man who haunted for years one of our chief termini: he was the son of a leading west-end confectioner, so that his early training had in no way disposed him to an engineering life; but he was the most remarkable accumulation of statistics in connection therewith I ever knew. The line employed several hundreds of engines, and he not only knew the names of all of them, but when they were made, and who had made them; when each one had last been supplied with a new set of tubes at the factory—this last, of course, only referred to the engines employed on the main line, which he had an opportunity of seeing, and would miss when they were laid up for repair—and how this had had the pressure on its safety-valve increased, and this had been diminished. He had such a retentive memory for these and kindred facts, that I have seen the foreman of the works appeal to him for information, which was never lacking. His penchant was so well known, that he had special permission for access to the works.

'Firebox boys' are rudimentary cleaners, and an unpleasant time they have of it; they hope, however, to have 'side-work' in time. 'Wheels' are not popular among cleaners, being always dirty work, with no show when finished; but all gradations must be gone through before the cleaner can be a tubesman—next in honour to the lighter-up. The tubesmen alluded to are those whose duty it is to see that every tube is clear before the engine is got ready for its trip. This is done by thrusting a long rod through each one, and is very tiresome work, as chinkers will often get into the holes. The importance of this must be obvious, as, without complete draught, there could be no such fire as would serve an engine.

Among so motley a collection as the cleaners were, sharp discipline was of course necessary, but this was sometimes abused; and I have known a contractor dismiss a man on the spot, who, on a bitterly cold and wet day, warmed his hands for a few moments at the furnace. Such harshness as this would not probably be exercised where the men were engaged by the company; but where a contractor had the work in his hands, he would grudge every moment that was taken from labour. This system, however—that of contracts—is not nearly so prevalent in the railway world as it was of yore.

When railways were new, the vast majority of the drivers and firemen were north-countrymen, and for a long time this element prevailed; but from the gradual growing up of cleaners who come to be firemen, and then drivers, the proportion of northern men gets smaller every day, the cleaners always coming from the districts through which the railway runs. No man is now allowed to pass as fireman until he can sign his name to the rules; and it is very much to the credit of the cleaners that they will often attend night-schools, to glean what bit of learning they can, and to enable them to make the desired signature. This rule is in direct opposition to the opinion of the late Mr Brunel, who held that reading and writing helped to unfit a man for engine-driving; that an animal trained to drive his engine, and whose mind was not cultivated enough to enable him to think about anything else, made the best and safest servant.

Labourers are those who assist fitters; those who assist smiths are called strikers, and are a grade above the others; they sometimes go out as firemen, but are not supposed to be, as a rule, so good as the cleaners. Of a batch of six labourers who were 'made' at one time on a certain line, five were killed, injured, or were unable to stand the work. This last cause thins the ranks terribly. From the continual exposure to wet and cold, especially when we remember that the men are always standing on a warm plate of iron, the trial of the first year of a fireman's life is excessively severe.

Injuries are very frequent among the labourers, as they are so much among and under the engines and trucks. In most sheds, a small glass case is fastened in a conspicuous place against the wall—such a case as we see stuffed birds in—and this contains a tourniquet or bandage for stopping the bleeding from an artery. There is no lock to the case; but, when wanted, the glass is broken, and the tourniquet taken out. A stretcher, too, is always at hand, and not seldom, unfortunately, used. From the immense weight of the vehicles handled, very slight pushes, as they seem, are fatal; and I have seen a young man killed, deluged, indeed, with blood from his head, by the apparently leisurely rolling together of two trucks; while another man, whom you would have thought had scarcely been touched, was squeezed so dreadfully in the waist as to force up instantly the food he had swallowed an hour before, and was then carried off, to linger best part of a year in the hospital. My readers would scarcely care for a catalogue of accidents; yet I cannot forbear mentioning one, as a case in point. A cleaner was at work on an engine in steam, just giving a last touch to the framing, when the locomotive moved—pushed on, doubtless, by another engine striking it behind. To the eye, the movement was scarcely perceptible; but the top and sole leather of the man's boot came

Digitized by Google

together, the toes within being crushed to nothing, we may say. The poor fellow died.

One can easily suppose that the work of a labourer is heavy and dirty. He has to carry the various detached portions of the machinery from the shed to the shops, when required for repairing, and back again; the fitter gravely and majestically preceding him, the majority of mechanics thinking it much beneath them to assist in the carriage of material. But such duties are not hard in themselves. The most disagreeable part of the labourer's work is getting an engine on the line. When a locomotive runs off the rails, although no serious accident may ensue, it blocks at least one line, and must be replaced as quickly as possible. This, of course, has to be done in the open air, and without the usual appliances for lifting an engine. It has to be lifted up by screw-jacks, and gradually turned in the direction of the rails; and in some loose soils the tremendous weight of the engine presses the screw-jack into the earth, instead of the latter lifting the engine. In this case, they have to accumulate blocks of timber under the jack until the maximum of pressure is overmatched, and no longer acts; as much as six feet below the surface having been reached in an extreme case. The labourer's pay, I ought to have said, is somewhat better than that of the cleaner, as he is always supposed to be a grown man; and he usually starts at half-a-crown a day—not, however, an excessive rate for the London district—and he gets no increase or promotion beyond two or three pence, unless taken as fireman.

As every one must know, the greatest offence either of these classes can commit, or indeed any other railway servant, is to come to their work intoxicated. This is always severely and yet justly dealt with; in fact, there is seldom any other penalty for this offence than dismissal.

A COUNTY FAMILY.

CHAPTER XXIII.—LUCY'S OPINION IS CONSULTED.

Ellen Blackburn had not exaggerated the case when she said that in her her grandfather now found his only comfort. His face was never seen to smile unless she was looking up at it. He had no consciousness (as Mr Waller had with regard to Lucy) that in favouring Mr Stanhope's suit he was urging her to run a great hazard. He knew no more of that gentleman's pecuniary affairs than that he had not an income sufficient to live at Curlew Hall in a manner suitable to his station, while of his character and disposition he thought very highly, and in many respects no less than they deserved. He scarcely deemed that he was asking of Ellen any sacrifice of feeling. He had almost forgotten the existence of John Denton altogether, and that other and intermediate state of life in which he had met with him was fading fast from his remembrance. The state of affairs of half a century ago seemed in the old man's mind to join with the present almost without a break. He had been always the Squire, and the heir of Redcombe Manor, but for a certain interval, which waned and waned in his waning mind until it was almost imperceptible. But there was one occurrence during that interregnum which he did not forget, and, indeed, of which he would in any case have been put in daily remembrance by the misconduct of the original offender—namely, the crime and punishment of his only son.

So long as any record of them had existed, the Blackburns had almost all been a dissolute and vicious race; but, however they might have sinned against the Gospel, they had none of them broken the Laws. They had had no temptation to do so. Old Anthony did not understand that want of principle in a rich man is almost certain, in a very poor one, to shew itself in crime. True, he himself had not much principle (in any high sense at least), and yet he had lain long years among the pots of Poverty, and come out unsoiled at last. But then he had a substitute for principle in his indomitable pride. Nine-tenths of the Blackburns before him had had something of this pride (though very few of them any real self-respect), but in him it had taken root and flourished prodigiously. He had sat under it, as under his own fig-tree, throughout his exile, and it had served him in good stead in many a wind of bitterness; and though his son William (savage as he was) had hewed its branches and hacked its trunk, it still lived after a fashion, and ever and anon put forth a bud or two. It had borne the shock of William's return, and had been propped up and even drawn some strength and vigour from the thought that Herbert Stanhope would marry Ellen, and their children's children perpetuate the good Blackburn blood, if not the name; but now there was a canker at its very core. 'The old Squire is breaking up at last,' was become a common saying about Redcombe. Those who looked deeper thought there was no physical cause, but attributed the alteration in him to the shock he had received from his son's recent illness, the nature of which was by this time as well known for ten miles round the Manor as the shape of the Redcombe weathercock. It must be uncommonly unsatisfactory, they thought, to have one's only son come home after ten years' absence (the most moderate doubled the actual period) to take his proper position in the county—with *delirium tremens*.

And certainly a change in the old man, both mental and bodily, had occurred exactly at that date. He had formerly taken a great deal of exercise—striding about his fields a wonder to his labourers (whose salutations he acknowledged without a word), or revisiting alone such of the ancient landmarks as still stood; but now he confined his rambles to the garden, or to that solitary part of the shrubbery called 'the Wilderness,' where he would walk to and fro for hours, leaning on his grand-daughter's arm. Few words were interchanged between them. She was afraid to encourage him to speak, lest he should make Mr Stanhope his topic; but this, of late, he had only done on one occasion. After a long silence, he had exclaimed suddenly: 'I wish you had been married, Nelly, darling, before this man had come back.'

She of course knew who was meant. He never mentioned his son William, now, by name. 'Nay,

Digitized by Google

grandfather,' said she tenderly; 'but then you would not have had my arm to lean upon. It is much better as it is. I am in no haste to wed.'

'A good child—always a good child,' returned he, patting her hand. 'If the chance does come, if it is not too late, Nelly, take it—take it; never mind an old man like me. Yes, I am too old—much too old. Why did not I die on Slogan, as your poor father did, whom you never knew? Why did he die at all, and why does this other one live? Do you remember the hill Slogan, Nelly?'

'Yes, grandfather, indeed I do. All the people at work upon it like bees, and the sea and the ships below. I can see the upper level, where I used to take you your dinner, as plainly now as though it were really before my eyes.'

'So can I, so can I, Nelly; though I can't always do it. I can't see so far, some days, for the mist. I mean,' added he hastily, 'for the mist in my eyes, for my brain is clear as ever—clear as ever.—Where was I?'

'We were talking of Slogan and the upper level, grandfather.'

'Yes, yes.—That was where we first saw him, Nelly. An excellent young gentleman. He gave me sherry out of his pocket-flask; and somehow I never get such sherry now. Nothing is so good as it used to be.'

'There are many things, grandfather, belonging to those old days, though they were hard ones, that one misses now—the noble prospects from the hills, and the glorious breezes from the sea, and'——

'The sea? Ay.' He looked round cautiously, and spoke low: 'Formosa is in the sea, is it not, Nelly?'

'Certainly, grandfather—it is an island. But—what is the matter?'

'Nothing. I am not so young as I was, and I am tired. I must sit down a bit—that's all; I feel faint. If I have said anything foolish, it was that, Nelly—the being so faint. Don't say a word about it to anybody, but I think it would do me good if I could only get to Slogan, and feel the air.'

'I would that we had never left it, grandfather,' exclaimed Ellen with involuntary bitterness. But the whole scene about the Moor Cottage was lying before her, with John Denton—honest sunbeam—in the midst.

'Not left it; that's nonsense, Nelly. Do you suppose he would have married you if we had stopped at that place? Never. As for me, though I am not happy, Nelly, not so happy as when I made the sparks fly with the big hammer, I am glad to be here, glad to have lived to make my will. It is a great and good thing that a dead man should be able to speak from out the grave, as I shall soon speak, lying in yonder churchyard, saying: "All to this woman, and none—or only a little, to that man." That is how I have left it, Nelly; Stanhope knows.'

This was a subject upon which the Squire's mind was always clear, and one that he would often descant upon, much to Ellen's embarrassment.

'Let us talk of something else, grandfather. Do not speak of that. It is much better not to do so.'

'Better not to do so,' muttered the old man; 'and yet, when I see her, and see him looking at her, I think I ought to speak. Poor Lucy!'

Ellen had paid small attention to these words; she was accustomed now only too often to find the old Squire rambling and inconsequent in his talk, although this rarely occurred unless they were alone together. In other company, he seemed to her (and the sight was very pitiful) to keep strict watch over himself, and check by sudden silence his tendency to wander. In her faithful presence only he was at his ease. When William was by, his father never spoke, except occasionally in tones of stern reproof; but his sunken eyes watched and followed his son's motions ceaselessly, as one who has a stick in his hand watches an adder.

To Lucy's wonder, the old Squire asked her to take Ellen's place one day, and give him her arm in his usual garden-walk.

'I want you to speak to me, dear young lady,' he began in tremulous tones, 'as though I were your father's father, as indeed I am old enough to be. I want to know'—— Here he stopped, and seemed to be casting about for some fitting word which would not come.

'To know what, dear Mr Blackburn?' said she gently. 'Let us sit down, for you seem fatigued, I think.'

'Yes, yes; I am very tired—always tired now. But that will not be for long. I want to ask you—for you are a good girl, like my own Nelly, and your opinion is worth having—let me see, let me put it as I should do, and if not, you will make allowance, I know. I cannot talk like my good friend Waller, with every word as it ought to be, and in the right place; but if *he* was to ask you: "How do you like that man who has come here of late?" what would you say, now, what would you say?'

'How do I like Mr William Blackburn, sir?'

'Yes, yes; who else? There he is yonder upon the terrace. A fine man—a man that will have money, perhaps. Hush, hush! There, I knew I should offend you.'

'No, sir; I am not offended.'

'Good girl, good girl! I always liked you, Lucy, always.—Now, how do you like that man?'

'O sir, that is a question—forgive me—which I cannot answer if his father puts it.'

'But if your father had put it?—Come, *your* father?'

'He never *has* put it, sir. But if he did, it would be my duty'——

'No, no; I don't ask what would be your duty—the truth, the truth!'

'Well, sir, your son is rough and rude; not kindly, as you are, in his speech and ways. Maybe it is his misfortune, not his fault; but being as he is, I do not like him.'

'Yes, yes; but there must be more than that, perhaps worse. Pray, tell me, for I am old, and may misjudge things; and I want to know.'

'Well, sir, his manner to his mother displeases me, and to Ellen likewise.'

'And to yourself? Do his ways to you—which I have often watched—displease you?'

'Sir, you press me somewhat unfairly; but, if I must needs tell the truth, they do.'

'One question more, Lucy, and I have done—only one more. So much depends upon your answering it; take time. Do you think'—he clasped his hands together and looked into her face appealingly—'that he is hopelessly wicked and depraved—capable of any cruelty—any crime?'

'O sir, I think no such thing. I cannot reply to such a question.'

Digitized by Google

'I see, I see,' moaned the old man. 'If he were ever so rich, and promised to improve, and though your father urged you to believe him—even then?'

'Sir, once for all, I could never *love* William Blackburn.'

'I knew it, I knew it!' cried the old man, wringing his hands. 'I ought to have spoken to him long ago, and I *will* speak to him to-day.'

'Not about me, Mr Blackburn!' exclaimed the young girl earnestly. 'I do beg of you not to do that. Nothing he can say, nothing he can do, will alter matters between us two.'

'Nor should they, my dear girl, nor should they,' answered the old Squire. 'He shall never trouble you more. He shall go away whence he came. I am master still in my own house, and I will not have him here.'

'I should be very sorry, Mr Blackburn, very sorry, to be the means, however innocent, of any rupture between you and your son. Please to spare me the pain of having thus requited your hospitality. You asked me in strict confidence, remember, to answer you certain questions, and I have answered them in confidence likewise.'

'You shall not marry him, Lucy, never fear. Your father shall have the money, all the same. It's all money, money, now-a-days; in my time—but there, that was long ago—folks married for love.'

Lucy was scarlet. It was terrible to hear her father's scheme thus openly spoken of by this doting old man. If *he* knew, must not all the world know, and cry shame upon her! Tears of anger, of wounded pride, ran fast down her cheeks.

'Don't cry, girl,' resumed the old man in a firm and altered voice; 'that man yonder shall never have you in his power. I will see to that. I am glad you have spoken; I had but very little hope, and it is dead without much pain. I am stronger for knowing the truth—stronger to cope with him—stronger to overcome him. He shall see.'

The old man rose from his seat with a vigour he had not shewn for months, and straightened his huge frame as of old. There was no tremor in his limbs now as he moved slowly down the winding walk towards the terrace, though he moved alone, for Lucy remained upon the garden-bench with her face hidden in her hands. When he reached the level sward of the croquet-ground he stopped for an instant, but only to take breath, then walked straight up to his son, who was leaning on the terrace balustrade smoking a short pipe, and tapped him on the back.

'I want you, sir, for a few minutes' conversation in my room;' then strode on without waiting for a reply.

Mr William Blackburn shrugged his shoulders, tapped his pipe against the stone, to empty it of its contents, and muttering to himself: 'I wonder what the old fool is up to now,' followed the Squire into his sanctuary.

CHAPTER XXIV.—WILLIAM'S CHANCE.

When his son entered the room, Anthony Blackburn was already seated in the high-backed black armchair, which was his usual place; his eyes were fixed upon something on the wall, which was not a picture, although it was set in a frame, and on this he seemed to gaze, as if unconscious of his son's presence.

'Well, father, what is it?' Mr William's tone was sharp and sullen, and had the effect which was intended—of awakening the old man from his reflections.

'I want to say a few words to you, William,' said the old man, in tones that were strangely different from those in which he had last spoken; no longer stern, but hesitating, and grave, and sad. 'Sit down; no, not here, but yonder.' William took the chair indicated, more remote from his father than the one he had selected, and sat down on it with a hang-dog look.

'Do you know what I have been looking at for the last minute or two?'

'Yes,' growled the other; 'Family Tree.'

This interesting record of the House of Blackburn ornamented one side of the fireplace, as dead Ferdinand's hunting-map did the other, and had certain marks of red ink upon it, such as are seen in wreck-charts to indicate 'Totally lost.' These marks were placed opposite to the names of those of the Squire's forefathers who had served the ancient and honourable office of high sheriff. In no other respect, so far as public affairs were concerned, had one Blackburn ever differed from another. The country at large, nor even the county, had not been wiser or better for any one of them. Yet, like any other old tree, which, though without fruit or foliage, has stood for centuries, it was respected by many folks for its mere pertinacity of vegetable life; while the Squire himself regarded it much as the African regards his fetich; he worshipped it with a veneration that amounted to awe, and without even asking himself a reason for the faith that was in him.

'Three hundred and fifty years,' he murmured, 'have we lived at Redcombe, father and son, father and son!'

'And very right too,' was Mr William's practical reply. 'It would have been a pity and a shame ever to let a girl in, when there was a male heir.'

'A girl. Ah! that reminds me,' said the old man with a deep sigh. 'I tried to-day, William—I did give you that chance—whether an honest girl—one who would not have pained me if she could have helped it, I know—had any one good word to say for you, or of you. I thought to myself, if *she* can see any good in him, the terrible thought I have got into my old head cannot surely be true. I would rather have believed myself to be in my dotage—much rather. But she thinks of you like the rest—like all the rest.'

'I don't know who you mean by all the rest, sir,' answered William angrily; 'but there are people in this house who know very well upon which side their bread is buttered. There's Miss Ellen, for one'——

'Hush, hush, sir!' interrupted Anthony, with dignity; 'I will not have a word said against Ellen. She has no fault except that she is not a man—my grandson instead of my grand-daughter.'

'Well, that change is not likely to happen, is it?' inquired William.

'There's your mother likes you, to be sure,' continued the old man, taking no notice of this playful rejoinder. 'That would be something, if she were not your mother.'

'The old cuss has lost his last wits,' thought William to himself. 'If Ellen was his grandson, and his wife were not my mother! He has become a drivelling idiot.'

Digitized by Google

'And yet, God knows, I would give forty thousand pounds, ay, and house and land, and all I have in the world, not to believe it of you.—Don't come nearer, sir; keep where you are.'

At the mention of so large a sum, William had involuntarily hitched his chair a little nearer to his father. Notwithstanding his doubts of the old man's mental capacity, he shrewdly and justly suspected that the figures of the sum mentioned as being at the Squire's disposal were tolerably correct, and he felt himself irresistibly attracted towards the possessor of such a sum of ready money, and inclined to conciliate him at any cost. Even the most sullen of misanthropes will endeavour to make himself agreeable if the temptation is strong enough. But the tone of his father's speech was far more forbidding even than the words themselves; and his manner had a certain loathing and shrinking in it, which (though he knew he was no favourite) he could not at all explain, and which frightened him a little, notwithstanding that he once more murmured to himself: 'He is out of his wits, that's all.'

'What could the old fool be driving at? and why did he keep him at a distance thus, as though his touch, and even his nearness, carried contagion?'

Anthony's eyes had returned to the Blackburn pedigree, and it was full a minute before he spoke again.

'If I ask you one question, William, will you answer me truly—just the truth, and no more? These men here, your forefathers as well as mine, were men of their word. It used to be said, though they had their faults: "As sure as a Blackburn's word;" and perhaps this one virtue may remain in you yet, notwithstanding—— But no; that is impossible;' and the white head and beard shook slowly from side to side.

'What is it you mean, sir?' interposed William with simulated indignation. 'I tell no more lies than my neighbours. If you come to that, you are not so particular about truth-telling yourself, it strikes me, since Mr Waller is such a friend of yours. You don't suppose that soft-spoken gentleman never tells a lie, do you? And Lawyer Moffat, too, he's another; and there's plenty more I could tell off on my fingers, if'——

'How did Bess really die, William?'

The effect of this sudden and most unexpected question was curious enough. Not only did he to whom it was put remain silent, with his lips apart and his face of an ashen paleness, but the questioner also turned as ghostly as himself. In the case of the former, this was explicable; for the old Squire had never before evinced the slightest interest in his daughter-in-law's supposed fate, any more than he had in her while she was alive; and as for other folks, William had easily silenced their inquiries as to detail with a few sullen words. Nobody cares to press a bad-natured man upon a distasteful matter, as the widower had taken care to shew this was to him; and when his mother had been inclined to be curious, he had treated her successfully, much as he had treated the jail chaplain: 'Don't ask me about poor Bess, mother; the subject is too distressing to me. Her end was peace, and let that content you.' Which it did, and the more so, since the nature of the reply convinced her how much there was of good in the character of her darling son, though many doubted it, because, forsooth, it did not always crop out upon the surface.

Thus Mr William, who, according to his promise at that harsh meeting, had transmitted to his wife the considerable sum of money paid to him by Richardson, had begun to consider the existence of Bess as an obstacle surmounted, a matter that was not to trouble him more; and this sudden reference to her from so unexpected a quarter embarrassed him exceedingly. What could it matter to his father how she died? and especially how could it so matter that the mere anxiety for the reply should change his face, so that it seemed more like that of a dead man—but for that same shrinking, loathing look which had come out afresh and more marked even than before—than that of the once ruddy Squire? He felt more alarmed and more at a loss for an answer than if the old man had asked him: 'Is your wife really dead?' Of course he had crudely contrived the story of her death, before he had ventured home. She had died of consumption (with which she had long been supposed to be threatened), and he had nursed her for many a long day and night. Not much of detail could be expected of such an end, and little, as we have said, had been asked for. But now, not only had inquiry thus unexpectedly arisen, but one which seemed to discredit his own statement.

'How did Bess really die, William?'

Absolutely nothing occurred to his conscience-stricken mind, at the moment, except procrastination; for evidently his father was in possession of some important fact, and the want of accord with it in his reply might be fraught with danger to his dearest hopes. He was as much in love with Lucy Waller as his coarse and selfish nature permitted him to be, and he was not going to own to any one that Bess was living, until he was absolutely obliged.

'Well, it is a very distressing story, father.'

'I ask, how did she die? If her end was such as you told your mother, there must have been a certificate of death; let me have *that*. But no; you are not to be trusted. I will write for it to Formosa myself.'

'You would give yourself a needless trouble, sir,' replied William Blackburn slowly. He saw the danger looming large and near before him, and since there was a lie that lay ready to his tongue by which it might be evaded, he did not hesitate a moment to make use of it. 'No such certificate exists; and since you press me so unmercifully—though I had hoped to spare myself so sad a story—I must needs tell you why my poor wife was never buried.'

The window was closed, and there was a fire on that late autumn day in the little room, yet the old man shivered, and seemed to shrink within himself.

'One moment, sir,' said he in trembling tones. 'You talk of sparing yourself; I am a very old and broken man; spare *me*. I do not know for certain what you are about to say. But if—if you are conscious in your mind—of something (and your face seems to tell me so) which it is better for your father not to hear—some act that no eyes save those of the All-seeing have witnessed, and which should make you hide yourself from the sight of man for ever, do not tell me the lie which your lips are about to frame. If you have any touch of feeling left for him that begat you, do not speak. I shall understand (Heaven help me!) your

Digitized by Google

silence well enough. Go in peace, if God has peace to give you, and never darken these doors again. You shall have money without stint; but go; steal off at once; the money shall be sent wherever you appoint; but as you value your worthless life, dare not to pollute your mother's loving lips with a kiss of farewell.'

The old Squire looked furtively up with haggard eyes, and beheld on his son's face a look of the most genuine and unfeigned amazement.

'What!' continued he with a strange tremulous joy, which seemed to pervade his very limbs as well as his speech, 'is it possible that I deceive myself, that I have been racked and tortured for so long by a baseless suspicion? Speak, William, speak; and if you are innocent, if you have not done this deed, I swear I will forget all else you have done amiss, and only remember that you are my only son.'

Perhaps there are no men so base, but that beneficent Fortune now and again affords them some opportunity of starting afresh in the race of life, less weighted than could reasonably be expected, by the transgressions of their Past. The unseaworthy and wretched bark on which they have been aboard so long, nears the land so close that it does but require one stride to be ashore and safe. They have had experience enough (as one would think) of the stormy sea, now raised on the froth of the wave, now sunk in its gloomy trough, and it needs but a moment's courage, one quick decisive step, to reach *terra firma;* and yet how seldom they take it! Such a chance now presented itself to William Blackburn, and he deliberately declined to avail himself of it. It had become possible for him, in a quite unexpected and not-to-be-hoped-for fashion, to be reconciled with his father; to have all old scores wiped out, no matter how heavy they might be (it was impossible, looking on his father's face, to doubt it), provided only that he should make a clean breast of it, and tell the truth. But the condition was too hard. It seemed so much easier to use the materials of the lie which he had, as it were, by him.

'I can make no sort of guess, father,' said he coldly, 'of the nature of the particular suspicion which you harbour against me just at present. You have been suspicious of me all my life, and more or less, as now, without cause. As to silence respecting my wife's death, I have no reason to keep silence except that which I have already mentioned, the desire to spare myself, but more particularly my mother, a painful narration. Poor Bess came to her end, not indeed by consumption, but after a much sadder fashion. Her death was the result of accident—poor soul, she was drowned.'

There was a long pause, and a silence unbroken save by the autumn wind moaning at the casement, and a cinder dropping from the fire.

'At sea?' asked the old man in a hollow voice, in which there was still the distant echo of a hope.

'No, sir, not at sea. When walking in the dusk about Formosa, she fell down a steep and terrible place they call the well-hole'——

Anthony Blackburn rose with a piercing cry, and tottered to the window-corner, as though to put as great a space as possible between him and his son.

'You lie, you lie!' cried he; 'she did *not* fall. You pushed her down. I heard it from your own lips the other night, when you were raving. You told the truth then; yes, you did—you did. Murderer! murderer!'

The window was violently thrown open from the outside, and Herbert Stanhope strode over the sill.

'What is the matter, Mr Blackburn? Has this fellow dared to strike you?'

Old Anthony had sunk upon the ground, his shoulders only supported by the angle of the wall. His limbs hung strangely loose and still, and his lip was drawn upon one side; but still he made shift to speak. 'No, *no; he* has not smitten me; it is Heaven that has smitten me.—Keep near me, Stanhope—keep quite close—and send him away out of my sight for ever.'

INSECT PLAGUES OF THE UPPER AMAZONS.

None but those who have travelled on the Upper Amazons can have any idea of the number and voracity of the insect torments which work their wicked will on the bodies of the unfortunates exposed to their attacks; and as the 'sancudos,' as those insects commonly known to Europeans as 'mosquitoes' are here called (the term mosquito being applied to a small sand-fly, of which we shall speak hereafter), form by far the most important section, and indeed, as a common topic of conversation, fill the place of the weather in England, we will allot them the first place on the list.

In the 'Pueblos' villages, round which the forest is cleared away for some distance, the sancudos are generally pretty quiet during the day, except where darkness prevails: there they are ever busy; and there is a device much practised by the inhabitants for getting rid of them from the houses, which we will here relate. The window-frames—at least in those favoured establishments which possess windows—are covered with fine gauze, instead of glass; now, just before sundown, all the sancudos inside a house fly towards the light: taking advantage of this peculiarity, each inhabitant, at the approach of night, shuts up his house, and prevents the entrance of light, except through one window. On the inside of the gauze, stretched over the frames, all, or nearly all, the sancudos in the house will now collect; and, on the window being opened, fly out immediately. The moment the sun sinks below the horizon, the window is closed; and, by the practice of this precaution, and the assistance of good mosquito curtains, one may sometimes enjoy a comfortable night's rest. But let the window be left open five minutes only after sundown, and misery will attend you, for your house will be full; each sancudo that departed, having seemingly returned with all his kinsfolk and acquaintance. The triumphant note of a sancudo who has made his way under your curtains is, to our mind, more annoying than even his bite; and should you have been careless in getting into bed, and been accompanied by two or three of these blood-suckers, we will defy you to sleep until you have exterminated them. You lie still, and hear them buzzing round you; presently one approaches, and you make sure you have him nicely settled on your cheek; you give yourself an awful slap in the face; but—you don't kill the sancudo; on the contrary, you only hear him hum more merrily than ever. He knows very well you were not asleep, and is only amusing himself. When you are really at rest, he will have your blood. Though you may repeat the slapping

Digitized by Google

process ever so often, you will never kill one; and the only way to insure peace is to get up, strike a light (every one takes a candle and matches to bed with him), and hunt them regularly down, taking care not to set the 'mosquitero' on fire in so doing.

In the forest and on the river, the sancudos are always busy day and night. When we first came up the river, I have known men get into the vessel's tops, and there cover themselves with sacks, notwithstanding the heat, rather than remain below exposed to their attacks. They punish women and children new to the country tremendously, frequently making them look as if they had small-pox.

Fortunately, they cannot stand a current of air, and so, when under weigh, we were comparatively free from them; but when at anchor, especially at feeding-time, they were something awful. A finer illustration of 'dinner under difficulties,' than was sometimes presented by our mess, could scarcely be imagined. A spectacle of men, their coats tied tightly round their wrists, and their trousers round their ankles, walking after the manner of a caged wild beast, a plate in one hand, a fork in the other, would probably have suggested the idea of escaped lunatics to an observer at a short distance to whom the cause would be invisible: and this is no exaggeration. We used to try all manner of devices to get rid of them, but without lasting effect. Creosote will certainly keep them off; but the remedy is as bad as the disease. Whitewash will drive them away; but when dry, its power ceases; and the only thing to do is either to cover all exposed parts of the body with black pigment *à la mode Indienne*, or else, as these Yankees say, to 'grin and bear it.'

Scarcely less troublesome than the sancudos are the mosquitoes, or sand-flies, although they have the negative merit of biting only by day. They are minute creatures, not much larger than a pin's head, they resemble much in shape the Cimex genus, and prefer the backs of the hands to any other spot for their attacks. But, unlike the sancudo, who, when undisturbed, gorges himself until unable to fly, and becomes an easy prey to your avenging finger, the mosquito never seems to take too much to prevent his easy escape on the slightest appearance of danger, being evidently just as wide awake when full as when empty; wherever he has sucked, he leaves a little black mark, from the blood coagulating in the puncture, and you find your hands occasionally presenting a most curious mottled appearance, from the attacks of these little wretches. Everywhere in long grass lurks the 'moquim,' a little red insect, so small as to be almost imperceptible, but which fastens on the legs, causing the most intolerable itching. The plan we adopted was, on our return from shooting-excursions, to wash all the lower parts of the body with 'Cachaça' (cane spirit); and this used to answer admirably.

There is a fly which burrows in the skin and deposits an egg, both in human beings and animals. This produces a maggot, similar in shape to that of the common blow-fly, but much larger. Of course, inflammation in the part, followed by suppuration and discharge or extraction of the foreign body, take place. Although the maggot is probably analogous to the Guinea-worm, it differs from it in being always discharged entire, whereas the Guinea-worm requires very careful and gradual extraction.

Then there are 'chigos,' which burrow mostly in the soles of the feet. You feel an intense itching, and on examination, find a little thing like a pea just under the epidermis; this is the bag containing the young chigos, which must be carefully picked out with the point of a knife, and the cavity left filled with tobacco-ash. It is said that if the bag is broken, and the young chigos escape, serious consequences will result. This, however, we do not believe, as we have broken many in the act of extracting them from our own feet; but always using plenty of tobacco-ash, we never experienced any inconvenience. Huge spiders abound, whose very appearance inspires a wholesome dread of a nearer acquaintance, but which are harmless enough if let alone. In fact, on board our steamers, almost every cabin was tenanted by one large spider, whose presence was tolerated on account of his being a deadly foe to cockroaches, which abominable creatures used to swarm on board. Sometimes he would not be visible for a fortnight or more at a time; but he would leave tokens that he was 'all there,' in the shape of the empty husks of cockroaches, from which he had carefully abstracted the interior. These spiders have the power of springing upon their prey from a distance, and some of them are so large and powerful as to kill and devour small birds.

In passing through the narrow forest-paths, it is necessary to be on the look-out for the wood-ticks, which are very difficult to get rid of, if once firmly attached; also for the huge black ants, an inch and a half in length, with stings like a hornet's; and the saüba ant, without sting, but armed with nippers like a pair of surgical bone-forceps, which are running about everywhere. One may sometimes chance upon a column of the dreaded 'fire-ants,' marching in regular military order; and if you do, the only thing is to bolt at once, for neither man nor beast may withstand the fire-ant and live. Occasionally one remarks the slender form of a tree-snake gliding away, or the deadly 'tucu-riju' basking in a sunny spot; while from out the mossy roots of the great trees, quaint little horned frogs peer at you, and startled lizards patter away over the dead leaves. When at length you stop to rest, take care to examine your camping-ground, lest you find that centipede or scorpion may fancy the same locality.

Frequently on board our steamer, both centipedes and scorpions would be killed, introduced, no doubt, in the wood used for fuel. One day, as we were watching the hands taking wood from canoes alongside, from one of the logs pitched on board was dislodged a scorpion, which fell on the naked left arm of a man keeping tally at the gangway. Astonished by his sudden flight through the air, the animal remained perfectly still. The man never moved a muscle, and quietly raising his right hand, flipped it away with his fingers and thumb. It was very neatly and coolly done; and he thus escaped a sting, which he no doubt would have received had he tried to brush it hastily away. Ants are a horrid plague, both afloat and ashore. It is amusing to see a host of small ants carrying off the body of a defunct cockroach, giving one the idea of mice departing with a dead elephant. But they are a great nuisance. They will not, however, walk over cotton wool; and anything

Digitized by Google

placed on or enclosed by it is safe from them. The saüba ants are, we think, the greatest depredators of any. They form regular communities, where each individual, workers, soldiers, &c., has his own especial line of duty, and are great excavators. Mr Bates, in his work the *Naturalist on the Amazon*, has given a very capital description of these ants; but we fancy he has omitted to mention the extremely pungent aromatic smell they, or at least their nests possess. These ants are extremely destructive to cacao plantations, stripping the trees of their leaves; they will carry away a large basket of grain in a single night, should any of them come across it. A migration takes place sometimes from the parent stock, some of the ants becoming winged, and flying off. Few, however, escape the Indians, who are always on the watch for these migrations, and by whom these winged ants are considered rather a *bonne bouche*. They catch and stuff them into bottles, occasionally lightening the work by pulling the wings off one, and devouring him alive. We never had the courage to taste one, although we have partaken of many strange dishes. 'Monkey' and 'parrot' are both good, 'tapir' and 'manatee' not bad, and peccary A1; but we never ate a saüba ant; nor could we ever taste a drink much affected by the Indians, and called 'massato,' of which there is generally a large jar standing in the corner of every Indian dwelling. They always offer it to visitors; but their mode of so doing is not inviting, as it consists in a black or rather copper coloured paw being thrust into the aforesaid jar, which contains a sort of pulp, and bringing up a handful, which is squeezed into a calabash, and placed at your disposal. This pulp is, however, produced by means which, from unwillingness to disturb the stomachs of our readers, we refrain from relating. Those ants which escape the Indians fall a prey to flocks of hawks and other birds, which make their appearance as soon as ever a migration commences.

The Upper Amazons are little known to Englishmen, and in this article we have endeavoured to describe a few, and but a few, of the annoyances to which the resident thereon is subject, and which certainly do not augment the charms of a life otherwise by no means luxurious. It will probably surprise many to hear that one gets very tired of turtle. But such is the fact, when it forms the basis of every meal; although (and for this hint we believe ourselves entitled to gastronomic gratitude) a young turtle, roasted in its upper shell, is one of the greatest delicacies of an Amazonian dinner, and might be introduced to civilised palates with much advantage. *Probatum est.*

ROBERT'S CAPITAL HIT.

IN THREE CHAPTERS.—CHAPTER III.

If there be such a thing in England as a cheerful waiting-room, which I do not believe, it certainly was not to be found at the London Bridge Railway Station ten years ago. It is almost that time since I have seen the dingy apartment, with the deplorable, high-silled windows; the shabby floor-clothed floors; the ingeniously uncomfortable benches; the heavy, dust-laden tables; the leather-bound Testaments; the dumpy bottle of stale, undrinkable water; the muggy glass; and the out-of-date time-table, which rendered a sojourn in the precincts of the London Bridge Railway a penitential exercise. Everything may be changed now, for aught I know, and the general first-class waiting-room may be as handsome, cheerful, refined, and habitable an apartment as those assigned to a similar purpose on the other side of the Channel, where the railways belong to the government, and the government best secures its own interests by consulting the convenience and the tastes of the people. I only know that waiting-room was a fearsome place on that fine summer forenoon, when I, finding I had missed a train for Sydenham, and should have an hour to wait for the next, seated myself despondently on one of the benches, on the surface of whose leather covering dust and grease contended for the supremacy, and made up my mind, ruefully, that this was almost as bad as putting up with Mrs John at Acanthus Villa.

A woman, whose face wore an expression of chronic discontent and fatigue, and two tired children, were in the dreary waiting-room; the former leaning her head forlornly in an angle of the wall; while the latter kicked the panels under the high-silled windows, and drummed upon the dirty lower panes, which they could hardly reach. I had bought a morning paper, but I did not feel inclined to read it. I am not a sufficiently large-minded woman to find solace for private trouble in public affairs, and my own small sphere occupies me to the exclusion of nobler themes. If the philosopher who defined the difference between the male and female intellect as integral, consisting in the incapacity of women to entertain abstract ideas, had known me, I am sure he might have cited me triumphantly in support of his theory. I remember one day when we were talking on this very subject of speculations, Robert said to me: 'Martha, my dear, you are a true woman, as to your brain; you have no faculty of generalisation.' And I replied: 'I daresay not. I have not the least notion what you mean; but I don't want to have the notion or the faculty either.' I found out afterwards what he meant, and I know he is right. If Robert were an officer in the army, I know I could not understand or care about war or peace, except as his safety and welfare should be concerned in them; and so it would be in every other case; so it was in this particular case. The Campo de los Angelos, with all its public and private interests, resolved itself for me into Robert's being mortified or pleased by the result of his undertaking and journey. Of all the unheroic, unambitious, narrow-minded women in the world, I do believe I am the most unheroic, unambitious, and narrow-minded.

No, I could not read the morning paper; and I took to gazing listlessly out at the large, intricate, dirty, comfortless station, where trains were arriving, departing, or standing about, having their doors slurred with water, and their windows

Digitized by Google

pulled violently up, to be imperfectly rubbed with dirty cloths. The time passed heavily, and I had just ascertained that only a quarter of an hour of waiting had gone over, when I saw a man, whose appearance seemed familiar to me, coming along the platform from a train which had stopped at some distance, and approaching the waiting-room. In a few moments he had reached the threshold, followed by a porter, to whom he was speaking, and carrying a black bag. This person was Mr Sloane, of whom Robert had spoken, whom we had met occasionally at Acanthus Lodge; and the porter seemed to know him, and his infirmity, for he roared his replies to the questions which were put to him.

'You 're sure you haven't seen him?'

'Yes, sir, quite sure,' shouted the porter.

By this time they were both in the room, and Mr Sloane had placed his black bag on the huge dusty table. He sat down with his back to the window at which I was standing.

'Very extraordinary,' he said, in a voice almost as loud as that in which the porter had spoken, and which, together with his frowning and forbidding appearance, sent the children to their mother's side, whence they directed alarmed looks at the large gentleman who made himself so very much at home—'very extraordinary. I never knew him to be late before—never.'

'Perhaps the message did not reach him soon enough, sir,' the porter said, and evidently wished to get away, for he looked fussily out of window, as if he saw a train coming.

'Nonsense, nonsense,' and Mr Sloane roared more loudly than before. 'The message was in plenty of time. However, I must wait. Do you look sharp out there; you'll be on the platform, I suppose?'

'Yes, sir,' answered the man.

'I can't stand about there; and if he isn't watched, he may go away without seeing me. Look out for him. I'll wait a quarter of an hour or so; and if you see him, send him in here.'

He gave the man a shilling; and turning sulkily to the table, undid the spring fastening of his bag, and took out several papers tied together with red tape. The porter passed the window the next moment with one of his fellows, nodding his head and jerking his thumb in the direction of the unconscious Mr Sloane, who was mumbling and growling over his papers like a discontented bear. He had not seen me, and I had no wish to attract his attention. He would probably think it a great nuisance to have to talk to me during our common durance, and I found it always very fatiguing to talk to him, for he was uninteresting, deaf, rude, and irritable. He had just come up from Sydenham, I supposed, and had made an appointment with some individual, who had not kept it, to meet him at the station. I continued my unobservant look-out upon the platform, and Mr Sloane sat with his back to me, but not far from me, as I stood, still growling over his papers, while the tired children continued to watch him with round, alarmed eyes.

Presently I heard him scrabbling among the papers still in his bag, and muttering: 'Now, where the deuce is it? Where can I have put it? I certainly had it this morning, and I did not take it out in the train. Let me see. Did I?—No, certainly not.' Then he clicked his tongue against his teeth, with that sound unrenderable in words which signifies vexation, and searched through the papers again. I turned half round, and watched the search, but he did not notice me. He grew more and more angry and impatient; turned his bag up with the open mouth downwards; shook all its contents out upon the table; turned them over unavailingly—muttering all the time, sometimes inaudibly, but at others so that I could catch his words: 'There; if I've come without that, he might as well have staid away as not. What the deuce *have* I done with it? If I could even remember the address.—Hôtel de l'Univers, was it? Hôtel de Rouen? Hôtel de Calais? Hôtel de something or other. *What* was it?' Now he was franticly searching his pockets, of which—as he was wrapped up as if in mid-winter on this fine forenoon in May—he had several; and presently he pulled out a white silk muffler, and with it a letter, which fell to the ground, and on which he pounced with a grunt of satisfaction, muttering: 'How the deuce did it get there?'

'Your train, ma'am,' said the porter to whom Mr Sloane had given the shilling, 'just starting. —Come along, little uns;' and he good-naturedly took the smaller child in his arms, while the mother led the other away, who went with a backward glance at the gruff old gentleman, with whom I now found myself alone.

He unfolded the letter, which was written on large business-like paper, and spreading it out on the table, set his elbows on either side of it, and holding his head between his hands, began to mutter and mumble more continuously and loudly than before. My position was not pleasant; he was evidently skimming the letter in order to find out some particular passage—probably the name of the hotel he had been trying to recall. I could distinctly hear what he said where I stood, and I could not change my position without attracting his attention, which I particularly wished to avoid. I was thinking that I must do this unpleasant thing, however, when Mr Sloane said, quite aloud: 'Hôtel d'Espagne! That 's it, of course. That 's where Dorrison's man found him!' and proceeded to make a memorandum in his pocket-book. The words so startled me, that I turned quite round, and then and there proved myself incapable of entertaining, or at least of acting on the abstract idea of honour, for I felt instinctively that if I listened to this deaf gentleman's communing with himself, I should learn something which it might be of importance to Robert to know, and it never occurred to me not to listen. Indeed—so confused are the feminine 'moral ideas'—I had a notion that there was something 'providential' in the circumstances. At anyrate, I stood quite still, and sideways, at a few feet from Mr Sloane, who presently began to read the letter before him in an audible voice, and almost consecutively. The earlier passages of the letter were of no importance; but soon I heard this: 'Disney is playing an artful game; but I daresay as much for the fun as for the profit of it. But to prolong this kind of fun does not suit us, so I have determined to bring the matter to a conclusion. I have not happened to meet Dorrison's man, though I know he is in Paris; indeed, Disney has said as much, and almost acknowledged the game he is playing; so I suppose he has given him a rendezvous somewhere else. Of course, if it were worth our while,

Digitized by Google

we could ascertain that very easily, but it is not. I am resolved now to use the five hundred pounds assigned debt, which Colvill prepared as a last resource, in case Disney was unmanageable, or Dorrison's man was treading too closely on our heels. Fortunately, the method of procedure here, in matters of the kind, is very summary; and *I know*, as a fact, that it would not be possible for Disney to lay his hands on five hundred pounds. Indeed, living the life he does, I am surprised he has five pounds in his pocket. I have just now given instructions to Fayolle's people. The five hundred pounds debt to Roberts and Smith is safely assigned to them, as you are aware, and they will take immediate action. Disney will find himself in a very short time lodged at Clichy; and the man who brings him the ready money to get him out will be the successful candidate for Campo de los Angelos. It is fortunate there is such an effectual screw ready to be put on, for he really is the most tiresome fellow, the most slippery customer, I ever had to deal with. But we have him now. Yesterday, he was so cool upon our bargain, had so much the air of a man who was going to slip through my fingers, I made up my mind this must be done at once. Fayolle's people will act to-morrow, so don't let any time be lost on your side. Let me have a draft on Lafitte for five hundred and fifty pounds by the tenth. I will report progress to-morrow.' Then came a pause, and some mumbled sentences which I did not catch. I had listened with painful intensity, I had heard with perfect distinctness, but my mind was not clear enough to take note, in any practical sense, of its own impressions. I knew I should not forget a word that I had heard, though some portions of the letter came back to me with more force than the others. I knew my memory was quite trustworthy, but there might be more for me to hear. After a little, I should be able to collect my thoughts, and decide on what was to be done. I remained motionless, and still intently listening; but Mr Sloane thrust the letter, with a final impatient grunt, into his bag, snapped the lock, and rose. I turned my face to the window, and leaned my forehead against the glass. It would have been unfortunate that he should recognise me just then, as he probably knew who was 'Dorrison's man,' whom his correspondent was so very certain about outwitting. Mr Sloane was walking heavily to the door, when the porter again made his appearance, and said: 'Mr Colvill's a comin' in, sir;' and in the next breath: 'Your train now, ma'am.'

Mr Sloane hurried out, and I caught sight of a slight dark man, whom he met a few paces from the door of the waiting-room, and with whom he walked away.

'Your train, ma'am,' repeated the waiter.

'Thank you,' I answered; 'I have changed my mind; I am not going.'

The man looked a little surprised, but I suppose railway porters see a good many eccentric and foolish people in the course of their lives; and this one said nothing to indicate that to have waited nearly an hour for a particular train, in such an uninviting place, and then change one's mind about travelling by it, was not the most orderly and rational of proceedings. I left the station and crossed over to the enclosed passage, which led, in arcade fashion, in those days, to the Tooley Street side, but which no longer exists. In that passage there were queer little shops, where the railway passenger could rush in and purchase fruit, cakes, confectionery, dolls, writing-desks, railway-rugs, spectacles, paper-knives, slippers, and other useful commodities. I entered the cake-shop near the entrance, bought some pastry, which gave me an excuse for asking for a seat; and then, opening my pocket-book on the counter, I wrote down every word of the letter I had heard read out by Mr Sloane. I had no doubt of the entire correctness with which I reproduced it; the sentences arranged themselves in my memory with unerring exactness: '*Disney will find himself in a very short time lodged at Clichy; and the man who brings him the ready money to get him out will be the successful candidate for Campo de los Angelos.*'

I tried to recall what it was I had heard Robert telling John about the summary action of French law in cases of debt, and how creditors in England could assign their debtors' obligations to French holders, and so bring them under the action of the law; but I had no very clear notion of it all. It did not matter, however. No doubt, the writer of that letter knew what he was about, and my business was to act on the information I had obtained.

I had Robert's letter with me, and now read it carefully again. The other formed a startling commentary upon it. Mr Dorrison was not in town, so that I could not go to him, tell him what I had found out, and leave him to circumvent the designs of the other party. I retraced my steps to the London Bridge Railway Station, and entering the continental department, ascertained the hour at which the mail-train for Paris, *vid* Dover and Calais, would be despatched. Six o'clock P.M. It was now half-past eleven. There was time enough, but none to spare, for what I had to do.

Mr John Hackett had his place of business, and also his place of abode, at No. 300 Lincoln's Inn Fields. He was the quietest and most business-like of men, and held Lincoln's Inn, out of whose precincts he rarely stirred, in reverence and admiration worthy of Tim Linkinwater. He had been an old friend of my parents, and took a kindly interest in myself and Gerty. He had not approved of my marriage, not on particular, but on general grounds. He did not see the good of it. Let people keep to themselves, and spend their little or much money, as the case might be, on themselves—that was his doctrine. He was very consistent; he had never married, or been suspected of the remotest notion of paying attention to any woman in his life. I don't know what his exact connection with the legal profession was; I believe he had some, though not 'a lawyer,' in the precise sense of the term; but, whatever his business was, he stuck to it pertinaciously, never went out, or had company at home, and cherished nothing except his cat and his cough. I believe to have lost either would have grieved him sorely.

The first thing I had to do was to see Mr John Hackett. That was easy; but I was not so sure about what was to come after, and had plenty of time to become very uncertain and uncomfortable about it, before a dreadful jingling, jolting 'four-wheeler' deposited me at his door. What a fool I was not to have gone in a Hansom, but I am as inconsistent as most women. I had made up my mind to do rather a daring thing, but I had not the

Digitized by Google

courage to get into a Hansom by myself! It is ten years ago, you must remember.

Mr Hackett was at home, and could see me; and in a short time I found myself in his private office—a gloomy room, with a very oppressive smell of parchment and mouldy ink about it—and explaining to him, while he maintained profound silence, that I had come to ask him for my five hundred pounds. I am sure my stammering speech and confused countenance would have justified Mr Hackett in suspecting me of the most nefarious designs in making this application. If he had thought I wanted the money in order to run away from Robert, and endow a gay Lothario with all my worldly goods, I should not have blamed him. This suspicion did not present itself to him, but I saw at once that which did.

'It is very odd that you should come in this way, and ask me for this sum, without giving me any notice,' said Mr Hackett severely.

'I know it is,' I replied; 'but Mr Heron told me he had explained to you that I had the right to claim it, of my own accord, at any time, and I am sure you will not make any difficulty about letting me have it. It is of immense importance to me, to Mr Heron, that there should not be an hour's delay.'

'Soh!' said Mr Hackett slowly; 'this is to follow the rest, I suppose. Well, well, it is of a piece with the folly of all you women. I thought the nest-egg would not be left long.'

How angry I felt with him! Afterwards, when Robert explained that Mr Hackett, who did not know any of the circumstances, had taken a perfectly correct and sensible view of the case, and had been very right and very kind in deploring his inability to prevent my committing what it was impossible for him to regard otherwise than as an act of arrant folly, I pretended to be convinced, but I was not. More want of generalisation, I suppose, another instance of inability to take in 'abstract ideas!'

'I cannot explain myself fully, Mr Hackett,' I said; 'and of course I cannot make you give me the money, if you won't; I can only assure you that if you do not give it to me, you will do me an irreparable injury.'

'Don't excite yourself,' said Mr Hackett; 'you shall have the money—not with my free will, remember; and I hope you will never regret having insisted upon it. I hold your husband's letter of instructions: you are quite right about that; but I am sorry to have to act on it. I hoped your husband would have had more wisdom and self-control.'

'My husband has plenty of wisdom and plenty of self-control,' I answered sharply; 'but the money is wanted for a matter in which the need could not have been foreseen.'

'Ay, ay, I know—the old story. No one ever foresees. However, it's no business of mine.'

'You shall know all about it afterwards, Mr Hackett,' I said imploringly; 'only believe me now, that I want the money for a good purpose. Indeed, it shall be replaced in your hands in a few days.'

He shook his head, but said nothing; then turned his chair round to his desk, and opened a long drawer, from whence he took a cheque-book and a slip of paper with a stamp upon it. Slowly and deliberately he made out the cheque. I watched the writing of every letter of it. Then he wrote something on the oblong slip of stamped paper, and telling me that it was a receipt for five hundred pounds, directed me to sign it. I did so, and he then handed me the precious cheque.

'Shall I send and get it cashed for you?' he asked me.

'No, thank you,' I said eagerly; 'I am going to the neighbourhood of the Bank, and will cash it myself.'

'Take care where you put it,' he said; 'and look sharp after your purse as you come out of the Bank.'

'Good-bye, Mr Hackett, and a thousand thanks.'

'Good-bye, Mrs Heron: you are a very foolish woman, and I hope you may not yet be very sorry for this day's work.'

He came with me to the cab, for all that, and shook hands with me when I was seated in it; and said: 'Tell Heron I should be glad to see him.'

'I will, when he returns from Paris.'

The cab moved on, and I left Mr Hackett, looking surprised. It had not occurred to me that he did not know Robert was away. He must have wondered more than ever what I wanted with the money.

It was just one o'clock when I reached the Bank of England. I cashed my precious cheque, taking the money in five notes of a hundred pounds each; and having fastened my purse securely into the bosom of my dress, I drove once more to the London Bridge Railway Station, and found a train, in which I took my place, just about to start for Sydenham.

My cousin, Mrs Eccles, lived close to the station at Sydenham, in a small house, with the prettiest of gardens and the greenest of palings. She was a widow, neither young nor handsome, but both clever and sensible, and I enjoyed her society very much. I did not see her often, because nothing would induce her to encounter the best-parlour *régime* of Clapham, and my mother-in-law regarded her as an eccentric person, a dubious companion for a well-regulated young woman. If Mrs Heron did not 'hold with' speculators, she held still less with clever women. She did not see the good of it, for her part—literary women never made good wives, or housekeepers, and they had much better leave 'such things'—by which my mother-in-law meant the writing of books—to men, who had sense. One of the trials, then, that had attended my removal to Clapham, and the relinquishment of our own happy little house, was the decrease in my opportunities of seeing my cousin. Mrs Eccles was writing in her tiny drawing-room, and was surprised and pleased to see me. I told her at once what had happened, and was much reassured by her composed acquiescence in my own plan of proceeding.

'Yes, of course,' she said. 'You must go to Paris by to-night's mail, and take the money to your husband. Whether this Mr Disney is in Clichy or out of it, this will secure Mr Heron's success; and equally, of course, your mother-in-law, and that detestable British matron, Mrs John Heron, must not know anything about it.'

'That was my chief difficulty—I felt it ought to be avoided, if possible: I could not explain things to them; and if they thought I had merely gone off to Paris, to join Robert, for a freak! oh, my goodness, I am sure I don't know what they

Digitized by Google

would say of me, or when I should hear the end of it!'

'I should think not, indeed. No, they must not know. You must do this little bit of business quietly—just going to Paris to-night, and coming back by the mail to-morrow night. When you have put the money and the information into your husband's hands, you have nothing more to do in the matter; leave him to make use of them.'

'I understand all that,' I replied; 'but the difficulty is to account for my absence. My mother-in-law will be so surprised and alarmed, if I don't return. I came down to ask you how I should explain my going, for I did not see how I could by any ingenuity conceal it.'

Mrs Eccles thought for a moment, then said briskly: 'She would never think of coming here to look for you, would she, if you told her you would remain with me for a couple of days?'

'No, I don't think she would; but I am sure she would make my staying here, during Robert's absence, a cause of offence, and harp upon it for many a day.'

'Never mind that; something must be encountered in a case like this; and it is better you should be blamed for staying here, than subjected to the frightful accusation of being a clever woman, who is doing a sensible thing to help her husband in a difficulty. You'll get over the one—but the other? Think of the inconsistency, my dear! It would never do. You must write a note from here—Mrs Heron will get it to-night, just when she will be expecting you home—and in that note you must tell a fib or two. You must say I have prevailed upon you to remain here for a couple of days, and that you will return to Clapham on Saturday afternoon.'

'Well—but—if she should ever find it out?'

('Moral ideas' again.)

'I don't think she will; but if she ever does, lay the blame on Robert. My belief is you will succeed in managing this affair, and your share in it will never be suspected; and Robert's capital hit will elevate him in the opinion of his mother—success always does elevate people in every one's opinion, you know; and all will go on much better for the future.'

'You will have to lend me the money for my travelling expenses,' I said; 'I have only ten shillings, beside my five hundred pounds.'

'I'll do that,' replied my cousin; 'and also I will lend you a little bag and a brush and comb; and those, with a collar and a couple of pocket-handkerchiefs, will be all the luggage there can be any occasion for you to take with you. And now, you are going to lie down and rest, until your dinner is ready, and to put all care and anxiety off your mind, for I will undertake that you shall be at London Bridge in time for the mail-train to Dover.'

She was a very cheering, helpful sort of woman; a capital person to have with one in any trouble, or when one was nervous or undecided. There was no indecision about *her*. I wrote the note, which I made as vague as possible, with a cowardly kind of notion that thereby I reduced the magnitude of the fibs which I had to resort to. There was clearly no alternative but to keep my mother-in-law in ignorance of my audacious act in taking the last money I possessed to Robert, on such an errand. I had a good rest, though I could not sleep, and a good dinner, during which Mrs Eccles talked to me in her cheery, bright, encouraging way, and made fun of my first appearance in the character of an unprotected female. She kept her word in every particular. She came with me to London Bridge; she bought my ticket, and selected a corner seat for me in a comfortable carriage; and as the train moved out of the station, I saw her bright, plain, sensible face to the last, and felt as if she were still patting me on the back.

I shall never forget Robert's face when he came to the door of the carriage in which I sat, at the *porte-cochère* of the Hôtel de Calais, and saw who was the 'lady' who had requested to see him; and I shall never forget what he said to me, when he had heard my story, told with the utmost incoherence and nervousness, for I broke down the moment I saw him, and felt that I need not be strong-minded any longer. But I made him understand it somehow, and put the money into his hands. What he said was very precious to me, and might have been dangerous, as provocative of self-conceit, had I not had the counterpoise of my mother-in-law and Mrs John to any risk of my thinking myself ready-witted. I asked him only one thing, in return for what he was pleased to call a service of incalculable importance: it was, that he would never tell any one, if he succeeded, that I had had any part in the transaction. He promised; and I think he has kept his word pretty well. But Mr Dorrison asked to be introduced to me not long after, when everything had succeeded, and took an early opportunity of presenting me with some beautiful ornaments; and has ever since evinced a livelier interest in me than is to be quite accounted for by the business relations between him and Robert.

I had a long rest, while Robert hurried away to see what had befallen Mr Disney. In some hours he returned, and told me his adventures. They are easily summed up, in the words of Mr Sloane's discomfited correspondent, who narrowly escaped being thrown out of window the next day by the enraged colonial—in the words which Robert quoted from my notes of the letter: '*The man who brought him the money to get him out of Clichy is the successful candidate for Campo de los Angelos.*' The bargain was concluded that very day, and the triumphant result telegraphed to Dorrison. Then Robert and I drove about Paris for a while, and dined in a wonderful room, so full of velvet and flowers, and gilding and looking-glasses, that I could hardly eat my dinner for bewilderment. It was on that occasion that we sketched out the scheme of a future visit to Paris; and I am afraid we were as much pleased and amused as a pair of naughty children at the escapade I had effected, and the little secret he and I and my cousin, Mrs Eccles, possessed in common. He put me into the train, and we parted quite gaily, laughing at the idea of my having made a journey which would have been talked about for a month at Clapham, with perfect ease. He did not mean to lose sight of Mr Disney until the final signing and sealing had been done. His last words to me were: 'I wonder if our dear old house at Hampstead is to be had?' And then I knew that Robert thought the turn in the long lane of our troubles had been reached, and this 'little bit of a venture' was to be the broad way out of them.

Digitized by Google

When I made my appearance at Clapham I was very coldly received, and my conciliatory attempts were received with a long series of sniffs. I was not afraid of questions; Mrs Eccles was a person concerning whom my mother-in-law would not condescend even to be curious.

Robert came home a few days after, and called on Mr Hackett within a few hours of his return. My five hundred pounds were safely lodged in his cautious keeping again; and I suppose Robert made a satisfactory apology for me, as, when I next saw Mr John Hackett, he told me he had believed me to be a much more foolish woman than I had turned out to be, and he congratulated Robert on having made a less fatal blunder in his marriage than almost any man of his acquaintance.

Campo de los Angelos was a brilliant success, and did prove to be the turning-point in our fortunes. 'The very clever way in which Robert managed a critical and difficult affair for Mr Dorrison, and the confidential and profitable relations resulting therefrom,' is a favourite theme with my mother-in-law, who likes us almost as well as she likes John and Mrs John, now that we have a finer house than Acanthus Lodge, and Heron and Shaw are no longer 'rising' young men, but in an assured and prosperous position. She is not, however, altogether inconsistent; she still declares, on occasion, that she does not 'hold with' speculations; though in that mine affair, somewhere in America, a place with a name which she would not pronounce if she could, regarding it as Spanish and impious, Robert had certainly made a Capital Hit.

THE CLOUD-MOUNTAINS.

When the day was slowly fading,
And the storm was hushed to rest,
I marked a lofty mountain chain
Against the glowing west.

High towered its mighty summits,
Half bathed in azure mist;
Its sides were clad with dazzling snow,
Its peaks by sunlight kissed;

And at its feet there slumbered
The southern English scene—
The violet-scented hedgerows,
The meadow's emerald sheen.

But by the Scottish blood that beats
Within my alien breast,
Ne'er rose behind so tame a scene
So fair a mountain crest;

And as with yearning eyes I gazed
On each enhaloed height,
The budding English woodland
All faded from my sight.

The mountain sky was o'er my head,
Aflame with sunset glare;
And with wild joy I drank again
The misty mountain air;

And where the sunny slope had smiled,
There frowned the rugged steep;
And where the rivulet had gleamed,
I saw the cascade leap;

And dearer than the violet breath
In dewy English vale,
The sweet familiar heather-scent
Was borne upon the gale;

And gladsome, to my Scottish ears,
As mother's lullaby,
I heard the music of the hills,
The torrent's melody;

And high above the foaming flood,
Beyond the heath-clad plain,
Still rose against the western sky
The same fair mountain chain.

Fair as the golden dreams that come
With morning's earliest ray,
The vision shone, and then as swift,
Alas! it passed away.

Paler and fainter to my eyes,
The mighty mountains grew,
Till, mingling with the air itself,
They faded into blue.

And with them faded, too, the spell
That bound me heart and brain;
The deep ravine was gone—I saw
The southern fields again.

O say not it was but a cloud,
Reared by the storm-wind's art;
It was a vision sent in love,
To cheer my drooping heart.

For lighter far, since that bright eve,
The days have gone and come,
For that sweet glimpse, bestowed by Heaven,
Of beauty and of home.

The Publishers of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

1st. All communications should be addressed to the 'Editor, 47 Paternoster Row, London.'

2d. To insure the return of papers that may prove ineligible, postage-stamps should in every case accompany them.

3d. All MSS. should bear the author's full CHRISTIAN name, surname, and address, legibly written.

4th. MSS. should be written on one side of the leaf only.

Unless Contributors comply with the above rules, the Editor cannot undertake to return rejected papers.

Printed and Published by W. & R. CHAMBERS, 47 Paternoster Row, LONDON, and 339 High Street, EDINBURGH. Also sold by all Booksellers.

No. 291. SATURDAY, JULY 24, 1869. PRICE 1½d.

HUMAN HAIR—REAL AND FALSE.

THE dark-haired races of mankind, according to Dr Prichard, inhabit the greater portion of the habitable globe. The black-haired Celts and Cymri were driven out by the fair-haired followers of the Norwegian sea-kings, and later by the Danes of the same type. Dr Wynter points out, that, at the present moment, the fairest-haired inhabitants of the earth are to be found north of the parallel 48 degrees. This line cuts off England, Belgium, the whole of Northern Germany, and the greater portion of Russia. Race determines the colour of the hair more than latitude or temperature; hence, brown hair has of course resulted from the admixture of the dark and light haired races. This colour is very predominant in England. Dr Beddoes examined the hair of 726 women, and of those he found that 22 had red hair; 95, fair hair; 240, brown; 336, dark brown; and only 33 had black hair. In one case, a weight of 22,000 grains has been supported by a single hair.

We have heard of a scientific barber who always enlightened his customers by informing them that 'the 'uman 'air is an 'ollow tube.' He was right. Each hair is a cylindrical tube $\frac{1}{350}$th part of an inch in diameter; and colour depends upon the fluid which fills it. The colouring matter is drawn directly from the blood. Golden hair owes its brightness to an excess of sulphur and oxygen; and black, to a great deal of carbon, and little sulphur and oxygen. Gray hair is, of course, owing to an absence of the colouring matter. In albinos, the hair is perfectly white. Marie Antoinette's hair turned gray in the night preceding her execution. Dr Wynter supposes that the blood sends some fluid among the pigment of the hair which at once changes its colour. The same author remarks, that in some, though very rare instances, persons have been born with patches of white hair; and there is at present in the Museum of Natural History at Paris a portrait of a piebald negro, in which the hair of the head presents very much the party-coloured appearance of the wigs exposed in the shop-windows, half-black and half-white, as specimens of the power of the various hair-dyes.

Respecting the hair standing on end from fright or other causes, the earliest instance is that mentioned by Job (iv. 15): 'Then a spirit passed before my face; *the hair of my flesh stood up*,' &c. Virgil, Seneca, and Shakspeare all allude to this. Dr Washbourne says this is owing to the outer layers of the hair-follicle being derived from the corinum or 'true' skin containing muscular fibres; these fibres, by the stimulus of mental emotion, contract, thereby causing the protrusion of the follicle, and consequent erection of the hair. The so-called 'goose-skin' is caused by similar contractility. Some physiologists think that curly hair is produced from a flattening of one side of the hair more than the other.

The apertures of the skin in which the hair grows are so constructed that, after a head has become bald, all the oils and pomades that have ever been advertised are powerless to revive the growth of the hair. An eminent German counted the number of hairs in heads of four different colours: in a blonde one, he found 140,400 hairs; in a brown, 109,440; in a black, 102,962; and in a red one, 88,740.

The Assyrians were very particular about their hair; and the beard was curled and plaited, as any one may observe in the Nineveh marbles in the British Museum. In that collection, an auburn wig, found in the Temple of Isis, at Thebes, is preserved: it must have been in the tomb upwards of two thousand years. The Egyptian kings had gold thread interwoven with their beards. This nation shaved their heads and chins, and wore wigs and *artificial beards*. The beard of a god is represented in their sculptures as being turned up at the end. The Egyptian women, as appears by figures of Isis, cut it square round the neck; but that strange *coiffure* which is seen upon Egyptian figures, on coins of Juba and the Parthian kings, Count Caylus thinks to be a peruke of wool. Curling hair was used by both sexes among the Phrygians and Sybarites; the Armenians wore their hair twisted in the form of a mitre; the

Digitized by Google

Persians, long, flowing, and curled; and the Arabians, cut upon the crown of the head.

The Jewish women kept their hair long, and also the men. Absalom's hair is said to have weighed two hundred shekels. Josephus tells us that Solomon, on grand occasions, was preceded by forty pages with their hair powdered with gold-dust. It is on record that Mausolus, king of Caria, to whose manes Artemisia erected the celebrated tomb, had a number of wigs manufactured, and then ordered all his subjects to be shaved, in order to compel them to buy his perukes at any price, to recruit his exhausted treasury.

The Greeks were very chaste in the arrangement of their hair; both sexes gathered it up into a kind of knot on the crown of the head, which was often ornamented with a grasshopper. They used hair-dye, for we read that the sculptor Miron, aged seventy, fell in love with Laïs; and, after he had been repulsed, had his white locks dyed black, and asked again; but she replied: 'How can I grant thee to-day what I refused to thy father yesterday?' Ælian describes the tresses of Atalanta as being golden or tawny (ξανθός). Evelyn says the Greeks shaved the heads of their children, leaving locks on each side, which they afterwards consecrated to their divinities.

The Romans were more elaborate than the Greeks about their hair. As the slaves were invariably cropped, the Roman gentlemen cultivated long hair. The Emperor Commodus powdered his with gold-dust. Martial says:

> A beau is one who, with the nicest care,
> In parted locks divides his curling hair;
> One who with balm and cinnamon smells sweet,
> Whose humming lips some Spanish air repeat.

They used a liquid for turning the hair black, prepared from leeches which had been left to putrefy for sixty days. But a dye that changed dark hair to fair was the most fashionable; it was made of a soap composed of goats' fat and ashes. Martial calls it Malliac balls, from Mallium in Germany. Ovid reproaches his mistress for having destroyed her hair by the use of injurious dyes. Ladies even cut off their hair, if dark, to replace it with a flaxen wig. When a man attained his majority, he shaved off his beard, and presented it at the temple of one of the gods. Nero presented his to Jupiter Capitolinus. Shaving continued in fashion until the time of Hadrian, who let his beard grow, to cover imperfections in his chin. Galen tells us that, in his time, women suffered much from headaches, contracted by standing bareheaded in the sun, to obtain this golden tint, which others attempted by the use of saffron. St Gregory Nazianzen, extolling his sister, says: 'She has no *yellow hair* tied in knots and arranged in curls.' The Romans began to cut the hair about 454 A.U.C., when Ticinus Mænas introduced barbers from Sicily. Many busts and statues in the Vatican and elsewhere have actually marble wigs upon them.

Diodorus Siculus says that the Britons, who had red hair, washed it in water boiled with lime to make it redder. The ancient Gauls had a like custom of washing the hair with a lixivium made of chalk, in order to make it redder. At the beginning of the French monarchy, the people chose their kings by the length of their hair. The Venetian ladies dyed their hair a gold colour by a preparation consisting of two pounds of alum, six ounces of black sulphur, and four ounces of honey distilled in water.

Long hair was a distinguishing feature with the Danes. In an ancient Danish poem, *The Death-song of Lodbroc*, we have mention made of 'the lover of the *lady beauteous in his locks*.' The hair of King Canute hung in rich profusion over his shoulders.

In the Anglo-Saxon illuminations of Prudentius, the hair appears to be cut short; but long hair was fashionable in the time of Edward the Confessor—persons not noble being obliged, as in France, to cut it round upon the middle of the forehead. In Anglo-Saxon manuscripts, the beard and hair are frequently painted *blue*. Strutt, remarking upon this, says: 'In some instances, which are not so common, the hair is represented of a bright *red* colour, and in others it is of a *green* and *orange* hue. I have no doubt existing in my own mind that arts of some kind were practised at this period to colour the hair; but whether it was done by tinging or dyeing it with liquids prepared for that purpose, according to the ancient eastern custom, or by powder of different hues cast into it, agreeably to the modern practice, I shall not presume to determine.' When monks were shorn, the first lock was cut off by the king or some great person. Gifts to the church were often confirmed by laying hairs of the head upon the altar.

Time has very little effect upon hair. The auburn locks of the Countess D'Albini, wife of the founder of Wymondham Abbey, were found to be as fine and glossy as if just taken from the head of a living person, when her tomb was opened seven hundred years after her burial. Fabyan, in his *Cronicle*, says: 'At this time [William I.], prists used bushed and braided heads, long-tailed gounes, and blasyn clothes, shinying and golden girdles, and rode with gilt spurs, using of divers other enormities.' The Norman ladies coloured their hair to give it a yellow tint. In the twelfth century, the hair was parted from the front of the forehead to the crown. Astrologers speak of fit days for combing the hair, so that it is probable our ancestors did not perform that operation daily. In the reigns of Henry III. (1216) and Edward I. (1272), the hair was worn very bushy at the sides, and arrayed in large curls. Chaucer says the locks of the young squire were curled as if laid in a press. The same author thus describes Emelie in the *Knightes Tale:*

> Hire yelwe heer was browdid in a tresse
> Behynde hire back, a yerde long, I gesse.

The ladies in the thirteenth century gathered up the hair into a net or caul of gold thread, replacing the gracefully arranged *couvre-chef* of the previous century. 'Alexis of Piemount' has the following receipt 'to make heare as yelow as golde:' 'Take the ryne or the scrappynges of rubarbe, and stiepe it in white wyne or in clear lye; and after you have washed your head with it, you shall weate your heares with a sponge or some other cloth, and lette them drye by the fyre, or in the sunne. After this, weate them and drye them agayne; for the oftener you dooe it, the fairer they will be, without hurting your head anyethying at all.'

In the fourteenth century, the hair was parted

Digitized by Google

on the forehead, and confined at each side of the face, usually in plaits; a gorget or wimple covered the neck, and was drawn up over the chin, strained up each side of the face, and generally fastened across the forehead, which was encircled with a fillet, ornamented with jewels. Over the head a veil was drawn, which fell down upon the shoulders. In the latter part of the century, cauls or close caps were worn, made of network, in which the hair was confined round the face. The fronts were frilled in various patterns. Some of the cauls were of gold and silver network ornamented with jewels at the intersection.

Soon after the commencement of the fifteenth century, the side cauls of the crespine head-dress were always of large size; frequently the outer edges were elevated above the forehead, so as to form horns; hence these head-dresses were called *horned*. About 1470, the wired or butterfly head-dress began to be much in fashion, especially among ladies of rank. The hair was strained into a richly ornamented cap, over which a veil of fine materials was extended, making altogether a very preposterous affair. At the end of the century, a kind of bonnet was used. Its leading characteristics were long frontlets or lappets, which formed an angle over the forehead, and hung down at each side. The steeple head-dress, with a long veil hanging down behind, was also in fashion in this century. A French moralist said: 'One manner of spoiling and abusing one's vestments is as to the form, which, as regards women, I consider in four parts. The first is the head, which used to be horned, but is now mitred in these parts of France. . . . . And now these mitres are in the shape of chimneys. . . . . And the more beautiful and younger the wearer, the higher chimneys they carry.' In the sixteenth century, ladies wore kennel-shaped bonnets; afterwards, small circular caps; and then a kind of close linen cap, projecting forward at each side of the face, often with a jewelled fillet over the forehead, and a lappet dependent behind. At the end of the century, the hair was brushed back from the temples, and the French hood had the lappet at the back thrown forward over the top of the head; and broad-brimmed hats were worn, which were much used among the Puritans in the seventeenth century. A calash or hood was also used.

Mr Rimmell, in his *Book of Perfumes*, says that there are three styles principally adopted by a Chinese lady for dressing her hair, which styles indicate whether she is a maid, wife, or widow. From her infancy to her marriage, a young girl wears the back part of her hair braided into a tail, and the remainder combed over her forehead, and cut into the shape of a crescent. On her wedding-day, her head is decorated with a crown covered with tinsel-paper; and on the next day her hair is dressed for the first time in the well-known *teapot* style. On holidays, she ornaments it with flowers. When she becomes a widow, she shaves part of her head, and binds round it a fillet, fastened with numerous bodkins, which are sometimes very costly. The men shave their heads, keeping only on the summit a long tuft of hair, of which they are very proud, although it was originally a mark of their subjection to the Tartars.

The Abyssinian ladies and gentlemen put a great deal of rancid butter on their heads. The Bedouin Arabs of Mount Sinai have their hair plaited and so arranged as to resemble a horn placed on the forehead. The Fejee Islanders dye their hair blue, red, and yellow, in patches; and the natives of the Duke of York's Island smear it with grease, and then sprinkle it with coloured powders. In the Britannia Islands, people take a good deal of trouble to make their black hair look white.

Poor Louis VII., at the instigation of his bishops, shaved his hair and beard; but Eleanor, his consort, so disliked his appearance, that she soon afterwards obtained a divorce. In the reign of Henry VIII., the women, as well as the men, are in portraits represented with very little hair; but the latter made up for it in the length of their beards. In the twenty-fifth *Coventry Mystery*, we read: 'With syde lokkys I schrewe their *here* to thy coleer hanging down.'

In Medwall's *Interlude of Nature*, Pride, one of the characters, says:

> I love it well to have syde [broad] hair
> Half a foot beneath mine ear,
> For ever more I stand in fear
> That thy neck should take cold.
> I knit it up all the night,
> And the daytime comb it down right,
> And then it crispeth, and shineth as bright
> As any pyrled gold.

Fairholt, in his *History of Costume*, engraves a portrait of Sir Thomas Meauty (*temp.* James I.), representing that gentleman wearing a love-lock reaching to his elbow. The Puritans denounced long hair with great virulence. Dr Hall, in 1643, says: 'Some men have long locks at their eares, as if they had foure eares, or were prick-eared; some have a little long lock only before, hanging downe to their noses, like the taile of a weasall; every man being made a foole at the barber's pleasure, or making a foole of the barber for having to make him such a foole.' The same writer wrote a book on the *Loathsomenesse of Long Haire*, in 1654. Fletcher, in his *Purple Island*, thus alludes to love-locks:

> A long love-lock on his left shoulder plight,
> Like to a woman's hair, well shewed a woman's sprite.

A song printed in 1641, entitled *The Character of a Roundhead*, thus commences:

> What creature 's this, with his short hairs,
> His little band, and huge long ears,
> That this new faith hath founded?
> The Puritans were never such,
> The Saints themselves had ne'er so much:
> Oh, such a knave 's a Roundhead!

In Southerne's play, *The Disappointment*, the Roundheads are described as

> The zealous of the land,
> With little hair, and little or no band.

Brides were always married with the hair dishevelled. In Middleton's *Roaring Girl* (1611), we read:

> Untie your folded thoughts,
> And let them dangle *loose as a bride's hair*.

Shakspeare, in *The Merchant of Venice*, says: 'Her sunny locks hang on her temples like the golden fleece.' He only mentions black hair twice throughout his entire plays. Every one who walks through any large collection of works of the old masters, the National Gallery, for example, must have noticed the remarkable absence of black heads.

Before noticing *wigs*, we must say a word on the ladies' head-dresses of the eighteenth century. About 1760, the fair sex wore them towering about three feet above their heads. Hairdressers considered that when thus decked they would *keep* for three weeks; but insects soon bred in the flour and pomatum with which they were bedaubed, and receipts for killing them are given in the newspapers of the period. For fear of disarranging these ponderous head-dresses, ladies frequently slept in chairs, instead of going to bed. The managers of theatres complained that those seated behind could not see the performance by reason of the large head-dresses in front; and in a caricature called 'A new Opera-glass for 1777,' a gentleman is represented looking through one of the great curls by the side of a lady's head, using it for an opera-glass:

> Behold how Jemmy treats the fair,
> And makes a telescope of hair!
> How will this suit high-headed lasses,
> If curls are turned to optic glasses!

The head-dresses were happily reduced about 1790, and soon declined altogether.

Louis XIII. wore his hair very long, and wigs were invented to allow his courtiers who were not so favoured by nature to follow the fashion of the king. In the reign of Louis XIV., perukes were made of vast size, and even children wore them. Full-bottomed wigs were invented by the French barber Duviller, for the purpose of concealing an elevation in the shoulder of the Dauphin. The earliest notice of periwigs occurs in the privy purse expenses of Henry VIII., where we find, under December 1529, an entry of twenty shillings 'for a *perwyke* for Sexton, the king's fool.' By the middle of the century, their use became frequent. Enormous periwigs were worn *temp.* Charles II.

Pepys, November 3, 1663, says: 'By-and-bye comes Chapman, the perriwigg-maker, and upon my liking it [the wig], without more ado I went up, and then he cut off my haire, which went a little to my heart at present to part with it; but, it being over, and my perriwigg on, I paid him L.3, and away went he with my own haire to make up another of; and I by-and-bye went abroad, after I had caused all my maids to look upon it, and they concluded it do become me, though Jane was mightily troubled for my parting with my own haire, and so was Besse.' Five days after, the same dear old gossip appeared at church in his wig, but he says it did not create a sensation, as he feared it would.

Up to 1714, wigs were made of the natural colour of the hair, but after that date they were bleached; but as they looked after a time a dirty gray, *hair-powder* came into use, to make them look white; that is, it was then applied to wigs, but had been in use long before, being, as some think, introduced by Marie de' Medici; at anyrate, it is mentioned by L'Etoile in 1593.

In a satire on the ladies in the *Musarum Delicie* (1655), they are thus addressed:

> At the devill's shoppe you buy
> A dresse of powdered hayre,
> On which your feathers flaunt and fly,
> But I'de wish you have a care
> Lest Lucifer's selfe, who is not prouder,
> Do one day dresse up your hayre with a powder.

A writer in the *Monthly Magazine* (1806) says, that Charles James Fox, *c.* 1770, actually used *blue* hair-powder—'he had his chapeau bras, his red-heeled shoes, and his *blue hair-powder*.'

Pitt taxed hair-powder in 1795, and its use soon declined. Pigtails succeeded, and were generally worn in the army, but in 1808 were ordered to be cut off altogether, to the great delight of the military world.

More than one hundred tons of hair are annually taken at Paris. A great deal of this comes from Brittany, where the girls cover the head with a white cap, and the absence of their beautiful black ringlets is not noticed. Mr Francis Trollope, in his *Summer in Brittany*, tells us what he saw at a fair in Collenée. 'What surprised me more than all were the operations of the dealers in hair. There seemed to be no difficulty in finding possessors of beautiful heads of hair perfectly willing to sell. We saw several girls sheared, one after the other, like sheep, and as many more standing ready for the shears, with their caps in their hands, and their long hair combed out and hanging to their waists. By the side of the dealer was placed a large basket, into which every successive crop of hair, tied up into a wisp by itself, was thrown. No doubt the reason of the indifference to their tresses, on the part of the fair Bretonnes, is to be found in the invariable "mode" which covers every head, from childhood upwards, with close caps, which entirely prevents any part of the hair from being seen, and, of course, as totally conceals the want of it. The money given for the hair is about twenty sous, or else a gaudy cotton handkerchief. They net immense profits by their trip through the country.'

In the Exhibition of 1862, Messrs Hovenden exhibited a head of hair six feet long, from the head of an English lady.

Another source of false hair is the combings of the ladies of Paris. The *chiffonier* picks out the hair from the heaps in the gutters as he goes his rounds, and this is sold to the hair-merchant.

Dr Wynter thinks that a good deal of false hair is obtained by the gravediggers from the corpses, as a kind of hair called 'churchyard hair' is well known to the merchants. Golden hair now sells for about fifteen shillings the ounce.

A GREAT JEWEL-ROBBERY.

IN TWO CHAPTERS.—CHAPTER I.

Some years ago, people used to prophesy that in consequence of the Californian gold discovery the precious metal would be precious no longer, but fall to a par with, if not below, silver in value. But in spite of the golden treasures of California, supplemented by those of Australia, a sovereign is still worth its twenty shillings; and the reports of progress in Sutherlandshire are not sufficiently promising to make the favoured of us mortals who indulge in such luxuries to exchange our golden ornaments for their present value before it deteriorates. But, as a dealer in precious stones, I have often thought of what would be the consequence should some tremendous deposit of diamonds be laid bare; for we are not bound to suppose that these precious crystals of carbon are everywhere so sparsely scattered over the earth's surface as to render the quest one of patience and difficulty. Imagine, for instance, some pebbly mountain

Digitized by Google

stream, whose pebbles were all Koh-i-noors, Stars of the South, and Great Pitt Diamonds! What consternation amongst the holders of family heir-looms, whose glittering clusters have been handed down from generation to generation, and valued at so many thousands sterling—what horror to find that, by the glut in the market, those thousands sank to hundreds, to tens, to units at last, or merely the value of the cutting! That lady who described the wearing of diamonds as an exquisite pleasure, but too painful, from the risks incurred, would be then able to wear her precious jewels in peace.

There is a strange, and too often a fearful history attached to every great gem of price, many of which, while flashing on the brow of beauty, or in some regal or imperial ornament, are dimmed to the thoughtful mind by the tears shed over them, or by the blood in which they have too often been bathed. Robbery and murder have ever been mingled with the stories of precious gems; and as a peaceful man, living in these highly civilised times, I have more than once felt my life to be far from safe as soon as it was known that in the little black leathern case I carried, or even in the scrap of tissue-paper in my waistcoat pocket, I held so many valuable diamonds, rubies, or sapphires.

One gets used to it in time; but at first there is a strong feeling that every person who looks at you, or says a word about the weather, is bent upon murder and robbery. You live a solitary life during your travels. You get in the farthest corners of carriages. You would not ride alone in a first-class coupé, with some strange traveller, upon any consideration, even if that strange traveller were a feeble old woman, since you would certainly suppose her to be a ruffian in disguise. Elegantly dressed ladies become swindlers' accomplices; clerical gentlemen, the swindlers themselves; and distrust of everything and everybody becomes the bane of your existence. Your wine or tea seems to be drugged, your food poisoned; and once, at an hotel where I was staying, I had serious thoughts about giving the proprietor into custody for supplying me with medicated soap.

I will not mention the name of the Bond Street firm with which I was some years ago connected, but let it suffice that their name was well known, and that the manufacture of more than one regal diadem had been intrusted to their skilled workmen. I was with them some twelve or fourteen years, and it was during that period that the incident I am about to relate occurred. As a matter of course, the strictest injunctions respecting care, caution, and watchfulness are issued to all the employés, especially to those whose daily business brings them into contact with the public; and being always in the show-rooms myself, I was one of those in whom the elders of the firm placed confidence. The consequence was, that being tolerably thoughtful, sharp of eye, and a good judge of gems, I rose to occupy one of the most responsible positions, and to me were always intrusted those rather delicate, critical, and caution-demanding embassies, where customers wished for jewels to be sent to their houses for inspection.

In course of time, a little feeling of jealousy sprang up; but it did not trouble me, for, either from extra care, or from good fortune, I had not in any single case been the cause of loss to my employers—a state of satisfaction hardly to be enjoyed by either of my brother-assistants, so many, so ingenious, and so carefully contrived were, in those days, the plans for defrauding the great jewellers. I do not know that any very great improvement has taken place of late years; but my experience is with the past, and I relate accordingly. In fact, so many were the tricks, that when a visitor came to the show-rooms, the first question we had to ask was: 'Is this a lady or a sharper?'

Very often the swindlers, or thieves, were easy to detect; for though dressed in the extreme of fashion, and arriving perhaps in a brougham, there would be some slip of the tongue—some vulgarism—which would betray them. Frequently, a misplaced *h*, or a wrongly applied verb, has raised suspicions, which defeated a carefully planned swindle, and sent the disappointed ones to lament their ill success, or often to jail. But with all care, the jewellers' enemies are so many, and their losses so heavy, that, in spite of enormous profits, the balance-sheets at the end of the year are not so satisfactory as is supposed for those who follow this artistic business. Now a well-dressed couple would come and look at some rings, turn them over for half an hour, and then leave, declaring that there was nothing to suit; when perhaps before, more often after, their departure, one or two valuable gems have been missed—taken no one could tell how. Twice over, assistants allowed jewels to be taken into the next room, at some hotel, to shew a sick lady, and came back ruefully to announce the sick, as well as the sound, lady had disappeared. Times out of number, ring, chain, or bracelet has been snatched from counter or table; once such a thing happened when I was in waiting, but a presented pistol stopped the marauder before he reached the door—a door already bolted by the porter; and my friend was committed for trial, and afterwards transported. One select company of visitors purchased goods to the amount of nine hundred pounds, when the gentleman of the party wrote a cheque on the spot for the amount—Drummonds of Charing Cross being his bankers—but as I objected to the jewels being taken away until the cheque was honoured, I was courteously told to send them to Morley's Hotel, and half sorry to be compelled to shew the distrust, I bowed the distinguished customers out.

'Here, Johnson,' I said to one of our men, 'run down at once to Drummonds, and present this cheque; take a cab.'

In half an hour Johnson was back with the cheque branded with the words 'No effects.'

I received an invitation to dine with the head of our firm after that, and returned home at night wearing a very handsome gold watch. 'A reward for your shrewdness,' said the old gentleman, clapping me on the shoulder. 'You'll be in the firm yet, Willis, that you will.'

'I hope I may,' I thought, as I went home that night; but the happy consummation never arrived, since I was but mortal, and, like other men, liable to be deceived; though, upon maturer consideration, I don't think I was very well used.

I was seated one day busily examining some stones which were to be reset for the Countess of Maraschino, when the principal came softly in.

'Lock those up, Willis,' he said, 'and go and attend to those parties in the front show-room. Thomas is with them, and I don't half like their looks.'

Digitized by Google

I hurried into the show-room to relieve Mr Thomas of his task, which he gave up with a very bad grace, and proceeded to listen to the demands of a tall lady and gentleman in black, both of whom wore respirators, and spoke in low husky voices. The gentleman looked very pale and ill, and the lady was very closely veiled as to the upper part of her face; but upon my approach she threw up her fall, and displayed the bright bold eyes of a very handsome woman.

'Don't look suspicious,' I thought, as I evaded the glance directed at me; for our rule is not to look at eyes, but hands—or rather fingers, which sometimes turn out to be light. In this case, though, the lady's were *bien gantée*, and the gentleman's thin, white, and soft—an invalid's hands, in fact, and I proceeded to listen to their demands.

'Well, Lilla, what's it to be?' said the gentleman.

'I thought you had decided, love,' was the reply. 'Something simple, and not too expensive now, whatever we may decide upon hereafter. Why not keep to what you said—a bracelet, or a cross?'

'Well, shew me some bracelets,' the gentleman said. 'We do not want anything of high price, but something pretty, light, and suited for a young lady of eighteen, about to be married.'

I proceeded to open case after case of bracelets of all prices, from ten to five hundred guineas each; but though they were fastidious and hard to please, I was bound to confess that the lady's taste was excellent, and that the gentleman was no mean connoisseur in gems.

'I rather like that,' said the gentleman at last, selecting a very pretty but slight bracelet, set with a sapphire, surrounded by pearls. 'What is the price?'

'That is sixty guineas,' I said.

'Yes, it's pretty enough,' said the lady; 'but not sufficiently good.'

'You mean not valuable enough,' said the gentleman; 'but you know the old proverb about the gift-horse. Lucille will not study the value, depend upon it; and, besides, I don't see anything I like half so well.'

'Have it then, dear,' was the reply; and then, directly after, 'Ah, what a sweet cross!' exclaimed the lady, looking at an enamel and gold ornament lying in a case—and which I immediately opened—for I must confess I had almost forgotten our principal's suspicions.

'It is a sweet little thing!' exclaimed the lady, examining the cross; 'such a fine pearl, too, in the centre. I should like it.'

'What, to give to Lucille?' said the gentleman smiling.

'No; of course not. I fancied it myself.'

'My dear Lilla, this is not a linendraper's shop,' said the gentleman with a shrug, and then there was a smile and a whisper between them.

'What is the price of the cross?' said the gentleman at last.

'Fifty guineas,' I said.

'It seems a good deal for so small an ornament,' said the gentleman, turning and re-turning the cross; but I explained that the size of the pearls increased its value; and after a little hesitation, he decided to take it, when I saw that he was rewarded by a quiet pressure of the hand from his companion, whose eyes then met mine almost mirthfully for a moment.

'You're a nice creature, I expect,' muttered I to myself; 'coax him out of everything you fancy, and then laugh in your sleeve.' But my eyes were wanted to guard the valuable assortment of jewellery displayed, and they were back the next instant to business.

'Where can I send these, sir?' I inquired.

'Ah! we'll take them,' said the lady; 'we will not trouble you to send.'

I explained that it would be no trouble, but they held to their determination; and upon payment being requested, the gentleman drew out a cheque-book, asked for pen and ink, and wrote a cheque for one hundred and ten guineas upon a small city bank.

Now it was that my lips became a little tighter, and I felt that the principal had had some cause for his suspicions; and thoroughly on my guard, I took the cheque, and explained that it was a rule of the establishment that goods should not be delivered until after a cheque had been presented.

'Ah, quite right, quite right,' said the gentleman quietly, and without displaying the slightest annoyance. 'I can easily suppose that you are obliged to be careful.'

But the lady looked angry, and returned my bow very distantly, as I ushered them out, having promised to send the purchases on to the fashionable hotel—Moore's, in Brook Street—at which they were staying.

'All a farce, but well carried out,' I said to the principal as he came up to me, and I shewed him the cheque and the card given me, bearing the name 'Mr H. Elliston Ross,' and in pencil, 'Moore's Hotel.' 'But we'll send the cheque all the same.—Here, Johnson.'

The principal shrugged his shoulders; and as Johnson came up to where I was carefully running over the various items of jewellery, to see that nothing had been stolen, I gave him the cheque, and he went cityward.

To my great satisfaction, all was right; not a jewel missing, and the purchased cases lying by me. Suddenly, a cold chill shot through me. Had they contrived to abstract the contents? I tore the little morocco boxes open; but, no—all was correct. Cross and bracelet lay upon their white velvet beds; and so far, everything was perfectly satisfactory. If they were swindlers, we had escaped; and I began to wonder whether I should get another invitation to dinner, a chain for my watch, and be told that I was a step nearer to the junior partnership.

To our intense astonishment, though, at an hour's end, Johnson returned smiling.

'All right, sir,' he said.

'Why, you don't mean'——

'All right, sir,' he said. 'Cheque cashed in an instant: hundred and fifteen pounds, ten shillings.'

It is almost needless to add that the two little cases were sent immediately to the hotel, and a discussion followed respecting unnecessary suspicion, and how very often it happened that swindlers passed unnoticed, while honest people were suspected.

CHAPTER II.

A month passed, when one cold January day I was in the show-room, and the same lady made

Digitized by Google

her appearance alone. She still wore her respirator, but looked very pale, haggard, and troubled. The bold look seemed to have gone from her eyes; and as I recalled my thoughts, I felt that I had misjudged her, for she began to speak tenderly of her husband, Mr Ross, who was lying very ill at the hotel.

'I have brought back the cross to be repaired,' she said, drawing the little morocco case from her rich sable muff. 'The ring was too slight, and it broke from my necklet the second time it was worn. I had a narrow escape of losing it; but Mr Ross found it himself upon the lawn, trodden into the grass. I thought I would leave it until we came up again. Of course, you can repair it?'

I expressed my sorrow, and promised to have it seen to at once.

'You need not hurry for a few days. Mr Ross is in town to consult Sir Ealing Dean, and I fear he will send us to Madeira. This climate is killing my poor husband.'

The distant hauteur was all gone; and in a ladylike, courteous manner, our customer bowed to my few sympathetic remarks, and hints of its being an unusually trying season, &c.

'Our friend was delighted with the little bracelet, a gift which Mr Ross wishes to supplement with something a little more valuable. Perhaps I could be allowed to select a few things for you to submit to his choice at the hotel? I know his taste now pretty well, and it will save trouble.'

'Anything you like to select shall be sent, ma'am,' I said; and I then proceeded to open and display to their best advantage some very valuable bracelets, which were one and all rejected.

'Yes,' she said sadly, 'they are very handsome; but Mr Ross would not like them, I am sure, and it is useless to take things on that he would not approve. His taste was always good; and as his health fails, it seems to have acquired an indescribable tone that I cannot explain, except that it is artistic, and dreamy.'

I brought out some plain but good pearl and diamond ornaments in suites, one suite in particular taking her attention.

'Yes; I like that. You might send that.'

'It is a suite made to order; but it could be made again in a very short time,' I said.

'That would not do,' she said, 'unless it could be supplied in a fortnight.'

'I think we could get over that difficulty,' I said with a smile; and then bracelets, rings, chains, and watches—certainly the most chaste and elegant we had—were selected and put aside.

'It is only fair to say,' said the lady smiling—at least, I could see that she was smiling, in spite of her respirator—'that Mr Ross will not purchase many of these elegant ornaments. I know he would like a watch and chain, and a ring. Perhaps, too, if he admired them, one of those pearl suites; but I thought it better to speak, as since his illness he has become, not irritable—but—but—perhaps a little hard to please, and I should be sorry if he rejected everything you brought.'

So much delicacy was displayed in these remarks, that I could only courteously assure her that we should only be too happy to attend again and again upon Mr Ross, till we had hit upon something he admired; and upon promising to send the selected goods on the next morning at eleven, our visitor rose to go.

'I would ask you to send this afternoon,' said the lady, on rising, 'but I don't think Mr Ross quite well enough. He saw our physician this morning, and the interviews are always very trying to his nerves.'

I placed the little cross in the workmen's hands for repair; and the next morning, punctually at eleven, I was at Moore's Hotel, accompanied by a porter with a goodly assortment of jewellery.

A few words with the manager set me quite at ease, though my inquiries were a mere matter of form. Mr Elliston Ross lived in Yorkshire, owned coal mines, and was in town to visit the court physician, Sir Ealing Dean; had been there once before for the same reason: perfect gentleman; his lady quite an angel—waited on him night and day.

I was shewn into the room where Mrs Ross was seated—this time without her respirator. She rose with a sad smile, and motioned me to a seat; while putting on her respirator, she went into the next room, remaining absent a few minutes; and then returning, requested me to bring in my cases for Mr Ross to see.

I had left the porter down-stairs; so, taking up the two small leathern boxes, I followed Mrs Ross into a slightly shaded room, where, looking deathly pale, the gentleman who had visited our place of business lay upon a couch reading the *Times*. He was attired in a blue cloth dressing-gown, and had a small table drawn up to his side, on which were a bottle, glass, and a caraffe which seemed to contain barley-water. He too wore a respirator; but he removed it for a few moments to take a little of the barley-water, and then carefully replaced it, coughing hollowly the while.

'Sorry to bring you into a sick-room,' he said courteously. 'Sorry, in fact, to bring you here at all, for I would much rather have chosen the trifle or two I wanted at your shop. I trust you have not brought many things, though?'

'Only a few that Mrs Ross thought you—that your lady chose, sir,' I said.

He nodded, and then listlessly examined first one and then another ornament, as I opened them out, but always with a dissatisfied air.

'Don't you like those, dear?' said Mrs Ross, in rather disappointed tones, as I displayed in the best lights the pearl suite.

'No; not at all,' said the invalid. 'Too plain; almost vulgar.'

'Might I be allowed to suggest,' I said earnestly, 'that to see pearls to advantage, they must be worn. It is a well-known fact that pearls are gems which shew to as great advantage upon a dark as upon a fair complexion; and if your lady'——

I paused here, and glanced towards Mrs Ross, who smiled graciously, and then clasped the bracelets round her shapely wrist, the necklace over her fine throat, and placed the tiara in her hair—looking almost regal as she stood before us.

'You see the difference,' I said, drawing back.

'Yes, yes,' said the invalid impatiently; 'they look well enough on her; but they are for quite a girl.—Take them off, Lilla.'

Mrs Ross obeyed, and the ornaments were replaced in the case; when I proceeded to display the other jewels, but apparently to find no favour.

'Here, Lilla, give me a glass of sherry.—

Digitized by Google

Confound this thing, it almost chokes me.' He tore off the respirator, and hurled it to the other end of the room.

'For my sake, dear,' I heard her whisper to him, as, stepping lightly across the room, she picked up the respirator, and brought it back.

'Well, there; get out the sherry, then,' he said pettishly, as he took back the instrument.

'No, no, dear; Sir Ealing said'——

'Confound Sir Ealing! If I am to die, let me die comfortably, and not be tortured to death. Get out the sherry, I say—the port too.'

I saw a tear trickle down Mrs Ross's cheek as she fetched a couple of decanters from a sideboard where they stood with glasses.

'Haven't you some cake, or did you send it down?' he said impatiently.

'I have it here, dear,' said Mrs Ross softly; and she placed a portion of a small pound-cake upon the table.

'Give me a glass of sherry,' he said impatiently. —'No, not that glass—the other.—Mr—I don't know your name—try that sherry.' He sipped a little. 'You'll find it very good.'

'I thank you,' I said quietly; 'but I never take wine in business hours.'

'Won't you try the port, then?' he said.

'I would much rather not,' I replied.

'A little cake?' suggested the lady. 'We are simple country people, and not much acquainted with London etiquette. Pray, excuse us if we trespass.'

I bowed, and declined, when Mrs Ross readjusted her husband's respirator, leaning over him the while.

'Now, let me see that bracelet,' said Mr Ross, pointing to one upon the table.—'But are these all you have brought?'

'Yes, sir,' I said; 'but I can easily bring a fresh selection'—though I had brought over two thousand pounds' worth.

'Hem, yes,' he said; 'of course!—Do you like that bracelet, Lilla?'

'Yes,' said Mrs Ross; 'I picked it out particularly yesterday. That emerald is so beautiful.'

'Put it on,' he said curtly; and she clasped it upon her arm.

'How much?' he said shortly.

'Thirty-five guineas,' I replied.

'Dear,' he said—'very dear. The bracelet we bought at the shop was far more handsome at the same money.'

'No, love; it was sixty guineas,' said Mrs Ross.

'Ah! was it? I forgot,' he said carelessly. 'Well, lay that aside: I don't want you to come for nothing.'

I hastened to assure him that it was the wish of the firm to satisfy their patrons, as well as to sell their jewellery, and that we should only be too happy to bring or send on a fresh selection for his choice.

He assented almost rudely, and turned over the various rings, asking the prices of nearly every article I had brought, when, suddenly throwing himself impatiently back, he exclaimed: 'Good heavens, Lilla, this room is insufferable; throw some of that vinegar about.'

Mrs Ross smiled faintly; and taking a flexible tube from the mantelpiece, she pressed it, so that in a fine shower a finely scented aromatic vinegar diffused a refreshing perfume through the room.

'That's better,' he exclaimed.—'Now, shew me those pearls again. How much did you say they were?'

'Four hundred guineas the suite,' I said, hastening to lay them before him.

'There, take them away!' he exclaimed. 'I can't afford four hundred guineas: four hundred shillings more likely. That confounded doctor is ruining me. Let me look at the watches; or, stay, let me look at the pearls again.—No; never mind. I won't have them unless you will take half the money.'

I smiled and shook my head. 'We are not dealers of that sort, sir,' I ventured to say.

'I don't know—I don't know. I believe you jewellers get most terrible profits. Shew me the watches.'

I was hastening to place the half-dozen I had with me in his hands, when he exclaimed again: 'Insufferable! Have you any more of that vinegar, Lilla?'

Mrs Ross nodded; and taking a cut-glass bottle from her pocket, she placed it with a handkerchief by his side.

'No, no,' he said, giving me back the watches. Sprinkle the room with another of those tubes.—Now, you! I'll have that little plain watch. I'm getting tired of this. Let me have a chain to match—a fine one, mind—the thinnest you have—and that will do for to-day.'

As I selected four or five chains, after putting the watch aside, Mrs Ross took up another tube, unscrewed it, and then appeared to be taking especial notice of the chains which I bore across to the invalid.

'Those are sweetly pretty,' she exclaimed. 'I don't remember noticing them so much yesterday.'

As she spoke, she stood close to my side, when the invalid exclaimed impatiently: 'There, pray, be quick dear;' and at one and the same moment, he poured out the contents of his bottle upon his handkerchief, and I felt a fine spray of a peculiar odour playing right in my nostrils.

I started back, gasping and astounded, when, leaping from the couch, the invalid exclaimed: 'Good heavens, sir, you are unwell;' and he covered my face and nose with the wet handkerchief, forcing me backwards into a chair.

I believe that I struggled, but only feebly; for a strange, delicious, enervating languor was stealing over me; I saw things mistily, but still with an understanding mind, seeing, though unable to move hand or foot, that the invalid was bending over me, while Mrs Ross was hastily placing the various articles of jewellery in her pocket.

I saw all that, but in a dreamy untroubled way, for it seemed then to be not of the slightest consequence—not to concern me. Then I have some recollection of an intensely cold sensation as of water being poured upon my face, while my next impression is of hearing a closing door and the click of a lock.

How long I remained in that condition, I never knew; but by degrees I woke to a feeling of deadly nausea: my head swam, my temples throbbed, and everything I gazed upon was seen through a mist of dancing motes. But by degrees thoughts of the present began to take the place of the dreamy imaginings of the past. I started up and looked around, to find that I was still in the

Digitized by Google

inner room; but the jewels—the cases—where was the invalid—where Mrs Ross? Was it true, or was it some strange vision? It was impossible that I could have been duped like that.

I ran to the door—fastened. The other door—locked on the outside. I darted across to the bell, but in doing so, caught my foot in the long table-cover, tripped and fell, dragging the cloth on to the carpet, and revealing the whole of the jewel-cases beneath the table, just as they had been hastily flung.

I could not help it then, for my brain was confused, and stooping down, I took the cases one by one, and opened them, in the fond hope that I had been deceived, and that I should find the jewels safe; but, save one ring, which had escaped their notice, everything had been taken.

I sat on the carpet for a few minutes holding my throbbing head, and trying to recall the scene, but almost in vain, for it seemed as if a portion of my existence had been wiped completely away. I was shewing jewellery at one moment, the next it seemed that I was seated by the empty cases. I tried to clear my faculties, but in vain; and I should think quite half an hour had elapsed before, thoroughly awakened to the fact that I had been robbed, I rang the bell.

I had nearly arrived at the extent of my loss two or three times, but only to have, as it were, a veil drawn over my senses, just as if a relapse were coming on; and then mentally blind, I could do nothing but rock myself to and fro, trying to get rid of the remains of the strange stupor in which I had been plunged.

Before the waiter could ascend, I rang again.

'Where are Mr and Mrs Ross?' I inquired.

'Went out in a brougham some time ago, sir; and your lunch is ready.'

'My lunch!' I exclaimed.

'Yes, sir; the lunch they ordered for you.'

'Oh, thank you!' I said quietly; 'I'll ring again. Send my porter up in five minutes' time.'

The waiter did not seem surprised that the door was fastened on the outside—it had not struck him then; but as soon as he had gone, I hastily repacked the empty morocco cases, and as soon as possible made my way back into Bond Street, and met the principal.

'We were just getting uneasy, Mr Willis, and going to send after you. What have they taken?'

'Everything, sir,' I said almost fiercely.

'What!' he exclaimed.

I told all I knew, while he listened with blank amazement.

Then followed a visit to Great Scotland Yard, and to Moore's, to find that Mr and Mrs Ross had not returned; while so impressed was the manager with his visitors' respectability, that he laughed at the idea of there having been any swindling transaction. They were most respectable people, he said; paid their bill last time without a murmur; their portmanteaus and boxes up-stairs were all in their rooms; and it was all a mistake—'or something worse,' he added with a dark look at me.

That it was 'something worse,' was very soon evident, from the tubes and bottles, and a wine-glass containing a few drops of a limpid fluid, found to corroborate my story. But though the instruments of the deception, even to a couple of respirators, lined with wet sponge, were found, the depredators had made their escape, and were never found; though I verily believe that if I had watched the lady-swindlers in the various police courts, sooner or later I should have encountered the interesting Mrs Ross.

I need hardly add, that after so heavy a loss, the firm never seemed to take thoroughly to heart the ideas of a junior partnership with respect to myself; while as to my brother assistants, they laughed in their sleeves at my downfall; though, after all, I cannot see that I was much to blame, this not being by any means the first Great Jewel-robbery.

THE RING AND THE BOOK.

Mr Browning has been before the world for some five-and-thirty years, and it is not too much to say that the world as yet does not know him. We do not speak of popularity such as attends the verses of the immortal Tupper, but of the measured and judicious approval of the educated public. And yet Mr Browning has not been left to pine away in unnoticed obscurity, nor has he been the victim of savage and indiscriminate abuse. He has received notices from time to time in the leading reviews, not fierce onslaughts such as those which in the good old days of the *Edinburgh* sent Keats despairing to an early tomb, but fair and reasonable criticism, whether conveying praise or blame. Nor is it alone that he has held on his way, as all true genius must, conscious of something within him, an individuality which he must make acceptable if possible, but certainly must not surrender. Mr Tennyson has done this also, and passed through the sneers and sarcasms of twenty years ago, to the glories of an established position and the laureate's crown. The

> Argosies of magic sails,
> Pilots of the purple twilight dropping down with costly bales,

and similar stumbling-blocks to unsympathising reviewers, have been forgotten in the sublimity of *Guinivere* and the pathos of *Enoch Arden*. The truth appears to be, with respect to Mr Browning, that his poetry possesses merits which, though certain of ultimate appreciation, yet are not in accordance with the poetical taste and fashion of the age, and therefore are slow of recognition; and partly also that he has a certain perverse attachment for whatever is obscure, subtle, and remote from ordinary experience in the characters which he conceives, and the situations through which he conducts them.

Now, obscurity, whether in conception or expression, is a blemish, and a just hindrance to popularity. When a preacher complains that he is unappreciated, because his sermons fly above the heads of his hearers, we generally suspect that it is not so much the heads as the hearts that are missed, not the superfluity of intellect, but the lack of interest which formed the defect of his preaching. It is easy to say something original and striking when the subject is so remote from human interest that no one has cared to tread the same path before us, but then there is this little compensatory drawback, that an equal indifference may be accorded to what we have said or written. No theme was too mean, trite, or common-place for Shakspeare's genius. He ventured boldly upon the most obvious motives and the most ordinary situations. Love, ambition, avarice,

Digitized by Google

jealousy, and fraud were the homely materials with which he laboured, and he has met with his reward. It is neither surprising nor unjust that curious psychological studies like *Paracelsus* and *Sordello* should fail in obtaining similar recognition, even though in their development they manifested an equal power of thought and breadth of sympathy. So far, therefore, as Mr Browning's want of general appreciation is due to this cause, there is nothing to be said against it. We cannot regard that man as so great an artist whose powers can only be stimulated into action by some forced, subtle, and almost unreal conception of character and incident, as he who can shed over ordinary life the elevating rays of true artistic treatment. But, so far as Mr Browning suffers from his want of accordance with the poetical taste of the century, we can only hail him as a martyr, and a martyr in a cause where one was sorely needed.

If we except Scott, and still more Coleridge in England, and Goethe in Germany, we have since the beginning of the century been in the hands of the subjective school of poets. Poets, that is, who view the universe of men and things through a medium supplied by their own idiosyncrasies, and whose poetry comes to us savouring strongly of the mind and heart of the individual poet. Against this style of poetry Mr Browning's works supply a welcome and long desired reaction. More productive than Coleridge, and far surpassing Scott in delicacy of touch and finished treatment, we find him free from Mr Ruskin's 'pathetic fallacy,' which attempts to depict external nature by investing it with human characters, and then painting it according to the tone of the artist's mind. In scenery, he gives us things as he sees them; and in dramatic poetry, which he chiefly loves, he thinks out his characters to the very heart's core, and then makes them speak for themselves, without coming forward like a chorus to explain the situation or scatter moral reflections over the drama. But it is in the work now before us that Mr Browning's genius reaches the culminating point. Henceforth, his place in the very first rank of English poets must be conceded without a murmur or a doubt. He has added a new lustre to English literature, and enriched our language with a possession for ever. In Count Guido, Caponsacchi, and especially in Pompilia, we have distinct creations, characters which stand forth in clearness and completeness like Macbeth, Hamlet, or Cordelia. Pompilia is exquisite in her beauty, her unconscious grandeur and nobility of soul, her simplicity, and withal her dignity, maintained alike amid great sufferings and petty persecutions more lowering than sublime trials. We cannot point to a creation worthy of being compared with her in the whole range of English literature. For the choice of subject we have nothing but condemnation. It is Mr Browning's luck. But granting this, there is no mark of great and lofty poetry wanting in the elaboration of this noble masterpiece. There is no departure from the true concrete artistic treatment in any line of the whole poem; no putting aside the poet for the didactic teacher; no thrusting forward of the author's individuality to speak for the characters, or to interpret them to his readers.

Repulsive though it be, however, we must set some abstract of the story before our readers, or it will be impossible to convey to them by quotation any real idea of the beauty of the poem. It is based on the trial at Rome, some two hundred years ago, of one Count Guido Franceschini, for the murder of his wife Pompilia, and her foster-parents Pietro and Violante. Guido justifies his deed on the ground of the shameless profligacy of his wife with one Caponsacchi, a priest in whose company she had fled to Rome, the husband overtaking them while resting at an inn at the last stage. Nor was this his only grievance, for his wife had been palmed off upon him as the child of Pietro and Violante, and the cheat afterwards disclosed, with the view of defrauding him of the dowry. The wife's friends admit the original fraud, in which the wife was an ignorant and unconscious innocent; and charge the husband with ill-treatment of his wife, too gross to be described, including incentives to unfaithfulness with Caponsacchi, so that, in despair, she was driven to commit herself to the priest's protection, with the most saint-like purity of act and intention on either side throughout. The law courts compromise, suspend Caponsacchi, send him to retirement, and Pompilia to a convent—whence, after a few weeks, she is removed to the villa of her foster-parents, gives birth to a boy, and is attacked and murdered by Guido and his associates—surviving only long enough to tell her tale. All this the poet finds recorded in an old book full of Latin pleadings. His aim is to set the story before us instinct with renewed life. We have the arguments of the husband's partisans among the gossips of the Roman bourgeoisie, then those of the wife's, and finally the epigrammatic comments of the gilded saloons—the contrast being worked out with consummate skill between the uncompromising partisanship of the two former classes, and the pseudo-philosophy of the last—with their affected superiority to passionate emotion, and their scepticism of the possibility of discovering a black and white, a right and wrong side in any quarrel. Then come the statements of the principal actors—Caponsacchi, Pompilia on her death-bed, and Guido after torture, the pleadings of the advocates, the final sentence of the pope, and the last utterances of Guido. The two lawyers we could well dispense with; they constitute the marked blemish of the whole piece. The humorous interludes in deep tragedy—the porters' scene in *Macbeth*, or the gravediggers in *Hamlet*, at once relieve and heighten the solemnity of the rest of the piece, but here they only weary us by their utter futility—and they disappoint us where we reasonably expect some insight into the difficulties of the story, and do not find them. But the personal utterances of the chief actors are works of art of the highest order. Pompilia is exquisite: we rise from the book feeling that we have communed with one of the finest creations of poetry, and that our souls are refined and elevated by the communion.

Not that Guido and Caponsacchi are not also masterpieces; indeed, as being more complex and more comprehensive characters, they may be regarded as even greater triumphs of art than Pompilia; but there is a completeness and perfection about the latter which the mind at once grasps, and never afterwards forgets.

Little Pompilia with the patient brow,
And lamentable smile on those poor lips,
And under the white Hospital array,
A flower-like body,

Digitized by Google

there she lies and breathes away her life in her artless moan of unaffected misery.

Of the two stories, Guido's is that which has by far the greatest intrinsic probability. The account given by him in the following lines of his feelings at the instant of the murder is very characteristic:

And then—why even then I think
I' the minute that confirmed my worst of fears,
Surely—I pray God that I think aright!—
Had but Pompilia's self, the tender thing
Who once was good and pure, was once my lamb,
And lay in my bosom, had the well-known shape
Fronted me in the doorway—stood there faint
With the recent pang, perhaps, of giving birth
To what might, though by miracle, seem my child.
Nay more, I will say, had even the aged fool
Pietro, the dotard, in whom folly and age
Wrought more than enmity or malevolence,
To practice and conspire against my peace.
Had either of these but opened, I had paused.
But it was she the hag, she that brought hell
For a dowry with her to her husband's house;
She, the mock mother, she that made the match,
And married me to perdition, spring and source
O' the fire inside me that boiled up from heart
To brain, and hailed the Fury gave it birth—
Violante Comparini, she it was,
With the old grin amid the wrinkles yet,
Opened: As if in turning from the Cross
With trust to keep the sight and save my soul,
I had stumbled, first thing, on the serpent's head,
Coiled with a leer at foot of it.

But if Guido's story, taken by itself, is plausible, it is no match for the pathos of Pompilia's simple autobiography. There is no violent indignation against her husband, the murderer alike of her happiness and her life—scarcely even of complaint; the whole force of her story is thrown into love for her babe, and devotion to her saviour Caponsacchi,

The lover of her life, the soldier saint;
Oh, how good God is that my babe was born—
Better than born—baptised and hid away
Before this happened, safe from being hurt.
Then I must lay my babe away with God,
Nor think of him again for gratitude.
Yes, my last breath shall wholly spend itself
In one attempt more to disperse the stain,
The mist from other breath, fond mouths have made
About a lustrous and pellucid soul;
So that when I am gone but sorrow stays,
And people need assurance in their doubt,
If God yet have a servant, man a friend,
The weak a saviour, and the vile a foe—
Let him be present by the name invoked,
Giuseppe-Maria Caponsacchi.
And this man men call sinner? Jesus Christ!
Of whom men said with mouths thyself madst once:
'He hath a devil'—say he was Thy saint,
My Caponsacchi! Shield and show—unshroud
In thine own time the glory of the soul,
If aught obscure—if ink spot from vile pens
Scribbling a charge against him—(I was glad
Then, for the first time, that I could not write)
Flirted his way, have flecked the blaze!

While the following quaint description of her introduction, at twelve years of age, to her future husband by Violante, is very characteristic:

And when, next day, the cavalier who came—
. . . . . .
When he proved Guido Franceschini—old,
And nothing like so tall as I myself,
Hook-nosed and yellow in a bush of beard,
Much like a thing I saw on a boy's wrist
He called an owl, and used for catching birds—
And when he took my hand and made a smile—
Why, the uncomfortableness of it all
Seemed hardly more important in the case
Than—when one gives you, say, a coin to spend,
Its newness or its oldness; if the piece
Weigh properly, and buy you what you wish,
No matter whether you get grime or glare!
Men take the coin, return you grapes and figs.
Here marriage was the coin; a dirty piece
Would purchase me the praise of those I loved;
About what else should I concern myself?

Caponsacchi's statement makes indeed large demands upon our credulity, and tries our faith to the uttermost, but the force of purity and truth in it renders doubt impossible, and the elevated strain of passionate indignation with which he concludes must have excited an outburst of applause which the officials found it difficult to suppress. The following exquisite lines occur in his description of the commencement of their flight to Rome:

For the first hour
We both were silent in the night: I know
Sometimes I did not see nor understand;
Blackness ingulfed me—partial stupor say—
Then I would break way, breathe through the surprise,
And be aware again, and see who sat
In the dark vest with the white face and hands.
I said to myself: 'I have caught it, I conceive,
The mind of the mystery; 'tis the way they wake
And wait, two martyrs somewhere in a tomb
Each by each, as their blessing was to die;
Some signal they are promised and expect
When to arise before the trumpet scares:
So, through the whole course of the world they wait
The last day, but so fearless and so safe!
No otherwise in safety and not fear
I lie, because she lies too by my side.'
You know this is not love, sirs—it is faith;
The feeling that there's God, He reigns and rules
Out of this low world: that is all; no harm!
At times she drew a soft sigh—music seemed
Always to hover just above her lips,
Not settle—break a silence music too.

And in these words of fiery indignation he withers the cowering Guido:

I conceive—
In all due self-abasement might I speak—
How you will deal with Guido: oh, not death!
Death, if it let her life be: otherwise
Not death. Your lights will teach you clearer! I
Certainly have an instinct of my own
I' the matter: hear with me and weigh its worth.
Let us go away—leave Guido all alone
Back on the world again that knows him now!
I think he will be found (indulge so far!)
Not to die so much as slide out of life,
Pushed by the general horror and common hate,
Low, lower—left o' the very ledge of things.
I seem to see him catch convulsively,
One by one, at all honest forms of life—
At reason, order, decency, and use—
To cramp him and get foothold by, at least.
And still they disengage them from his clutch.
'What! you are he that had Pompilia once,
And so forwent her? Take not up with us.'
And thus I see him slowly and surely edged
Off all the table-land, whence life upsprings
Aspiring to be immortality.

As the snake, hatched on hill-top by mischance,
Despite his wriggling, slips, slides, slidders down
Hill-side, lies low and prostrate on the smooth
Level of the outer place, lapsed in the vale,
So I lose Guido in the loneliness.

A COUNTY FAMILY.

CHAPTER XXV.—JENNINGS' LEASE.

Doctors were summoned of course from far and near; they came, and went, taking their fees with them, but leaving the old Squire of Redcombe precisely as they found him, alive and likely to live, so far as continuance of breath was concerned, but a wreck in mind and body. One side of him was totally paralysed. The stalwart limbs that had borne him so bravely through so many hardships, the giant arms that had been wont to lift such weights and strike such blows, were to do work no more. Even his speech, which for a time had wandered with a vague indistinctness only too consonant with his dim and confused thoughts, had ceased to be intelligible. Only his eyes were still quick and restless, and evinced such evident loathing and repugnance at his son's presence, that the doctors had forbidden his approach to the sick-room. It was quite usual, they said (for what will they *not* say upon occasion?), for a person thus afflicted to take unaccountable aversions to those who were nearest and dearest to him. They received Mr William's account of his parent's seizure with the most grave credulity. He said that his father and himself were having some slight disagreement—it could scarcely be called a dispute—about the letting of the Home Farm, as to the tenant's right of shooting game, when all of a sudden the old man had started up, with cries of 'Away, away!' and 'Don't come near me!' and then had fallen on the floor. That was absolutely all that had occurred.

The great Dr Fleam, and the great Dr Pulsatilla, who had each founded schools of medicine diametrically opposed to each other, were unanimous with the local practitioner that such cases were by no means uncommon—that is, they were so when interrogated by ignorant, anxious Mrs Blackburn. When the three medicos were alone, Dr Fleam had quietly observed, and Dr Pulsatilla had gravely nodded his adhesion to the pregnant inquiry: 'Do you think it likely, Mr Allcase, that there was any actual physical violence?'

The local practitioner, sitting, with an air of much deference, upon the extreme edge of his chair, had replied: 'I think *not*, gentlemen—I really think *not*. Mr Stanhope informs me that he put that question to Mr Blackburn at the time, and it was answered in the negative.'

As the final result of the consultation, an electric battery was sent down from town, which was so far of use that its presence terrified the servants from approaching their master's room; and perfect quiet, it was decreed, was above all things necessary to him. Finally, so great were the resources of science, that a slate and pencil were provided, in case the invalid should recover the use of his fingers and be able to express his thoughts.

Thus Redcombe Manor became a hospital, and also in a sense, to one of its inmates at least, a prison. Lucy Waller was as fast bound and tied to the spot as the Squire himself; for, urged her father, would it not be the height of ungraciousness to leave the hospitable old man in so sad a plight, when her occasional presence (as it evidently did) afforded him pleasure. But he did not also add, that the storm which had been so long threatening his own affairs had burst, and would have sunk him altogether but for the rumoured engagement of his daughter to William Blackburn, with which he pacified his more pressing claimants, as with a promise to pay. So long as he remained with her beneath the Squire's roof, these bills on the Bank of Expectation might obtain currency and credit; but should he leave it, his creditors, he was well aware, would begin to question the security.

To her father's arguments in favour of remaining at the Manor, Ellen's entreaties were added, to whom indeed Lucy's companionship was become more than ever grateful. After long watches by her mute grandfather's pillow, it was a relief indeed to take a brisk walk with her friend (for it had become too cold for croquet), or to seek with her that common ally, the piano, or to hear her clear voice read aloud the literature to which her own youth in its chill poverty had been a stranger, but that Lucy had taught her to love. In one respect, although their affection was so genuine, their friendship differed from that between most young ladies. At night, when they repaired to one another's rooms to brush out their back-hair—an operation which (perhaps from its electrical nature) has commonly quite a magical effect in eliciting mutual confidences—they did not speak to one another with total unreserve: perhaps one or both had a secret of her own which she wished to preserve, or perhaps it was only that they tacitly agreed to keep silence upon certain topics.

Herbert Stanhope of course remained at Redcombe. The Squire's 'Keep near me'—the last intelligible request he had made—was an invitation so pressing that it might almost have salved his conscience for continuing there, notwithstanding the mercenariness of his scheme, and the very moderate hope of its success. He knew that it was base, as a once rejected and still unwelcome suitor, to inflict his presence upon the daughter of the house; but, on the other hand, was he not useful to her, as indeed he was to all the rest, as a friend and protector? Without him what anarchy would there not have been at the Manor, with coarse William as Lord of Misrule? Even Mrs Blackburn, who saw the velvet glove without guessing at the hand of steel, confessed that nobody understood her Willy so well as Mr Stanhope. As for her husband, he was still eloquent, so far as eyes could speak, in his regard for the young man. They followed him with eager restless looks, and glanced from him to Ellen and from Ellen to him in a manner so wistful as to be unmistakable. To do Stanhope justice, he took no advantage of this favour to urge his suit, but seemed content to trust to time and its effects, the impression produced by his respectful but unceasing attention, his dexterous management of the common tyrant, and delicate consideration for his host and hostess, evinced in a hundred ways. Since he was present, and this John Denton away, he must, he concluded, surely be making progress, while the other receded in the young girl's good graces, or at most stood still; and one day it could not be but that he must needs get level with his rival, and the next day pass him. That is how one man always does cut out another with a

Digitized by Google

woman, as 'Sporting Dawlish' had observed in one of his practical philosophic letters.

That gentleman's correspondence had of late, however, become less philosophic than practical. He had hinted that his friend was making too much of a waiting race with the Blackburn filly, and had better go in and win. He had himself given a sop here and a sop there—and, so far as he was concerned, 'Herby' was quite welcome to the temporary accommodation—but nothing would prevent 'people talking,' and very unpleasant things had begun to be said. The absence of his friend from his usual haunts during the end of autumn had been commented upon without much scruple, and although Dawlish softened the expressions, he rendered them with sufficient faithfulness to prick his correspondent's pride—as he intended to do—to the very quick. Stanhope already owed Dawlish himself, for these friendly advances, more money than he could pay without parting with that remnant of the Curlew Hall estate which he could still call his own—and these advances were mere drops in his ocean of debts, the burden of which sat none the more lightly upon him because they could not be exacted by the law. If his present intentions were dishonourable, it must be conceded that his chief desire for their success arose from a certain sort of honour too—very much (though he would not have relished the parallel) as King Herod kept his royal word at the expense of his captive.

By help of the hold which Stanhope possessed over William Blackburn, he could doubtless have squeezed out of him a temporary loan, had that gentleman possessed the money; but he was, in truth, almost as much in want of funds, or at all events as destitute of them, as either of his father's guests, a fact which Mr Waller had ascertained by practical experiment. The ex-M.P., on the presumption of their future relationship, had actually attempted to borrow of his possible son-in-law, and failed. Fortunately for herself, Lucy was ignorant of the degradation she had thus been subjected to, nor did she suffer from it (as would otherwise have certainly been the case) in the increased familiarity of the young Squire's manner, for a reason with which we are acquainted. If he did not persecute her with marked attentions, it was because he did not dare bring matters to the point at which he must needs acknowledge himself as a suitor for her hand. Although, by having cut himself loose from his matrimonial moorings, he might indeed win a bride, he could of course not wear one; while Bess was alive, no matter how cruelly he had menaced her, or how sternly he had enjoined silence, he could never marry. There was not a day in which he did not secretly regret that he had not put that murderous scheme of his into execution, and made himself a free man in fact, and not merely in appearance. If those ravings of his, the listening to which had wrecked old Anthony in body and mind, had only been true! As it was, he had all the credit with his father of having put an end to Bess, with no sort of compensating advantage. If the Squire should recover his wits, the first use he made of them would doubtless be to settle on him some sum which, compared with his reasonable expectations, would be a mere pittance for life, and to exile him from Redcombe, and probably from England, for ever. While, in case of the invalid dying without sign (as seemed by far the most probable), he would still be left by the old man's will without adequate, or, at all events, as compared with Ellen, proportionate provision. That a will that did thus unjustly distribute the family property was in existence, he knew for certain. The Squire himself had as good as owned it. Lawyer Moffat, whom he had had the imprudence to rudely interrogate upon the matter, had not denied it. He had only said: 'You had better direct your inquiries to your father, sir. If the will were in my possession, it would be most dishonourable in me to accede to your request' (for William had even asked to see it); 'but, as a matter of fact, I have not got it.'

The lawyer had spoken with an irritation apart from that which his question had aroused; for one of the first acts of old Anthony, upon his coming to Redcombe, had been to transfer all the family documents from Mr Moffat's keeping to his own. Perhaps he feared that his scapegrace son might, one day or other, tamper with his agent, as indeed he would certainly not have hesitated to do, had the opportunity been afforded to him; or perhaps he preferred to hold in his own hands the title-deeds of his house, to have tangible possession of what had so long been a mere dream of wealth. But, at all events, much to Mr Moffat's chagrin, he had carried off the fire-proof box labelled 'Blackburn Estate,' which had so long been the chief pride and ornament of 'the office,' and placed it in his bedroom at home. He had also retained possession of his own will. The lawyer's manner convinced William Blackburn, even more than his words, that he had in truth not got it, and, in fact, that it was somewhere at the Manor-house. But if so, where had the old Squire hid it? In what particular spot was this piece of parchment, the existence of which debarred him from his just rights, and the destruction of which would restore them to him—make him his father's sole heir! Truly, a pregnant question.

Since the old man's seizure, months had now elapsed, during which Mr William, debarred by the doctor's orders from the sick-room, and left a good deal to himself by the presence there of the rest of the family, had had much indoor leisure, and he had consumed it in a singular fashion. The time he had spared from billiards with Mr Waller and brandy-and-water with himself had been devoted to hide-and-seek. As in that innocent game, the seeker had had no desire (at present) for the object itself—for his father might recover and inquire for it—but merely to know where it was. He searched high and low, in places probable and in places almost impossible, but he could not find it. He did not even know whether he had ever been near finding it, since there was nobody to tell him when he was 'warm.' But, after all, he was not seriously disappointed, since the most promising cover remained yet undrawn. One of the most likely places where the Squire would keep his will was in that same strong-box in his own bedroom, and that, in the present case, was the very spot which his son was personally unable to explore. His native cunning, however, after much counsel with himself, enabled him to get this done by deputy. There had been really some disagreement between his father and himself (although not at the date he had assigned to it) concerning the right of shooting enjoyed by the tenant of the Home Farm, and he

Digitized by Google

easily contrived to make out to Mrs Blackburn that the matter was a serious grievance. It was nothing to him personally, he said, but it was very irritating to feel that the Squire's good-nature was being imposed upon. He was unwilling to trouble that fellow Moffat (who had behaved to him so disrespectfully), but if he could only see a copy of the lease in question, one look at it would decide the matter at issue. It was probably in the strong-box in his father's chamber, along with the other law documents, and he would be much obliged if his mother would just get it out for him.

She had replied, as he had expected, that for her part she did not know one law document from another. 'Then,' said he, 'some night, when you are keeping watch alone, bring them all to me, and in half an hour you shall have them back again.'

'But I hardly think, if your poor father were aware, Willy, that he would like me to meddle with the box,' hesitated Mrs Blackburn, who, with all her weakness for her son, was loyal to the husband of her youth. 'I have never done anything on the sly, as it were, nor against him; and now that his poor wits are wandering—no, no, I could never take advantage of that, Willy.'

'But, mother, I am only asking you to do something for his own good; something which, if he was right in his mind, and fit to form a judgment upon things, he would wish done himself. I tell you, he has been imposed upon by Farmer Jennings, and that ought not to be. Nor is he the only one who has imposed upon father of late, as you well know. There is a regular cabal in the house against you and me, because we stand always together, we two.'

'As we always shall, my darling,' added his mother gratefully, for it was not often that her son exhibited such affection.

'Well, let us do so now, then,' said practical William. 'You must get me a glimpse of these papers, and also take care that no one sees you doing it. They are all jealous of my "interference," as they choose to term the interest I take in my father's affairs, which are surely also my own, and yet how long is the estate to go without a master? It is impossible to say when father may recover, even if he recover at all, and in the meantime everything is at Mr Moffat's mercy.'

'But everybody says Mr Moffat is an honest man, Willy. Mr Waller, who has been his neighbour so long'——

'Yes, yes; but has he no reason for saying so?' broke in William impatiently—'no interest in letting things be as they are? Why, Waller could always wind my father round his little finger, and will do so more than ever, if the old man should flicker up a little.'

'But Mr Stanhope, who is such a friend of yours, Willy, even he says'——

'*He* says,' hissed the other savagely. 'You might as well say "Ellen says" at once. O yes, he is my friend with a vengeance; such a friend as would strip me bare and wear my clothes. They would stick at no lie to do it. If either of them saw you bringing me the papers, that would be the ruin of me, mind that. And yet, as I said, there is no harm in it, but only good.—Now, don't argue about it, mother; because, you know, I hate to be argued with. It's only the lease I want, and even that only to look at. You shall have all back in half an hour or less.—When is it you have to watch with father next?'

'I shall be left alone with him from twelve to-night, "William"'—that was the only form which his mother's displeasure ever took: when some request was made of her more unreasonable than usual, she would call him (but still granting it), instead of Willy, 'William.'

'Then bring me the papers at two; I shall be waiting for them in my room. Be sure there is nobody stirring; and close the strong-box softly, so as not to wake father. There, that's well; and now I know you really love me.'

'I think you might have known that before, Willy,' sighed Mrs Blackburn. She felt she was about to do wrong, and yet she could not—perhaps, though she did not even own it to herself, she dared not—refuse her son. In the middle of the night, then, when all the household, including the invalid himself, were asleep, she rose softly from the sofa-bed by her husband's side, and opened the strong-box, the key of which, always kept in a cupboard in 'the Squire's Room,' William had given to her. There were a good many documents in the box, but she managed to wrap them all in a towel, and carry them to her son's room: 'There are fifteen,' whispered she as she gave them into his hands.

'Why should you have counted them? You did not suppose I meant to steal any, did you?' was his harsh reply.

She had not, in fact, entertained any such suspicion; but when he spoke thus, her heart misgave her; not on her son's account, even then, but on her own. She felt more than ever that she was doing wrong; for if William could hint such a suspicion of himself, what might not others hint if the thing were discovered? At the time appointed she returned to his room. He was waiting for her with the parcel. 'Jennings was right,' said he; 'but I am glad the matter is set at rest.' Yet his tone was full of sullen disappointment, and his face pale. Something, indeed, so strange was there both in tone and face, that before returning the documents to their receptacle, Mrs Blackburn found herself counting them over, and a sigh of relief involuntarily escaped her when she found the fifteen were there. As she closed the lid, she looked round mechanically, and by the dim glimmer of the night-light, she could see her husband's eyes, which she had thought fast closed, fixed earnestly upon her. Their look of keen reproof cut to her very heart!

'Have we been man and wife for fifty years,' it seemed to say, 'to be sundered thus at last!'

'I meant no harm, dear Anthony,' answered she to this mute appeal, falling upon her knees beside his pillow. 'It was only Jennings' lease, that Willy wanted to look at, and which he has been seeking for high and low; indeed, that was all.'

But the poor fading brain could, as it seemed, comprehend nothing about Jennings' lease; it could only understand, and continue by that reproachful gaze to shew that it understood, how old age and sickness, and the visitation of God, had been taken advantage of by one who had sworn to be faithful and true, notwithstanding all such things. She knelt for hours trying to comfort him, not without repentant kisses, bitter tears, but old Anthony would not be comforted. He had 'flickered up,' as William had phrased it, with a vengeance; and his wife, instead of longing—as the

Digitized by Google

watcher even more than the sick man is wont to long—for the morning, dreaded its coming, since others must then needs behold those reproachful eyes, and ask their meaning.

CHAPTER XXVI.—THE SQUIRE SPEAKS.

It was plain to all who sought the sick-room that day—and it was the morning custom even of his guests to look in with a kind nod and a smile, of which the old man seemed generally to be more or less conscious—that there was some change in the Squire's face. It was wont to be so still and quiet, immobile as a sculpture, always excepting the eyes—and now the wrinkled features were twitching and perturbed. Love and Duty, helped by Use, had hitherto been able to decipher his mute requests and supply his simple needs; but now they were at fault. It was plain that there was something wanted for which that scanty language had no sign. Wanted? Nay, yearned for. It was impossible to misunderstand him so far. And yet how to satisfy an unknown desire? There were sharp wits at work to interpret for him too. Not only his wife, repentant for the pain she had involuntarily caused him, and eager to make amends; and Ellen, whose loving eyes had ever been quickest to flash responsive to his dumb appeals; but Lucy Waller, always composed and prompt; and her father, who knew men so well, and all their needs, as he fancied—but not men in such a strait as this, and *their* needs; and Herbert Stanhope, keen and observant, and as willing as Ellen herself. He was really touched by the old man's condition, and could not regard it in the philosophic and abstract way that Mr Waller was wont to do over his after-breakfast cigar.

'Gad, sir, it's terrible,' that gentleman would observe. 'One has heard of one leg in the grave; but our poor friend yonder has everything in the grave except his eyes. It is as you might say, death in life; and there is no knowing how long it may last, for he is but about seventy. It would be a happy release to him, one might almost say, if he were to have done with it all.'

Some men are like the crows, who, when any of their brethren are smitten (or seem to be so) with a mortal disease, adopt at once the 'Happy Release' theory. And yet Mr Waller was by no means a heartless person, and was a very good-natured one. He cudgelled his subtle brains as soundly as the rest to get at the poor Squire's meaning, and would have given what he had to discover it. Mrs Blackburn, not without an inward struggle and a blush in her withered cheeks, had pointed to the strong-box, and even shewn her husband its contents, in case it was concerning them and their safety that those still piteous glances were so anxious. But Anthony closed his eyes, in token that his need did not lie there, and then opened them again, to rove from face to face with the same urgent inquiry as before. Mr Allcase had been sent for in the first instance, but he had been summoned away on some parochial emergency, in the night, so that Science was not at hand to solve the difficulty, which it probably might have done. It has been said, indeed, by some one, doubtless who owed medicine a bad turn: 'Leave Nature to herself' (as though she were a child in a passion), 'and she will come round;' but surely there are cases where skill can hasten her movements. Thus, a doctor might have drawn at once a deduction from the poor Squire's altered features, which it took unlearned helpfulness hours to draw.

'Do you think, grandfather,' said Ellen, driven to her wits' end, and when all were weary with touching and pointing and asking 'Is it this?' 'Is it that?'—'that you could write down the first letter, if I brought you *the slate*?'

This implement had been tried and found useless so often, that it had long ago been thrown aside, and even placed in another room. Scarce a muscle of poor old Anthony—save a certain involuntary twitching of the mouth—had stirred for months, and far less a finger. But no sooner did Ellen utter the word 'slate,' than, like fire to flax, it lit up the white bearded face with eager joy.

Eureka! The problem was solved so far, at all events. They brought slate and pencil, and released his nerveless hands from the clothes that covered them, and propped him up with pillows, and watched as men of old might have watched at some Sibyl's cave for her vague prophecy; and scarce could one of her leaf-inscribed mysteries, after the wind had taken the rest, have been more difficult and inscrutable. He strove, and strove; but only could you trace some wandering scratches, a spider-web scrawl with the meaning strangled in it like any fly. And yet it was so pitifully plain that it *had* a meaning, though not the eyes of love, nor even those of deftest compositor (had such been there), could decipher it.

'I have it!' cried Ellen suddenly; and fleeing from the room, she returned at once with a worn and dog's-eared little volume. It was a relic of those so different days when she had been pupil-teacher at the village school under Slogan, and was in fact a spelling-book. She opened it at the alphabet, great A, great B, from which so many lisping little ones had learned their first lesson; and now she was to teach it once again to one in *second* childhood, upon the threshold of life, indeed, like them, but about to *leave* it. The rest stood round her, keeping an anxious silence as she held the open book before her grandfather, and touched the letters slowly with the pencil one by one.

'When I come to the first letter of the thing you wish for, grandfather dear,' she had said, 'you must close your eyes.'

She had gone over half of them, and still, though his eyes had seemed to follow her every movement, they had given no sign.

'It is too much for him,' whispered Mr Waller to Stanhope; 'I doubt whether he comprehends at all;' and indeed so Stanhope and the rest thought; but the faithful fingers pursued their task nevertheless to the end, or rather just short of the end, when they were rewarded, for, at the letter W, Anthony's eyelids dropped.

'Does the thing you wish for begin with W, grandfather?'

No placard, the most plainly printed, that was ever stuck on wall could have been read more easily than that earnest glance of his 'Yes, yes.'

Ellen had thus discovered, as it seemed, provided only that this new-born intelligence of the old man should last, a mode of interpretation for all his thoughts. But *would* it last? The Squire's brain had been quickened into activity by a circumstance, the precise nature of which only one person present could have indicated. Had it been awakened

Digitized by Google

only to sink back again into torpor, since the incident that aroused it was not likely to recur? The sick man already appeared much fatigued, as with his unaccustomed exertions, not to mention those hours of untranslated anxiety, he well might be, and it was evident that only by effort could he keep his attention fixed on the task before him, but he did do so, so far as to spell out the first four letters of his son's name—W, I, L, L—without which indication of his wishes they would certainly not have been guessed. Then his eyes closed, as though he had done enough for that day, and he sank back, as if exhausted.

Then a council was held as to whether or not William should be sent for: Mrs Blackburn opining that he should be, since the Squire was so evidently desirous for reconciliation with him; but the rest, unwilling to act in such direct contradiction to the doctor's orders, opposed this. Finally, it was resolved to await, at all events, the arrival of Mr Allcase.

The surgeon positively declined to undertake the responsibility of disobeying his metropolitan chiefs. They had declared it to be their opinion that it would be highly dangerous, and might be even fatal to the patient, to permit access of the person who (whether wilfully or not) had been the immediate cause of his seizure, and at whose approach he had since shewn such evident marks of perturbation.

'But my husband has asked to see him,' urged Mrs Blackburn.

Mr Allcase smiled blandly, and shook his head.

His practice was a general one, but had not included examination of the paralytic by alphabet. He had listened to the whole account—as he was accustomed to listen to the extraneous detail of the sick-room, unprofessional opinions, and new and miraculous methods of treatment—with good-natured incredulity.

'It is very natural in you, my dear madam, to imagine that Mr Blackburn has expressed the wish in question; but in my opinion the whole affair is a delusion. He has not for three months been in a condition to entertain such a desire, much less to express it, although what you tell me of his attempting to write is very curious, very curious indeed. The brain may be active, but it is only mechanically so. Miss Ellen here is about to give him his cordial, which will put him, for the moment, at his best. Let her ask him, in my presence, whether he is of the same mind with respect to his son William; if he still wishes not to see him. If so, let him close his eyes, in token thereof, as you say it was understood he should do on the previous occasion.'

Mrs Blackburn was eager for this test; and the poor Squire being propped up as usual, while Ellen administered the potion, the question was put to him, as well as the proposed method of reply.

'Do you still wish not to see Uncle William, grandfather?'

The Squire closed his eyes and kept them fast, notwithstanding that quite a murmur of surprise broke forth from the womenfolk.

'There!' said the doctor, with quiet triumph; 'did I not tell you so? My dear madam, it is folly to be annoyed by such an incident' (for the poor lady had turned very pale)—'these are not even the caprices of a sick man. Mr Blackburn would have closed his eyes from very weakness, no matter what question you had proposed to him. For my part, I confess that at present I see no alteration in our poor patient. There is nothing for it, till some change occurs, but the same course of treatment—rest and quiet, quiet and rest: and you will forgive me if I hint—though it seems cruel to deprive one in his position of the society of a single friend—that there must not be too many people about him at a time.' And with that Mr Allcase, who was a man of action, and would never have made a fortune in Mayfair, took his leave, and proceeded as usual to make his report below stairs, nominally to Mr William, but in fact to Mr Waller and Stanhope.

There is no trade in which the professional has so decided an advantage over the layman as in physic. Few can gainsay him; for intelligent men, who, masters of their own calling, are inclined to credit others with the same knowledge of their proper affairs, have often but slight acquaintance with the phenomena of the sick-room. Still, Mr Allcase did not find his present audience so easy of conviction as the last. They stuck to it that the Squire had been in full possession of his wits, whatever might have been amiss with speech and movement, when he had spelled out the beginning of his son's name that morning.

'My good sir, we must believe the evidence of our own senses,' urged Mr Waller.

The surgeon's smile was pregnant with pity and good nature.

'Why, you are worse than Gibbon, Mr Allcase. You refuse to believe a miracle because it is contrary to your mere medical experience.'

'I don't know to what precise circumstance you are referring, Mr Waller; but I should say that Dr Gibbon was right.'

'Nay,' added Stanhope; 'why, one of the best scenes that Dumas ever wrote is where the paralytic old Noirtier, assisted by his grand-daughter—just as it might be Mr Blackburn and Miss Ellen—makes his will by merely winking his eyes.'

'I don't suppose Mr Dumas is a medical man,' observed the surgeon drily. 'If the patient he describes had winked with one eye, and pointed over his left shoulder, I could have understood what was meant.—Good-morning, gentlemen, for I have no more time to spare for your experimental philosophy.' And he mounted his cob, and rode away, as his custom was, at the gallop.

'There's a sceptic for you,' observed Stanhope laughing; 'and yet I suppose the man is right. He ought to know what he's talking about; and, besides, it appears that Mr Blackburn did decline to see his son, by the same token that we took for'——

'My dear Stanhope, I've got it,' interposed Mr Waller gravely. 'Allcase is a mere fanatic, with the Pharmacopœia for a Bible; but he is right thus far—that it is not his son whom Blackburn wishes to see. Perhaps I should never have hit upon it (although he spoke as plain as letters could speak, poor fellow), if it had not been for your chance allusion to Dumas. What the Squire wants to see is not William, but his WILL. Now, the question is—Where is it?'

IN FIVE CHAPTERS.

CHAPTER I.—CURATE OF MARL HILL SCRIBIT.

No; I am not in the fens, old friend, though you may smell them when the wind blows from the sea, and though a considerable portion of the largest estate in the parish is certainly marsh-land, as yet unreclaimed. Marl Hill proper is really not called so in satire; it is on rising ground, the first wave of the wolds: the house I live in is at least eighty feet above the sea-level. The land all about is thoroughly drained and highly cultivated; and if you will come to see me, I will insure you against ague, unless, of course, you get it by voluntarily going into its strongholds to shoot wild-fowl.

It is a trifle dull, I must confess; so that you must expect to get long-winded old-fashioned letters in exchange for your occasional penny-post notes. One cannot read all the long evenings and all the mornings too; and sermon-writing is not a difficult style of composition here, for it is impossible to be too simple; you must talk rather than preach if you want to catch the attention of the people. These are scattered about, living in disgraceful cottages, upon the different estates. There are one or two small farmers, but the greater part of the land about here is let out and cultivated in a wholesale way, and one farm of a thousand acres pretty well takes up a parish. That is why the vicar has two, I suppose. He is one of the old school, and took things pretty easy: had morning service in the one church, and evening service in the other, every Sunday; married, buried, and christened when obliged to do so, and bothered himself no further. He has been ordered off to Madeira for his health, by a homœopathist, one would say, and on the principle that like cures like, if, as scandal reports, his ailments are traceable to his fondness for that too seductive wine. At anyrate, he required a curate to take his place, and here I am. After the fashion of new brooms, I want to perform some sweeping, but it is very difficult to do anything. The people are more heathenish than I had any idea was possible in this Christian country; but the job is to get at them. The women and children are out at work almost as much as the men; and district-visiting is impossible when the cottages are locked up and empty, or in the charge of a young girl, who also has to look after her small brothers and sisters. Drunkenness is not very prevalent, because the beer-shops are few and far between; but the devil does not lose much, for opium-eating is a common habit. It is a fact, I assure you. When you come here, you shall be taken to the chemist's in the nearest village on Saturday evening, and see the piles of opium pills he sells to the labouring classes. I tried tracts, but found that very few could read them. However, I have managed to double my congregations, and have established a Sunday school, which is a beginning. I hope to get up an infant school for week-days, next. You asked me what sort of life I led, you know, so if these matters bore you, I am not responsible.

I should like a little more civilised society, I confess, for, not being able to afford a horse, I am well nigh neighbourless. The property about here belongs nominally—for I believe it is mortgaged as heavily as it will bear—to a Major Holcombe, who lives with his only child, a daughter, at the Marl, which must have been a nice place once, but now—— I do not know how to describe it to you; think of Hood's Haunted House. The stables are in ruins; the garden is a wilderness; there is good feed on the drive up to the front door, which is never opened, the people going in and out by the back ways. As for the master, he has just recovered from an attack of D. T., but is dying. He has something on his mind, I think, or I doubt whether he would care so much for my company, or listen so patiently to all I have to say on religious matters, especially as I must seem a mere boy to him. I was rather stumped at first, but he soon began to talk scepticism, and arguing set me all right. And then I do look ten years over my age; that is one of the advantages of being ugly. He is constantly on the point of telling me some secret, only I do not encourage him, and he often says that he will

Digitized by Google

write something down, and leave directions for the paper to be given me after his death. What is my duty, I wonder? If one were a Roman, I suppose it would be clear; but you see I am not even in priest's orders yet, and altogether I had rather be without his secret. But probably it is all nonsense. A man just out of D. T. is never right in his head; and yet, I daresay, his conscience is bad enough, for he has led a queer life, by all accounts. He has run through three fortunes, they say, two of his own, and one of his wife's, whose heart he also broke, they say; but 'they' always do say that of a spendthrift. When his wife died, he disappeared for a while; went yachting, to dodge his creditors, and placed his daughter, who was but ten, at school. He was away for eight years, and then he returned here, and brought his girl with him. And a strange life that poor young lady must have led, considering that she is not a Di Vernon. Only men came to the Marl, and those of the fastest. Major Holcombe wanted her to marry one of them, the son of an attorney and land-agent who had made his fortune, named Naisley; but Miss Lucy would not have him. Perhaps, however, she would have been bullied into it, only Naisley got a fall out hunting which injured his spine.

I can see you grinning, but you are quite out. I do not believe that I should ever fall in love with her. She is good looking, no doubt, and friendly enough; but she has got some great sorrow weighing upon her. Her father's state would of course account for a certain melancholy; but there is more than that; there is mystery, suspense, expectation of something which never happens, and which yet *may* happen, in the expression of her face. I have not made my meaning clear, but no matter; I could not if I tried for a twelvemonth. Miss Holcombe is my only ally in the small reforms which are being attempted; without her aid, I doubt whether the Sunday school would ever have become a fact. I close this in haste, for a messenger has come to say that this same Major Holcombe is *in extremis*, and calls for me.

CHAPTER II.—THE UNFINISHED RUBBER.

The strangest thing has happened, Brown: Major Holcombe is dead. The paper he talked about leaving for me to read is lying before me, and it affords a clue to our mystery—I mean about poor Godwin. Do you remember the minute details of that evening? I think *I* do, and propose to jot them down here. If I am incorrect in any particular, perhaps you may be able to set me right: then, please send this letter on to Thorpe, and ask him to supplement our memories still further. I want to have the account very accurate, because legal proceedings may follow upon the steps which I shall feel bound to take.

Our happy Cambridge life was drawing to a close; indeed, I had taken my degree, and only remained up because I had a scholarship to run out. You others were still undergraduates, but were going in for your final examinations in the winter, and it was late in the October term. To be precise, it was on the 4th of November 1840, exactly three years ago. You came up to the B.A. table in hall, touched me on the shoulder, and said: 'Come to my rooms afterwards, and have a rubber.' I accepted at once, for you had brought some very excellent port wine from home with you, and there were a few bottles still left. Just then, Thorpe passed, and you invited him. Thorpe fancied that he could play very well at whist, and did not like to sit down with an inferior performer; so, before giving a decided answer, he asked who the fourth was. 'Hylas Godwin,' you replied. 'All right,' said Thorpe; 'I 'll come.' Who first called Godwin, Hylas? It was a capital nickname, for it just hit off his style of beauty. What a good-looking fellow he was, certainly the handsomest man of our time. Rather conceited, perhaps, as youngsters who are admired by women are wont to be, and finikin in his dress. Yet he was clever too, though, may be, not such a genius as we esteemed him; and I do not think that I have ever met with a more agreeable companion. Gerrard said better things, but in so confused a way that they lost their pungency in the uttering: he always went shy in the middle of a joke. But Godwin rattled out any absurdity that came into his head in a manner which was irresistible. And he was in particularly good cue at the whist-table—not that he ever spoke during the play, he was far too keen a lover of the game for that, but between the deals he made amends for previous silence, and generally kept his three companions on the grin till the hands were sorted and the first card led.

He was in his usual spirits that evening, nor could we afterwards recall a word or look which seemed to shew that he had anything on his mind, or any presentiment of evil.

We sat for a little while round the fire, drinking a glass or two of your port, and then opened the card-table, and cut for partners. It was you and Thorpe against Godwin and myself. The cards fell very evenly, and the first rubber, which you won, was very protracted, so that we had hardly finished the first game of the second when we heard the chapel bell going, and Thorpe cried that he was short of his chapels for the week, and must keep that one.

'I have had a notice from the dean too,' said Godwin, 'but I 'll cut chapel and finish the rubber for all that, if Thorpe will.'

But Thorpe was firm. We abused him for his laziness in not getting up for morning service, and so securing evenings of unbroken comfort; but he prided himself on his sloth, and took our sarcasms for compliments. When he actually rose and threw his gown on, it became evident that our rubber was really to be interrupted, so we all agreed to wipe a chapel off our score, leaving the cards on the table, and returning to finish the game directly service was over.

Do you wonder at my writing down these minute details? I am purposely allowing my mind to dwell on every little particular, because, to tell the truth, I can think of nothing else just now, and I find my memory very vivid. I can see the counters I had just stuck under a candlestick to mark a double; the patterns on the back of our pack and of yours. I can see Godwin's face as he said to me: 'Now don't you go rushing off to your rooms for a pipe after chapel, as you are so fond of doing. Come straight back to Brown's, and don't keep us

Digitized by Google

waiting. I will give you a cigar if you have forgotten your baccy.' And then in a loud aside to Thorpe, as we ran across the court: 'He never can resist smoking another fellow's cigars. Oh, I know where to have him!'

We were just in time to get in before the chapel doors were closed, and as we were walking up the aisle, he whispered in my ear: 'If you *do* admit a secular thought during the next half hour, partner, let it be a meditation upon the propriety of leading trumps when you hold five.'

Though three years have elapsed, I think I could swear to those being his exact words. How little I thought at the moment that they were the last I should ever hear him utter.

We all missed each other in the crowd on coming out; and when you, Thorpe, and myself met again at your door a few seconds afterwards, Godwin was not there. We went in and lit the candles, and laughed at his being the last, after the fuss he had made about the punctuality of others. You said that the porter had met you in crossing the court, and had given you a letter; so we concluded that the same thing had happened to Godwin, and that he had gone to his own rooms, to see what it was about, before joining us. We speculated upon its being a *billet-doux*, and joked about Hylas and the nymphs, speaking finally rather harshly of the supposed lady, whose letter we assumed to have caused this delay in resuming our rubber.

It is curious to note how the first thought of suspicion or alarm comes into the mind with a flash—by instinct apparently. No doubt, some reasoning process has been going on with such subtlety as to be unfelt, and that which we often call a presentiment, is merely a logical conclusion. For some time on that evening, we never doubted but what the absent man would come in from minute to minute. The open card-table, with its two lighted candles, the cards, and the counters upon it, stood as it had been left. The sofa was drawn up in front of the fire, and you lay on it; Thorpe and I sat in two easy-chairs on either side; and so we remained, smoking and chatting, for upwards of an hour.

And then I perfectly remember experiencing a sudden uneasiness, which caused me to look across at Thorpe, and I read a similar feeling in his eyes. We both turned to you, and the expression on our faces must have been very plain, for you at once said: 'What! you do not expect that there is anything the matter with him?'

'Of course not,' replied Thorpe. 'But—there would be no harm in going to his rooms to see.'

We went, and found the outer door sported; and while we were hammering and shouting, the gyp came by and told us that Mr Godwin had gone out of college, not wearing his academical dress, and carrying a carpet-bag. On going to the lodge, we heard this story confirmed by the porter, who also said that there *had* been a letter for him. We learned next day that he had left a note for his tutor, saying that urgent family matters obliged him to leave immediately, but that he would return or write as soon as he could. And that was the last of him.

He was a man who seemed pretty well alone in the world, so far as relatives were concerned. He had entered himself at college, and the tutor knew no one to communicate with. Of course a man could not disappear like that without causing some sensation in the university, but all inquiries were fruitless, and the majority of his acquaintances soon forgot him. The mystery of the affair struck us three, however, with a sort of awe, besides that, being his most intimate friends, we were naturally the most anxious to learn what had become of him. We even, you may remember, made a note of the state of the game of whist at the time we rose from it, and agreed that, if ever we could meet with Godwin again, we would play it out. That can never be. For here, on the borders of the Lincolnshire fens, I have unexpectedly come upon the traces of our old friend, and the cause of his disappearance. I will copy out Major Holcombe's—confession I suppose I must call it, though I hate the word, and will send it you, but you must not shew it to any one, at all events at present.

CHAPTER III.—THE PATRICIAN'S CONFESSION.

It is true, it is true, that which you have preached to me, that which I believed when I was a child, that which I have scoffed at as an old wife's fable. All is not over when this machine of flesh and blood stops. When a young man goes to the money-lender, the present pleasure seems so very real, the future burden so distant and intangible, that the idea of self-denial is to him like grasping at shadows, and missing the substance; but pay-day comes, and ruin. 'A short life and a merry one,' cries the lad; but the merriment evaporates, leaving the nerves shattered, the body diseased, the heart full of bitterness and misery; and I feel a conviction that this is part of an inexorable system which extends after we are able to trace it. In whatever direction we seek to probe the mysteries that surround us, we are lost in infinity. Space is infinite, and time, and life. Motion is infinite; the moon revolving round the earth, the earth round the sun, this solar system round another, till the brain reels: is not retribution infinite likewise? These thoughts are new to me; I but grasp them vaguely, express them crudely, but they burn in my soul. Oh, the innocent hearts into which I have infused the germs of evil! Oh, the weak ones vacillating between good and bad whom I have drawn devilwards! Repent of my own sins? Ay, if that were all; but how to account for the eternal wrong I have done to others? And the one great crime which renders my conscience sensitive to the sins which I might otherwise have forgotten, on this side the judgment at least, how can I atone for that? By confessing it to you? No, no; and yet I have a thirst to do it, a desire not new to me. I have written the details in the form of a narrative, which will be placed in your hands at the same time as this letter. I began this account, of what it was the one remaining object of my life to hide, some months ago, carefully stopping at those details which would criminate me. I have not finished it now even, as I write this; but I will before you have it; yes, if my head keeps clear, and my strength holds. Criminate me? What do I mean? Nothing I could say would do that. But my nerves are not what they were; it is years and years since men first began to notice that I craned at my fences; and I see visions since that illness. For weeks a young man stood over against me night and day, with a bloody bruise on one

Digitized by Google

side of his head, and a look so pitiful and reproachful, that it was a miracle I did not go mad. Will faces come around one like that hereafter?

I was what prudes and parsons call wild, I suppose; not worse, perhaps, than my neighbours, but more careless. I never could think economy anything but mean; and I confess to having been a fool in money matters. Though a younger son, I had a fair portion, quite as much as any man in my regiment—and I spent every penny of it. Then my elder brother died, and I came into the estates, and soon had them pretty well dipped. To get clear, I married a woman with money, whom I never liked so much as she deserved, for she loved me well, and stuck to me through everything—ay, to the very last. If it had been left to her, there would have been no settlements; but her people insisted on my tying up a few thousands for her and her children—she brought me but one, a girl, and died a few years afterwards. I was again involved in money difficulties by that time, so I put Lucy at a good school, and went to the Mediterranean in Lord Plunger's yacht. He was shirking the bailiffs too; and we cruised about together for some years. It was only in '39 that I could return to England, and then I settled here, and began to look about me. There is a deal of marsh-land on the estate, and I had a mind to try draining a part of it, as many landholders have done in the county, to the great improvement of their property. But there was no capital to start with, and Marl Hill would not stand another mortgage; so then I thought of Lucy's money, which was lying idle in the funds. The estate is not bound to go to the male branch, but will come to her after my death, so the tied-up capital could not be laid out better for her than in reclaiming this fen. One of the trustees was dead, and the other very ill at the time—only had a bit of one lung, people said; but it seems to have grown again, for he has got better, they tell me. He was living in Devonshire, and there was a difficulty about communicating with him, as also about the transaction altogether; there always is in such matters, I believe. However, it was got over, and a part of the money was withdrawn, and applied in the way which promised to be so much more advantageous.

There was not much to start such an undertaking with; and I had to begin in a small way, and do it cheaply. I found a man named Bradley, who professed to understand draining, and bargained with him to keep a party of five men at work on the place most favourable for a start; and they built some wooden huts on a dry spot in the marsh, so as to live close to their operations. Whenever he had an opportunity, Bradley was to add to the number of his workmen, so that sometimes there would be ten or twelve employed, but never less than five. The draining did not go on fast, but then the wages paid were very small; the truth being that Bradley and his gang carried on more profitable business, and found working for me useful as a blind. This got suspected, and the fellows were called 'Holcombe's Rough uns' by their own class, 'Holcombe's Ruffians' by mine. I got rather a bad name amongst certain people; but what did that matter to me? Everybody is liable to that.

Bradley's gang were a bad lot, no doubt. They drank a good deal of spirits, to keep off the ague, and were suspected of brewing their own medicine. They were clever poachers, and never got caught; they kept up communication with vessels in the Humber, and made use of a small but navigable stream about four miles off for smuggling purposes. Some very queer fellows hid for awhile in those wooden huts sometimes, I daresay. But I do not preserve, and hold no office in either the Excise or Customs, so I got my draining done cheaply, and asked no questions.

Lucy was too old to be kept at school any longer, so I sent for her to the Marl; and a few days after her arrival a man named Naisley, the son of a Louth lawyer, who has bought land near here, and wishes to be thought a county gentleman, saw her, and fell in love with her. Naisley is rich, and the marriage would have been a good thing on that account; but besides that, he knew all the rights of the difficulty I had had about that money which was tied up by settlement, for he was still a sort of sleeping-partner in the legal business, and the firm had transacted all my affairs, so that Naisley had opportunities of making any inquiries he chose, and suspected something not quite right. I had reasons therefore for taking up his cause pretty warmly; but there was a difficulty. As I was not on good terms with any of the distant branches of my family, there had been no one to receive Lucy during her holidays, and I had made arrangements with the schoolmistress to let her remain with her all the year round. But when the girl grew into a young woman, she formed romantic friendships with other girls, whose parents asked her to their homes; and when the matter was referred to me, I saw no reason to forbid her accepting such invitations. On one of these visits she met a young man, who fell in love with her; and when Naisley began to shew her attention, and I backed him, she told me that she was engaged to this lad, who was a Cambridge undergraduate, and would not be in a position to marry probably for years. It was annoying; but I took it for granted that she would soon get over this girlish fancy, and made light of it at first. But the more I reasoned, the more she pleaded; and she would hardly treat Naisley with common civility. Then I lost my patience, and spoke harshly; and Lucy, who was very different from her mother, grew more obstinate as I insisted. Matters might have gone differently if she had respected me; but how should she think much of a father who was constantly drunk? Hardly a day passed without some violent scene; and in a short time we felt a positive aversion for each other—for I have always come to hate any one who opposed my will, and my feelings towards her reached almost as far, though she was my own child. I judge of her sentiments to me by her shrinking, as if she expected a blow, whenever I came upon her unexpectedly.

In the summer, during the long vacation, her lover came to Lincolnshire to see me; and, learning from his own mouth that his patrimony was but a small one, I told him that I had other views for Lucy; that I disapproved of long engagements; and finally I forbade him to hold any further communication with her. He left the house without saying whether he would obey me or not, but hung about the neighbourhood, and contrived several clandestine interviews with my daughter before I discovered what was going on. Then there was a quarrel, and blows were struck, though I confess

Digitized by Google

that he was as forbearing as possible, and only threw me to the ground in self-defence. Still I hated him for it—hated him keenly and personally now, not merely as the cause of my plans being thwarted, and my safety endangered. I caused Lucy to be closely watched after this, for if she eloped with this Godwin, who must now look upon me as an enemy, he would make inquiries after a time about the property secured to his wife by her mother's marriage settlements. So, while her lover was in the neighbourhood, I kept her a close prisoner in her own apartments. Soon after this, Naisley became pressing, and almost threatening, affecting to suspect that I was playing him false, and not doing my best to force Lucy to listen to him.

Early in the following November, I went up to Lucy's room one morning, with the intention of trying what conciliation would do, now that it was evident that she could not be compelled. She had been writing, and as I entered, she closed her blotting-book on the letter. After talking quietly for a little time, I alluded to this, and expressed a hope that she was not corresponding with the man who had made use of personal violence towards her father. Then she made a false move; had she remained quiet, it would never have occurred to me to examine what she had been writing; but she darted towards her blotting-book, and so roused my suspicions; and the next moment, in spite of her struggles and despairing cries, the letter, which was finished and signed, and the envelope, which was directed, were in my hands. She was accustomed to put on a quiet, protesting, persecuted-heroine air in her interviews with me; but now she fell at my feet, and clasped my knees, imploring me not to read what she had written. By which, of course, I knew that it was very important that I should do so; and when she found me determined to disregard her entreaties, she went into hysterics.

A glance shewed me the purport of the letter. I then rang the bell, and told the servant to remain with her mistress till she recovered, and to lock the door upon her on leaving the room. Then I went to my private room, and studied the letter. Where could a young girl have got such boldness and such invention? It seemed that this lover of hers, Godwin—to whom, of course, the letter was addressed—had endeavoured to persuade her to elope with him on one of those occasions when they had met in the summer; but that she had refused to take so serious a step, urging that he himself would think the worse of her afterwards for it. She now alluded to this, in order to own that she had been wrong: my tyranny, as she chose to call it, had become insupportable. I was determined to force her into marrying a man she positively hated. Then followed her reasons for thus hating Naisley, which shewed considerable power of discerning character, and she positively appealed to her lover to come and save her from the cruel fate I designed her. But the most astounding part of the letter was the cunning and carefully studied plot which she had framed for the evasion. She knew that Godwin could not come undisguised into the neighbourhood without my receiving early intelligence of it; so she directed him to dress himself as a navvy, and demand employment of Bradley. Men on the tramp to or from Hull often took a spell of work on my fen; and his making a similar application would excite no suspicion, or even particular attention. She was to disguise herself as a peasant, and they were to meet at a certain spot at eleven o'clock at night, and go off wherever he chose. Nothing was forgotten; she calculated the first possible night of his arrival, and said she would be at the appointed place on that, and if he were not there, on the next, then the next, till he came. She gave him a pass-word; told him the times of arrival and departure of the ferry-boats from Hull to the nearest town on the Lincolnshire side—in short, the whole thing might have been arranged by a Leporello or a Figaro.

I was nearly mad with humiliation and rage when I had read that letter carefully through. What had I said or done to drive an innocent young girl to plan and write it? Something probably inspired by drink and fear, which I remembered nothing of now I was sober. I cursed myself for my folly; I cursed Naisley, who had goaded me to it; the girl herself; and above all, this man, who had interfered to thwart my plans. I had spoiled this one scheme; but could I always make sure of equal success in the face of such method and such determination? Yes, if I could keep clear of drink; but drink was as necessary to me now as air.

I went up to the fire to throw the letter into it, when suddenly a thought came into my head—clear, distinct, inspired by the devil. Instead of burning the letter, I put it into the directed envelope, sealed it, rode over to the nearest village, and posted it with my own hands.

Then I visited the place where the draining was going on, called Bradley into one of the huts, and——

No, I will write down what I said to him when I have told everything else. Not yet, not yet. But I swear, and I know that I am a dying man, that I did not intend that to happen which did.

A week afterwards, I saw Lucy for the first time since the day that I intercepted her letter, and told her that her determined opposition to my wishes had at length convinced me that they would not tend to her happiness, and that I was ready to give way in anything, rather than drive her to so disgraceful a step as an elopement. If this marriage, which she had so set her heart on, must take place, let everything be done decently and without scandal. She should no longer be imprisoned or watched, but might correspond with her lover, and even tell him that I was willing to let by-gones be by-gones, and see him, if he still continued in the same mind, and would come to the Marl.

Ah, that burst of gratitude! I have led a hardening life, but my heart is not quite seared; and it was an agony to hear her self-reproaches, her promises of filial duty, and her auguries of a happy future—an agony to see her step lighten, and the flush of health come back to her cheek; for I was a traitor, and I knew the sickening disappointment which was in store for her.

She wrote, and waited for an answer, which never came. She wrote again—a third time—still no response.

She sickened and pined; her eyes seemed to grow preternaturally large, and were turned on me at times with a look of mournful inquiry which was haunting. I can write no more now; I am giddy; the letters are confused. To-morrow.

CHAPTER IV.—THE PLEBEIAN'S CONFESSION.

I read the first part of this unfinished manuscript, left for me by the man who now lies dead at the Marl, as the mere raving of a brain disordered by drams, till the name of Godwin caught my attention; and then a comparison of dates shewed that this improbable story tallied exactly with our friend's mysterious disappearance, and I could not doubt that he had met with foul play.

I write calmly now; but I was thrown into a terrible state of excitement at the time. The confession was incomplete, and he who had volunteered it could not write another line or utter another word. I am sorry, my dear Brown, that you cannot come here to pay me a visit at present, and I own that your reasons are valid; but had it been possible, you would have been of the very greatest assistance to me. I knew you would feel the interest you say you do, and I will send you a continuous narrative of my success or failure in tracing what I fear will prove the last footsteps of our poor friend. The first thing will be to find this Bradley. Of course, it will be impossible to speak to Miss Holcombe till after the funeral; and if her late father's account is to be trusted, it would be inflicting needless pain to trouble her with the subject at all, except that she could confirm or contradict the various statements in that account of which she has cognizance, and so enable us to judge of its general trustworthiness.

Three weeks have elapsed since Major Holcombe's funeral, and I have strange news for you. I will not enter into the minor details of my proceedings, but leave them to be talked over when we meet, and confine myself now to results. I *did* speak to Miss Holcombe as soon as it was decent to do so, and she was much overcome on hearing that I had been poor Godwin's friend. It was also a great shock to her to learn that her late father had sent the letter he took away, which she was sure that Godwin had received, because the later ones had been returned through the dead-letter office. It was not an easy matter at first to gain any tidings of Bradley, so I went to Hull, and put the matter in the hands of the police there, and they were able at once to trace him, as he was undergoing a sentence of imprisonment at Lincoln, to which town I proceeded. Then it appeared very doubtful whether any magistrate would commit him on a charge of murder, with no stronger evidence to go upon than the obscure hint of a man whose brain had been disordered; but Bradley, whose nerves seemed shaken by confinement, was so alarmed at the idea of such an accusation hanging over him, that he volunteered a confession of all he knew about the matter, which was taken down in writing, and here is a copy of it.

That there gentleman as came to the Marl Fen in November 1840, murdered? Don't you believe it, sir; he weren't no more murdered than you are. I am an unlucky beggar, and always was, but to get into trouble along of having done for a bloke, as for all I know is a-eating of his dinner comfortable at this present moment, is too bad, it is.—Ay, I know Major Holcombe thought he was dead; I let him think so for a reason, but bless yer, it was all kid. Ask Bill Blazer, Joe Keggs, Lushy Noggins, or Abe Snarem; ask Captain Blobber of the *Slosure*.—How was it? Why, this is how it was.

I was digging in the Marl Fen one arternoon along with my mates, when the major rode up and called me; and when I got to him he beckoned with his head, and said low like: 'Come here,' so that I should go up quite close. So I did, and put my hand on the horse's neck like, and he bent a bit and said: 'Bradley,' says he, 'I know, of course, that you and your mates would not drain my land, at the price you 're a-doing of it, unless you found the situation, and the excuse for living in these out-of-the-way huts, convenient. Well, that 's nought to me,' says he; 'it 's a mootooal advantage, and I 'm not a-going to see you fall into a trap for want of a word o' warning. The custom-house people is arter you; they 've got an idea there 's a bit of running done in these parts, now and then, and that Holcombe's rough uns have summut to do with it. And there 's a spy a-coming to-morrow, or the day arter; he will be dressed like a navvy, and come to you to be took on at the draining, so that he may live in the huts here, and find out everything. Be all friendly and mate-like until he gets the chance to betray you, you understand?'

'Thank ye, major,' says I; 'now we shall know how to make him comfortable. He shall have a pleasant evening, and I daresay he will be in a hurry to come back for another.'

'Well, Bradley,' says he, 'money ain't plentiful here, but I do so hate a spy—special when he comes a-interfering with my workmen—that I think I could find a ten-pun note somewheres if he got a warning to mind his own business done clever, so that there ain't a noise about it.'

When the major spoke of paying, I saw he was up to a game, so I says: 'If we should make a mistake, major, and we found arterwards he were not a preventive at all, that would hurt our feelings uncommon, and you would make it fifty, then, wouldn't you?'

'P'raps I would,' said he, and rode away.

Well, I explained the matter to my mates, for there was only us five reg'lar ones working at the time; that is, I told them a preventive spy was coming, and kept the idea that the major might have a grudge against the chap to myself—there warn't no call to speak of that. We agreed what we 'd do: that were, to receive him friendly and unsuspicious; get drinking, and start a quarrel, quite promisc'ous like, and then give it him stiffish—all under seeming of a pleasant quiet fight, and no malice.

He came the third day after, I think it wor, but I won't kiss the book to the actooal day. There was no mistaking him: he was dressed like a navvy, sure enough, but he 'd small delicate hands, mudded over artificial; and he weren't used to the heavy boots he 'd on, for his steps didn't drag. He acted his part very well, though; sat down and blew his baccy quite friendly, and offered to stand a couple o' gallons to wet his footing.

'There ain't a public nearer nor a couple o' miles, worse luck,' says Joe Keggs.

'Haven't you got a drop of something handy, in stock, as it were?' says the stranger; and I saw my mates look queer at that; it made 'em feel sartain this were the preventive spy.

'Well,' says Joe, 'there is a couple o' bottles o' stuff which was sent to us from the Marl, in case

Digitized by Google

one on us should feel a touch of the rheumatics coming on.'

'Let 's have 'em,' says the stranger; and we did. But he tried to shirk drinking hisself, and that made an excuse for a quarrel.

I 'm not going to deny that that stranger got something for himself; two of my mates had drunk as much as they could do with, and punished him more than we meant. And just then the major came down, and had a look into the hut; none of the others twigged him, but I did. He had been lushing pretty free, as he always did, and I suppose couldn't keep away. But he looked precious scared at what he saw, and I expect it pretty well sobered him. The stranger was lying on the floor of the hut, face uppards, senseless, with a nasty place on his temple. He did look uncommon dead sure-ly. But he warn't, bless yer, not a bit. When the major was gone—and he only held the door ajar, gave a look in, and was off—I washed the chap's bruises, and made him tidy with a hankercher round his head. And then we played him a trick. The day before, Captain Blobber, of the *Slosure*—which is a whaler, and he her skipper—comes to me, and says: 'Do you know one Jack Sherks, who lives hereabouts? Because he came to me and engaged himself, and I gave him an advance to clench the bargain, and we sail on Saturday, and he hasn't turned up.'

Now, I knew Jack Sherks well enough, and that he didn't mean to sail in the *Slosure*. He 'd been a whaling once, and didn't much like it; but being down on his luck, he engaged to Captain Blobber, and then heard tell of something he liked better, and was hiding till the ship was off. But I wasn't going to split on an old pal, for Jack and I had done a little together in the smuggling way; so I says: 'No, I haven't seen him lately; but if I do, I 'll bring him if I can.'

'If you will,' says he, 'I 'll reward you handsome, for I 'm full short of hands. Or if you bring me any other sailor, and there 's many has a friend hereabouts,' says he, hinting delicate at my character for a bit of contraband, 'I 'll make it worth your while.'

I thanked him, and said I 'd do my best, and forgot all about it till that night, when the stranger was a-lying stupid on the floor of the hut. It was Friday, and the *Slosure* sailed next day, for the wind was favourable. Captain Blobber had only set eyes on Jack Sherks once, and couldn't know him well; so the trick I thought of was to take the stranger down to Grimsby in a spring-cart I knew how to get the loan of, and see if we could get him shipped for Jack. Well, we fetched the cart, and put the stranger into it. He had come round a bit, and groaned now and then, but didn't know where he was, or what we were doing with him; and we got him to Grimsby, where I found Captain Blobber at the house where he told me to ask for him. I said that I had met Jack Sherks at a public disguised as a navvy, and he had got drunk and been fighting, and got a knock on the head, but I didn't think it would be much, so I had brought him. The skipper got a lantern and came outside the town where the cart had been left; and when he looked at the man's head and felt it, he said he would be all right for a cut like that in a day or two, and he was so short of hands he 'd take him. So he got his boat and took him aboard ship at once, and the *Slosure* sailed next tide; and that 's the last I ever heard of the matter. Every word as I 've said is the truth, so help me.

How does this story of Bradley's sound to you, Brown? I confess that I am inclined to believe it. *Credo quia*—it is so improbable; the man could never have invented a lie so circumstantial. Besides which, I have made inquiries, and a whaler named the *Slosure*, Captain John Blobber, did sail from Grimsby on Saturday November 7, 1840. The fact is easily verified, because it made a considerable stir in the neighbourhood at the time; for the Hull whalers generally start for Greenland in the spring and return in the autumn. But John Blobber had some private dodge of his own about wintering in an uncomfortable proximity to the north pole, and securing the first of the fishing when the ice broke. A chosen party, who had made several ordinary trips with him, fell in with his views; but it was a small one, and he had considerable difficulty in getting outsiders to have anything to do with so wild a proceeding as starting northwards at that time of year. This would account for his rash advance of money to the able-bodied seaman Sherks, and also for his taking him (as he supposed) on board though he was temporally disabled.

One more point adds to the credibility of Bradley's account, or, at anyrate, throws a difficulty in the way of disproving it: the *Slosure*, alas for our poor friend! has never been heard of since.

CHAPTER V.—WHAT'S TRUMPS?

You will be surprised to see my handwriting again, my dear Brown, so soon after my last budget, especially as there is a chance of this letter crossing one of yours on the road, and you know my objection to such accidents. But you express so much anxiety to hear the latest particulars of anything which may throw light on Godwin's disappearance, that I will not let a post go by without sending you word of what has happened. Miss Holcombe has not shut herself up, or professed any great grief on account of her father's death. She feels that madness would have been so far greater an evil, that the actual event is evidently a relief to her mind. Of course, she has regrets, and pictures to herself that her father might have become reformed, and given up his habits of intemperance, if he had recovered his health; but still I fancy that she has too strong a conviction that the probabilities are all the other way for that sorrow to penetrate very deep.

Her position is a singular one. I do not understand much about the laws of my country, and fancied that land always went to males; but what Major Holcombe said in his confession is quite correct, it seems—he actually *had* the power of leaving Marl Hill to his daughter by will, and has done so. As she is just of age, therefore, she finds herself the mistress of a house and an estate, both half in ruins, and requiring a vast amount of care and judgment to set them right; while she is so ignorant of affairs that she looks up to me—a fellow who knows no more what ought to be done in any legal or agricultural juncture than an Ojibbeway—as a perfect oracle. Common sense told me one thing, that she ought to have some motherly middle-aged lady—a widow for choice—in the house with her; and as she saw the propriety of

Digitized by Google

that, I looked about, and secured a comfortable, sympathetic dame, the relict of a clergyman, poor and without encumbrances, who was glad to accept the position of chaperon and domestic economist.

So soon as matters were thus in a measure settled, Miss Holcombe redoubled her efforts for the improvement of the poor around her; for she was able to spend a little money now, while at the same time she felt her responsibility as an owner of the soil in addition to a desire for some end and aim to live for. Coals, candles, and blankets have been distributed; the infant school is a permanent establishment; and she even entered into a little fancy I had for dressing up the church for Christmas. The edifice is so dull and gloomy that I am always longing for the power of painting it up a bit, clearing out the horrible old pews, and so getting rid of that gloomy air of depression which I fancy seems to affect the spirits of every parishioner who enters it. However, I am utterly unable to do anything permanent myself, but I thought a little temporary cheerfulness might be infused over the place in honour of the happiest of Christian festivals. Plenty of laurel, holly, and red berries could be had for nothing; nor were children wanting who entered into the spirit of the thing, and were delighted to bring the evergreens to the church; the only desideratum was the taste to arrange them, and for this I had to appeal to Miss Holcombe, and her new companion, Mrs Wing. They answered readily enough: the younger lady brought originality; the elder, experience; I, superior strength and a longer reach.

It was past three o'clock in the afternoon, and our task was fortunately approaching completion, for the light already began to wane, and the snow, which was falling in large soft flocks, silently gathered over the windows, and obscured it still further. The two ladies were at the east end of the church, putting the final touches to a bower of mistletoe which festooned over the marble medallion of the late Sir Timothy Wetherbel, Bart.—as if any one was likely to want to kiss *him!*

'One little bit more holly for the reading-desk, and I think we shall do,' said Miss Holcombe; and I went to the church porch to select a bough from the heap which had been thrown there.

The door stood ajar; on swinging it open, I saw a sailor standing in the porch, peering through into the interior, and supposing that he was attracted by curiosity, I told him to go in if he liked. 'We are smartening up a bit for Christmas,' said I.

He made no reply, but looked me steadily in the face.

'Is there anything the matter?' I asked. 'Am I wanted?'

'What's trumps, Stacey?' he said; and then I knew him.

'Hush!' whispered I, grasping his hand. '*She* is in there. She has lately lost her father, and'——

Before I could finish my sentence, there was a rustle behind me, and Miss Holcombe, who had heard and recognised the first tones of the sailor's voice, stood in the doorway. She gave a great gasp, and fell almost senseless in Godwin's arms, to the great surprise of good Mrs Wing, who had followed along the aisle to see what was up. I explained the state of the case in a few hurried words; and then the sympathetic matron began to cry.

Hylas Godwin rather marred the impressiveness of the scene by staggering under the weight of Miss Holcombe, who is a very fine girl, and sitting down on the holly: having tight sailor's trousers on, he got up again pretty quickly.

You must positively come now, Brown, and hear Godwin's yarns. He has been catching whales and exploring countries which are all hummocks and bears; and he has lost two toes from frost-bite, and been shipwrecked, and travelled half over the globe before he could get here. And of course he will marry Miss Holcombe as soon as it is decent; for she does not mind his being a toe or two short, not she. He will write to you in a day or two, for he wants you to be another witness to his identity, as he has been reported dead, it seems, and has certain formalities to go through to get at his own property. Whether he will complete his college career in the legitimate manner ('make his exit B.A.,' he calls it), is uncertain, for he doubts whether he could pass after three years' estrangement from classics and mathematics. Just as I was closing this, your letter came in announcing your intention of coming to see me at last. You will have to sleep on a sofa, as Godwin has taken possession of the bed reserved for you, but you will not mind that! Come along, old fellow; I wish Thorpe could be here too. Why, we might finish the rubber!

PROSECUTIONS.

In most civilised countries there is a public prosecutor, whose business it is to set the criminal law in motion against all who seem to be within the gripe of it. We have not any such officer here. Perhaps we do not like the notion of a nominee of the crown, kept up to his work by the jealousy of public opinion, which would criticise his salary with reference to the work done for it, prying *ex officio* into all our acts, seeking whom he may prosecute, going about to 'sniff out moral taints, and call the devil over his own coals.' Perhaps we do not like the notion because it is not our own—perhaps because we think we can get along pretty well with the machinery for prosecution already at our disposal.

The Attorney-general, who is the chief law-officer of the crown, is indeed in one sense a public prosecutor. It is his duty, on being satisfied that a punishable crime has been committed, to take such steps as are calculated to lead to the punishment of the criminal. He is bound to see that the suspected persons are arrested; that a full inquiry is had into the case before a justice of the peace; that, if committed for trial, the prisoners shall be duly pursued at the assizes or sessions; and it is his duty to demand judgment and execution of the sentence, in the event of a verdict of 'guilty' being returned.

But the Attorney-general proceeds in a case, or abstains from entering upon it, according to his discretion; and his intervention is practically limited to cases of great public interest, to cases where the crown is directly concerned, or to cases which it would be scandalous to leave unquestioned. Many minor offences are prosecuted by the authorities of the counties in which they have been committed; and sometimes they are so by order or request of the court, in cases where, from one cause or another, there is no other pursuer.

Digitized by Google

It is a leading feature in English jurisprudence that any person whatever can set the criminal law in motion if he chooses—that is to say, if he chooses to be at the trouble and expense, and chooses also to run the risk of the consequences, in the event of his prosecution failing. These risks include liability to compensate the defendant for the injury done him through having been subjected to criminal proceedings, a liability very properly enforced in cases where the proceedings have originated in carelessness or gross blundering. The most insignificant person in the land can institute proceedings against any other save the highest, in whose name all criminal proceedings are conducted, even though the crown officers, having been applied to on the subject, have refused to enter upon it. In one sense, therefore, though we have not any public prosecutor, in another sense we have a most effectual one, for the public is its own prosecutor. And this applies not only to cases of wrong done to private persons who are directly concerned in the punishment of the wrong-doer, but also to cases in which the accused bears no personal relation whatever to the accuser, who simply stands forth as the champion of principles which he deems to have been outraged.

To guard against factious interference and annoyance from meddlers—to prevent also the malice of spiteful persons, who might wantonly set the law in motion, in order to gratify private hatred, even though the trial end in an acquittal, the law has provided various protections, which stand as barriers between the liberty of the subject and those who would infringe it. What these protections are it is proposed now to consider, and to point out at the same time the various steps which have to be taken, not only to set the criminal law in motion, but to secure a conviction.

If a constable or a justice of the peace sees a man committing a breach of the peace, or a felony, he may arrest him then and there, and so indeed may any one; but an unofficial person is responsible in damages for any mistake he may make in the matter, by taking the wrong man or otherwise, while the constable or justice is not. The ordinary way, however, in which the law is invoked is by application to a justice of the peace for a warrant ordering the arrest of the accused person. This warrant is not to be granted except on sworn testimony of such a character as to convince the magistrate that there is a strong possibility of the accused having committed the offence imputed to him. The warrant is given to a constable to execute, and in ordinary cases the accused is arrested and brought before the justice as a prisoner. Sometimes, however, when it is desired not to put the accused to the disgrace of an arrest by policemen, the warrant is given to the high sheriff of the county, who undertakes to bring his prisoner into court at the time named by the justices. This course was adopted in the case of Mr Eyre, on the occasion of his being ordered to be brought before the justices at Market Drayton, upon charges founded upon his conduct as governor of Jamaica.

So soon as a British subject is arrested, he is entitled by the ancient law of England, and also by special act of parliament, to be brought before a magistrate, whether justice of the peace or judge of one of the superior courts, in order that it may be publicly ascertained in open court for what reason he is detained in custody. Magna Charta asserted, among other things, that the king was not to 'deny or defer to any man either justice or right;' and because in the course of time there came to be crooked notions in the minds of the crown lawyers as to what this meant, and because the birthright of all British subjects came to be invaded, parliament, in the thirty-first year of Charles II., passed the Habeas Corpus Act, a new law declaring what the old law was, and providing means for the immediate examination, in all cases, of persons arrested for any cause whatever.

As a matter of fact, prisoners are now with all convenient speed brought before a justice of the peace, who hears the charge against them, and the evidence adduced in support of it, and then hears the defence. If he is satisfied that there is not any reason for going further with the case, he orders the prisoners to be liberated, and neither he nor those who moved him to exert his authority are responsible for the arrest and the detention hitherto, unless malice can be proved to have actuated them. If, at the hearing, the justice is persuaded of the truth of the charge, he either punishes the prisoner himself, by virtue of an act of parliament giving him authority to do so in certain cases; or, he sends him back to custody with a view to his trial at the next quarter-sessions, or at the assizes, in the event of the case not being one for summary conviction. The accusers of the prisoner are bound over to prosecute, and the witnesses to give evidence, and the prisoner is then said to be committed for trial. Except in cases of a very serious nature, as murder, high treason, or strong cases of felony, the justice is empowered, and for certain matters required, to accept bail for the appearance of the prisoner at the sessions, and not to remit him to custody. As an additional safeguard to the subject from the tyranny or whim of the wielders of the law, and because it was found that the right to be bailed was nullified at the discretion of the judge by insistance on enormous bail, it was inserted as one of the capital items in the Bill of Rights that excessive bail was not to be required. Sometimes the bail or deliverance money (from *bailler*, to deliver) is required only from the prisoner, who enters into a bond to forfeit the amount of his bail if he fails to surrender on the day and at the place ordered; but generally it is required from sureties as well, who agree to surrender the prisoner as ordered, or to forfeit the amount of the bond. In the event of the prisoner not being able to find bail, he is committed to prison till the day of trial; but should satisfactory bail be offered after committal, the magistrate committing is bound to take it, and to liberate the prisoner. Should the accused be remitted to custody, he ought not to be treated more harshly than is necessary to secure his safe keeping. He ought not to be put to menial work, nor, indeed, to be deprived of anything but his liberty, the object being simply to guard him till trial, not to punish him. It is to be feared, however, that these principles of treatment are by no means universally adopted in this country, nor even in the metropolis.

At the quarter-sessions or assizes, whichever it may be, the case as it presented itself before the magistrate is stated to the grand jury by the chairman or judge of assize; and they are required, after hearing his charge, and, if they wish it, examining witnesses, to say whether there is 'a true bill,' or

Digitized by Google

'no true bill'—in other words, to say whether the prisoner is or is not to be put upon his trial before a *petit* jury of twelve of his peers.

If the grand jury ignore the bill, the prisoner is forthwith discharged, not any one being responsible to him for injury caused by his detention and imprisonment, nor even for the expenses incurred by him in his defence. If the grand jury find a true bill, he is given in charge to a jury of twelve, who hear the case in open court, with the advantage of counsel to represent both sides (the judge himself taking the part of counsel for the prisoner when he is undefended), and with the further advantage of the judge's summing up. Upon the unanimous verdict of the twelve, the acquittal or conviction of the prisoner depends, and against the sentence there is not any appeal on the merits of the case, except to the mercy of the crown. Sometimes the judge who tries the case will allow of the reservation of some point of law which may have been raised, for the consideration of the Court of Crown Cases Reserved, a court composed of all, or nearly all the judges, who carefully review the legal matter placed before them, with arguments, and lay down the law upon the subject. They have not any power to rehear the case itself, as the French Court of Cassation has, nor, indeed, can any case come before the court on appeal except on a point of law, for the further argument of which the judge who presided at the trial has given his permission.

Should this court take a view of the law favourable to the arguments of the prisoner's counsel, the sentence on the prisoner is modified so as to suit the justice of the case. He may be set at liberty, or he may receive a less punishment than that to which he was condemned, but any favour of this kind must be sought from the crown as the sole source of mercy; and even concessions which should be made on the broad principles of justice, are, theoretically considered, given by favour of the crown. The maxim that the king can do no wrong, goes to the length of supposing that the king cannot err by his representatives administering the criminal law. Any sentence, therefore, which may have been passed upon a prisoner cannot be revoked; and a sentenced man, who is afterwards proved innocent, must be content to accept as an act of grace a free pardon for an offence which he has not committed.

One point, and a material one, remains to be noticed in connection with the subject of prosecutions. At present, if a man is robbed, half-murdered, swindled, or outraged in any way, he has to bear not only the injury or loss directly accruing from the wrong done to him, but also the cost of prosecuting the wronger. What the cost is must depend very much upon the nature and complications of the case, but the fees to solicitor and counsel must at all events be borne, and other expenses arise incidentally which may make the costs of prosecution a ruinous fine. Of course, when the crown lawyers take up a case, all expenses of prosecution are borne by the crown, but in the great majority of cases, it is left to private persons to conduct the prosecution of criminals, and it does not seem fair that such persons should have to pay the cost of proceeding against those who are indicted as public enemies, breakers of the peace 'of our Lady the Queen,' and generally as disturbers of the public order.

On the other hand, it seems to be equally hard on the innocent man who is accused, tried, and acquitted, that he should have to bear the costs of defence against a criminal charge in which he had no part. A prisoner must either raise money with which to employ attorney and counsel, with which to bring up witnesses, and with which to defray other necessary expenses, or he must appear at the trial 'undefended,' and trust to the generosity of some barrister, who has not been instructed in the case, and who has to gather the lines of defence from what may be presented by the prosecution. If a man be guilty, it is scarcely an aggravation of his position that he should be thus placed; but to an innocent man, accused in error, from mistaken identity or any other cause, it is a grievous addition to his misfortune that he should have to bear the expense of proving his own innocence. Of course, where malice has actuated the prosecutor, the late prisoner can bring his action for false imprisonment and for a malicious prosecution; but it may well happen that the man is too poor to indulge in the costly luxury of civil proceedings, by which, even if he wins a verdict, he will be considerably out of pocket. In cases of prosecution through sheer mistake, and where malice cannot in any way be imputed to the pursuer, the prisoner has not any remedy against his accusers, and must put up with the fine imposed upon him through having to pay for his defence. Costs in such cases, if not also in cases of prosecution, might be paid out of the rates of the county in which the trial takes place.

A COUNTY FAMILY.

CHAPTER XXVII.—THE NEST-EGG.

NOTWITHSTANDING Mr Allcase's edict, both Mr Waller and Stanhope found themselves once more in the sick-room that afternoon. Lucy had brought down a report that the Squire was looking about him in the same anxious inquiring manner as before, and Stanhope was hardly less curious than Mr Waller to see whether the latter's theory of the will was a correct one. It was a delicate subject to introduce at such a time and place, and was rendered more so by other circumstances. In the first place, it was not pleasant to inquire of a sick man upon what, in all probability, was his death-bed, concerning that document at all; and, again, although any such idea was rendered impracticable by his condition, there *was* the idea of his wishing to effect some change in the disposition of his property. As his affection for Ellen seemed not only undiminished but on the increase, and as he manifestly did not desire even to see his son, this notion of change must needs be obnoxious, for her darling's sake, to Mrs Blackburn; as, indeed, for other reasons, it would have been to Mr Waller. What was, however, at the bottom of that gentleman's anxiety upon the subject was something that, at all events, testified to his sagacity, although, like most men of his class, he was prone to err through over-subtlety. A first-rate whist-player, unless his nature is adaptive, often credits his adversary with too much finesse, and this was Mr Waller's case. The truth flashed upon him at once that the Squire was anxious about the *safety* of his will, and although, of course, he did not know how seriously it was being endangered, he did not think that

Digitized by Google

anxiety unreasonable. Perhaps he had hid it somewhere, as men often do, and was apprehensive that it would not be found after his death. Besides Mr Waller's general sympathy with the interests of justice, which we have no reason to doubt, he was unwilling that this should be the case; for he had a notion in his mind, from what had dropped from the Squire, that in that document Mr William was left a very considerable sum, *conditionally*—that is, in the event of his marrying one Lucy Waller. Now, although, if the Squire should die intestate, his son and heir would inherit infinitely more, he might then marry (almost in every sense) whom he pleased; and although he seemed so fond of Lucy, Mr Waller's faith in the power of love was more limited than some of his commercial responsibilities. He preferred a material guarantee to an *entente cordiale*. In this he did his possible son-in-law wrong, for the strong will and animal nature of William Blackburn—if we may not say heart—were set upon Lucy; and the insuperability of the obstacle to his wishes only added to their vehemence.

On the other hand, Mr Waller knew nothing of that game at hide-and-seek on which the young Squire had so long been engaged, and with which he still was busy. Whether Jennings' lease was in the strong-box or not, we may fairly conclude that Mr William had not worn that look of disappointment, on giving back the papers to his mother, for any reason connected with *that* document. The will, at all events, was not there; and where, in the Fiend's name, had the old man hidden it? Sometimes he tried to lay the flattering unction to his soul that his father had destroyed it, intending to make another, which his illness would now render impossible. But in less sanguine moments this seemed a slender hope indeed. It was contrary to his father's character to leave anything to chance which could be made certain, and far less a matter like this, in which his prejudices were so deeply involved. It was far more likely, thought he, that the Squire, whose infamous suspicions of his own son had absolutely no bounds, had put it in some place of security, where it should only be found after his demise; either in the general search and overturn, or, still more probably, by some express direction that by word or writing he would leave behind him. Had such direction been left already, or not? Not a scrap of paper in desk or pigeon-hole with his father's handwriting upon it had escaped Mr William's prying eyes, and yet he had found no such key to the enigma; while, as to verbal instruction, none had certainly been left with the only two persons in whom he would have been likely to confide—namely, Mrs Blackburn and Ellen. Mr William had asked the question of his mother point-blank; and she, in her turn, instigated by him, had interrogated her granddaughter. There was nothing that seemed to Ellen suspicious in such an inquiry; it was not unnatural that her uncle should wish to know whether his father had arranged his affairs, although at such a juncture it was not perhaps very delicate; but delicacy was not to be expected of Uncle William. At all events, she had answered frankly enough, that she knew nothing about the Squire's will—a matter, indeed, upon which, to do her justice, she thought less than any one in the house, not excepting even Lucy, to whom Mr Waller's frequent speculations about it had made the subject familiar.

And now the question was, was it indeed about this document that old Anthony was so disquieted? Had what he had seen on the previous night—that rifling of his strong-box by his unconscious, or, at least, only half-guilty wife—shot so sharply to his core as to revive intelligence and stimulate paralysis itself to almost action? Had he watched her through the whole transaction, seen her take the papers forth, and guessed her errand better than she guessed it herself? Nay, had not her very excuse sharpened his suspicion, and guided it aright? He knew—if he was indeed conscious of anything—that his son William *was* NOT anxious about Jennings' lease—was not at all likely to be looking 'high and low' for *that;* and yet he had evidence that he was in search of something, of which he was so earnestly desirous that he had persuaded his mother to take a step discreditable in itself, and quite antagonistic to her loyal and faithful nature.

'Authority deserts the dying king,' but bitter must it be to the monarch who, though moribund, beholds it fleeting.

Was it possible that Anthony Blackburn, conscious of this disobedience, was haunted also by the apprehension that a certain decree, upon which his whole system of government had, as it were, been founded, was now in danger of being reversed? Lying in that living tomb of his, feelingless, motionless, senseless, save in eye and ear, was he instinctively aware, as he had been always instinctively suspicious, of that search and its intention, which, if successful, would render the scheme of his life fruitless, and make William Blackburn the heir of Redcombe Manor, and the inheritor of all? And if so, did not, at this thought, some thrill of horror, even through that numbed and shattered frame, make itself felt? One would indeed have said so, who, when Mr Waller stooped over his pillow and whispered something in his ear, had read as he read the sick man's answer in his eyes; for it leaped out from them as in words of fire. Yes, yes, a thousand times yes; it *was* his will that he wished to have brought before him, and set in his sight, that he might have the safety of it assured.

The question was repeated to him aloud, that the others about him might hear, and there was not one of them—nor would have been, had even Mr Allcase been among them—who entertained a doubt of the nature of his reiterated reply.

'And where *is* your will, grandfather?' inquired Ellen, holding the alphabet beneath his earnest gaze, and pointing to the letters as before.

That the task before him, simple as it seemed, was to the sick man a matter of toil and pain, was evident enough—almost as evident as the intensity of his desire to accomplish it. To collect his thoughts and concentrate them for ever so short a time, was irksome and difficult; and even to keep the weary lids from closing before each letter was reached, and to lift them after they had fallen, seemed to tax all his remaining energies. After all, it was but one word he did spell out, and that, as it seemed at first, without a meaning—PEDIGREE.

Mr Waller and Stanhope glanced at each other significantly. Was the old man's mind, then, wandering still?

'It is a shame to trouble him,' sobbed Mrs Blackburn; 'you see he knows not what he wants.'

No voice replied to this observation, and the

Digitized by Google

features of the sick man were sealed and shut. The watch upon the dressing-table seemed to tick as loud as the house clock upon the stairs; the idle whistle of Mr William made itself heard from the floor below; otherwise all was silent.

'I am afraid Mrs Blackburn is right,' whispered Stanhope gravely. 'It is the ruling passion strong towards the last; he was always so proud of his pedigree, poor fellow!'

Mr Waller shrugged his shoulders.

'Perhaps,' said Ellen gently, 'grandfather wishes to see the family tree, that hangs up in his little room.'

Then the sealed eyes opened with a glance of rapturous content and gratitude, and rested upon her.

'Shall I go and fetch it?' said Stanhope. Mr William was in the apartment indicated, and it had long become Stanhope's mission, and his alone, to deal with the young Squire. No other person cared to molest him, or come across him in any way, if it could be avoided; even Mr Waller shunned him. His tactics, as we have already said, were too delicate to cope with so rough a customer. Not only diplomacy, but even the art of war was thrown away upon that savage young chieftain.

Mrs Blackburn shook her head; it really seemed to her that there was something cruel in indulging these vagaries of her poor husband. He had not so irrevocably lost his wits that he should need to be thus humoured like a madman.

Mr Waller did not speak. In his opinion, there could not be the slightest connection between a 'will' and a 'pedigree,' except in an imagination that had gone astray. It seemed to him indifferent whether the thing was sent for or not.

'If you don't mind, Mr Stanhope, please to fetch it,' said Ellen quietly.

He was gone in a moment, yet without noise, as all save one in that house had now accustomed themselves to move. Even if his steps could have been heard as he drew near the snuggery, Mr William's whistling would have drowned them. It was not often that he whistled, but all that afternoon he had been as blithe and loud as any black-bird; and the sound, striking upon the hush and silence above stairs, had jarred not a little upon his mother's ear.

'Hollo, Stanhope; glad to see you,' cried he. 'You are come in the very nick of time. I was just wanting a game at billiards.'

It was quite unusual to see the young Squire so buoyant and so affable. He had been striding up and down the room with his hands in his pockets for an hour or more, giving vent to his feelings in popular airs, and now some one had come to keep him company. 'Have a cigar, old fellow?—How is the governor?'

'I am afraid your father is no better,' replied Stanhope gravely. 'We had hoped this morning he was getting more sensible, but I am now inclined to doubt it. He seems somehow to want to have that pedigree yonder brought up-stairs.'

'What! the family tree?' ejaculated the other, hastily stepping between it and his visitor. 'Why, that's ridiculous. Besides, it's nailed into the wall, man. It's not meant to be moved at all.'

'Nevertheless, since Mr Blackburn has asked for it, I shall take it up-stairs.'

'But indeed you shall not. My father would be as sorry as anybody, when he comes to himself, to find that pedigree hurt. Since he is not right in his wits, why not take the hunting map instead? He will never know it from the other, and then no mischief will be done. If it does not content him, you have only to take down the pedigree at last, don't you see?'

'Very well,' said Stanhope reflectively; 'there can be no harm in that. Only you need not shew your temper so about such a trifle, my friend.'

William Blackburn's face was indeed white with passion, and his hands trembled so that they could scarcely unhook the map from the nail on which it hung. It was impossible also to avoid remarking how eager he seemed to get rid of his visitor; making no rejoinder (with which he was generally ready enough) to his reproving words, and even opening the door for his exit.

'What is that pigeon-hole in the wall?' inquired Stanhope, lingering and pointing to a sort of niche by the fireplace which the removal of the hunting map had discovered.

'It's a place my uncle Charles had made to put his glass of grog into,' said William readily. 'He could take it so without going to the table, you see.'

'Just so. But is there not a corresponding hole on the other side—underneath the pedigree?'

'I don't know; I have never looked.'

'Then I will look,' said Stanhope, fixing his eyes steadily upon the other.

'No, no. You will hurt it to lift it up; it is as bad as taking the whole thing down.'

'Excuse me; that is not so, for somebody has already moved the bottom nails.'

Stanhope could never explain why his suspicions, aroused by William's irritable manner, should have taken this especial direction; it was quite at hazard that he raised the frame on which the parchment was stretched, and put his hand cautiously within, as a boy feels the eggs in a nest.

'There is a pigeon-hole,' said he, 'and there is something in it.'

'It is a plan of the estate, which my father keeps there,' said William hastily.

'I thought you said you did not know there was such a hole. Here's the plan, as you say; but there is something else.—By Jove! I believe it is the will itself, and that the Squire was right, after all.'

CHAPTER XXVIII.—ANTHONY MAKES HIS CHOICE.

Yes, the Squire was right. From the mere association of ideas, perhaps, or because it really seemed as safe a place of concealment as any in the house, he had hidden his will behind the family tree; and it had been only that very day, nay, within a few hours, and by the merest accident, that William had found it there. If he had only taken it and put it somewhere else, as he would now have done, could Stanhope even for a minute have been got out of the room; or if at first he had thrown it behind the fire, as he had thought of doing, but had been afraid to do; or if this meddlesome fellow, that he had always thought he hated, but whom, by comparison with his present vehemence of abhorrence, he must have almost liked, had not come hither upon his fool's errand!

These bitter and vain regrets—the knowledge of

Digitized by Google

what he might have gained, and of what he now might lose—came in upon William Blackburn, wave after wave, and well nigh choked him. But he was not going to throw up his hand and forfeit such a stake while there was a card left to play. If Stanhope should once make certain it *was* the will, the destruction of it hereafter would be a perilous risk indeed; but at present he had only expressed an expectation of it, which was, however, also a suspicion; for he kept the hand that held the document behind him, just as though he thought a snatch might have been made at it—which without doubt he did.

'I don't know what that paper is of which you have possessed yourself,' observed William doggedly, 'but I know that it is of a private nature—something my father does not wish to be fingered and pried into by strangers such as you: I know *that*.'

'Your sense of delicacy is more acute than I should have given you credit for,' rejoined Stanhope coolly; 'but it is in this case unnecessarily alarmed. I am about to carry this document, which, as I believe, is the one he has been asking for, to your father himself.'

'The one he has been asking for?—and he without speech or motion? No, sir; I cannot permit this outrage, and I will not. You have taken upon yourself already more than most men would have stood in their own house; but there are limits, you must understand.'

'I am doing nothing of myself, Mr Blackburn,' said the other composedly, 'but only obeying, I do assure you, your sick father. He has contrived, by Miss Ellen's help, to make his wishes known.'

'By Miss Ellen's help! Yes, you and smooth Miss Ellen would grasp all. Oh, I know you both!'

'You cannot put me in a passion, sir, just now; but if I had any doubt whether this thing here was your father's will or not, your conduct has resolved it.—Am I to understand, by your standing with your back against that door, that you refuse to let me pass?'

'I do: I will.'

'You have an ugly look, William Blackburn, and you are feeling in your pocket for your knife; but I am not so much in love with life as to keep it at the price of the fear of a man like you. Nay, if you were fifty men with fifty knives, it would be all the same.'

'Ah! you say so.'

'And I mean it too.'

'And *I* mean something, Herbert Stanhope. I am a desperate man.'

'I well know that. I have not forgotten, though I have not repeated it, the word I heard your father speak in this same room, when I came in at yonder window. He called you "Murderer."—You smile contemptuously, and, indeed, I well believe that you never committed murder. But you have within you what goes to make a manslayer. You are thinking even now—not, "Shall I stab this man if he comes on?" but, "Shall I hang for it?"'

'Now, look you,' said William, with his hands outspread, at least as much to shew they had no weapon as to fit his words with their appropriate action, 'there is no need to fight about the matter. The case is simply this: I do not credit what you say. I decline to believe that my father wishes to deliver his most private papers into your custody, unless I have some better warranty. Put that thing back, and fetch my mother, and I will abide by what she says.'

'I agree to that—at least,' added Stanhope, seeing a gleam of triumph in the other's face, 'you must fetch her, for I will not part with this, or leave you alone with it, for a single second. I see now why your father wants to have it in his own keeping, safe from *accidents;* a will, under certain circumstances, being like a child that must not be left in a room with *a fire in it*.'

Mr William answered nothing to this insinuation, which, perhaps, as a vile personality, he knew how to despise; but, throwing the door open, he called 'Mother, mother!' in a loud and angry voice.

Mrs Blackburn came down stairs with finger on her lip. 'Hush, hush!' she whispered; 'your father is dozing again, Willy; I have sent them all away but Ellen.'

'Is it your wish, mother, that Mr Stanhope here should take my place in this house, even to the guardianship of my father's private papers?'

'Nay, Mrs Blackburn,' interposed the other, 'that is not the point at issue. Your husband has desired, as you know, to have brought to him a certain document'——

'Yes, yes; the pedigree yonder.—That is quite right, Willy, dear. But it can wait, for I am sure that, more than pedigree or anything, he needs just now rest.'

'The pedigree—do you hear?' cried William exultingly. 'Yet this man would have persuaded me it was something else my father wanted—something that he holds in his hand behind him, look you, like a thief.'

'Yes, madam, it is your husband's will,' said Stanhope with dignity. 'I will willingly commit it to your charge, to be taken up to him straightway, while your son stops here.'

'But not if Ellen is there,' said William obstinately. 'She would stick at nothing—she and those who abet her.—Do *you* keep it, mother; that, I suppose, will satisfy even this gentleman.'

'Dear Mrs Blackburn,' said Stanhope with respectful earnestness, 'whatever pain this most unseemly discussion causes you, believe me it is none of my seeking. You know as well as I do what your husband has been so anxious to possess; well, I have got it here. Let himself decide into whose keeping he will have it placed. Do you inquire of him, since Mr William here distrusts his niece'——

'And as Mr Stanhope here distrusts *you*, mother,' interrupted William.

'That is not true, sir, as you are well aware,' said Stanhope firmly. 'I have the utmost regard for Mrs Blackburn; yet I am prepared in this matter to stand under her misjudgment, and even her displeasure. As for you, sir, you well know what I could say, and what I have left unsaid, with respect to your mother and your influence over her; and unless upon your father's express commandment, I will *not* give up the will.'

'Dear me, dear me,' cried Mrs Blackburn, looking from one to the other in much perplexity. 'What a caddle is this all about a piece of paper. As to making my poor husband understand with the alphabet and things, it is only Ellen who can do it.'

Digitized by Google

'And I'm not going to trust to Miss Ellen's version of the matter,' said William doggedly.

'Pardon me, Mrs Blackburn,' observed Stanhope, 'but if you will kindly come up with me, I am sure that I can make plain to you your husband's wishes. Miss Ellen need not be there at all.—Come, sir; you may surely intrust yourself and your interests to your mother's hands.'

Mr William was understood to allow this much, though not without a growl or two of objection; he saw Stanhope was not to be moved.

'I suppose this story will be all over the place to-morrow?' said he surlily; 'our family affairs being public property.'

'Nay, Willy,' exclaimed Mrs Blackburn; 'I am sure you do Mr Stanhope wrong: whatever unhappy differences may exist between your father and you, I am convinced this gentleman has never helped to spread them, and will not do so now.'

'Indeed, madam, you are right,' said Stanhope haughtily; 'I am no tale-bearer; and as for this particular affair, the sequel, however it may chance to end, shall never pass my lips.'

'That looks fair enough,' assented William, in his niggard fashion.—'Now, do you get Miss Ellen away, mother, and let us know what is father's fancy about this will—unless, as is most likely, he has forgotten all about it in the meantime.'

Then Mrs Blackburn went up-stairs, to insist upon taking Ellen's place in the sick-room, as she had often done before, while her grand-daughter took exercise or recreation with Lucy.

'There now, you have got it your own way, Stanhope,' said William Blackburn, as soon as they were alone. 'So mind and hold your tongue, whatever happens. And I *say*, I hope you'll behave honourable, and give a fellow a chance. Just put it to the governor whether it isn't only right and fair that his son should have the keeping of his papers and things, and not anybody else. And don't suggest Waller's name, nor Moffat's—do you understand? Because, you see, I shan't be there to look after my own interests.'

'I will represent the matter as you wish,' said Stanhope quietly. 'I have no other aim than to have justice done; but your father cannot be troubled by much talking; he can scarcely keep his attention even to one thing.'

The door was gently opened, and Mrs Blackburn appeared, with beckoning finger. 'He is alone,' whispered she, 'and awake. I have sent Ellen away, and you must not let her hear you come up-stairs.'

Stanhope nodded, and followed his hostess to the sick-room, which they entered softly, leaving the door ajar.

'I have brought you, Mr Blackburn, what I believe you have been inquiring for,' said Stanhope, seating himself by the pillow, and speaking in low but very distinct tones. 'Is not this your will?'

A look of grateful pleasure overspread the worn white features, and the joyful eyes glanced from Stanhope's face to the paper which he held in his hand, and back again with earnest approval.

'Why, he wants you to read it, Mr Stanhope, that's what he wants!' exclaimed Mrs Blackburn involuntarily.

Such was without doubt the sick man's wish, as Stanhope saw, but he only smiled and shook his head. 'No, sir,' said he softly, 'I will not read it; but I am come here to place it in whomsoever's hands you may please to wish.'

Again the eyes glanced earnestly from the will to Stanhope, from Stanhope to the will.

'He wishes *you* to keep it, Mr Herbert,' said Mrs Blackburn sighing; 'and I am sure, although I might have wished his confidence to be placed elsewhere, there can be no objection.'

'There are three other persons who have a more natural right to such a trust,' said Stanhope, 'and it is only proper that this should be made plain.'

'Do not mention my poor Willy,' sobbed Mrs Blackburn; 'it is no use, I know: I am quite content that you should keep it. And oh, it puts him out so to speak of Willy.'

But Stanhope, mindful of his promise, went on unmoved: 'There is your wife, sir—your true and tender wife—would you not wish that she should keep the will?'

The Squire's eyes shut fast. You might have thought he was a man laid out for dead.

'There, sir, you see it's no use. He does not wish me to have it,' sighed the old lady. 'And yet you might have trusted *me*, dear Anthony.'

The Squire looked at her, tenderly enough, and even gratefully; so much so, that once more the question was put: 'Do you wish your wife to keep it?'

'No; most certainly, no.'

'And Miss Ellen, sir? Would you not wish your grand-daughter to have the keeping of it?'

For one instant, there was indecision—a mere quivering of the eyelids; but the next, they were shut close and rigid as before.

'No, not Ellen.'

'Oh, why do you trouble him thus, and torture *me*, dear Mr Stanhope? I know that he means you to keep the will.'

'Nevertheless, dear Mrs Blackburn, I must put one more question.'

'There is another person yet, sir, to be mentioned, who has a stronger claim than any to your confidence. I beg of you to put aside all bitter memories in answering now; to forget the past, and, so far as it is possible, to be hopeful of the future. Do you wish this paper to be taken charge of by your son, William Blackburn?'

The eyes did *not* close now; they opened wide; they shot—each glance was an arrow tipped with flame—unspeakable disgust and horror.

'Oh, but this is terrible!' cried Mrs Blackburn. 'Great Heaven! what is it that he sees?' She turned her gaze, whither Stanhope's was already turned, to the wall opposite the foot of the bed, on which had been hung a mirror, so that the sick man should have the windows' out-door sights presented to him. The home-lying fields that he was never to tread again, the flying clouds, the life and motion of the flocks and herds, were dear, it was thought, to him, chained to his pillow.

'I see nothing, Mr Stanhope. Do you?'

'No, madam; nothing.'

'Then, pray, put no more questions to dear Anthony, for you see they have half driven him wild; and take away that dreadful paper, and send Ellen. He is quiet again now, thank God.'

Stanhope *had* seen something, though but for a moment's space. Besides the window, was mirrored in the same glass the door, and at it, half opened, he had caught William's prying face, there, doubtless, to see that faith was kept with him. One glance, such as we have seen, had Anthony bestowed upon his son, and then the latter had

Digitized by Google

turned and fled down-stairs, noiseless, with stockinged feet. So haggard and awe-stricken had been his answering glance, that Stanhope felt a sort of pity for this wretched spy, thus shamefully detected. The thought flashed through him: 'Bad as the fellow is, may not his father have judged him somewhat too harshly, to cast at him, from what may be his death-bed, such aversion and distrust as this? And was there not something in William's sullen face, which, though not innocence, seemed really to be a sense of wrong?' As for the base suspicion of himself, implied by the espial, that was only natural to such a man, and Stanhope determined not to tax him with it. The will was safe in his own keeping, and so far he could afford to be generous to the other, foiled.

'Well, and who is to have it?' inquired William presently in the room below, with a would-be air of curiosity, as though he had not already received his answer at first hand, and yet with a certain spite in his tone that belied it. 'Not me, I'll warrant.'

'No, sir; as Mrs Blackburn will inform you, if my word is not sufficient. Your father has requested me to take charge of this document; and you may depend upon it,' he added, with a significant glance, 'that this time it will be put out of harm's way.'

THE MONTH:

SCIENCE AND ARTS.

Among the fifteen elected this year into the Royal Society are Sir Samuel Baker, the famous traveller, and Mr J. Norman Lockyer. The latter holds a situation in the War Office, and in his spare hours has studied astronomy to such good purpose, that he has added largely to our knowledge of the sun and stars, and has achieved for himself a European reputation. This is an instance which those young men who complain that they have not time for study or self-culture would do well to keep before their eyes.—The Society of Arts have awarded their Albert Gold Medal to Baron Liebig 'for his numerous valuable researches and writings, which have contributed most importantly to the development of food-economy and agriculture, and to the advancement of chemical science.'—The Chemical Society have established a Faraday Medal, in commemoration of the late distinguished philosopher, which is to be given annually to some scientific man, who on his part is to deliver a lecture on some part of chemistry. The lecture for this, the first year, was given at the Royal Institution, by Dumas, an eminent chemist and member of the French Academy of Sciences.—A public meeting has been held, under the presidency of the Prince of Wales, to initiate a subscription for erecting a statue to Faraday in St Paul's. We hope the sculpture will prove worthy of the man in whose honour it is to be undertaken.—The British Association are about to hold their annual meeting at Exeter, when the president for the present year, Professor Stokes, one of the Secretaries of the Royal Society, will deliver an address which may be expected to embody all the recent advances in mathematical and physical science. We hear that Professor Huxley is spoken of as president for next year, which, if true, will gratify anatomists, naturalists, and palæontologists.

Among the sights shewn to M. Dumas (whose lecture is above referred to) during his visit to this country were some remarkable experiments with gun-cotton at Woolwich. A few particulars will probably surprise our readers. A heavy palisade of oak timbers, a foot thick, was fixed in the ground, and supported by struts in the rear in the usual way. Two or three disks of gun-cotton were laid on the front of each timber a little above the ground, having a narrow strip of wood to rest on, and were fired by electricity. A sharp but tremendous report followed, and down fell the palisade, the massive timbers being blown away and splintered as if they were laths. What ship's side, what gate, what wall can now be regarded as a defence? A few disks of gun-cotton will blow them all away. And if one of such disks be fired lying on the top of a block of stone or of iron, the metal and the stone are at once crumbled to powder. Perhaps when the New Zealand Maoris hear of this, they will leave off building pahs; and it is not difficult to foresee that the practice of attack and defence is about to undergo important modifications.

Dr Matthiessen, F.R.S., of St Bartholomew's Hospital, has made a curious discovery, which may be of use to medical practitioners. By treating morphia with hydrochloric acid, he obtained a product which he calls apomorphia, and while working with this he and his assistant were overcome by fits of vomiting. Here, then, is a new emetic: it operates speedily, and in small doses, and though attended by depressing effects, these soon pass away. Moreover, this apomorphia serves the purpose without being taken into the stomach, for if one-tenth of a grain is injected under the skin it will occasion vomiting in a few minutes.

Mr W. R. Grove, author of that excellent book, *The Correlation of Physical Forces*, has delivered an address, at St Mary's Hospital, on the importance of the study of physical science in medical education, which ought to inspire the students who heard it with a hearty love of work. He shewed how limitless was the field of work that lay before them, and the advantage involved in variety of study. Variety within proper bounds tends to promote elasticity of mind; and in natural philosophy, the laws of motion, the effects of light and heat, the effect of food, there is scope enough to occupy even the most active. Then as Mr Grove remarked: 'Chemistry applied to the respiratory functions offers a field of inquiry not much trodden since Dr Beddoes established the Pneumatic Institution at Bristol; not merely by inhalation of gases *per se*, but by a judicious admixture of small portions of given gases with the ordinary air. Thus, a small increase of carbonic acid in the air tends to produce somnolence: might not this be carefully tried in cases of extreme nervous excitability and insomnia? Ozone, again, doubtless has its effect, probably of somewhat a converse character to that of carbonic acid. Such remedies might be free from the disturbing influence on other organs which the administration of sedatives or stimulants by the stomach frequently, always perhaps in degree, occasions.' Mr Grove's address abounds in suggestive instances of this sort.

Mr G. Campbell has read a paper before the Society of Arts on the cultivation of waste lands in India, and in discussing the question, he regards India as a favourable field for English colonists.

Digitized by Google

For this reason, he confines his observations on waste lands to the hill districts which have a comparatively cool climate, and where, as he says, great profits are to be gained by enterprising settlers who employ native labour. There are many vegetable products which flourish and yield abundantly at high elevations within the tropics, and in the cultivation of these, Mr Campbell believes there are advantages to be gained beyond any offered by other countries to which emigrants are always swarming.

It was stated at a recent meeting of the Entomological Society, that silkworms' eggs and other objects of natural history could now be sent to or from different parts of the world by the 'pattern post.' They may be enclosed in a box, provided the ends of the box have small openings through which the contents can be seen. Perforated zinc would answer the purpose. Mr Wallace mentioned that a closed packet which came to him by post from Japan was charged forty-seven shillings; but a similar packet, *with open ends*, which he sent to Japan, was charged four shillings only.

Some years ago, a photograph of a bronze statue was taken at Berlin. Besides the image, it shewed a few small faint streaks of light, one of which shot upwards from the point of a spear held in the hand of the statue. What produced them was a question, which at length was solved by a member of the Prussian Academy of Sciences. He suggested that the figure was in an electric condition while the photograph was taken, that streams of electric light were passing off at various points, and that these, though invisible to the eye, were detected by the photograph. Hence there was a talk about invisible light. This has recently been verified: by sending an electric current through a Geissler's tube (a glass tube almost completely exhausted of air), an interior light is produced, which cannot be seen by daylight, but which is distinctly shewn in a photograph of the tube. It has often been remarked that photography detects particulars which escape observation, and here is another proof of it.

It seems as if the endeavours made at different times and places to extend our knowledge of sacred history, geography, and topography, were about to be largely increased. The general interest in these subjects has been manifested by the support given to explorations in the East, the survey of Palestine and the peninsula of Sinai, the excavations at Jerusalem, and the welcome shewn to the researches of scholars. These researches, as stated by Sir Henry Rawlinson to the Royal Asiatic Society, have brought to light a series of facts of the highest importance out of the historical documents collected at Nineveh; namely, the Scripture history as contained in the Book of Genesis from the time of Abraham, narrating nearly the same particulars. Sir Henry himself is at work on a paper in which it will be shewn that the natural name of Babylon was the Garden of Eden, the rivers being described by the same names as in Scripture. And further, that these ancient Babylonian documents furnish an account of the Flood and of the building of the Tower of Babel. All this seems little less than wonderful. Who would have expected to find Biblical history in the inscribed cylinders and bricks from the banks of the Euphrates, as well as in the ancient Hebrew and other oriental manuscripts!

The Peruvian government for some years past have sent out what they call a 'hydrographic commission,' to explore one by one the tributaries of the Amazon. By the latest Report communicated to the Royal Geographical Society, we learn that the explorers had ascended the river Ucayali from its confluence with the Marañon to the place where it is formed by the flowing together of the Urubamba and Tambo, a distance of seven hundred and seventy-two miles. The country passed through on this long voyage was before unknown: it is described as salubrious and fruitful, with facilities for trade. The two rivers above named are also navigable, and will in turn be explored; and in the course of a few years, we may expect to hear of steamers trading from the sea up to the very foot of the Andes. Who shall say there is nothing left to discover while those vast regions exist—vast enough to receive the population of Europe. The Report states further, that the Ucayali, and not the Marañon, as hitherto supposed, is to be regarded as the source of the Amazon.

HIDDEN.

O BLUSHES, rise not to my cheek;
O tell-tale eyes, be clear and gay;
O lips, no warmer language speak
To him than simple yea and nay;
O heart! in thy most deep recess,
Be safely, surely hid away
This secret, that he may not guess.

They call me beautiful: alas!
By him uncared for, what care I?
Once I knelt down and kissed the grass
His foot had pressed in passing by;
A little common buttercup
That he had crushed, and left to die,
Still for his sake I treasure up.

O tender Father! is it sin
To love thy noblest creatures thus,
Although no answering love we win?
Art Thou not ever leading us?
And hast Thou sent this love to me,
To calm my heart tumultuous,
And guide me, through my grief, to Thee?

O let me love him to the end
Most purely; and perchance some day
He 'll take my hand and call me friend,
When time for love is passed away;
When eyes that shine when he is near
Are dim; when golden locks are gray;
And Death, the angel, draweth near.

The Publishers of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

1*st*. All communications should be addressed to the 'Editor, 47 Paternoster Row, London.'

2*d*. To insure the return of papers that may prove ineligible, postage-stamps should in every case accompany them.

3*d*. All MSS. should bear the author's full CHRISTIAN name, surname, and address, legibly written.

4*th*. MSS. should be written on one side of the leaf only.

Unless Contributors comply with the above rules, the Editor cannot undertake to return rejected papers.

Printed and Published by W. & R. CHAMBERS, 47 Paternoster Row, LONDON, and 339 High Street, EDINBURGH. Also sold by all Booksellers.

POPULAR

LITERATURE, SCIENCE, AND ART

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 293. SATURDAY, AUGUST 7, 1869. PRICE 1½d.

SAVAGES I HAVE KNOWN.

THE HALF-BLOOD.

MY experiences of the Spanish Main could supply a hundred examples of the 'mestizo' savage. I select for illustration that specimen which most irritated and amused me at the time.

He was, and very likely is still, the parish priest, the *cura* of a little mountain village. On the map hanging against my wall, this hamlet, which I recollect so well, is marked in big letters as a town of the second class. The fact does not surprise me; our geographers are so utterly ignorant, scientifically, of Central America, that, where they have traced the course of big rivers, I have tramped along dry-footed; in a morning's walk, I have crossed mountain chains of theirs higher and broader than Helvellyn; I have eaten 'papyas' and 'zapotés' in the midst of their deserts; and shot fish on the cone of their volcanoes. It does not at all astonish me, then, to observe that this little oasis in the Sahara of trees, lost as it is and stifled among the eternal leaves, should be raised by our well-intentioned topographers to the dignity of a borough.

We had reached it late one evening; and never, I recollect, was traveller more glad than I to gain his journey's end, for my feet were full of *neguas*—jiggers, as West Indians call them. I never examined this little pest with a microscope; but, on Mr Waterton's authority, I accept the fact that it presents the appearance of a flea in miniature. Unlike that lively creature, however, the negua prefers an underground life, burrowing beneath the skin of man and beast, and under that shelter, marrying and giving in marriage. If undisturbed, it will breed and breed in its hiding-place, till a permanent lameness is caused, and amputation of the part attacked—generally the feet—becomes necessary. I have seen the most horrible, most incredible deformities produced by this tiny plague, which is not bigger than a pin's head; and never, after the experience of that day, did I fail to have my feet examined each night, to arrest in time the proceedings of the enemy.

We found shelter in the hut of a carpenter; and next morning, after a painful extraction of the jiggers and their brood, I crawled across the plaza, under guidance of my host, to find the parish priest; for we had heard of notable antiquities, earthworks, and tombs, and ruins in this neighbourhood, and wanted his encouragement in exploring them. Under the shadow of a little church, built of mud, roofed with sunburned tiles, and flanked on either side the entrance by a ghastly, wide-mouthed idol of stone, a remnant of the old times, which it would scarcely have been safe or wise to remove now, we found the 'parsonage,' a filthy den of two apartments. Its roof, like all others of the village, sloped out beyond the house-wall, supported on four posts of wood, and thus formed a sort of piazza. Therein hung a hammock of twine, in which was suspended the cura's body, between heaven and earth; but much, much nearer, now and at all times, to earth than heaven. Three ill-looking fellows lounged against wall or post around him, smoking cigaritos, and half-dozing, though the sun had been up two hours. There was a bad smell about the place and about the men; not merely the sensible odour of drink, and dirt, and unhealth, but an odour morally unwholesome. A mean and wretched spot enough was that plaza outside, its faded grass strewn with rags and broken shards, a dingy little church on its one side, a dingy *presidio* on the other—with naked ruffians of soldiery lounging about the door—and a row of kennel-like huts around. But the sun beat broadly down upon it, the diamond-bright air quivered, parrots and blue jays fluttered across it, returning from the river to the deep forest shade; whilst under the gloom of that portico, of which the shadow fell keen and blue as a steel blade upon the ground, the three men blinked and muttered like unclean things; and their spiritual guide, hanging in the centre, poured out rings of smoke from his swollen lips, and grunted in dogmatic monosyllables. This scene we beheld, walking up the colonnade before the huts.

On coming nearer, one of the clerical *compadres* turned, hearing the unaccustomed sound of boots

Digitized by Google

upon the hard clay floor. At his low exclamation of surprise, the *padre* raised himself, and stared, in a brutally silent fashion, at ourselves. After a moment's examination, he sank back again along his hammock, with a muttered remark, at which the three friends laughed aloud. We came up and stood beside him. While the carpenter humbly explained our wishes, the priest regarded us with sleepy insolence, until one of my companions, a hot-headed French miner, declared his intention of pulling the *gredin* out of his hammock. Whether the cura understood the threat, or whether he was influenced by a hint of possible profit to the church, judiciously dropped by our host, I don't know, but he rose in a languid manner, with the assistance of all his three friends, and descended. Then we perceived that a vicious life, and not years or privation, had swelled the priest's face and limbs. He was probably not more than twenty-five years of age. His face had the fleshy bloated roundness that tells of brutality; his eyes and lips that moisture and unsteadiness which continual indulgence brings. It was not an ugly face in feature. The dark and brassy skin, the hair curling slightly in dank tresses, the prominent eyes and cheek-bones, plainly revealed his 'mixed blood;' but the unnatural combination is not always uncomely. He was dressed in a long and filthy *soutane*, and trousers of the very brightest pea-green. Round his neck were twisted several coils of blue glass beads. A little pouch of feather-work, adorned with a fringe of mouse's teeth, hung upon his chest, beside the crucifix. What it contained, the owner only knows, but it looked suspiciously like a charm-case. His feet, of course, were bare, and the pea-green trousers only reached to the ponderous calf of his legs. Such was the figure that descended from the hammock, and stood sullenly staring before us. A more savage, wicked-looking face, for all its rude proportion of features, never saw I in my wanderings. 'These English gentlemen have come to your town to find "Carib" antiquities,' began our French companion.

'*A su disposicion*,' blundered the padre, with an air of utter bewilderment.

'They hear that a great castle of the "Caribs" exists near this, and many graves where the "Carib" kings were buried.'

(All through Central America, Indian remains are called 'Carib.' This designation has not, of course, any connection with the mahogany-cutters of Honduras, who now bear the old title without much justice or reason.)

'*A su disposicion*,' muttered the padre.

'They want you to help them in finding the Carib remains.'

Then his savage blood broke out. 'I 'm not a Carib!' shouted the cura, his thick skin puffing with rage. 'I 'm not a prying devil of a foreigner (*un curioso entremetido de los diables!*). *Soy caballero Catalano*, ah! There 's no one here cares a "monkey's grin" about your heretic charms, your devil-stones, and unholy things! Ach! Go to the French brutes across the mountains then! Perhaps they 'll help you to your soul's destruction!'* Then turning his back on us with unspeakable contempt and hatred, he snatched a mule-whip from the hammock, and addressed one of his friends: 'How goes the lame mare, Guleërmo mio?' he said.

Our French companion seized the insolent scoundrel by the trailing skirt of his soutane, and twisted him sharply round. It was a face perfectly fiendish which this priest turned on us. He raised his heavy whip; and the three worthies made an ominous movement of the right hand towards their macheté hilts; but we, throwing back the loose edge of our jackets, quietly displayed the revolvers on our hip. With that quickness to apprehend personal danger which is characteristic of the savage wherever I have met him, and that equal disregard of personal dignity, our padre, on the instant, changed his expression to one of sulky complaisance, and said: 'What can I do for your service? I know nothing of Carib remains. We are very poor here, in this town; very, very humble. It is with difficulty that my sheep support their miserable existence, and provide for the eternal safety of their souls. You see, señores, they have no time to search for old stones and Carib rubbish. They are not Caribs or heretics here, thanks to the good St James; and they know that honest people do not care for such things, if they exist—that is, not honest people of this country, you see, señores! For my own part, caballeros, rely upon me to do all that is possible to assist you; but there never were any Caribs in this neighbourhood, nor other *mala gente*, until the gold was discovered on the other side the forest. But'—and here his sudden change of tone was delightful for the cynic to perceive—'twenty leagues further over the mountain are plenty of Caribs even to this day. I know nothing of them myself, but our bishop endeavours to convert those poor heathen, at great cost of prayer and money: if any of your dignities feel the Christian spirit, and desire to advance their eternal welfare, *I* am the unworthy receiver of such contributions as your benevolence may choose to offer. Any sum, however small, may, by the good St James's blessing, be instrumental in rescuing a soul. Let me pray of your dignities;' &c. We tossed him a dollar, and left, hoping never again to behold his face, so expressive of a brutal hypocrisy. And even while we passed from off his portico into the wholesome sunshine without, he proceeded rapidly to gather up the long skirts of his garment for riding, to roll them round his fat waist under the girdle, and thus to display all the length, and more especially the breadth, of his pea-green trousers.

Two days afterwards, we left the village on our way to the gold-diggings. There we passed our Christmas as merrily as is possible in the most extraordinary settlement of an extraordinary country; and a fortnight after, rode back to the hut of our carpentering host. In the evening, while we sat without his door, watching the red sunshine pass swiftly up and up from bough to bough of the great forest trees on the opposite hill-side—ah! those days, those sights of my past wanderings, how divine regret stirs within me in recalling them!—a clamour in the street above disturbed our meditations. We looked up, and beheld our foe, the padre, staggering towards us, yelling out the equivocal ditty: 'De Guadalajara vengo, lideando con un soldado,' &c. The villagers stood at their doors, looking without surprise or

* I have softened the padre's language considerably. His metaphorical anathema was very picturesque, but untranslatable.

Digitized by Google

apparent disgust at their pastor, who, with his soutane kilted, and all his pea-green trousers displayed, rolled along the street, keeping time to the music with furious cuttings and crackings of his mule-whip. He approached, and halted in front of us. After pausing a while in deep consideration of our appearance, the padre lifted his broad straw-hat, and spoke with drunken solemnity. 'Machitos caballeros,' he said, and paused. Then the brilliancy of this witticism, of addressing us as 'little he-mule horsemen,' overpowered him; he laughed long and very loud.

'Don Emanuel,' I said, 'what will your congregation think?'

'They!' he replied at the top of his voice. 'They are beasts, pigs, and are all doomed to perdition as Indian idolaters. Machitos, I wish to speak with you.'

We went inside, and he followed. When safely anchored upon a smoothed cedar 'knee,' which served for a chair, he said: 'You gave a ball, machitos, up there, over the gold mountains?' We nodded. 'There was present a young girl, *muy linda*, very beautiful, an Indian witch, a limb of the devil, with black hair reaching to her feet, eyes like mirrors, and mouth like a purple fruit, the loveliest girl in the five republics! Her name'——

'We recognise her,' interposed my friend; 'the prettiest and most virtuous creature in all your country. What of her?'

'I have spent your dollar, señores, in supplication to the saints on your behalf. May the prayer be heard!' piously continued the creature after a while.

'The prayers of a good man avail much,' observed our French companion gravely.

'A su disposicion!' modestly replied the padre, unconscious of his sarcasm. 'Did this Indian sorceress draw you into her net?'

I answered: 'We fell in love with her, as should every bachelor caballero with each pretty and good girl he sees. But we did not think of taking her to our home across the ocean. Her French lover is our friend.'

'Ha! Her French lover! The long-limbed heretic, the'—— A string of epithets followed.

'What do you want, Don Emanuel?' asked our companion, rising from his hammock.

'I am speaking to these noble caballeros,' he retorted savagely. 'They love the church, and they will hear me.'

'Make haste!' we exclaimed.

'You are rich, gentlemen, and you love the church. I have prayed for you, more than the full price of the dollar, much more. See now! That girl has bewitched me. Her face is always before me, and her voice in my ears. I never loved like this before. It is not human fascination. Caballeros, my soul will be lost because of her! Oh, sirs, have pity, and help me! Her mother is very poor. For one hundred dollars she would sell all her children. Give me the money, and I will intercede day and night for your miserable souls,' he went on. A something of real pathos in the drunken wretch's prayer restrained our indignation.

'What would you do with her?' I asked.

'I would marry, and keep her with me as long as she lives. Write down what conditions you like before the alcalde here, and I'll sign them.'

'Can you not write?' asked my friend.

'O yes. I can write my name with ease—Don Emanuel Blank,' he replied with dignity.

'You, a priest, marry!' we objected.

'Yes, yes; I will perform the ceremony myself at night, in the presence of the alcalde.'

We knew such strange abuses obtained throughout these countries, but were amazed at his openness.

'And what is to become of our friend, her lover?'

'He will not wed her; or, if he should, when his luck changes at the diggings, he will run away and leave her, as do all *machos;*' which is but too true of the wild mining population.

'This has lasted quite long enough,' said our French companion. 'Don Emanuel, we pity you, and for other reasons besides this infatuation for the Indian girl—reasons which you probably would not understand. It is not worth while to explain why all gentlemen would refuse your application with disgust, for that also lies beyond your comprehension; enough to know that you weary them. The lover of that young girl you have dared to look at is my dearest friend. The cloth which removes you from the rank of common men, the cloth you disgrace and dare to outrage, will protect you from Eugène; but I am not so gentle, priest, nor so orthodox. Out of our house, traitor alike to man and heaven!' The good but rough old digger appeared almost majestic as he ordered out that poor savage creature. We did not interfere, and, growling, he slunk away, and stumbled up the street.

So it ended at that time; but six months after, lounging in the doorway of the Howard House in Colon, I saw Eugène approaching from the wharf. I seized him by the hand.

'And the other turtledove?' I said, looking round—'the little *fiancée* with whom I danced on Christmas Eve?'

He laughed hard. 'I was over-weighted, compadre. My rival had the good things of heaven to offer besides those of earth. The fiancée is married long since, and her own husband read the service!'

'Ah,' I exclaimed, 'married to a priest! To the cura of ——?'

'To him, my friend. He bought her for eighty dollars "strong!" They offered her to me at an advance of fifty cents! Ha, ha! And she's very happy, compadre; and I—I'm going to crack *huacos* [Indian graves] on the Chiriqui!'

PLAYING THE MOLE.

THAT dreary old edition of a double-barrelled wine-cellar continued from shore to shore, the Thames Tunnel, has at length found a purpose, and as the sub-fluvial way of the East London Railway, may prove in its old age a useful and respectable member of society. Every one remembers its troublous birth, and dissipated youth and maturity. Classed amongst the sights of London, country cousins in search of excitement were often taken down into its gloomy shades, where, lit by feeble gas-lamps, a few wretched stalls struggled to assume the aspect of a bazaar in the last stage of consumption; and after a quarter of an hour in this damp whispering-gallery—for its depressing effects were such that no one ever dared to speak aloud—the aforesaid country cousins requested to

Digitized by Google

be taken out, and walked back to the entrance, peering between the pillars, as if expecting to see piled-up coffins, or skull and thigh-bone designs, built up in the last style of catacombical art.

The old Thames Tunnel is in a transition state; with the engineering knowledge, mechanism, science, and scheming of the present to back up the experience gained in tunnelling, a new company has been formed, whose project, attracting little notice either in the past or present, is being carried forward in a most unpretending but rapid fashion, so that now, while this paper is being written, the engineer has moled his way from the London Bridge side of the Tower half way beneath the Thames; and unless unforeseen accidents should delay progress, in the course of a few months the new Tower Subway will be an accomplished fact.

Leaping the bridge of Time, or tunnelling it to the extent of those few months, let us rush into the To Be. We are at the end of Lower Thames Street, and at the foot of Tower Hill, our aim being not to take tickets for armory and regalia, but to cross over to the Bermondsey side of the river. Enter we, then, this little structure of a dozen feet in diameter—no larger, for the land upon which it was built cost the company at the rate of two hundred thousand pounds per acre. We are in a circular room, as it appears, but in reality a 'lift,' which rapidly descends a spiral shaft—the shaft turning while we retain our position. In a few seconds we stop; enter, fourteen strong, a roomy omnibus-like carriage, well lit, and padded; the door is closed, and then, with a rush, we are spun along a tram-way to the Surrey side, passing beneath barge, lighter, steamer, and clipper-ship, to where another little room awaits us, into which we step, ascend rapidly, and the next minute we are in Tooley Street, Southwark; and all for, most probably, that immortal coin that has taken the shine out of Aladdin's lamp a thousand times over—all for the sum of one penny.

Those are the plans for the future; but we will return to the present, and you shall perforce accompany me, this bright summer morning, to the works.

Here we are; and at first sight, you might pass by, under the belief that those inevitable sewers, or gas, or water, or telegraph pipes are 'up,' for there is a slight hoarding, from behind which a thick plastic clay is thrown up; a little steam-engine puffs and snorts; and a railway van unloads pieces of iron segments, evidently of a moderately sized tunnel. A few words with the courteous engineer of the undertaking, whom we find in his little office; and then, as if about to visit a mine, canvas trousers are produced; and in a few moments, we are in a mud-encountering costume, ready to descend the unprotected iron-lined shaft which yawns close by, and up which, as we look, comes a square bucket of clay, which is emptied, and then we are asked if we are ready.

Some people are never frightened; for our part, we do not belong to that class, and hence we do feel alarmed at the prospect of descending some sixty feet into a dark well with one leg in a bucket, and the other swinging over the side. But we scorn to shew our terrors; and declaring our readiness, place the left foot in the bucket, cling to the rope with fingers that seem to grow into it; and then—oh!

We do not utter that ejaculation, but we feel it; for the bucket swings over the black depth, and then begins rapidly to descend, while we experience sensations of being a Leotard performing some last new feat. The descent occupies but ten seconds, but they might have been as many minutes, so long did we have to ponder upon the distance to the nearest hospital, amounts connected with life-assurance, and sudden death.

Bump! We are at the bottom; the bucket is unhooked, and a clayey man places it upon a trolly running upon a narrow tram-way. We are invited to *sit* in the bucket this time, and we do, gazing forward at some tiny spark-like candles, set here and there in a long dark vista, from which comes a hollow rushing roar.

Is it? Can it be? Has the water mined its way through, and shall we be swept out, drowned out, as were Brunel's men with the old tunnel? Accidents are rather given to occur at inopportune times! But the men around seem perfectly cool and unmoved; a few warning cries are given, and then, the tunnel dipping towards the centre, we rush in our bucket-car away and away beneath the bed of the murky Thames; farther and farther into the thick darkness, till a faint glow appears ahead, apparently at a great distance, but only to prove to be quite at hand, when our muddy car stops, and we step out, to begin crawling about in the confined space, extricating our feet at every step from the adhesive clay, like subterranean beetles in progress over a fly-paper.

And now we begin to look about, to find that we stand in an iron tube seven feet in diameter, fitted together in segments, four of which complete the circle or band, two feet wide—rings, which as the work progresses are fitted in, bolted together, have cement forced behind, and then are calked at their seams with oakum and Stockholm tar—the whole forming a vast watertight pipe, whose perfection is favoured by the strata through which it is being carried, progress so far having been through a tenacious clay, so impervious to water, that the supply needed for mixing the cement has had to be carried down.

So far we are told there has not been a check; and we peer forward into the circular shield, like a vast iron big drum, which is forced forward as the work progresses, to make room for another, or another, band of segments; while the men employed delve on and on, tunnelling away in complete safety; for should there be an influx of water, they have but to step out of their shield, close its sliding doors, and the tunnel end is sealed up almost hermetically.

But though guarded against, no such danger is apprehended, especially now that the nearest point to the bed of the river has been passed. Where we now stand, about the middle of the river, we are, it seems, twenty-eight below the bed, that is to say, with that number of feet of earth, mud, and clay between us and the water flowing swiftly over our head.

'What is that rushing roar behind?' we ask. 'Only a returning trolly rattling over the tram.' But do we feel it warm? We confess to the air being slightly oppressive, and our companion, Mr Barlow, the engineer, goes to the tunnel side.

'Ting, ting!' an electric bell sounds, and a signal is telegraphed along the wire laid down to the shaft mouth: 'More air!'

Digitized by Google

'Rush-h-h-h! hiss-s-s!' Here it is on the other side, pumped down through a pipe, to come in a soft pure refreshing stream; when candles seem to burn brighter, and we gaze about at finished sides and roof.

But in the dim light shed by the candles, it almost seems as if we had penetrated to where the cherubic portion of the inhabitants of gnome-land were at work; for here and there we see yellow faces moving about, and hear blows given by invisible, tool-armed hands. Perhaps there are bodies, but we see them not—only flitting yellow faces passing the candles stuck against the wall.

And now we learn that nine feet of the tunnel are completed daily, so that, without let or hinderance, a few weeks will suffice to reach the Surrey side; and pondering upon the application of the system to the Dover and Calais project, we peer about at the handy way in which, bit by bit, the iron tunnel is put together; but all the same, feeling no unwillingness when a hint is given respecting our return; for in its present unfinished state, a hole below the bed of Thames is not a confidence-inspiring spot.

We walk back very slowly over the tenacious flooring of clay upon which the tram is laid; the darkness is not even visible, and the candles are so distant that once our feet glide from under us, and we fall—not painfully, and our clothes *are* canvas.

Daylight at last, even though it be at the foot of a shaft; but there is the bucket ascent on one leg, a trifle to the initiated, but a real peril to the nervous; and here once more we are hanging halfway down, performing a pleasant leg-of-mutton and bottle-jack movement: the upward progress is so slow that we appear to stand still as far as ascending goes, while our companion shouts to the brakeman to arrest the roasting motion.

It is with something like a sense of having been reprieved that the surface is reached once more; we assert that we have been delighted with our visit, declaring it to have been most interesting, but with a private resolve that we will wait, before paying another visit to the new Tower Subway, until its completion.

NODDY'S SITUATION.

IN FIVE CHAPTERS.—CHAPTER I.

'I GIVE my daughter Julia three years. You understand? If she makes a good match within that period—well; if not, I have done with her: I wash my hands of her completely.' Mrs Muciller gently chafed her left hand with her right, arranged her rings, and replaced her fingers upon the lace handkerchief in her lap, as though the operation were completed.

'Amply sufficient, my dear Mrs Muciller, for a young lady who doubtless inherits her mother's tact for improving a favourable opportunity;' and Mrs Sharing took a comprehensive glance at the drawing-room of Braithfield Villa. The room was handsome and tasteful, as even a neighbour would allow. A cool green light shimmered in through the jasmine-covered verandah, and played in wavering little pools of subdued sunshine upon the carpet. A soft green fernery had taken the place of the winter fire-grate, its beauty reproduced in a plate-glass background. The furniture modern, and doubtless elegant, but swathed up in holland coverings, as though it were dead furniture, shrouded and laid out, waiting to be buried. A tiny fragile stem of frosted silver depended from the ceiling to carry the Greek lamp branches, hung with silver chains, and the perfect globes of egg-shell glass. The piano was Broadwood's grand; and displayed on dainty little tables, was the correct quantity of drawing-room stores.

As Mrs Sharing mentally appraised the effects in her friend's room, she was not unmindful of the favourable opportunity that had been improved. It was not so many years since a Mrs Cray, a widow with one daughter, had been a fashionable teacher of music and painting, and had found Mrs Sharing one of the most useful of patrons. It was at Mrs Sharing's house she had first met Mr Muciller, a successful speculator, who experienced little difficulty in tracing back his genealogy an extra generation for every ten thousand he netted. Mr Muciller was a rich man when he married Mrs Cray; but he went on speculating, as people will, and the crash came, and he was nearly ruined in fortune, and quite in health; for he took it to heart, and died, leaving Mrs Muciller a widow for the second time, with a handsome house and a very slender income. Still, it had been a favourable opportunity for Mrs Muciller, late Cray, all things considered.

'At least,' Mrs Muciller said, in reply to Mrs Sharing's remark, 'I can rely on Julia's discretion. She is not likely to be betrayed into an undesirable match. My daughter is not flighty, like some girls.'

When Mrs Sharing had taken her leave, Mrs Muciller thought a few minutes, and then touched the bell.

'Send Miss Noddy to me,' she said to the servant.

Norah Cray, for that was Miss Noddy, can hardly be described as a relation of Mrs Muciller, being nothing more than a kind of connection—in fact, a step-daughter, the child of her first husband, to be precise. She was a little thing for her age, which was quite two-and-twenty. She had smooth brown hair, neatly dressed, but rather odd-looking, as it actually shewed the shape of the back of the little head, without any chignon at all to improve it. She had bright brown eyes too; but you could not say she was pretty. Hers was a plain face, but good tempered and pleasant to look upon. She came into the drawing-room, in answer to Mrs Muciller's summons, in a print dress, not fashionable nor new, though neat and becoming, and her hands white with flour.

'Noddy, what *are* you doing, to come into the drawing-room in that state?'

'Pies,' said Noddy laconically, and smiling.

'You might have waited till you had finished your work,' said Mrs Muciller, 'as I wish to speak to you on something of importance.'

'They said you wanted me directly, so I came,' Noddy explained.

'Very well; as you are here, you may remain; but please, don't sit down, or you will be sure to soil the chairs with your floury hands. —I need not remind you, Noddy,' Mrs Muciller said with a smooth and rather pretty lisp, 'that I have sought to discharge the onerous and unthankful office of step-mother to you in two families to the best of my ability. You have too much good sense to feel hurt at not having been

Digitized by Google

placed on a precise equality here with my daughter Julia. You well know that, had your poor father, Mr Cray, still lived, you would, in all probability, have been required to take at least as active a share in household duties as you have done with me. You have therefore no reason, nor, I feel sure, any desire for complaint on that score. But it is needful I should inform you the time has arrived for a change in our mutual relations. You are aware Julia returns to-morrow from finishing her education. It is my intention to make great personal and pecuniary sacrifices, with a view to her advancement in life. It is probable we may entertain more company than we have been in the habit of doing, and consequently we may require more domestic assistance. But this and other expenses will involve pinching. I must pinch, you must pinch—we must all pinch, in fact. Under these circumstances, I am not disposed to continue to employ you in a subordinate capacity in the household, for people to make remarks about, and I cannot afford to retain you in any other. You will therefore see it to be your duty at once to look out for a situation as governess in some respectable family. I will not hurry you to a few weeks, and I shall do my best meantime to help you find such a situation; but I name three months as the time at which our present connection should cease.'

'O dear,' said Noddy, her usually cheerful face becoming quite blank—'I'm sure I'm not fit for a governess. I don't know nearly enough to teach.'

'Perhaps not. No one does. What of that? You are quite as competent as many young ladies I know who go out. No girl is expected to be competent in her first place. You learn at your first situation what you want to teach at the second. It is the same in all businesses. Now, let us see what we can say in the advertisement—French, German, Italian, and the usual accomplishments, I suppose; that is the customary thing.'

'But I scarcely know a word of French, not a syllable of German, and can't even understand an Italian song,' objected Noddy; 'and as to accomplishments, I can only play hymn tunes, as you call them, on the piano.'

'Very well, miss; and pray, what of that? Nobody will ask you for more, will they? You will go with young children first; you can teach them English, and spelling, and that, and what little French you do know, and their notes on the piano; and if their parents wish for more, you can tell them it is not advisable to overfill little heads too soon, can't you?'

'But I should be so ashamed,' pleaded Noddy. 'Please, don't say all that, for indeed I couldn't teach at all when it was found out how ignorant I was of all I had professed; and people would despise me when they found me out.'

'Nonsense; nobody will find you out. Why, how do you think I began as a drawing mistress? The same as other people do. I bought my specimens of a lady artist, and always took care to bring my pupils' drawings home to be corrected by the same lady. My drawings were admired, so were those of my pupils, and I obtained a connection. I forget what became of the artist; but you may be sure she never came to any good. You see she had a certain order of talent for production, whilst I possessed the superior ability to render her commodity marketable. As to advertising anything short of what I have told you, it would be useless; every governess does the same, for the reason that every other governess does so too. If people believe it, that is their affair; mine just now is to get you a situation; and when I have done so, I shall consider myself relieved from further responsibility.'

Noddy went back to her pies; but a heavy heart won't make light pastry, and Noddy's wouldn't rise.

The next day, Julia returned—a tall showy blonde of eighteen, with the languid air of completion which a finishing school so successfully imparts. Julia Muciller was an accomplished girl; she had learned all the last new tricks of musical execution, and shewed peculiar facility in the performance of pieces of the *Bubblings at Morn* and *Dribblings at Eve* order. These she could rattle through with an air of easy superiority to the instrument, to the music, and even to her audience, as though such trifling feats of sleight-of-hand were the most easy of accomplishment in the world, as perhaps they are when once you know the trick. She was on singing terms with most of the gushing songs of flimsy sentiment of the day. She 'knew an eye,' belonging, it appeared, to some party who had had the other one made into a star, or had lost it in some other way to provoke admiration not quite so clear. She 'saw two leaflets floating down a stream,' and expressed regret at one having to 'float onwards all alone' after its fellow had stuck in the bank. She aspired to be a bird—she 'breathed for wings'—she sighed for 'a fairy's life in an elfin grove;' but of the passion and suffering of humanity, and its loves and tears, in a world that is in earnest, Julia did not sing. She could paint groups of impossible flowers, chatter boarding-school French, embroider in beads and wool, dance, and read novels on the sofa. In a word, Julia was finished.

Poor Noddy's little heart quite sank when she was admitted of evenings to the drawing-room (when there was no company) to hear the rehearsal of Miss Muciller's accomplishments, for it made her despair more than ever of being able to lay even the groundwork for such a display. But the advertisement was already sent to a weekly paper, spite of all Noddy's entreaties, detailing her proficiency; and so she could see nothing to be done but to borrow some of Julia's early school-books, and try, in spare moments, to gain a little knowledge of what she was expected to teach. It was with some difficulty that she could even do this, for Mrs Muciller did not like to see her reading, observing that her duty was to devote her mind exclusively to household affairs, and there would be plenty of time for study when she went to her first situation. 'You have only to keep yourself one lesson in advance of your pupils,' Mrs Muciller said, 'and you are safe. It is very strange if a grown person of average ability cannot manage to compete with children to that extent.' So Noddy would get up early, and get all her dusting done, and manage to make an hour at least for study before breakfast.

Within a week of Julia's return from school, Mrs Muciller received this letter by afternoon post:

London, *June* 27, 18—.

Dear Mrs Muciller—You will be surprised to hear I'm just home from Bombay—more so, perhaps, to learn I'm tired of India, and mean to

Digitized by Google

settle in England. I shall run down and pay you a visit in a day or two, and shall probably stay till you turn me out, as your cool country scenery will be a relief to eyes that still have the glare of the Indian sun in them. Don't put yourself out of the way. You need not reply, as I shall not be in London after to-morrow.—Yours,

FRANK GEOGAGAN.

'Well, that 's cool,' said Julia.

'It certainly is,' replied Mrs Muciller; 'but he must come. In the first place, he is a nephew of the late Mr Muciller, and I suppose fancies he has some right in his uncle's house. In the next place, I am not disposed to dispute the point, for he has been making a deal of money in India in connection with a Reclamation of Land Company. He must have turned a pretty penny, or he would not think of settling down yet. Those Geogagans are a money-making family, and always were, and not satisfied with a little. I should have invited him myself, had I known him to be in England. I consider his visit highly desirable. You must look your best, Julia, when he comes.'

Julia languidly smiled obedience. 'But he does not say when he is coming, mamma?'

'No; just like the Geogagans—always thoughtless. However, we need not trouble about that to-day, as it is time for you to dress for Mrs Sharing's croquet party.'

So Julia rang the bell for Noddy to come and do her hair.

CHAPTER II.

The 28th of June being the anniversary of Coronation Day, is kept holiday at most country places. Both Mrs Muciller's servants had hurried to get their work done early; and as 'their people,' to wit, Mrs Muciller and her daughter (for Noddy didn't count) were going out, they were given the afternoon as a holiday.

It was a real treat to Noddy to get a spare afternoon all to herself, with no work to do, and no one to find fault with her. Noddy made up her mind she would spend the time in trying to learn how to teach music. So she went in to the piano in the drawing-room. I don't like digressions, but pardon me for a moment. I would not have you think Norah Cray an ignorant girl simply because she owned herself consciously unfit for a governess: she was not that. Her opportunities had been scanty enough. She left school at thirteen to 'make herself useful.' But Noddy had read a great deal, and possessed besides much intuitive knowledge of the right and wrong of things, though without being at all times able to reduce it to such a rule and science as would properly qualify for a teacher. She at least had this wisdom, that when she did not know anything, she would make no secret of her ignorance about it; and if all of us did the same, we might none of us seem quite so wise as we do. Noddy had picked up a fair knowledge of music, though not of a showy sort. Fireworks on the piano completely baffled her; but she could play some of Mozart's quieter sonatas with taste and real feeling, and they delighted her heart, though they were utterly unsuited for display. But what Noddy was now anxious to learn was how to teach. So she began at the beginning of her Pianoforte Tutor, and went slowly on till she came to the scales, which she commenced practising.

It being very hot, all the doors and windows of the house were thrown open to get the breeze, and the fragrant breath swept in through the hall door, and along the passage, and to the drawing-room, bearing the scent of roses and jasmine to Noddy, as she sat there practising scales. It is rather monotonous work, but Noddy's whole mind was in it. She was indeed so absorbed in her occupation, that if a person had come up the gravel-path, and across the lawn, and straight into the room where she was, it is doubtful if she would have noticed it. Of course, it would be unlikely; but I say if a person had done so (the piano was at the farthest end, in the shadow of the large room), Noddy was so preoccupied, that it is not probable she would have observed the intrusion. She had been grinding away at the F minor scale, up and down, down and up—*one* and two and three and four, and *one* and two and——

'Oh, bother!' said Noddy, flinging her hands on her lap; 'what an awful little goose you are! You haven't a bit of gumption, nor a mite of common sense. As to being a governess, and can't play scales, you must be a noodle to think of it—a dreadful noodle!'

'You're about right there!' said an unmistakable masculine voice from somewhere by the door. Noddy started as if she had been shot; then she came over red and hot at being surprised. But the owner of the voice walked boldly into the room. Noddy being left in sole charge of Braithfield Villa, and seeing an entire stranger march in like this, did not like the look of it. *His* looks were nothing to provoke dislike, be it said—a tall, fine-bronzed man of thirty, with a tawny moustache and handsome sunburned features. She resolved to challenge him.

'What do you want?' she said brusquely.

'You,' said he—'you are Miss Muciller, I imagine?'

'No; I am Noddy—Norah Cray, that is,' she stammered, correcting herself. 'Please, what is it?'

'Cray?' the stranger said—'Cray? Any relation to Mrs Muciller?'

'Yes.'

'Oh, I think I know, then. So you are Miss Cray, eh? You will see who I am from this card; and as you have not offered me a seat, I 'll take one, after shaking hands with you.' He held out his hand frankly, and Norah could not refuse it.

'I don't know who you are,' said Noddy. The stranger had lounged himself on the sofa.

'Then, perhaps, you 'll look and see.'

'Mr Frank Ge-Ge-Geog-a-gan?' asked Norah, puzzled.

'*Ga*-gan, if you don't mind. It 's spelt heathenish, but it reads easy. You 've heard of your cousin, Frank Geogagan, in India, surely? That is, he might have been your cousin, if Mrs Muciller's marriages had not mixed the relationships so confoundedly.'

'No,' said Norah.

He whistled. 'Didn't Mrs Muciller tell you I was coming?'

Norah did not wish to expose the precise state of things between herself and her step-mother, and did not choose to tell an untruth; so she replied: 'Mrs Muciller received a letter just before she went out this afternoon, but she was hurried, and I did not know its contents.—So you are expected, then?'

Digitized by Google

'I said I was coming, but not exactly when.'

'That 's awkward,' said Noddy.

'Why?'

'Because we are not prepared to receive you. Mrs Muciller would have been home, and Julia, had they expected you to arrive to-day.'

'You are very plain.'

'You are not complimentary,' retorted Noddy.

'I didn't refer to your looks; but I wonder if you would insist on my saying they were anything different?'

'You can say what you please,' said Noddy; 'it is a guest's privilege.'

'Whew!' Mr Geogagan whistled softly. 'Nettled, eh?'

'No; I justify your remark, that is all. You called me plain.'

'So you are going out as governess, I heard you say. Pray, are you competent to teach?'

'I don't think so.'

'Then why do you go?'

'I think you have no right to inquire.'

'Gracious! Why, you forget I 'm your cousin, and take a family interest in you already.'

'If you do, you won't ask,' said Noddy.

'But I do, and still ask.'

'Then I can't tell you.'

'Well, you are the coolest little baggage of a cousin to welcome any one home from abroad one could well expect to find. Are you not glad to see me?'

'Well, not particularly,' said Noddy. 'How should I be, never having seen you or heard of you before? Besides, you come at an awkward time, when nobody is at home. And for aught I know, you may be an impostor, and have watched your opportunity to enter the house when it is unprotected. I don't think you are that, though—you are not polite enough. But one never knows.'

'Upon my word, you are not flattering. Still, at anyrate, I think you might have offered me some refreshment, as I have just come off a journey.'

'I am very sorry,' said Noddy; 'but Mrs Muciller has taken the keys with her. I can only offer you a cup of tea or coffee, and some bread and butter. Everything else is locked up.'

As Mr Frank seemed to think that would do very well indeed, Noddy went out to prepare it, and presently returned with a tray of tea and coffee and a single cup.

'*Two* cups, please,' said Mr Frank. Norah was not generally accustomed to take her meals with the family. She was certain Mrs Muciller would not like this arrangement, but divining a refusal might prove embarrassing, she brought a second cup, and joined Mr Geogagan at tea. When they had finished, Mr Geogagan said he should walk up to the station to arrange about his luggage being sent, and on his return he should insist on Noddy giving him some music. No sooner was he fairly out of the house, than Norah hastened to Mrs Sharing's, to let Mrs Muciller know of the arrival of a visitor. However, Julia was in the middle of an exciting game at croquet, and learning that Mr Geogagan was gone out again, she prevailed on her mother to remain till it was finished. Meantime, Noddy returned to Braithfield Villa. In five minutes, in walked Mr Frank again, clamorous for his music. Now, Noddy was never in the habit of playing for anybody's amusement but her own, and was quite certain if Mrs Muciller heard of her taking the liberty of playing to please a visitor, it would be considered a deadly offence. Moreover, she expected Mrs Muciller to arrive every minute.

But Mr Frank insisted with such vehemence that a refusal seemed like palpable affectation; so Noddy risked the consequences, and began to play Mozart's *Ah Perdona!* She had only got half way through it, when Mrs Muciller and Julia appeared at the window. Noddy shut up the piano, threw down her music, and fled.

'What impertinence!' ejaculated the widow. She was so fairly astounded at Noddy's barefaced impudence, as to be betrayed into making this remark aloud—and Frank Geogagan heard it. She had the tact, however, at once to divine it, and to correct her mistake. 'What impertinence, Mr Frank, of you, to be sure, to come and take us all by surprise without a word of warning! However, we must try and overlook it, as it is your first offence. I 'm sure I hope it will not be the last. We are delighted to receive you, although, had you told us when to expect you, we might have given you a better reception.'

'Well,' said Mr Frank (but he detected the artifice), 'I thought I told you pretty exactly. I said "in a day or two," if I remember right, and I came in "*a* day" instead of "two," to shew my anxiety to pay my earliest respects to my aunt—and her daughter—for I presume this is Julia?' Julia made a most finished *révérence*, and offered her hand in the most approved style. Julia was well and carefully dressed for the croquet party. 'That is fortunate, at anyrate,' Mrs Muciller thought. 'We might have been surprised at greater disadvantage. So much depends upon first impressions.'

A few interchanges of courtesies from the ladies, with commonplaces from Mr Frank, and Mrs Muciller and her daughter retired to remove their bonnets — if the little bits of flowers and lace adorning their hair might be so designated. Mrs Muciller took this opportunity of administering a severe rebuke to Noddy upon her boldness, forwardness, and presumption in attempting to entertain their visitor in a manner so unbecoming. It was not couched in gentle terms, but in words that sting the more from having truth in them. She reminded Noddy of her dependence, of her prospects as a governess, of her own father's position (he was Mrs Muciller's first husband, be it remembered), and contrasted these with her behaviour not to *her* guest, but to Mrs Muciller's. If the sting of a rebuke be any criterion of its deservedness, Mrs Muciller's was richly merited, for poor Noddy went away to cry where there were no eyes to triumph over her distress.

But Mrs Muciller was a student of expediency. She felt it would be undesirable (a favourite word of hers) that Noddy should continue to take her meals apart from the family, with a visitor in the house. The continuance of such a course would convey an impression, not so much false, as undesirable. She therefore 'desired' Miss Norah's presence at supper, and made known her wishes for the future. But Noddy pleaded headache as excuse for that evening, and remained in her room, hearing the sounds of music come faintly up from the drawing-room when the door was opened, till bedtime.

Next morning, Noddy was up and about soon after the lark. As blithely as he, she was singing

Digitized by Google

about her work, for there is nothing in all the world like cheerful work to prevent any one feeling dull and unhappy. How strange a drawing-room looks in the morning-light, in all the disarrangement of only a 'little music' of the night before! The piano heaped up with songs—songs on the floor—songs on the tables, on the chairs—here and there—everywhere. Furniture untidy and displaced—antimacassars to be newly smoothed and arranged. Confusion that the sun lights up into chaotic disorder, but which candlelight eyes do not notice. Nobody ever dared touch the drawing-room to 'tidy' it but Noddy—that was her particular province and her pride. There she was, that bright June morning, sweeping and sweeping away, and singing, as her mind, like the lark's, soared above the dust.

'Bravo! Cousin Noddy!' It was Mr Frank, who had been strolling about the lawn with a cigar in the fresh morning air, and who had walked up to the window.

'Oh, dear,' said Noddy, 'please, don't tease me. Don't you see I 'm busy?'

'I 'm coming in to see,' said Mr Geogagan, entering the casement.

Noddy looked pleasant enough as she was surprised in her print morning dress—her brown hair neatly arranged close to her head, where it could not stop without struggling out into little curls here and there; and a faint blush on her cheeks—partly shy, partly vexed at being caught, and partly ashamed of being vexed. 'Oh, please, go away—do—or I must sweep you up,' she entreated; and 'Oh, please, go away,' she added more seriously, remembering Mrs Muciller had cautioned her respecting her behaviour to Mr Geogagan. So Mr Frank went and finished his cigar by himself.

THE CROW.

Shakspeare tells us that snowy purity itself need not hope to escape the shafts of calumny; that being the case, it is only according to the nature of things that Slander should empty her quiver when the object of her unkind attentions is as black as a crow. Luckily, her arrows are not so deadly as her malice would have them, or the crow would long ago have been extinct as the dodo; but, like his relative, the priest-banned jackdaw of Rheims, he is not a bit the worse for all the hard words levelled at him, merely because he happens to have a good black coat to his back.

Pliny calls the crow a bird of ill-omened garrulity, most inauspicious at the time of incubation, or just after the summer solstice. The appearance of a flight of crows upon the left of their camp sufficed to cow the courage of the soldiers of old Rome, since they looked upon it as a certain sign of defeat, as certain as when the birds hovered or passed over their standards. So Shakspeare's Cassius presages misfortune at Philippi:

> Ravens, crows, and kites
> Fly o'er our heads, and downward look on us
> As we were sickly prey; these shadows seem
> A canopy most fatal, under which
> Our army lies, ready to give up the ghost.

The Cingalese to this day draw auguries from the movements of these birds: the direction of their flight, the numbers in which they assemble, the tone in which they croak, their choice of roosting-places, are all held ominous of evil or prophetic of good fortune. In many parts of Europe, the fact of a crow croaking thrice as he flies over a house is considered a sure prognostic of the death of some member of the family. An astrological writer declares pestilence and famine are infallibly at hand when the crows desert the woods, 'because these melancholy birds, bearing the characters of Saturn, the author of famine and mortality, have a very early perception of the bad disposition of that planet.' Rutty, the Quaker doctor and diarist, pays the crow the compliment of the following comparison: 'A physician in high reputation is like a carrion crow, he thrives on the diseases and impending death of his brother; he appears only in the time of calamity and distress, and very often when all dependence on him is like on a broken reed of Egypt.' Without discussing the justice of the comparison as regards the doctor, it certainly is an absurd one as regards the bird, for the crow puts in an appearance at all times and seasons. Birds possessing an undoubted prevision of atmospheric changes, the crow may have some claim to the character of weather-prophet. Virgil says its croaking forebodes rain; an old English writer says foul weather may be looked for when crows make a hoarse, hollow, sorrowful noise as if they sobbed; if they stalk into the water, or become very garrulous towards evening, rain is coming; but hot and dry weather is to be expected when they gather together in great companies, or call loudly and clearly in the early morning. A shrewd Scotch observer remarks that crows have a very keen and correct perception of changes in the weather, and that stormy winds may be presaged when they feed greedily, and fly speedily along the lower edges of the glens; while, if they betake themselves to sheltered places when the tempest begins, it is a certain indication that it will increase to a hurricane. Still, their weather-wisdom does not suffice to save them from coming destruction. In 1839, thirty-three thousand dead crows were counted on the shores of a lake in Westmeath, after a violent storm; a few years ago, the beach of Crow Island, a favourite resort of the Ceylon crows, was strewed with the remains of the birds killed by a thunder-storm; and when Pea Patch Island was inundated one night, the shores for miles were blackened by the bodies of thousands of unlucky crows, as the streets of Calcutta were filled with them after the last great cyclone swept the Indian continent.

Our sable subject owes no little of his evil reputation to the fact, that nature has not cursed him with a fastidious palate; but if he can make a meal off what a bird of nicer taste would rather starve than touch, he only does so when nothing better is to be got. There is no doubt that when the choice is given him, he prefers dining upon a tender leveret or young rabbit; and he will work hard enough at unearthing grubs and worms where he can earn a fair wage for his labour. It must be admitted the crow has an unfortunate liking for poached eggs, combined with a blissful ignorance of the sacredness of a partridge's or pheasant's nest, while he will not hesitate at appropriating stray ducklings or chickens, if they come in his way. When stealing eggs, he generally impales them dexterously on his bill, but not always; Mr Weir frightened a flying crow into dropping his burden, and found it was a wild-duck's egg, perfectly whole. Another crime of which this bird is, upon very

Digitized by Google

strong evidence, accused, is that of putting sickly sheep out of their misery; and, as Mr Hogg puts it, of descending to the most dishonourable dodges to maintain himself in good condition. That gentleman personally complains that while at other times his farm was only favoured by the patronage of a single pair of crows, in the lambing-season the hills swarmed with them, ready to take advantage of the ewes in their hour of trouble, and destroy both them and their offspring. The crow is by no means a one-idead bird. Small feathered game he strikes as it flies; sheep, and such-like victims, he first disables by picking out their eyes; if he gets hold of a nut, he cracks the shell by dropping it again and again from a great height. One was seen to kill a young duck by laying it upon the ground, and then walking backwards and forwards over it until its life was trodden out of it; and the Roman naturalist tells us of a thirsty crow heaping stones in an urn containing rain-water it could not reach, until it brought the draught to a convenient height.

Somebody, however, has said a good word in behalf of the crow; Friar Glantville deposing: 'In Exameron, it is said the mildness of the crow is wonderful, for when the old crows in age be both naked and bare of covering, the young ones cover them with their feathers and feed them. And when they wax old and feeble, the young crows undersit them, and rear them up with their wings, and comfort them to use to fly to bring their members that be diseased into state again.' Although it is hard to believe in such filial affection on the part of the young crows, we may say that the old birds deserve every kindness from them, seeing they tend upon their offspring long after they can fly, instead of, like most other birds, leaving the youngsters to their own devices at the earliest possible period. Indeed, the crow is a model parent. When Mr Weir had deprived a lady-crow of her liege lord, he was astonished by finding her provided with a second mate before three days had elapsed. Determined to get rid of the family, he next shot the hen bird; but even her death did not suffice, for the male bird continued to feed the motherless brood, and persevered in performing his paternal duty until he paid for his constancy with his life.

The note of the crow is said to have twenty-five modulations. He possesses the capacity of imitation in an extraordinary degree. 'At the moment I am writing this,' says Pliny, 'there is in the city of Rome a crow, which belongs to a Roman of equestrian rank, and was brought from Bætica, able to pronounce several connected words, and repeatedly learning fresh ones.' There is nothing very surprising in this, considering that the corvine family is famous for its possession of the often worthless gift of the gab. This imitative faculty makes the crow an amusing pet; he is easily tamed, being of a sociable temperament, and may be taught many tricks, while he is not incapable of attachment. Mr Weir kept one for some time, which flew round about the neighbourhood in the day, and roosted at night in his shrubbery. The sound of his master's voice was enough to bring him to him immediately to receive his caressings, but he sharply resented any stranger's making free to stroke his back. This bird's favourite amusement was to peck the heels of barefooted urchins. His memory was astonishing. One Monday morning, after being satiated with food, he picked up a mole in the orchard, and hopped with his prize into the garden, where he buried it so nicely, that his master, who had been watching his proceedings, could not discover where he had put it. As his wings had been clipped, to prevent him flying over the garden-wall, he was unable to get into the garden again until the Saturday evening, when, seeing the door was open, he hopped at once to the very spot where the mole lay hidden, and disinterred it in the twinkling of an eye. In 1807, a gentleman told the following story in a magazine: 'In spring 1789, a boy brought a nestling crow to my house, where he remained until the harvest following, when he disappeared. In June 1790, I observed a crow approaching near the house, and suspected it might be my old bird. I threw a piece of bread to him, which he immediately picked up. From that time he paid regular visits, and is known by the name of Wattie. After pairing, he brings his mate with him, who waits for him at a distance until he returns with his allowance, which they eat very lovingly together. In breeding-time, he comes very often, and when his young take wing, brings them to a little distance from the house. If he finds the door fast, he first caws, then thumps on the door with his bill, and if still unsuccessful, utters a pretty loud sound like the barking of a little dog. If he meets me at a distance from the house, he comes up to me, and if coming home, accompanies me all the way, either hopping or taking short flights. He once recognised me three miles from home, and I was obliged to beg some bread to pacify him!'

Some writers credit the corvine tribe with possessing an organisation unheard of among any other members of the ornithological kingdom, actually averring that they hold regular assizes for the trial of offenders who have set at nought the laws of the black community. Edmonston declares the crows of Zealand seldom associate, except when they meet together for the purpose of holding a crows' court, when numbers of them assemble on a particular hill or in a particular field. All the delegates having arrived, proceedings are opened by a general croaking, and after a while the whole body fall upon two or three individuals, and put them to death, dispersing immediately afterwards. It would seem the crow, like Coventry Patmore, believes

> That penalty is best to bear
> Which follows soonest upon crime.

Landt not only corroborates Edmonston's story, but pretends he was able to distinguish the judges, jury, council, and accusers!

A belief was long current in England that it was penal to kill a crow within five miles of London. The crow has certainly been honoured with the notice of parliament, but rather by way of proscription than protection. In 1532, an act was passed to encourage the destruction of choughs, crows, and rooks, because they bred and increased too fast in the realm, yearly consuming and devouring marvellous quantities of corn and grain of all kinds, and destroying the roofs of barns, ricks, and stacks, threatening thereby great undoing of the tillers, husbandmen, and sowers of the earth. After this terrible indictment, by way of preamble, the act ordered all landowners to do their utmost to exterminate the criminals, upon

Digitized by Google

pain of being heavily amerced. It also directed that every parish should provide itself with nets for crow-catching; while the farmers and tenants were to meet from time to time, to take counsel together as to the best means of destroying their supposed foes. Moreover, every occupier of land was bound to give any one asking for it a day's sport over his land, allowing the sportsman to carry away all the crows he succeeded in capturing, and paying him at the rate of twopence a dozen for his trouble; but every one was warned against making the act a pretence for killing doves and pigeons. It is evident the legislature had no faith in the prescription of those wise men of old, who, Lupton tells us, taught that crows were to be kept at a distance by burying a new earthen pot tenanted by a toad in the middle of a field.

The Carrion Crow makes itself at home in every climate habitable by man; it is found everywhere in Western, but is rarer in Eastern Europe. Well-wooded countries are its delight. Plentiful in England and the southern parts of Scotland, the carrion crows are seldom seen in the central and northern portions of the latter country. They are not very sociable together, more than two being rarely seen in company. About February, they set about constructing their nests of twigs, lined with moss, hair, and other soft material, and fenced externally with half-rotten twigs; and when they have settled down to housekeeping, they are very particular in carrying away the refuse of their meals, depositing it a considerable distance off. Suspicious in the extreme, they give humankind a wide berth, especially if they perceive anything in the shape of a shooting-iron; but they are as bold as they are wary, and will make a good fight of it against much bigger birds than themselves. The Royston Crow (*Corvus cornix*) differs little from the common crow, save in the colour of its plumage, which is ash-gray tinged with purple. It is a graver bird than its relative, but has the peculiarity of leaving its quarters in some parts of England in the summer-time. White of Selborne says: 'Royston or gray crows are winter-birds, that come much about the same time with the woodcock; they, like the field-fare and redwing, have no apparent reason for migration, for as they fare in the winter like their congeners, so might they, in all appearance, in the summer.' What makes this conduct more inexplicable, is that in Scotland the birds remain stationary all the year round. Mr Jesse infers that the gray crows seen in England during the winter only, are visitors from Sweden and Norway.

The rector of Ousby, Cumberland, writing to Mr Urban in 1709, advocates the protection of the crow as a national benefactor, doing his part towards providing material for England's navy, when its ships were hearts of oak. Mr Robinson says: 'About twenty-five years ago, coming from Rose Castle early in the morning, I observed a great number of crows very busy at their work upon a declining ground of a mossy surface. I went out of my way on purpose to view their labouring, and found they were planting a grove of oaks. They first made little holes in the earth with their bills, going about and about till the hole was deep enough, and then they dropped in the acorn, and covered it with earth and moss. This young plantation is now growing up to a thick grove of oaks, fit for use, and of height sufficient for them to build their nests in. I told it to the owner of the ground, who took care to secure their growth and rising.' A belief in the planting propensities of the crow, led the Dutch to take him under their protection, when they became masters of Ceylon and its cinnamon groves, and inflict severe punishment upon any one interfering with his life or liberty. Bold enough naturally, the small glossy Ceylon Crow (*Corvus splendens*) has, thanks to years of impunity, become the most impudent and audacious of birds. Colombo swarms with these black citizens, ever on the watch to enrich themselves at the expense of humanity; and doors and windows being oftener open than shut, they have every opportunity of indulging their thievish proclivities. Nothing portable is safe from them. Workboxes, baskets, paper parcels, are all deftly opened and overhauled, and anything taking their fancy quickly carried off, though what use crows can find for lace-bordered handkerchiefs, Paris kid gloves, and similar plunder, it is hard to conceive. So little fear have they of being punished for their larcenies, that they will join a dinner-party without invitation, pounce upon any tit-bits they spy on the table, and wing their way out of doors to enjoy their booty at their leisure.

The common black crow is unknown in America, although that continent owns a member of the race sufficiently like it to have been long held identical; but the American Crow (*Corvus Americanus*) is now generally admitted to be a distinct species, being less in size, and having a very different voice, but in all other respects closely allied to his European brother; possessing his courage, sagacity, and omnivorous appetite, to which vegetables, fruit, seeds, snakes, lizards, grubs, insects, eggs, and carrion are alike welcome. Mr Lord found this species more than abundant in British Columbia, and bears emphatic testimony to its vocal capabilities. 'If birds,' he writes, 'are gifted with ventriloquial powers, I should say the Barking Crow was at the top of the profession. Wandering through the forest encircling the prairie, one's ears are dinned by the extraordinary sounds made by these crows. Sometimes it seems as if these hidden polyphonists were making all sorts of disagreeable fun of you, and chuckling hoarsely at their own jokes; then one goes in for a bit of song, and others readily taking it up, they manage between them to raise a combination of discords, compared to which the parrots' screams in the Zoological Gardens is whispered melody. They shriek, yell, laugh, shout, whistle, scream and bark, driving one to wish all the crows in British Columbia were consigned to the depths of Hades.' We have given the American crow the benefit of this panegyric, because the naturalist of Vancouver's Land calls it *Corvus Americanus*, but we feel doubtful as to whether he is not describing the fish crow; a doubt strengthened by his admitting the strong resemblance between it and Baird's North-western fish crow, while he accords that diminutive bird the dignity of being a species, on the ground that it builds a domed nest, which the other never does.

The Fish Crow proper (*Corvus ossifragus*) is peculiar to America, and was first observed by Wilson on the Georgian sea-coast. It abounds at all seasons in the maritime districts of the Southern States, a range beyond which it cannot be said to extend, although it is found in spring as far north

Digitized by Google

as New York, and is known to breed in New Jersey, returning southward as soon as cold weather sets in. Like the common crow in appearance, but much smaller in size, the fish crows fly in flocks, keeping in pairs as they fly. They haunt the river-banks, salt-ponds, and marshes, hovering watchfully over streams, on the look-out for dead fish, floating carrion, or small fry, which they secure with their claws as the water hurries by. They will dive after small crabs or water-lizards, and often force the gulls to drop the fish they have caught. Not being able to feed upon the wing, the fish crows retire to the nearest trees, to discuss their meal conveniently, and indulge in a congratulatory *ha, ha, hae* over it. Partial though they be to fishy diet, they are not above robbing the nests of other birds, even such big birds as the cormorant; but they take good care to see the owner off the premises before committing a burglary.

Audubon mentions a case where more than six hundred crows were shot on the carcass of a horse placed at shooting-distance from the stable, by which the farmer got enough feathers to fill a bed, besides making as much money by the premiums and the quills as the horse was worth when alive. Somebody relates that a planter, living at a place called Caney—should it not be Canny?—Creek, sowed his crops in peace, by adopting the following ingenious plan of circumventing the crows without destroying them. Before sowing a field, he set some negroes at work running a long horsehair through every grain of a bushel of Indian corn, previously soaked and softened. This prepared seed was scattered over the field, and picked up by the crows, who found the horsehair more than they could swallow. The ends dangled from their beaks, and irritated their throats, causing the victims to make such an immense to-do, and express their disgust in such eloquent terms, that not only themselves, but their luckier comrades, took especial care to avoid the scene of their discomfiture for some time to come.

A COUNTY FAMILY.

CHAPTER XXIX.—MRS BLACKBURN SEES A GHOST.

THE winter was over and gone, and still the great Blackburn vault remained without the prey for which, in all men's eyes, it seemed to have yawned so long. The Squire was yet alive; and even, as the wise doctors said, who had come again from town to visit him, better—at all events less restless and discomposed. They had recommended change of air—removal to some convenient distance; and it was in contemplation, when the days grew warmer, to transport the invalid to that sheltered cottage on the Curlew of which we have already spoken. There was no more chance of his recovery than of Fisherman Richard, who had built the place, coming back to claim his own again. But there was so far an improvement in the sick man's state, that it was now wholly passive; there were no more yearning glances, dumb appeals. He had never suffered bodily pain, and now his mind seemed still and quiet as his limbs.

None but his wife and son, and Stanhope, guessed the cause. Even Ellen, seeing his eyes often fixed upon the pedigree (which had been transferred from the old place to his chamber-wall), believed that it was that which so contented him. He saw the seasons change in the great mirror—the snow dissolve, the green appear; the awakening life of bud and branch—but without pain or pleasure. He watched the familiar faces about his bed with the same listless look as he gazed on the motes in the sunbeams.

Heaven only knows what he thought. We who live and move can scarcely picture how looks the world to those who only have their being in it.

The outside folk—his friends and neighbours—did not speculate upon that matter, but counted him for dead already, except that they did not call upon the family with 'kind inquiries.' Even to those about him it sometimes seemed so. The prayers which Ellen never omitted to read to him, night and morning, fell on deaf ears, and might have been the service for the dead.

William, though he well knew he was not the heir, began to exercise the rights of heirship, and rode and strode about his father's lands as though they were his own; and whether he rode or strode, a 'beggar on horseback' was what the people called him. Mere power, such as is neither influence nor authority, was very sweet to him, as it is to all brutal natures; and he misused it sorely. And yet it angered him to know that he was hated. He was jealous of the respectful salutations with which Ellen was welcomed by the meanest hind, as she passed by; although all the village, and the poorest most of all, had cause to like her, as he knew, and more or less had cause to *dis*like him. He was jealous of the kindliness with which Stanhope was universally regarded, notwithstanding that the young Squire of Curlew Hall had not the means to 'do his duty by the land,' that is, by those who lived by it. He was jealous of the cheery looks which Mr Waller, always chatty, always gay, inspired. He was jealous, even though his rival in her affections was in the grave, with respect to Lucy; and had had the meanness, on some pretence, to get dismissed a gardener whom he had overheard talking to her about 'young Squire Richard as was dead and gone.' He hated the county generally, partly because his presence in the hunting-field had not been received with enthusiasm by the other red-coats, and partly because he had not been made a magistrate. The Blackburns had always been put upon the bench as soon as they were of legal age, and his father had had that responsibility conferred upon him directly he had succeeded to his inheritance. Why, then, was he left out in the cold? The cabal against him, it seemed, had not been confined to his own home.

It was curious how this denial of the mere *insignia* of respectability—since for the thing itself he cared nothing—rankled in his mind. In reality, only there is nothing so unreasonable as intense selfishness, William Blackburn had had every opportunity of 'getting on' in the neighbourhood afforded him. Country-folk are the last to judge men of their own class upon their own merits, or he would have had small chance indeed; scores of welcoming hands had been held out to him, but in return he had only shewn the cloven foot. His behaviour to his parents, and especially to Lucy, was resented; and besides, notwithstanding the shortness of his sojourn at Redcombe, he had openly, more than once, shocked a by no means fastidious public opinion. As to the magistracy, Stanhope, though the lord-lieutenant was

Digitized by Google

personally known to him, had declined point-blank to move in the matter, and had even expressed himself to be, 'under the circumstances, astonished at such a request.' Mr Waller (who would himself perhaps have found a difficulty in getting J.P. tacked to his name, had not M.P. been there already) had recommended patience, and hinted that there would be a better chance of such promotion when he had formed some matrimonial connection with a county family; at which William's brow darkened visibly, for reasons best known to himself. He had received a letter on the very morning on which that remark was made, and had it then in his pocket, which, besides its intrinsically unpleasant nature, reminded him bitterly enough of how far off was that consummation of his hopes, his marriage with Lucy Waller. This communication ran as follows:

My dear Mr Blackburn—I daresay you will scarcely remember this handwriting; and yet it comes from one who is a sort of kin to you [here Mr William winced and swore a great oath]. Some men might take it ill that you never wrote a line to tell me of my poor niece's death; but it is likely enough, not being an habitual correspondent of yours truly, you did not know my address, which indeed is generally pretty changeable, as at present. If I had chanced to see the notice in the *Times*, I should certainly have come, no matter what distance, to pay my last tribute of respect to your late wife's memory [here Mr William expressed incredulity in the strongest language]. However, as business is bringing me northward shortly, I will do myself the pleasure of just looking in at Blackburn Manor. It was only quite by chance, and within the last day or two, I heard of your *luck*. What a pity it is poor Bess never lived to see it! Richardson also joins with me in felicitations [never did 'felicitated' man wear so incongruous a look as William Blackburn wore as he read that word] upon your position and *prospects*. Still, you must not forget old friends.—Yours very sincerely, John Dean.

This unwelcome letter was no doubt intentionally unfurnished with an address, so that Mr William Blackburn was unable to indulge himself in what would have been an immense relief under the circumstances, the sending an appropriate reply by return of post. 'He wants money, this impudent scoundrel,' ejaculated William. 'He and Richardson, they think to put the screw on, on account of that confounded Chester business. But not one penny of hush-money do they get out of me. I had rather they told the whole story than not indeed, for it would set me free of this fellow Stanhope; *he* would have no hold upon me then, except that—curse him!—he has got that will in keeping. He took it to Curlew Hall that very day, I know he did. Yes, I must not break with *him*—just yet—whatever happens.—But why does this fellow prate so much about Bess? He uses her as a stalking-horse, of course. He dared not shew his face here but for that. And yet it is clear he suspects nothing. If he only *knew*—why this man would be a stone about my neck for all my days. I must see him, I suppose, since I cannot prevent his coming. But I will not give him a shilling, not a sixpence—let him do his worst. I believe if he told all, that Waller is so deeply dipped, that it would make no difference now as regards Lucy. But what is her father's consent, or even hers, to me' (and William Blackburn ground his teeth), 'while there is that woman at Formosa!'

It was in vain for him to recapitulate what an out-of-the-way place Formosa was, and all the arguments he had so often used with himself against the probability of Bess turning up to trouble him. The very thought of the risk he should incur, if he married while she was alive, brought the perspiration out upon his forehead.

It may be judged whether this was a propitious morning for Mr Waller to hint to the young Squire that an eligible matrimonial connection was the only thing to set himself right with the county and the lord-lieutenant.

Another annoyance chanced to arise that day from the same source, although of a very different and quite unsubstantial kind; but then annoyances are often irksome in inverse proportion to their substance. Just as he had contrived to put that letter of Uncle Dean, with the bitter recollections it evoked, out of his mind, his mother, of all people in the world, must needs awaken them again. She had driven out with Lucy to 'The Fishery,' to give certain final directions there for the reception of the family, and had come back, to use her own expression, 'much upset;' by which she meant, not that she had been frequently thrown out of the carriage, but was seriously indisposed. Perhaps, as Lucy suggested to Ellen, the idea of leaving Redcombe under such sad circumstances, since it was out of all human probability that her husband would be brought back thither—save to the churchyard—had overcome her; she had borne up wonderfully all day, however, until on their road home, when she had given way in a rather unexpected, and apparently uncalled-for manner in Redmoor fir-grove—'Just where it is so steep, you know, that one always gets out and walks; your grandmother and I were walking, and she bade me go on at my own pace, since waiting for her made her nervous; and although loath to leave her, I did so; but finding she did not appear within a reasonable time, and since the coachman feared that the horses, being heated, would catch cold waiting too long on the brow of the hill, I went back, to give Mrs Blackburn my arm to help her up the steep. I found her leaning against a tree, not out of breath, but very pale and trembling, and she said something had given her a turn.'

'Ah, then I know what it was, Lucy,' interrupted Ellen sadly; 'I can guess why that particular place should affect poor dear grandmother: it was in that very fir-grove, as she once told me, that she and grandfather had a last interview with his mother. He was but a few weeks married, then a young and handsome bridegroom; and I daresay the sudden recollection of him as he then was, involuntarily contrasted itself in her mind with his present woful condition.'

'I think that must have been it,' assented Lucy, 'for she said something, I could not quite understand, about a warning and your poor grandfather. I am sure it is a miracle to me that Mrs Blackburn gives way so seldom, considering her trials.'

Indeed, the stout old lady, notwithstanding that tenderness of her heart, which evinced itself in such culpable weakness with respect to her son, was by no means easily cast down, but went about her household duties bravely, and nursed the sick

Digitized by Google

man in true wifely fashion night and day, the only one about him who in her heart of hearts had had even until now some hope of him yet. She was one of those who have faith in the doctor while he prophesies smooth things, but when he shakes his head, who comfort themselves with a 'Well, well, science is often mistaken, and after all we are in God's hands;' as though we had not been there before. But all that evening good Mrs Blackburn kept sorrowful silence, and more than once considerably embarrassed Mr Waller by bursting into tears. To weep in public was, in that gentleman's eyes, an unpardonable solecism ('Good Heavens,' whispered he to Stanhope on the second occasion of this ebullition, 'are we in the Forest of Bondy?'), an impulse which, if generally indulged in, would make the ordinary transactions of life impossible: the idea of some meeting of ruined shareholders, instead of stigmatising one as a scoundrel (against which one might bear up), dissolving into tears! As to Mr William, full of his own personal troubles, he doubtless wondered what the old woman had got to cry about; but sympathy did not prompt him so far as to make inquiry. He had got his greatcoat on, and his cigar in his mouth, about to visit the *Blackburn Arms* as usual after dinner, when his mother beckoned him into the deserted dining-room.

'O Willy,' said she, 'I have been wanting to speak to you all the evening, but could not get you alone. I have had such a shock to-day as you cannot imagine; and I am only thankful that it did not happen to you.'

'Shock; well, I'm not easily shocked, and I daresay I could have stood it,' returned William gruffly. 'What's happened now?'

'A very dreadful thing, Willy. I have had a message from the grave. I have seen a ghost.'

'Oh, I *say;* come now. You must have a talk with Mr Allcase when he comes to visit the governor to-morrow. These sort of fancies—for I've heard him say so—are all stomach.'

'But this was not fancy, William, I am very sure. Now, do you sit down and listen.'

'But I want a cigar, mother; and Bill Dykes and Harry Willing have got a match on to-night at four corners.'

'Never mind *them*, William,' returned Mrs Blackburn gravely; 'and have your cigar here if you please. If you had seen what I have seen this day, you would be in no humour for games or smoking.'

'I will just light up, however, in the meantime,' said Mr William contemptuously, for he had drunk his fill, and was by no means in a condition favourable to superstitious fears.—'Now, then, I'm all attention; fire away.'

'I daresay you have heard, Willy,' began his mother slowly, with her hand upon his knee, 'of that old legend about the Blackburn folk, that before they die they have each a warning of their end sent from the other world, that the *last* dead Blackburn returns to tell the doomed one of his race that his time has come to depart also.'

'I have heard some twaddle of the kind,' said William carelessly. 'They say in the village that young Richard's dead mother was seen in the park the night before her son popped off the hooks so suddenly; but it's all rubbish of course. And indeed she did not happen to be a Blackburn at all.'

'That is no matter, Willy; she was a Blackburn by marriage, if not by blood. Your grandmother walked on the terrace the night before her wicked husband breathed his last. It is always the last dead that gives the warning.'

Mr William, lying back in his arm-chair at ease, expelled his tobacco-smoke in rings, an accomplishment of which he was unreasonably proud, and inquired scornfully: 'Well, what then? Have you seen this young gentleman to-day?' and he pointed to the picture of his cousin Richard that hung above the mantelpiece.

'No, Willy; but I have seen your wife—poor Bess.'

William Blackburn bounded from his chair with a fearful oath.

'Don't swear, Willy—don't swear, for Heaven's sake; you don't know how soon you may be called to answer for such words. What I saw was a warning for one of your race; but who shall say for whom? At first, of course, I only thought of your poor father. He is the likeliest to go, dear soul, and the fittest for it. Ah, if you could but see him lying day and night, night and day, patient and gentle-faced as the stone angel over the church door! I know by his look that he has forgiven me for meddling with his papers, though, indeed, it was very wrong of me to do so; and I do think, if you were to go and see him once again, Willy'——

'Never you mind me and father. You tell me about what you saw, mother; tell me everything.' He had sat down again now, and had hidden his eyes behind his hand, but his features worked beneath it restlessly.

'I knew it would move you, my dear boy—I knew it would touch you; and I hope it will work for good. I know you are not wicked, as some believe, but only a little wild and thoughtless. Yet, O remember, that it is not always the old and ailing that are taken first, but oftentimes the young and strong. Think, if this should be a warning sent to you, my darling—to you, instead of'——

'Will you tell me what you saw?' broke in her son with savage impatience. 'That first, and what you think of it afterwards. What, in the Fiend's name, did you *see*, mother?'

For a moment, the poor lady's speech was choked by sobs. For the first time, perhaps, it was borne home to her that this son of hers had indeed a heart of stone; but he muttered something by way of an apology for his tone and temper: he had been put out, he said, by an infernal business letter that morning. And her hand once more rested on his knee as she resumed her story.

'We were walking—Lucy and I—up the short-cut through Redmoor fir-grove, while the carriage went up the road. I had sent Lucy on before, because I like to go my own pace, and not feel hurried; and presently she had left me far behind, and I was quite alone. It was the very place where fifty years ago, Willy, your father and I met Russell Blackburn's wife for the last time, and the thoughts of old times crowded in upon me, so that I stopped and lingered more than I needed to do, though the way was steep.'

'You had your mind, then, full of the past, and death, and such like?' observed William, with interest.

'No doubt, Willy; and I may have also even thought of Bess herself, as I certainly did of you, dear boy. But if I did, I thought of her less than

Digitized by Google

any. Then presently, in the silence of the grove—for you know there was not a breath of wind to-day—I heard steps behind me. I was not surprised, for the path is used by all folks on foot coming from Mosedale to Redcombe, nor in the least degree agitated or alarmed. As the steps grew nearer, I moved to one side of the path, in order to let the person pass me, for whoever it was, she was a faster walker than I.'

'But how did you know it was a woman?'

'Because I heard her dress brush against the trees.'

'She was so close as that, was she?' inquired William hoarsely.

'She was at one time, but not when I looked round. I walked on and on, expecting every instant that she would pass me; but finding that the footsteps ceased, I turned about to see why she had stopped.'

'Well, and what then?'

'Then I saw that it was Bess. It was growing dusk, but I am certain that it was she, and no other. She was a deal older, and more white and wan-looking than when I saw her last; but, as sure as it is my voice you hear, Willy, it was your dead wife.'

'Did you speak to her?' As William put this question, he shot through his fingers an eager glance at his mother's face: it was a careworn and wrinkled one enough, but as honest and open as the smoothest; he need not have been afraid of any concealment there.

'Speak to her? No, indeed, Willy. I was much too skeared. My limbs seemed to give way, and I sank down trembling all of a heap against a tree-trunk. Indeed, for a moment, I shut my eyes for fear, yet not so long that if it had been anything but a ghost, it could never have got out of sight; and yet, when I looked again, Willy, there was nothing there.'

'No; and there never was anything there, mother,' said William, forcing a laugh, 'you may take your oath of that.'

'I tell you, Willy,' answered Mrs Blackburn solemnly, 'I am not more certain that I see you now than that I saw Bess to-day. Moreover, she saw *me*, for which, indeed, without doubt, she had been sent. O Willy, Willy, I cannot keep the terrible thought out of my mind that it was about *you* she came. It seems so strange else that she should have looked so wan and sorrowful about your father. Oh, repent my darling, for we have all something to be sorry for, and be a good lad while you have yet time. I have never troubled you with such talk of late, Willy; I have been afraid of your ill looks and your tempers, but it has been often in my thoughts to speak of such things.—Kiss me, darling, kiss me. Pray to-night. Oh, how I have prayed *for* you, Willy! Pray to be a good man.'

'Yes, yes, all right,' said Mr William, submitting, if with no very good grace, to his mother's impassioned caress. 'I will do all that if you on your part will promise me to hold your tongue about this matter. In my opinion, you have been misled by your feelings; you were tired and full of melancholy thoughts, and your imagination has built up the whole affair. It was a mere delusion.'

Mrs Blackburn shook her head, and smiled sadly.

'Well, that 's my opinion, I repeat,' said William coldly; 'and I think most people will agree with me. On the other hand, you think you have seen a ghost. In either case, I judge the thing had better not be talked about. You never said one word of this to Lucy or Ellen, of course?'

'Not a syllable, Willy; and I never shall. This is a secret between you and me—a secret much too sacred, much too awful, to speak to any ear than that which it may concern. Your father, alas! is deaf to every voice, even though it be one from the tomb; but you, Willy, oh, lay it to heart—lay it to heart! You will not go out to-night, darling, among those rough rude men?'

'No, I will not. I promise you that, mother. Good-night. I will just have another cigar, and then to bed.'

But William Blackburn remained in that room for hours, now sitting by the fading embers with moody brow, now starting up to pace the floor with restless steps. Not till the morning light found its way through the closed shutters did he retire to his own chamber; yet after all this counsel with himself, he could come to no more satisfactory conclusion than to hope that all these pains of thought might be in vain. 'The old woman must have been deceived,' he muttered, as he threw himself on his bed. 'It could never have been Bess herself; she would not have dared to come.'

CHAPTER XXX.—MR WILLIAM ENJOYS SOCIETY.

That heaviness may endure for a night, but joy cometh in the morning, was certainly not written of the vicious. To them the beginning of the day more than any other time brings the reproof of Nature. It is then that she chiefly resents upon the wrong-doer his contravention of her laws, and, until he has commenced his daily round of life, hidden himself from her among his base companions, or forgotten her in strong liquors, her presence is irksome and hateful. It was at breakfast of all meals that Mr William Blackburn appeared to least advantage; and on the morning succeeding his long vigil, he was a piteous sight to behold. Mrs Blackburn regarded him with unfeigned terror, as she thought of that mysterious vision of the previous day, and what it might portend.

'I shall be glad indeed,' said she, seeing him heap this and that upon his plate, until it was like the 'Douglas larder,' and yet scarcely swallow a mouthful, 'when the time is ripe for our going to the cottage, for your sake, Willy, almost as much as for that of your poor father. I am sure you want change of air.'

'I don't know whether I shall go to the cottage at all,' answered her son gruffly; 'and, at all events, I shan't go yet.'

'Not go, Willy?' pleaded she. 'Why, you surely would not stop here alone?—What *can* you have to keep you at Redcombe?'

'Something that women understand nothing about,' growled he—'business.' And with that scanty information she was fain to be content.

It was certainly a business of a light kind, and one that did not keep Mr William within doors. It was his habit to lounge about the grounds, and park, and village all day, the very type of a loafer. But he now confined himself to the grounds only. Instead of his old listless look, his eye seemed ever on the watch, his ear upon the stretch, for some one coming; he would break off suddenly in his speech to listen to sounds that heralded nothing, to stare with eager looks into the distance, where

Digitized by Google

nothing shewed itself. He was alert, and yet distraught. Doubtless unwilling, for good reasons, to be from home upon Mr Dean's arrival, which would probably occur at some reasonably early hour, he was awaiting that gentleman's visit; for when the dusk began to thicken, he would set out none knew whither, but for such a distance—and it was observed that his steps always took the direction of Mosedale—as often brought him home long after dinner was finished. On one occasion, being later than ever, his mother ventured to remonstrate with him: 'You should consider, dearest Willy, there are guests in the house, and your poor father is not here to do the honours. I do not like to see Mr Waller sitting opposite to me instead of my boy.'

'Very well, mother,' said he, 'it shall not occur again.'

In spite of herself, Mrs Blackburn could not but feel amazed at her son's ready obedience. His tone, if not tender, which perhaps it could not be, for voices lose their tenderness through long disuse, was not rough, but hollow and nervous. His face was deadly pale, and his brow damp, and his whole appearance shewed that he had been walking far and fast.

'How ill and tired you look, Willy; you overfatigue yourself; and do make haste to change your things, for see, your boots and leggings are quite wet.'

'I came through the furze, and it was heavy with dew,' said he, 'that's all.'

'But how hungry you must be, darling. I will bring my knitting and sit with you while you eat.'

'Yes, do, mother,' said he. It was almost the first time he had expressed a desire for her company, and the poor lady was in raptures. At the same time, this change in his behaviour, which had during the last few days been even unusually brusque and surly, really alarmed her. It struck her that he must surely be ill. The apprehension of the warning vision having had reference to him, recurred to her with redoubled vehemence, for, curiously enough, it had never even entered into her mind that it might be Ellen's life that was imperilled. She had had his favourite viands kept in readiness for him, but he ate scarcely anything, though he drank freely; and this did not tend to make her less anxious. Yet she did not dare to recur directly to that subject, for which he had shewn a particular distaste.

'Mr Allcase called while you were away, Willy, and he thinks the weather is now quite mild enough for us to leave home; and Mr Waller tells me that the Fishery is looking so bright and comfortable, with everything ready for our reception.

William laid down his knife and fork. 'Has Mr Waller been over yonder to-day?' asked he earnestly.

'Yes, darling; he had business in Mosedale this afternoon, and so very kindly he rode over to see how things were looking at the cottage.'

'When did he go? When did he come back? I mean at what hour?'

'He started after luncheon, and he was home again by six at latest, my dear. I wonder you saw nothing of him upon the moor.'

'I did not go to the moor to-day: I walked in the opposite direction.—How is father?'

'Well, no worse, at all events. Mr Allcase says he can quite bear the journey, and oh, dear Willy, I do so hope you'll go with us. There will be the fishing, you know; and though there is no billiard-room, Mosedale is quite close; and Lucy and Mr Waller will be almost as much with us there as they are now, although we have no sleeping-room for them in the cottage. Mr Stanhope, too, has kindly promised to stay on with us. I don't think you need be very dull there. Come, dear, it is not often that I ask a favour of you, but for *my* sake, if not for your own—and I am sure you need the change—do promise me to go with us to the Fishery.'

'Very well, mother; I will go with you, since you make such a point of it.'

'You good, dear boy, you have no idea how happy you make me!' murmured Mrs Blackburn, with dim eyes. 'And now I will leave you to have your cigar in peace upon the terrace.'

'No; I shall not go out again to-night; I have been out enough.—Where are Waller and Stanhope?'

'They are not in the smoking-room, so that you can have it all to yourself, dear. They are playing a game at billiards.'

These two gentlemen were wont to have their cigars together in the Squire's sanctum, unhonoured by Mr William's presence, who found companions more suited to his nature in the saddle-room, or at the public-house. But on this occasion, notwithstanding that he might have had the little room all to himself, he joined their company, and even volunteered to keep their score for them; this he did as usual, with the rest; and the way in which that instrument rapped against the marking-board, through the trembling of his hands, made the two players look at one another significantly: the one remarked in a whisper 'that their friend was like the Cock Lane ghost;' and the other, under cover of a canon, expressed his belief that they were going to have D. T. in the house again before very long. When invited to play himself, Mr William protested he was much too tired; and yet, when the others were about to put away their cues, he persuaded them to have one more game, and still another, until Stanhope declined point-blank. Never had the young Squire shewn himself so docile to his mother, so affable to his guests, as upon that night, nor, it may be added, so disinclined for his own unimproving society. Was it possible that Mr William Blackburn had taken his mother's words to heart at last, and was about to turn over a new leaf?

THE NATIONAL GALLERY.

Loud roared the tide of life, rapid and vast,
That eddies ceaseless through Trafalgar Square,
As o'er the threshold, up the accustomed stair,
I entered the hushed chambers where the Past
Lingers, its transience caught, its forms made fast,
Its thoughts eternised by the cunning care
And wonderful fine skill beyond compare
Of Art's great masters. And as there I cast
Long loving looks upon each well-known face
Of monarch, sage, poet, and priest, and saint,
And sought with busy critic brain to trace
The secrets lurking in that world of paint—
The Past in all its grandeur filled the place;
The tumult of to-day seemed far and faint.

HOSPITAL-VISITING.

NOT long ago, finding time to spare, I agreed to assist a friend in visiting a London hospital, at least once in the week. This seemed a small affair. I mean to shew what it came to, rather in the hope of inducing others to help, where much help is needed—help of so many kinds almost all within the reach and the power of *some* one. The chief contributions required are these—time, money, old clothes, tea and sugar in very small quantities, oranges, old toys, old newspapers and books. These are not always in the power of individuals to give; but out of many, each one might give a part, however small—an ounce of tea one day, an old shawl or worn linen garment another, a few oranges. I need not go through the list. How many could at least give the *time* that often hangs heavy upon hand and heart—that could be well spent, a single hour of it, once or twice a week; not in preaching or praying with the sick—that is not always needed or desired—but in simply sitting by the bed of some poor hospital patient, who has no friend in London to come and see him on the visiting-days, and who looks wistfully at the more fortunate ones whose families and friends come to them regularly enough on the days and at the hours allowed.

It was on a visiting-day, a Wednesday, that I paid my first visit to the hospital of this district. I knew nothing of the rules and regulations, and passed in with the patients' friends unnoticed. The great entrance and hall marked the centre of the building, crossed at right angles by a wide and long stone corridor, with a stair at each end—the women's wards to the right, the men's to the left: the four stories exactly alike. A pleasant-looking woman, evidently nurse or matron, was knitting at a door, over which the names of three wards, to which it led, were painted in large letters.

My only shyness was the lack of a direct reason or excuse for speaking to any *one* patient in particular; but I thought there might be a child somewhere, and I had oranges in my bag, and went on. There *was* a child in the first ward I entered—a white, thin, wizened creature, close to the door. There were about a dozen beds, almost all filled. A long, lofty room, well ventilated; almost too well, I have often thought since, when sitting in a thorough draught between that wide open door and the high north window open at the top.

Most of the patients had visitors—the child had none. I sat down on an empty bed next her, and asked her how long she had been there. Three weeks, she thought—it was a long time. She had disease of the hip-joint. Did it hurt her? 'Yes, when she moved, dreadful; and they moved her so many times.' Had she had any one to come and see her? Yes, her little brother had been. Mother couldn't, not to-day; she had hurt her arm, and it was very bad, and Johnny had come to tell her. She was eight years old, and Johnny was seven. Yes, father was at work in the country, and mother did charing and washing; and she had three more brothers and a sister. I peeled an orange and gave it to her to eat, while I took a survey of the other patients. A quiet, sad-faced girl, with a bandage over her eyes, sat knitting slowly near the fire; the ball of worsted rolled off her lap close to my feet. I picked it up, and went across to her. It was as good as an introduction; we were friends directly. She was nearly blind from small-pox, and neglect and cold afterwards; the eyes were constantly under treatment, and covered entirely from the light. Nobody had been to see her that week. 'Father was terribly *down*,' she said; he had been out of work for two months. He did odd jobs: watching empty houses, &c. for the builders—only stray work now and then; and he was bad with rheumatism, and terribly low. Her sister told her he would sit for hours staring right at the wall—she thought he fretted for work; and they had no other way of living, now she was in hospital. Her sister was married, and her man had work, and she was very good to father. 'But it frets me sadly, ma'am,' she said with quivering lips, 'thinking of father by himself, and so low as he is—it does fret me, indeed. He hasn't the heart to come here, ma'am, unless he'd got something to bring me; and if he does bring me a little tea or sugar, I feel

Digitized by Google

he's given away all he's got;' and the tears rolled down from the poor hidden eyes.

We talked of hope of work, of hope of cure for herself, or chances of better days for the poor father. I could have staid longer talking to the gentle little soul, who spoke so quietly of her troubled life and home, with an accent and manner far above her class; but I had more to see even that first day. The other beds seemed to have plenty of visitors, and I went into the next ward. Finding one excuse or another, I got into conversation with several patients; one, a bright-looking woman, recovering from rheumatic fever, whose husband and children arrived while I was talking. She told me she did washing and charing—the old story—and the husband was out of work these two months, and was losing heart. His face said that much as he came up and sat down at the bed foot with a weary sigh. 'Have ye heard nothing?' she said anxiously. 'Nothing at all,' he said; and his head drooped. Such a worn, anxious, weary face. The children were clean and cared for. 'There's only him to do it, you see, ma'am, and he's that careful of them; and they go regular to the school. I'll be glad to get home, God knows; but he can't get work, and it's telling on him, ma'am, that it is—he seems to lose hope, he do.'

A little more talk, and a shilling and a little tea and sugar to the poor mother; and I went slowly down the ward, and stopping near the door, two very wistful eyes, and a very thin haggard young face stopped me. 'Have you no visitors to-day?' I said as a beginning. 'No, ma'am; I've no friends in London at all.' She was nineteen, she said. Her husband was at sea; her baby was with a poor neighbour; 'and they don't feed him, nor care for him, and they haven't brought him to-day;' and she broke into sobs, and hid her face upon the bed. 'He won't live, I know; and they don't allow me to have him here except on visiting-days, and to-day they haven't brought him.' Poor little woman; I thought, even hospital rules might have been stretched to allow her to keep her own baby. But so it was; and she was crying her anxious heart out when I went away.

I spoke to many more that day—cases more or less sad, more or less poor, and friendless: many of them of hopeless illness; and some that would be turned out in a week or so, scarcely better, to return to their poor homes, to miss the warmth, and the nourishment, and the care which for a few weeks had made sickness less hard—some to go out into the pitiless streets, homeless. 'I'm to go out Tuesday, ma'am,' said one poor woman upstairs; 'that's one week more.' 'And where do you go?' I asked, for she did not speak complainingly. 'God knows, ma'am.'

There were plenty more like her. 'Where should I find you?' I said to one to whom I had promised a petticoat. She was to leave next day, and I was not able to return to the hospital for a day or two more. 'Where would a note or parcel find you?' She grew crimson. 'Well, ma'am, it's the truth, I've nowhere to go, and I don't know in the world where I'll go first. There was a poor woman I lodged with once; but she's gone away, and I haven't anywhere to go. Maybe I'll get a night's lodging near where I was before. Ye see, ma'am, it would be nothing at all if I was well, but I'm not fit to work these three weeks yet.' Fit to work! Ah! my fine ladies, if you could have seen her—you who lie in bed for a cold, and silence the house and darken the room if you have a headache. This poor soul, racked with cough, aching in every limb, both lungs diseased, worn to a skeleton, thinly and barely clad, going out with scarce a complaint into the cold streets—homeless, friendless, without food, and without fire in those cold March nights! Strange and sad enough it is to know how many scores of these poor creatures exist, somehow and somewhere in London, seemingly belonging to no one—without relations, or home, or ties of any sort or kind.

The women and girls who sell oranges and apples on the street are generally of this class—mostly Irish, they have not a link in this wide London world.

I do not need to speak of half the patients in the hospital wards with whom and with whose histories I became somewhat acquainted that first day—but I will mention one more; a plain, fair, intelligent-looking woman sent the nurse to me, and asked if I would speak to her. 'You see, ma'am,' she said, 'I thought you might pass me and not speak, and I haven't had a soul to speak to but the patients since I came; and it does feel so lonely seeing the other folks with their friends about them, and not one have I to come near me.' After this single speech, I could get little out of her. She seemed to draw back and regret having spoken. I was going away, and asked her if she would care to have a newspaper. Yes, she would; she liked to see about the theatres. 'I used to belong to the profession,' she said, half shyly, as if expecting I should be surprised. Seeing I evinced only interest, and not a pious horror, she went on to say she had been a dancer, and then taken different parts, chiefly comic, and done pretty well till she married a surgeon; 'but he was a gentleman, worse luck,' she said, with a considerable Irish accent; 'and his father was a gentleman, and a member of parliament; and a terrible life I had with him.' He had lived upon her for a time, till her health failed, and then went off one day with all the money she had—about ten pounds—returned and sold the furniture, and left her with a few shillings and her clothes. She believed he was in Canada; but he had been away two years, and she did not know that he would ever come back—'and if he did, if I ever saw the face of him'—— And she broke down. 'Was he not kind to you?' I asked, more for something to say. 'If he did return, would it be any good?'

'No, ma'am,' she said sadly—'little good. I know that. I believe I'm best off without him; but I did love the very shoe-strings of him. And if he was to kill me—well'——

It was the old story—the old sad story, that has been and shall be acted out while men wrong and women forgive—injury, neglect, cruelty, absence, desertion; but his place was kept. Poor woman! I was thinking all this, when a slim girl came up and took the teapot from the shelf above the bed.

'Double allowance to-night, Mrs Dean,' she said with a smile. 'Mother's left me some tea.—We always put our tea together, ma'am; it goes further so,' she explained. 'And we that's better, and can go about, we wait on them that's abed, you see.'

'She's been very kind, that girl has,' said Mrs Dean. 'I shall miss her. She's going to be sent

Digitized by Google

to the convalescent home to-morrow. I wish I was going too.'

I thought this might be managed, and said so; and asked further what her plans were when she went out.

Plans—she had none. If she were only well enough, she could get work at the theatres, where she was known; but to shew herself in such clothes as she had left would only injure her cause, she said. She must go respectably dressed, or they would not give her employment. She was to go out in a week or so. She had not a change of linen, or anything but the poor clothes she had come in, such as they were. 'And, O ma'am, it 's degradation to be so dirty. Think of it—not a change these two weeks; and I can't even stay in bed and get them washed for want of money—and I lived like a lady once,' she said, and burst out crying. 'Oh,' she said bitterly, 'and me crying for the clean clothes I can't have, and never a tear for the grief that 's killing me. Ah, well.'

Visions of a 'bag' for the hospital flitted across my brain, collected from every friend and acquaintance I could muster; old clothes or new linen, and cotton under-garments and night-dresses for these poor creatures, even if only for use during their stay here. The vision flits there still, for though I have supplied a few such things, I am as yet no further on with the 'bag' which I hope still to realise. But of this by-and-by.

I returned to the hospital, or rather to my share of it—for I have nothing to do with the *men's* wards, and only some of the women's—the following Friday. I felt quite at home this time. Looking into the first ward, I saw the poor blind girl lying half across her bed sobbing violently. No one seemed to notice her; but at that moment a kindly looking person went past me quickly, and took the poor girl in her arms. 'I know, my poor child, I know,' I heard her say; and I left them together, and told the nurse I would look in on my way back. My little lame girl was lying patiently behind the door, her face brightening with the hope of a picture-book I had promised to bring next time. She gave awe-struck looks at the sobbing girl and the pleasant-looking lady, who, I afterwards heard, was a district visitor, and knew the blind girl before.

'She 's cried like that all day,' the child said in a whisper, 'ever since they told her.'

'What did they tell her?'

'They came and told her her father was dead, and wasn't coming to see her any more.'

'Yes, ma'am,' said the nurse, coming up and stroking the child's hair: 'that 's not the worst of it;' and as I went out with her, she said: 'They should never have told the poor thing—there was no need. He hanged himself, ma'am, only last night. Hanged himself, O my God! for want of a day's work! A day of hard toil, hardly paid, would have saved his poor life; or rather, please God, his reason, for that must have gone first.'

I said so to the poor daughter, later, sitting by her on the bed, trying to bring her to my own feeling, that he was past responsibility for his own death; and that so she might think of him as at rest—no more need for work, no more waiting for what never came, no more hopeless seeking. The married sister came presently, crying and shaking, and I feared the effect of it all upon the poor girl's eyes and nerves; but when I saw her next day, she was quiet and calm, and not crying. The poor soon face their sorrows, and cease to bewail them aloud. In their own poor homes and busy toilsome lives, they have little *time* to grieve—well for them, perhaps, in some ways. But it is hard to be sorrowful and cold—sorrowful and hungry—not with the mere good appetite which disappears with anxiety and grief, but with the gnawing of exhaustion and long fasting; to weep and work—weeping over wash-tubs and wet floors, and on their knees, and scrubbing with sore and bitter hearts—what must it be?

I had found a little work for the mother of a consumptive child in another ward, and the news was received joyfully. I met the poor broken-down husband of the woman I saw last week coming down-stairs with his little girls, clean, decent, and orderly, but with another week's hunger and hopeless failure of work written on his sad white face. Since then, I have been to several builders, and decorators, and house-agents, begging for work for this man. The answer is always the same: 'We have dozens of our own hands unemployed, and if work came, we must give them the preference.'

I have quoted a few cases, and given but a faint and imperfect sketch of one kind of help that is greatly needed amongst the poor. In visiting hospitals, there is not only comfort and kindness to many sick and friendless people—men, women, and children—the kindly word, and the listening to the talk of their illness; their troubles, their difficulties; their future plans, and hopes, and fears; the giving of newspapers and books; of any old toys or picture-books to the children; of tea and sugar, or snuff, to the old people; a few pence for their washing—all of which costs but little, and contributes greatly to their consolation. Besides this, there is the religious reading, talking, or teaching, if there be inclination or need; and then comes what, as I said at first, widens the work—the inquiry into their home circumstances and troubles: the brothers in trouble, in jail, in scrapes, in service; sisters in sad straits, sickness, want, sorrow, degradation; mothers and fathers out of work, or past work; children in bad health, untaught, or wanting schooling.

So much might be done, if *many* would do a *little*. Ah, if only a hundred people would give *a shilling each*, I could send poor Mrs Dean to a convalescent home, where she could rest and get strength, and get her decent clothes to wear, when she applies for work at the theatre. It would not take a hundred shillings to do this; and the rest would take poor Green down to the country, where he could get work; and the change of air would give him fresh strength and hope. A few more shillings would give some wine and good food to a consumptive girl of fourteen, just turned out, but, alas, no better. A few more would pay for a decent lodging for a poor girl of twenty, whose soldier-husband is in Canada, and who broke her leg in two places falling down some steps. She will be turned out in a week, cured, which means that the bones are mended—too lame to walk alone, too weak to work, and penniless—no house and no friends in London—Irish again.

And then my vision of a bag, such a bag as is well known to district charities and mothers' meetings—under-linen of all kinds, old and worn or new, coarse or fine. If only each family would

Digitized by Google

give *one* garment, the bag would soon be filled. They should be marked 'Hospital,' and be claimed by the nurses when the patients leave the ward. Let them at least be clean and fresh while they are *there*—while they are ill and weak. It might give some of them (who can afford it) a taste for cleanliness when they go home.

In a few weeks, as one of three or four regular visitors at one hospital—amongst the women alone—I find my hands full. I cannot quite lose sight of the patients who leave, and new ones come in daily: this must go on increasing. My companions are of course in the same position. As I said before, we want help; and many could help us. The requisite items are money, time, tea and sugar, newspapers, books, toys, and old clothes. Those who can give nothing else can give their *time;* and almost everybody has old clothes to give away some time or other. Let them remember the bag. And, besides the bag, the patients are often in the direst need of clothing to take away. They have perhaps been ill for weeks before entering the hospital, and pawned all their available clothes for food, lodging, and medicine.

There are many charitably inclined, who, willing to give, do not know *where* to give. If they are in doubt, let them take to visiting a hospital, or give help to those who do. I would have such places visited, not because it is *hospital-visiting*, but because it is a means of discovering the wants of many poor.

Perhaps the greatest want as a charity now in London is a free convalescent and incurable hospital. No such hospital can be really useful and available that entails *waiting for votes:* to be serviceable it must be free. There are such places already, and most useful and excellent they are; but they are few and small, and totally inadequate to the need. Would that Mr Peabody would dedicate his next gift to this purpose. For want of such a refuge, I have searched London and the 'charities of London' in vain for a shelter for Mrs Dean, the poor actress, and several others this very week. Of some of these charities I may have occasion to write again. If any reader of this paper should feel disposed to assist in contributing in any way, however small, to the relief of these poor people, they may hear all particulars by writing to the initials 'S. D. H.,' care of Mr Hayes, bookseller, Lyall Place, Eaton Square. *Any* help will be most acceptable. *Pence*, old clothes, a single garment, a pair of old boots—anything that can be spared, will be most thankfully acknowledged.

NODDY'S SITUATION.

IN FIVE CHAPTERS.—CHAPTER III.

Six weeks had come and gone at Braithfield Villa. The advertisement had been inserted five times—but still no answer. A situation as governess is not the easiest thing to obtain. It is something like that of prime-minister—there are always plenty of candidates for the office, and most of the candidates (poor things) are about as well fitted for it.

Mr Frank had more than fulfilled Mrs Muciller's most sanguine anticipations. He had proved a most attentive cavalier to Julia. He paid respectful deference to her piano performances and to her singing; indeed, he seemed particularly impressed with her rendering of *Twilight Twitterings—a Reverie*, by some noodle or other, that sounded very like fairies hammering in tin tacks. As for music! I am only surprised at Mr Frank's taste; but I suppose it came new to him on his return from India. He would lounge about, smoking, whilst Julia painted flowers or embroidered him a smoking-cap. He accompanied her in walks and rambles; he was her attendant at croquet parties, and picnics, and morning calls. Julia received these courtesies with artful unaffectedness, and her mother remarked them with inward satisfaction. Nothing afforded Mrs Muciller more sincere delight than when people began to couple Julia's name with Mr Geogagan's. They were not actually engaged, however; indeed, beyond the courtesies referred to, Mr Frank had made not the slightest attempt at anything more decisive. But still, people will talk, and Mrs Muciller liked to hear them. People began vaguely to suppose that Julia had made a fortunate hit, and that it was in all probability an accomplished fact; but they hesitated to do more than hint their belief, without something like foundation. Mrs Muciller, fully aware of the important part gossip plays in the history of daily life, determined to turn it to account. She reasoned thus: Mr Geogagan is evidently impressed with Julia, but he is a little shy, or dilatory, in coming to the point. In either case, a favourable rumour may do much in bringing about a desirable result. It may encourage him: it *must* stimulate him.

With this idea, in the course of her next private conversation with Mrs Sharing, when that lady inquired, with certain friendly nods and elevations of the eyebrows, if she might venture to offer congratulations on a certain fortunate event, Mrs Muciller gave her unmistakably to understand that she might, although perhaps expressed in that coy language of partial reserve with which women like to enhance the value of private communications.

Now, thought Mrs Muciller, I know Mrs Sharing to be the greatest gossip in the neighbourhood. She will be certain to spread the news of Julia's rumoured engagement far and wide. It will undoubtedly get round to Frank Geogagan, and will lead him at once to make that proposal for which he seems so ready. So the rumour shall make the fact, and the fact keep the rumour in countenance.

Meantime, the subject of Mrs Muciller's design appeared to be in most genial ignorance. He continued to pay the same respectful attentions to his charming cousin Julia. He took little notice of Noddy, as a consideration for the lady of the house indeed dictated, for he had more than once observed that any slight attention to Miss Cray was visited on *her* with a glance of disfavour from Mrs Muciller when she thought he was not looking. But Frank Geogagan had very quick restless eyes that could see round a corner.

As for Noddy, if she owned to herself one feeling at all about the matter, it was just one of sadness that a school-girl should render a *man* so artificial and constrained, and unlike his real self, as she

Digitized by Google

thought Mr Geogagan was becoming. But there was another feeling at the bottom of her heart, that Noddy would not own to herself. The wind bloweth where it listeth: you cannot tell whence it comes or how. There were Phæacian ships with sails ever set that carried their owners without oar or effort whithersoever they listed. And in these six weeks Noddy had come to love Mr Frank. She would not have confessed it to herself: she would have despised herself had she believed it. How was it? Dear soul! Is there any better reason to be given for loving anybody than the child's reason—Because I do? Must we not all come back to that? Noddy had seen few people; few people had ever taken notice of her, or seemed to think of her as worth talking to or caring about. Mr Frank always had a word of some sort for her. Many a morning he would chat pleasantly to her as she dusted the room; many a time he would refrain from speaking to her, or of her, before Mrs Muciller, for her sake. Well, you may say this, or you may put it how you will, but you will have to come back to the little child's reason at last, for all the wiser people in the world who have tried to give any better explanation have talked nonsense, and, what is more, owned it.

Frank Geogagan had made many friends in the neighbourhood, and it was not long before one of them congratulated him on his engagement to Julia Muciller. It staggered him at the first; but, bless you! Mr Frank had his eyes about him. He took it as coolly as possible; never said a word to contradict it. He saw it would not do, as this would be a palpable reflection on Mrs Muciller, by whose tacit endorsement at least he ascertained such a report had obtained currency at all. He just smiled, and thanked his friends, and so gave renewed credence to the report, which now had received the final stamp of veracity. Mind, I do not defend Mr Frank's conduct; I only state what he did: and now I am going to tell you what came of it.

Dear reader—you who have followed me thus far—do you think I am telling you fiction? If so, I ought not to make Frank Geogagan a party after the fact to a deceit. There was once an audience that thought the squeak of Archippus more life-like than that of the real pig. Remember this.

The latter end of August, a picnic had been arranged to Cherleigh Lake—a most delightful jaunt, and Mrs Muciller, Julia, and her Indian lover were to go, of course. It so happened, however, at the very last minute, that important business required Mr Geogagan's attention in London. I need not further relate the nature of the business than to say it was understood to be something in connection with the Indian Reclamation of Land Company, and that it was urgent. It was not a letter that summoned Mr Geogagan, but a printed notice, stating that, in consequence of the sudden depreciation of shares (which had previously gone up many hundred per cent. above their paid-up value), a heavy call was to be made on the shareholders.

Mind—once more. It is not for me to defend Mr Geogagan. I take the facts as they come. I cannot apologise for facts, and won't. It was settled that Mrs Muciller and her daughter were to go to the picnic, while Mr Geogagan went to London to transact his business. Mr Frank never went near the metropolis at all; he just marched over to Mr Sharing's to smoke a cigar. And when the house was clear, Noddy sat down at her books to study teaching.

It has been said Mrs Muciller knew Mrs Sharing for a gossip. Mr Frank also knew Mr Sharing for one. With this knowledge, how it was he went and confided to such a man the state of his affairs, I must leave you to guess.

Over their cigars he stated something like this to Mr Sharing: 'The fact is this. Every penny I could get together I put into this Indian Land Reclamation scheme. The shares went up fabulously, till a hundred pounds became worth thousands. The scheme was feasible, and likely to succeed and to pay at any premium the shares could go to, it was so good. I had every confidence in it. Suddenly, a panic comes, the shares drop nearly to par before we in England can get the intelligence, and we are called on to pay up our amounts. Now, I know you are accustomed to advance money on security—will you lend me three thousand pounds on a deposit of shares to twice the amount?'

'Ah, my young friend,' said Mr Sharing, 'you see that's your way and the way of yours, always. Here you go and mix yourself up in the rashest of speculations without a chance of success—as independent as you can be, all the time—you're all alike. Then you get into a hole, as we say—and you come to me to help you out. Look you; your shares are not worth that'—and he snapped his fingers—'not worth the paper they are printed on. Three thousand pounds? Three thousand fiddles, sir.'

'But,' said Mr Frank, 'it is only a temporary depression, owing to a panic: the scheme is a good one—the shares will go up again.'

'Yes, like a gunpowder mill! The whole affair will explode—that will be the next rise, and the only one. I'm sorry for you—sorry for you, sir:' Mr Sharing gently emphasised his sorrow by tapping it out with his finger-points on the table—'thought you had better judgment. You are just like a moth. You have been dazzled with a glittering prospect, and rushed straight into the flame. Now you complain that your wings are singed.'

'Pardon—I have not complained. I do not believe my case so bad as you represent, and I do not yet despair of making you see it in a different light. Rumour may have informed you that I have been so fortunate as to secure the affections of Miss Muciller. I have not made minute inquiries as to the amount of that young lady's fortune, not wishing to appear mercenary, but I have every reason to suppose, from the style in which her mother and herself are living, and from the fact of her being an only daughter, that she will receive a handsome portion on her marriage. If you take this into consideration, you may be disposed to look upon my security as at least sufficient to cover the loan I seek.'

Mr Sharing was silent for a minute. 'That is how the wind blows, is it!' he thought. 'So you fancied you had got hold of a fortune, my fine fellow; and Mrs Muciller, on her part, was of very much the same opinion respecting you. Why, the girl won't have a penny! As if the style in which a woman lives, who has a daughter to marry, could be the least criterion of her means! *You* know very little of the world, Mr Frank.' But he remarked aloud: 'I have certainly heard of your

Digitized by Google

happiness in that respect, but you will bear in mind you are not yet married to Miss Muciller. There 's many a slip, you know. And in addition to this, I have every reason to believe that whatever may be the extent of Miss Muciller's fortune, it would be placed beyond her husband's control.'—'That 's about the neatest way I can put it without injuring the young lady,' he thought. 'For that matter, her fortune is beyond *any*body's control!' And he smiled and tapped the table again.

'Well, sir?' said Mr Frank.

'Well, sir?'

'Then am I to understand that you refuse to entertain the question?'

'Entirely. I don't discount possibilities, but only extreme probabilities. It is not in my line.'

'I need not remind you, at anyrate, that the subject of our conversation is private,' said Mr Frank.

'And confidential. Certainly.—May I offer you another cigar?—No?—Well, if you must be going, *good*-morning, sir.'

'Private and confidential—stuff and nonsense!' Mr Sharing observed to himself, as soon as he was alone. 'That is all very fine, young gentleman—but it is right Mrs Muciller should get just a hint that her great catch is a very little fish, that had better be thrown into the river again. I will tell Mrs Sharing, and trust her to make use of the information.'

Mr Frank went back to Braithfield, and found Noddy sitting in the window, trying hard to perfect herself in the mysteries of the accordance of French *participes passés*. She was huddled up with her book in her lap, her elbows on her knees, and her head in her hands.

'Noddy!'

'What, not gone to London? Have you missed the train, Mr Geogagan?'

'No—neither: I was not going. Put on your bonnet, and come out for a walk.'

She hesitated.

'Come, put away your books. The walk will do you good, and Julia will not be jealous.'

Still she hesitated: she thought of Mrs Muciller.

'Come, Noddy; I am in difficulty and some trouble, and I think you can help me. So, put away those books.'

Noddy hesitated no longer. In two minutes, she was ready, and came down with a calm, wise expression on her little face, ready to help.

They set out, and walked for nearly half an hour without a word. Noddy remembered she was wanted for help or advice of some kind, and so was quiet, waiting to hear. Through pleasant cornfields, glistening like seas of restless gold, while the warm summer breath passed over the ripe ears, and bowed them in long fleeting waves, whereon the cloud-shadows floated—wide, swelling waves that calmly rolled the sunshine along to cool reedy music, as the breeze played on the heavy grain—and burning poppies were upheaved or borne under by the chasing waves. By hedges, bright with summer flowers, and cool with ferns and creeping green. Along paths patterned over with the moving shadows of oak, and elm, and willow.

'Noddy, what would you say if I told you I was ruined?'

'I should say I didn't believe you.'

'All the property I have in India is in the "Anglo-Waddy Company" for the reclamation of land from the sea. I doubt if I shall ever see a sixpence of it again. Mr Sharing told me to-day the share certificates are not worth the paper they are printed on.'

'Well,' said Noddy, 'I thought you said you were ruined. Is that all?'

'All?' he returned, rather sharply. 'Is it not enough to be ruined? Not a sixpence of it, not a penny-piece, shall I see again!'

'Oh,' Noddy said, half talking to herself, 'is that ruin? It seems to me a man is never ruined while he has life, and health, and strength, and cheerful courage.'

'It is easy to talk. You never had any money to lose.'

'No; not much. But I have a little property for all that.'

'Indeed. And, pray, how much?'

'Thirty pounds in the savings-bank, which my father left me.'

Mr Frank laughed, despite his own trouble.

'Dear me! I didn't know you were an heiress before. How you would grieve to lose your money!'

'I should be sorry.'

'Then you can't find fault with me for being the same at losing so many thousands.'

'The amount makes no difference. My thirty pounds is my all, and I should be just as sorry to lose it as you are at losing your all. But though I 'm only a woman, I shouldn't say I was ruined—that is absurd.'

'You are a Job's comforter, at all events.'

'There are very few comforters *like* Job's, in these days,' said Noddy—'very few persons who would sit down in silent sympathy, the deepest of all sympathies, for three days and three nights with a friend.'

'So you look upon me as a friend?'

'Yes,' said Noddy, blushing a little, but displeased with herself for doing so, on account of an avowal so innocent.

'And can you give me any better advice than Job's friends?'

'Perhaps not.'

'Tell me what you think I ought to do.'

'Do?' said Noddy quickly. 'Go and work. It 's a brave thing, work is. You will forget all about being ruined, and only remember you are a *man*, doing a man's work. I don't know what I should do without work myself; it is the most soothing and refreshing comfort I know, even to me, and it must be better to a man. But your case is nothing like Job's. If it had been only his money Job had lost, his friends would just have staid at home, and sent messengers offering to help him to work, and Job is just the sort of man who would have been content to take it.'

'Noddy, I really believe you 're right.'

'I 'm sure I am. Haven't you seen me sweep?'

'Yes,' laughed Mr Frank; 'but that is hardly in my way—digging would come more natural than that.'

'Then dig. But there 's plenty of work for earnest workers with brains without digging. I don't pretend to tell you the exact direction in which it lies, because that is out of my province; but I am sure you will find it, if you are in earnest.'

'I will,' said Mr Frank, and he was quiet again for a little.

Digitized by Google

And Noddy was quiet too. She had something on her mind she wished to say, but hardly liked to mention it. However, she began: 'If you mean what you say, you will not remain much longer here.'

'I shall not remain much longer here,' he echoed abstractedly.

'You will begin at once to strike out a new path, as a brave man should; and you will walk as straight, and feel as proud as a man ought who feels he is neither ruined nor disgraced when he has only lost his money.'

'Gently, Noddy. People don't like to see much of this sort of thing in any but the rich.'

'Then people are wrong, and must be shewn so. But what I want to say is this: If you have lost all your money, you may have expenses to meet, and one thing and another that may harass you, and prevent your beginning clear.'

Mr Frank nodded. 'Quite so,' he said, and shook his head gravely.

'Well, would you mind—that is, if I lent you twenty pounds of my property, would you be certain sure to pay it back to me again somewhere? I can't spare more very well, as I want ten pounds of it to get myself ready for the situation I am looking for. But I thought it might come in handy.'

'Just so,' said Mr Frank, and shook his head again gravely: 'there's no doubt about it.'

'You see, I should not have proposed it, but I should charge you interest, and that would do away with all obligation.'

'Entirely,' Mr Frank coincided: 'that would be a regular commercial transaction. And the interest would be?'

'Three per cent.—the same as the bank gives.'

'And you would require my note of hand for the amount?'

'No,' said Noddy, laughing at the idea as absurd; 'I can trust you for that.'

'What! for nearly all your property?'

'Yes; because it would not ruin *me* if I lost it.'

'Well, I will take your money, Noddy—it will be very acceptable—and I won't cheat you.'

'No,' Noddy said; 'I hope you won't, for I look upon it as safe as the bank.'

Mr Frank laughed.

So it was settled that Noddy should draw her money from the bank on the following day.

'You are a good little friend, Noddy,' Mr Frank said, as they walked home.

'No,' Noddy said; 'I hope I should have done as much for any one.'

Noddy meant to tell the truth. Maybe she 'hoped' she would; but I am not at all certain she would. However, she had never before felt so rich as at the prospect of helping Mr Frank. Her twenty pounds seemed to her quite a large property, and she almost jumped to the conclusion that it would go a good way towards making a prosperous man of Mr Geogagan again.

Mrs Muciller and Julia returned from the picnic party rather bored. It was 'awfully slow,' Julia decided; and 'so many stuck-up girls that it was quite horrid.'

Mr Geogagan spent the evening listening to Julia's music with as much apparent appreciation and interest as though he had not been unsuccessful in his attempt to raise the loan he wished from Mr Sharing.

CHAPTER IV.

One day passed—two days—three days, with little worthy of remark. Then Mrs Muciller, becoming impatient at receiving no replies to the advertisement respecting Norah Cray, made a call on Mrs Sharing to consult her about some immediate steps for getting Noddy out. At the close of her visit, Mrs Sharing imparted the bit of news she had been burning to tell, but yet treasured up for her last communication—namely, that on the most reliable authority, her Indian nephew was not worth a dozen rupees; and that he had actually attempted to raise a loan on his prospects of marriage with Miss Muciller.

'Quite absurd, you know,' said Mrs Sharing; 'but it just shews what he is worth.'

'But I know he has money,' Mrs Muciller protested indignantly. 'I'm certain of it. That Reclamation Company is a wonderfully good thing, and I know his money is in that. I have made every inquiry.'

'Exactly. But that is the very reason. The Anglo-Waddy Company has gone to entire ruin. My husband says the shares are not worth sixpence.'

This was a great blow for Mrs Muciller, especially remembering that she had only herself to blame for promulgating the report of Julia's engagement to this adventurer. The one little bit of comfort she had remaining was, that Mr Geogagan had been as much deceived in thinking Julia had expectations as she had been with him. But that did not mend the matter, which presented itself to her mind in the light of a most atrocious take in, and she said so.

'Well, but,' said Mrs Sharing, 'the company was prospering when he left India, and there is no reason to suppose he has been guilty of intentional deception.'

'What has that to do with it? How does that make any reparation for the injury it has caused to my daughter's prospects? Everybody knows of the engagement, and people will talk. Oh, how they will talk! It is abominable! It will be most prejudicial to Julia to break it off now; but it must be done at any cost. And a most fortunate escape it will be.'

Mrs Muciller returned to tea at Braithfield Villa, outwardly calm and cool, but, as may be imagined, in not the most placid serenity of mind. She made not the slightest alteration in her behaviour to Mr Geogagan, who appeared in very fair spirits, and entirely unsuspicious of the coming storm.

Mrs Muciller was a woman of quick action; a course once resolved on with her was put into execution immediately. When tea was finished, she blandly requested Noddy and Julia to leave the room. Her manner of doing this was so marked, that had Mr Frank not been deeply interested in a book he was reading on the sofa, he might have had his suspicions aroused.

When they were alone, Mrs Muciller commenced: 'Mr Geogagan, will you do me the favour to pay attention to a few words I have to say?'

'I am all attention,' said Mr Frank, dropping his book, and drawing himself comfortably on to the sofa-cushion.

'When you invited yourself as my guest, I had

Digitized by Google

not the slightest idea that you would place me in a false position.'

'Nor I,' said Mr Frank resignedly, his hands languidly crossed, with the air of a martyr.

'I had no idea that you would avail yourself of my hospitality to betray the confidence naturally reposed in a visitor.'

Mrs Muciller paused, expecting an answer; but Mr Frank was silent.

'Or,' she continued, 'I should not have extended towards you that hospitality. You will excuse my being plain, but it is my duty to be so.'

Mr Frank extended his hands and bent his head, as deprecating such an apology.

'Your conduct towards my daughter Julia has been most heartlessly cruel.'

'Excuse me,' said Mr Frank.

'Pardon me; I don't wish to be interrupted. Most heartlessly cruel. You have paid her marked attentions at home and abroad, and have given currency to a most undesirable report that you were engaged to her, without any reference whatever to my wishes or feelings. I do not, of course, pretend to know the extent to which you have influenced her mind, or the hold you may have succeeded in obtaining over her affections; but I must say you have no right to promulgate a report that, in my opinion, is injurious to my daughter's prospects.'

'I have paid your daughter no more attention than ordinary courtesy to a relative would dictate. As to an engagement, I have not thought it needful to make a reference to you on the subject, Mrs Muciller, not having had the slightest notion of such a thing, until I heard the report you allude to, which certainly did not originate from me.'

'It is most singular how such a report could have obtained currency had you given no occasion for it,' said Mrs Muciller.

'There I agree with you; and significant also,' said Mr Frank.

'And significant also. Had your attentions to Julia been restricted to home courtesies, it might have been less so. But when you seek, on the strength of such a report, previously disseminated by you, to use your rumoured engagement as the security on which to borrow money, it becomes still more than significant, it becomes conclusive of something that is detestably disgraceful.'

Mrs Muciller paused, wishing for an answer to a shot that combined truth and falsehood so deftly that she knew it would tell; but there was only one answer Mr Frank could have given at the moment. If it had been a man who had stung him like this, Mr Frank would have knocked him down; but as it was a lady, he was silent.

'In entering my household,' Mrs Muciller proceeded, 'you led me tacitly to understand that you were at least in as prosperous a position as I had reason to believe you were some years ago. It is useless to say you did not actually state this in so many words; you led me to believe it, and took no pains to dissipate such a belief. Such conduct I can only characterise as the basest duplicity. You then sought, by the cunning artifice of a hinted engagement with my daughter, to mortgage her expectations as well as to injure her prospects. Such a proceeding I can only stigmatise as contemptible and systematic villainy. Your future course, whilst you remain in my house'——

But Mr Frank just walked into the hall, took his hat, and scribbling a pencilled address on an envelope, gave it to the servant for Miss Cray, and walked out, leaving his luggage and personal effects to be sent after him.

The note contained only an acknowledgment of the sum of twenty pounds borrowed from Norah.

SOLDIERS AS LABOURERS.

THERE is a problem waiting for solution, the decision concerning which will have much influence on the well-being of our people—namely, how can we most suitably treat our soldiers, so as to make them good members of society? In days not yet beyond the memory of persons now living, the British soldier was regarded as little better than food for powder; if he did his work well when fighting, the nation asked but very few questions concerning his behaviour or his treatment at other times. His trull was always ranked among the most worthless of her sex; while his oaths and his drunkenness, his ignorance and his brutality, were almost regarded as things of course. Happily, a great change has taken place in the tone of public feeling on these matters—due, in a marked degree, to the publicity which the press gave to the shortcomings of our military system in the Crimea. Fourteen years have passed away since that dreadful winter on the heights between Balaklava and Sebastopol; and they have been years of wonderful activity in all that concerns our army. Regarding the troops simply as fighting-men, the improvements in the belligerent appliances have been immense. New breech-loaders, new repeating-rifles, new revolver pistols, new conoidal bullets, new cartridges carrying their own detonating composition, new artillery of vast power and range, new projectiles of unprecedented hardness and efficiency, new time-fuses acting almost with the precision of clockwork—these have tended to make one soldier equal to many under the old régime. Then, the soldier, when on active service, has much to do besides fighting. For marching, his knapsack and accoutrements have been improved, and are likely to receive still further improvements. For the bivouac and encamping, many useful novelties have been introduced either in the materials or the construction of tents, huts, substitutes for beds, waterproof coverings, &c.; while the drainage and the water-supply receive an amount of attention which never used to be bestowed on those subjects. For barrack-life, sanitary arrangements are more and more sedulously studied—especially in the adoption of the Rev. Mr Moule's invention of the earth-closet, which the authorities in India describe as being almost invaluable in that hot and ill-drained country. For dress, the soldier is in better trim than in the old days of the 'clothing colonels,' when greatcoats were very spongy and boots very shaky. For food—thanks chiefly to improvements in the army cooking apparatus—he can have hot meats and fresh meats to an extent that he never used to dream of, and a larger allowance than formerly of warm and wholesome beverages. For his health, there are medical arrangements and comforts which gradually lessen the number of his sick days in the course of a year.

Digitized by Google

All this applies to the soldier on active service. Much of it is also applicable to the soldier in barracks; with several important additions. The barracks, one by one, are gradually being supplied with good gas-lighting, good warming arrangements, good ventilating, good draining and water-supply, good recreation and gymnastic rooms and courts, good reading and news rooms. Then, again, soldiers' wives are treated as respectable women. It is true that the state does not give quarters or rations to more than a limited number of women for each regiment; but when that number has been selected, the way in which they are treated is productive of vast improvement; the soldier can really have some of the comforts and ameliorating influences of a home, the magic of a tidy woman's handiwork replacing many of the rough and coarse ways of barrack-life. His children, too, share in the improvement, for the regimental schoolmaster (or schoolmistress) teaches the little ones, and instils into them habits which tend to their well-being.

Of course, all this cannot be done without expense. The English soldier is very costly, as our army estimates clearly enough shew; and the cost, too, is increasing; seeing that most of the ameliorations are a little more expensive than the older systems which they supersede. Nevertheless, the much-tried British taxpayer seldom objects to the charge, if it can be clearly shewn that the soldiers themselves, the rank and file of the army, are improved in health and efficiency and moral conduct by the changes gradually introduced. And, after all, there may not be more real expense in the end; for the nation can assuredly get more work, and more useful work, out of a soldier whose health and general conduct are well attended to, than out of a neglected, diseased, dissipated fellow, who is no comfort to himself, and no credit to anybody else.

There is another matter, quite apart from all those noticed above, which has an important bearing on the well-being of the soldier—this is, the profitable employment of some of his time when in barrack or camp during periods of peace. The artilleryman has his guns and gunnery apparatus to attend to, in addition to his own uniform and accoutrements; the cavalry soldier has his horse to attend to, and a somewhat onerous duty it is; but the foot-soldier of our line regiments has not much to do beyond attention to himself, in his dress, kit, accoutrements, drill, &c. A question arises, whether some of his spare time could be profitably bestowed on handicraft employment, either as an artisan or as a labourer? Many of the men had been apprenticed to, or engaged in, mechanical trades before they enlisted; while all could do something or other as labourers. This subject is not altogether a new one to readers of the *Journal*. Six years ago, we noticed it. We passed in review certain plans which had been partially carried into effect for employing soldiers in useful works. A military commission, two years earlier, had gone into the matter pretty fully, with a view of reporting on the practicability of teaching useful trades to soldiers, their sons, and their daughters, and of furnishing employment for the persons thus taught. The commissioners were asked to collect such information as would enable them to express an opinion—'whether the system pursued should be garrison or regimental; at what garrisons or dépôts it should first be tried; what buildings it would be necessary to provide, at what cost, and how to be defrayed; what tools should be provided, and how paid for; how materials should be purchased and accounted for; what rate of payment the trade-teachers should receive, and out of what fund; what prices should be charged and paid for work done; the kinds of trade to be taught and practised; the kinds of encouragement best to be given to induce soldiers to learn; the best mode of disposing of the profits; the keeping and auditing of the accounts; the degree to which such artisan-soldiers might usefully be employed upon barrack repairs and other public works; and the general regulations that would be necessary for carrying out the whole system.' The officers of every military district in the kingdom were applied to for information on the subject; they almost uniformly viewed the scheme favourably; and we gave* an epitome of the plan which the commissioners recommended. The progress made by 1863 was limited to barrack repairs at Aldershot. Since then, troops stationed in India have done most effective work in road-making; they have made long mountain-roads in the important strategical region between the Punjab and the Afghan frontier, available for armies and heavy guns in time of war, and for merchandise traffic in time of peace. This work, it was clearly ascertained, was done more cheaply by the troops than it would have been by private contract; while the men themselves were more healthy, more cheerful, and provided with a pleasant addition to their small supply of pocket-money.

It is satisfactory to find, from information recently made public by the War Office, that the military authorities continue to employ soldiers in barrack and in camp in a useful way, for barrack repairs and new works of moderate extent. Not much has yet been done in the way of actually teaching trades to the men; but such as already shew some tact as artificers, especially in the building trades, have been employed to a considerable extent. The Sappers, as may be supposed, are more serviceable in this way than the rank and file of the foot-regiments; for the Sappers are, almost to a man, good artisans, and are remarkably steady and intelligent fellows.

Let us see what some of the Reports say. Colonel Lothian Nicholson, Adjutant-general of Royal Engineers, speaking of the operations at the Curragh Camp in Ireland in 1868, says: 'The employment of the labour of soldiers at the Curragh Camp during the past year has produced the most satisfactory results. The barrack incidental repairs of about half of the buildings have been well and expeditiously performed by soldiers of the Royal Engineers (Sappers) and line regiments, at a saving of nearly forty per cent. of the total cost to the public. Soldiers have also been employed on new works; and it has been found that in large services, where the work is of a straightforward character, a great percentage of saving can be effected. My opinion is, that such a system as that now in full work at the Curragh, when in the hands of thoroughly capable officers of Royal Engineers, assisted by trained non-commissioned officers of Sappers, may be extended to all barracks in occupation, with the sole proviso that the moves of troops

* *Journal*, October 31, 1863.

Digitized by Google

take place at rare intervals.' This and another proviso are dwelt upon with some force: 'As long as the troops remain in any particular barrack only for a short time, it would be impossible to extend the system; and I would further remark that it would not be possible to carry out the system of military labour fully, unless the skilled labour supplied by regiments of the line can be supplemented by Sappers, and superintended entirely by officers and non-commissioned officers of Royal Engineers.'

There appear to have been many varieties of work included in that which Colonel Nicholson here speaks of—such as external painting, repairs prior to painting, field-officers' quarters, canvasing and papering officers' rooms, repairing the angles and sills of huts, renewing drying-posts, alterations in the sergeants' mess-rooms, repairing machicoulis, additions to the postmasters' quarters and the chaplains' quarters, reading and recreation rooms, providing pack store, ventilation of cells, married soldiers' quarters, incidental barrack repairs, incidental hospital repairs, repairing targets and rifle-ranges, repairing roads and improving the surface of the Curragh.

Colonel Chesney, reporting as to Aldershot, dwells on the importance of employing Sappers as skilled artificers, and soldiers of the line as labourers. Of the former he says: 'Under proper superintendence, at a station like this, their employment should save from twenty to fifty per cent. It has saved fifty on some large jobs performed here during the period of my observation.' Of the line soldiers, serving as labourers, he adds: 'Their labour in this form has effected a saving varying from ten per cent. on incidental repairs to fifty per cent. on some new works.' He offers grounds for believing that it is not so well worth while to employ Sappers as labourers or line soldiers as artificers.

Lieutenant M'Hardy, in relation to the military establishment at Parkhurst, tells us that 'the result which has attended the employment of the labour of soldiers on barrack incidental repairs has been very satisfactory; the works have been properly performed, and with expedition. The percentage would be thirty-five per cent. of saving by employing the soldiers instead of a contractor.' He confirms the opinion of Colonel Nicholson that the system is most usefully adopted when a regiment is stationed for some considerable time at one spot; it is not so well adapted for battalion dépôts, where the men come and go frequently.

Lastly, Colonel Driscoll Gosset, reporting on the operation of the system at Woolwich, says: 'The saving due to the employment of soldiers on incidental barrack services at Woolwich has been about twenty per cent., compared with contractors' charges. The works have been as well and quite as expeditiously performed as if done by a civilian contractor's agency. On new works, the saving has been about twenty-five per cent.' Until June 1868, it appears, only Sappers were employed at Woolwich on such works; but since then soldiers of the line regiments have been added, with a thoroughly satisfactory result; and Colonel Gosset remarks: 'A continuance of the system on a larger scale will, I am certain, develop its advantages in a higher degree.'

There is thus every reasonable ground for satisfaction at the result of the industrial employment of our soldiers. The nation, unless all the above-named officers are strangely in error, saves money by it; while the men are unquestionably more orderly, cheerful, and contented in their position.

A COUNTY FAMILY.

CHAPTER XXXI.—UNCLE DEAN.

The next day Mr William's conduct still shewed signs of grace. He was silent; but then in his case silence was indeed golden, though his speech could scarcely have been described as 'silvern,' but rather as small change in brass. He not only made no objection to the family migration to 'the Fishery,' which it was arranged at breakfast should take place on the ensuing day, but evinced a strong desire to depart at once: 'Why couldn't they go that very afternoon?'

This could not be done at such short notice, because of certain arrangements necessary to be effected for the invalid; but it was suggested by Mrs Blackburn that all was ready at the cottage, if William liked to precede the party by four-and-twenty hours, and establish himself there alone. But this he would by no means listen to; he would wait and travel with the rest. His sociability was so extreme as to become almost oppressive to poor Mr Waller, to whom he chiefly attached himself. 'I like to hear you talk, Waller, you have got such capital stories: be lively, there's a good fellow, because I feel rather down in the mouth, and as if, somehow, I was going to be ill.'

It was rather difficult to be lively under such depressing circumstances, and especially as his companion did not exhibit the slightest appreciation of his efforts, or indeed appear to listen to one word he said. His eye was on the watch, his ear was on the stretch, for that expected some one, more than ever.

Yet, when the footman came into the room where they were sitting late in the afternoon, with: 'You are wanted, if you please, sir, by a person in the front hall,' Mr William seemed by no means relieved by that indefinite summons. On the contrary, his lips grew white, and his jaw fell, so that he could not utter a word; and it was ready Mr Waller who put the question for him: 'What sort of a person is it, John, and what is his business?'

'Well, sir, he said he wouldn't give his name, but that Mr William knew all about him. I think he's some sort of a horsey gent.'

'Yes, yes,' said William with a testiness which the sharp eyes of the ex-M.P. at once perceived was assumed to conceal a sense of relief, 'I know the fellow. I have been expecting him this long time. It's a disagreeable business.—I am afraid I must see him alone, Waller.—John, if there is no one in the drawing-room, shew him in there;' and in a few minutes the young Squire was face to face in that gorgeous saloon with the man who had known him in his least prosperous days, and who knew his secret, but to whom, as we have seen, he had made up his mind not to give a sixpence of hush-money, and to carry matters with a high hand.

Still, Mr William's manner was far from that of one who wishes to pick a quarrel, or even to maintain a frigid isolation, as he rose and shook hands

Digitized by Google

with Uncle Dean. This gentleman, whom circumstances had associated with horse-flesh, and whose tight-fitting trousers and sporting scarf-pin had doubtless led the footman to that just conclusion, had certainly not been intended by nature for the saddle. He was upwards of six feet high, and of great weight, if there is any truth in the adage: 'It is bone that weighs;' but, whether from the constant habit of physical 'jockeying'—that leaning forward to hustle with the reins—or from that moral 'jockeying' which requires an earthward vision and a close inspection of one's fellow-creatures, his back was bent into a bow, which, assisted by the quick, searching glance that he bestowed upon his nephew by marriage, made him look one huge note of interrogation. He had placed a deep band of crape round his hat, in token of his sorrow for the loss of their common relative; but his long waistcoat was bright yellow, his trousers green, and his scarf a brilliant blue. Perhaps the poetry of his nature, forbidden an outlet through the usual channel, exhibited and expanded itself in colour, but certainly he was very highly tinted; nor was it his own fault, but Time's, that the hair which had been red was now quite gray.

'How are you, Dean? It was kind of you to come and look me up. I am only sorry that the house is full, so that I cannot ask you to take a bed.'

'Don't mention it, Mr Blackburn, don't mention it. I had no idea of sponging on you to that extent, I do assure you; but being in the neighbourhood, and wishing to hear about poor Bess'——

'That 's a sad story, Dean,' broke in the other hastily, 'and I don't wish to talk about it. Take some wine—take some gin.—Here, what 's your name? bring this gentleman some gin and hot water.—That used to be your tipple, did it not?'

'Why, yes, and yours too, in the old days,' said Mr Dean slily; 'but there, I suppose with the run of the cellars of a place like this, you never touch anything worse than champagne and brandy. Dear, dear, what a change it seems! Richardson and I were talking over it only the other evening.'

'Richardson is an infernal scoundrel,' observed Mr William bluntly.

'Well, he does run a little near the wind at times, no doubt. But so we all do, for the matter of that, or *have done*, eh, Mr Blackburn? As he was saying, only think of your being here a squire, and a magistrate, I suppose, and all the rest of it; sending poor folks to prison. Lor, what a game it is!'

'Yes, Mr Dean, and it 's a game that I have taken care shall not be spoiled by any man,' said the other slowly. 'I felt, of course, that I need never fear any molestation from *you;* but knowing what sort of a man Richardson was, and how like him it would be to hold over my head, as it were, for the purpose of extorting money, that trouble I got into at Chester, I made up my mind, upon assuming my position here, to make a clean breast of it at once.'

'You don't mean to tell me that all these fine folks about here know that you were in that horse-job, and got' (Mr Dean looked cautiously round the room, and the shining faces of the inlaid cabinets and gilded mirrors seemed to make him more cautious, for his voice sank to a whisper)—'got put into quod?'

'Yes, I do,' said Mr William boldly. 'I don't say that the servants and village people have been told, but everybody with whom the knowledge of such a circumstance could do me harm was put into possession of it at once. Of course, it did do me harm, but the worst is past, and the ground on which I stand at least is firm.—If you still doubt me,' for the other wore a very incredulous look, 'ask Mr Herbert Stanhope, whom, I suppose, you know, and who is staying here at present.'

As Uncle Dean sat rubbing his chin with his large hand, you might have thought that his face was made of india-rubber, and that he was pulling it out inches at a time, so obviously did it lengthen at these words. It was evident to him that the moral lever which he had brought with him to work upon his nephew-by-marriage would have no mechanical force.

'So Mr Stanhope is with you, is he?' observed he slowly. 'I know of more than one "party" that would be glad to know where he was.'

'Owes money, does he?'

'Money! He owes a fortune. *Gazeebo* must have cost him twenty or thirty thousand pounds at Goodwood; that is, he would have cost him, if he could have paid it. The idea is that he is gone abroad for a time, and that when he comes back he will settle everything; and Sporting Dawlish sticks by him in that story. But, there, since Mr Stanhope is a friend of yours, I 'm mum.—What a fine room this is, Mr Blackburn, and what a fine place! Lor, if my poor Bess could but rise out of her grave—— What 's the matter, sir?'

'Matter, man!' cried Mr William, trembling violently—'did not I tell you not to talk about her, not to speak upon that subject? If she happened to be alive, I couldn't stop you; I am quite aware of that. You would have been coming over here a dozen times a year to borrow money of me, upon the score of our relationship. But, mark me! if ever I give you a farthing—and I don't say I will, mind—it must be upon the distinct understanding that you never breathe a word about—about your late niece.—The fact is,' and here Mr William began to whine and whimper, 'you may believe it or not as you please, Dean, but I was not altogether a good husband to that poor girl; I was harsh and rough with her at times; and now she 's gone, I can't bear to think about it.'

'And she was a delicate creetur too,' said Mr Dean, shaking his head. Poor Bess had been really his own niece, and perhaps his conscience pricked him in that he had not been altogether a good uncle to her; or perhaps he only wished to exaggerate the case, as a question for damages. 'As delicate a creetur as ever I saw.'

'Just so,' said Mr William. 'She died of a consumption, with which she had long been threatened, out in foreign parts. The whole matter is one with which all my people are well acquainted, but of which they do not speak, because they know it pains me. You will oblige me, therefore, Mr Dean, by being silent also. There is nothing to be gained by speaking of it, either to me or any one else, you understand *that*, I suppose?'

Uncle Dean nodded assent; he had carefully gone over that idea, with an eye to business, and had been obliged to come to the conclusion, that no profit could be made out of a relationship that had become extinct. It had afforded him an excuse for his present visit (the real object of which had

Digitized by Google

been precisely what his nephew had foreseen), and nothing more could reasonably be expected of it.

'Very well,' said Mr William, 'you will distinctly bear in mind, then, that any present which I may think fit to make you now, or hereafter, is neither a tax nor a due. I fear no menace, as you may tell that scoundrel Richardson, if you please—and I acknowledge no claim in respect of our late connection by marriage.'

'I see that, sir, all quite plain,' answered Mr Dean deferentially. 'I am quite sure you have no call to help me with a shilling—though, if Bess had been alive, and knew that her poor uncle, who brought her up from childhood, was so devilish hard up as he is just now'——

'There, there; that will do, Mr Dean: I was quite aware that we were coming to that at last. Well, I had a hundred pounds with your niece when I married her, and I don't say but that I may be induced to refund it to you, as her representative, upon a certain condition.'

'I'll take my solemn oath, Mr Blackburn, that I'll never speak of Bess again as long as I live, if *that* is what you want. Of course, if you're going to marry again (as I hear is the case), you don't want people to go tittle-tattling all over the county about your late wife and her humble station just now.'

'Excuse me, Mr Dean,' said the other peremptorily, 'you would seem to imply that your silence is of some material importance to me; whereas no word of yours respecting your late niece could affect my interest in the smallest degree. It is merely a question of sentiment. I have asked you, as a favour, to avoid in future all mention of a certain subject, though I do not deny that you may have hit upon my reason for so doing. The condition I would impose is something quite different. You say that you know more than one party to whom Mr Herbert Stanhope owes large sums, and who would be glad to know of his whereabouts.'

'Yes, Mr Blackburn, I do; but I'll be mum as death for your sake—and in consideration of that hundred pounds you speak of.'

'Be so good as to hear me out, Mr Dean. You say that Mr Stanhope owes in all twenty or thirty thousand pounds. How is it he has not been declared a defaulter?'

'Well, it's all Mr Dawlish's doing, that is. He has the ear of some of our big men, and has persuaded them to wait; but there's others as I know of as have a matter of eleven thousand, or perhaps twelve thousand pounds in all, against Mr Stanhope, and they're hungry enough, I can tell you. They have been told it will be better for them not to press matters; but that don't stay their stomachs, you see, and they would like to know what I know, most uncommon. It's so precious difficult, you see, to get hold of a chap abroad.'

'Just so. I will write you a cheque for fifty pounds, Mr Dean, upon the understanding that you tell them (not from me, of course, but as a piece of information you happen to have obtained) that Mr Herbert Stanhope is staying *here*. Let them press him as hard as they please. Do you comprehend, man?'

'Very good, Mr Blackburn; but'—Uncle Dean hesitated a moment, and it is possible that across his untutored mind there flitted some crude notion of violated hospitality—'I warn you that they'll make it very hot for him. Once they think they have been deceived, they'll be as eager as a pack of hounds who have been thrown off the scent, and suddenly find it breast-high. They'll be fit to tear him to pieces.'

'Let them tear him,' said Mr William sullenly. 'When you have set them on, but not before, I'll send you the cheque for the other fifty.'

'You may consider that as good as done, Mr Blackburn,' said Uncle Dean as he drained his glass and rose from his chair. 'If you have no other commands for me, it is time that I should be off.'

'As you please, Mr Dean. This is a sick-house, or I should have been glad to offer you something more of hospitality. I have guests who, I do assure you, are less welcome. Perhaps, by the way, it will be well that you should see one of them, whose voice I can hear upon the terrace yonder, with your own eyes; you will not then need to speak from hearsay.' Mr William pointed to the window, and bidding the other to look out without being observed, asked him what he saw.

'I see a very pretty young woman, and a young man who has his back to me, but is evidently making himself most uncommon agreeable to her. I should say there was love in the case on one side, at the very least.—Now he turns; yes, that's my man, sure enough; and I confess I'm sorry for it, Mr Blackburn; for Mr Stanhope was ever an open-handed young gentleman so long as there was any'——

'Here is a cheque for the fifty,' interrupted the other coolly. 'And now I will shew you to your vehicle by the back way, since it's just as well our young friend yonder should not know to whom he is indebted for whatever happens.—Good-bye, Dean, and remember the sooner you set about your work the sooner you will get your pay.—Yes, yes,' muttered Mr William as he re-entered the house alone, 'I'll put a spoke in Mr Stanhope's wheel for him: *twice* has he interfered in my affairs; so that I shall owe him one even when these hornets come about him.'

He turned into the little room where he had left Mr Waller; but that gentleman, as soon as he had got released from his companion, had incontinently fled. It was growing dusk, and solitude was so insupportable to the young Squire, that he hastened to join the pair upon the terrace, notwithstanding that they were the two individuals whom, of all the unloved world, he liked the least. But at the open Hall door he stopped, petrified with amazement at what he saw upon the terrace. As Uncle Dean had described it, there was indeed a young man making himself so very agreeable to a young woman that it seemed that love must be upon one side at least: he was leaning forward and speaking eloquently, if not passionately, into her very ear, while she, though shaking her fair head with gravity, by no means had the appearance of inflexible denial. He seemed rather to be excusing himself for some course of conduct which she was reprobating, yet not without holding out a hope of pardon. But what had turned Mr William into stone, as though it were a Gorgon's head, and had also transformed his features into some likeness of a Gorgon, was this, that the object of these marked attentions of Mr Herbert Stanhope was not Ellen, as of course her uncle had expected it to be, but Lucy Waller!

CHAPTER XXXII.—THE JOURNEY.

Surely it is one of the most extravagant weaknesses of the human heart to set its affections on an object which does not reciprocate them; we may indeed love a child without our care and devotion being appreciated, or indeed any particular regard being shewn to us in return; but in the case of a grown-up *woman*, how *can* a man be so foolish as to press his attentions where they are not desired, and where, therefore, they must needs be unpleasing?

Although one would think that a very little self-conceit, or proper pride, would cause such a suitor to give up his quest at once, it is not usually a symptom of humility to persevere, but rather of a coarse and vehement will. Mr William Blackburn, for instance, as we have seen, was by no means of Sir John Suckling's opinion:

> If she be not fair to *me*,
> What care I how fair she be?

but coveted Lucy all the more that she, on her part, exhibited no sort of inclination for him. The scene he had witnessed on the terrace transported him for the time with rage, and laid up in his mind a third occasion of hatred against Herbert Stanhope, in comparison with which the two already garnered there were but slight. It was likely enough, indeed, that he might have been mistaken as to the cause of that gentleman's warmth of manner towards a young lady who had been his friend and neighbour from childhood, and, on the other hand, Lucy herself had certainly manifested no corresponding emotion; but when was jealousy capable of reflection? Under the circumstances, it was wonderful that William Blackburn was able to conceal the anger that consumed him; but the fact was the spectacle he had witnessed was not altogether without its mitigation: he felt himself tolerably secure of Lucy, since her father's fortunes depended upon her consent; and he was not displeased, for a certain reason, to persuade himself that Stanhope was not personally devoted to Ellen. At all events, Mr William's manner continued as urbane as we have observed it to be for the last four-and-twenty hours, and his inclination for society as strong; of this latter, the following was a curious example. Mr Waller and his daughter had departed the next morning for Mosedale, upon the understanding that they should spend the ensuing day at the Fishery, and Mr Stanhope accompanied them as far as Curlew Hall, where he had business to occupy him for a few hours; so that the Blackburn family were for once left to themselves.

'I suppose, Willy, you will take the mare over to the cottage?' said Mrs Blackburn after her guests had departed. 'You will have a charming ride across the moor.'

'Why so?' inquired he sharply. 'Why should I not drive with you?'

'Well, of course, my darling, we should be only too glad of your company; but then, you see, there is but room for two in the invalid carriage which takes your poor father.'

'Then let Ellen go in that, and do you come with me in the brougham. We have never yet ridden in our own carriage together, you and I.'

Mrs Blackburn hesitated: perhaps it struck her, that if not now, she would probably never again drive with her Anthony, and that it was to him that her duty was first owed; but she gave way as usual, and the brougham was ordered accordingly. Only she did insist upon its following the other vehicle, in place of preceding it. Her son, whose desire to get away from Redcombe seemed to grow stronger every hour, would have had it driven at a quicker rate, 'so as,' said he, 'to be at the cottage beforehand, and get all things ready for the governor.'

But his mother was firm in adhering to her own plan. 'Everything is quite prepared there, Willy, and I will not consent to be separated from your father more than has been already done. Think if anything should happen to him on the way, and I were not close at hand, could I ever forgive myself?'

And so, not unlike a funeral procession, the invalid carriage, with its motionless occupant and Ellen, took the lead, while the brougham followed at the same slow pace. The villagers lined the little street in mournful silence. The short experience they had had of the old Squire's rule had been a favourable one, and they had every reason to expect less good at his successor's hands. As for the report of the estate having been left to Miss Ellen, they did not credit it: the Blackburn land had always gone from father to son. It was indeed a melancholy exodus. It was observed that Mr William was very pale and awed, and exhibited much more feeling than he had been supposed to possess. Singular to say, this not only continued to be the case with him, but he even grew more serious as they proceeded on their journey. In vain his mother endeavoured to console him. 'You must not give way so, dear Willy, although I am glad to see you so deeply touched. It is rather for me to weep, who must soon lose the friend and lover of fifty years yonder. The last time, yes, the very last that he and I journeyed together this way'—— The poor lady could not finish the sentence; the memory of the past was too bitter to be shaped in speech: it was a fact that the last time she and Anthony had taken the Mosedale Road together was on their way to be married, when they were little more than boy and girl. There are probably but few old people, even of the most unsentimental sort, on whom at times some thought of this kind must not intrude, more affecting, surely, than any grief which self-conscious youth imagines or supposes. Perhaps the springs of regret are as fast frozen in their case as those of passion? Heaven grant it may be so.

There was one consideration that certainly tended to Mrs Blackburn's comfort—the universal sense of her husband's hopeless condition confined her own apprehensions to that channel, and removed her anxiety with respect to her son. If any warning of approaching death had really been sent through her to the House of Blackburn, it must surely needs have relation to the poor Squire, whom all men thus regarded as a doomed and dying man. It was in continuation of this idea, so strong in its possession of her mind that she was probably ignorant of not having given it expression, that she suddenly whispered, as they drew near the termination of the moorland: 'We are getting near the very place now, Willy.' Her son had been leaning back with closed eyes, but he opened them at those words, and turned upon her a face of ghostly horror.

Digitized by Google

'Don't fear, Willie,' said she, herself greatly alarmed at his appearance, inasmuch as he had hitherto affected to speak of the matter with contemptuous disbelief: 'it is your poor father who has been sent for, if anybody, and not you, darling. I feel quite sure of that, except when you look so strange as you are doing now.—What on earth ails you, Willy?'

'Nothing, nothing,' gasped he.—'Why don't they drive faster? They are stopping, they are stopping, I tell you. What do they see?'

'Stopping?' cried his mother: 'then something has happened to Anthony; O dear! O dear!' and as the brougham pulled up, she opened the door, and got out quickly.

'Stay here, stay with me,' cried William wildly: 'I will not be left alone.'

But she was already out of hearing.

After all, the leading carriage had but stopped on the brow of the steep Redmoor hill to put the drag on; but Mrs Blackburn seized the opportunity to look in upon the invalid. Was it her fancy, or had the passing through the air really revived him somewhat from that long lethargy, and even called up a tinge of colour in his pallid cheeks? Or was it possible that the scent of the fir-grove, or the sight of its gentle waving tops, had in his mind also awakened a reminiscence? Certainly his eyes welcomed his wife with a glance of ineffable tenderness, such as they had not shed for many a day.

'I think he would like you to get in and sit by his side, grandmother,' whispered Ellen earnestly.

'I will, I will,' replied she. 'But do you take my place with Willy. Your uncle is not well, Ellen; look to him.'

Her grandmother and she therefore changed places. It was the first time for weeks that Ellen had been left alone with her uncle, and she shrank from the idea of his rough companionship; but, to her astonishment, he seemed pleased to see her, and scarcely to notice that she was his mother's substitute. She was about to explain why she had left the other carriage, but he interrupted her with incoherent words: 'Quite right. Good girl, good girl. We are moving now. Faster, faster! Why do they linger? Let me hold your hand;' and he took her fingers in his own, and clasped them tight. 'Are we down the hill yet? Have we passed the —the fir-grove? Is the moorland out of sight?' For again he had closed his eyes, as though unwilling to look out upon the landscape.

'We are nearly down the hill, uncle,' answered Ellen quietly, though in extreme surprise; 'the moor is out of sight, and I can only just catch the top of the embankment of the reservoir. Now we are stopping once more to take the drag off. The valley lies open before us, and there is Mosedale Church spire.' She went on talking, not for talking's sake, but with that desire which seizes us when alone with those with whom we are ill at ease, to avoid silence. 'It is certainly warmer here than at Redcombe; it seems as though we were miles and miles away already. How green and summer-like are these fields and woods!'

'Ay, so they are. It looks quite different, as you say. The air is better too; I felt so oppressed just now—it was the warmth of the fir-grove, I suppose —that I could hardly breathe. Did I not look ill? Did I not say foolish things? I think I must have been half-fainting.'

'You looked very pale, uncle, but seem much better now. As you say, the air is delightful, though it is surely not so fresh as on the moorland. Heaven grant it may do grandfather some good!'

'Just so: it's lovely. I think I'll just smoke a pipe. Tobacco always does me so much good. I'm deuced glad we have left Redcombe, for I think the place was beginning to disagree with me; at least I felt uncommonly hipped.'

'It has been a sad house of late to all of us,' sighed Ellen. 'First, the tidings of poor Aunt Bess's death! What a kind heart she had, and how she loved you, uncle! I can scarcely picture to myself that she is really dead; and I sometimes think'—— She hesitated.

'Think what?' interrupted William fiercely.

'Well, perhaps it's wrong, uncle; but I sometimes think that if she had been amongst us, and lived at home, and especially as we live now, no longer pinched and worried by poverty, she might have been spared to us yet. Dear patient, loving Bess, I seem to see her now!'

'Don't be a fool,' cried Uncle William angrily. 'Why do you talk about a subject which you know I detest? That is, one that is naturally painful to me. You are worse than your grandmother: she is always talking about dying people, as if I could help the governor's being in such a bad way. Is it not enough to be with him all day, without coming down-stairs and telling other people all about it, so as to make their flesh creep?'

'You see, uncle, dear grandmother finds it hard to get poor grandfather out of her thoughts.'

'So it seems, indeed. But that reminds me.—I daresay *you*, Miss Ellen, are not so entirely wrapped up in your grandfather's state of health (however much you may be interested by his *death*) as not sometimes to think of other things—such as marriage, for instance.—There, you are turning quite red, which is as good as a "yes." Well, I daresay you think yourself quite sure of your young man—that you have only got to whistle to him when you want him. But don't you be too sure; that's all I say.'

Ellen was indeed blushing scarlet, but it was with contemptuous indignation at her uncle's words. She had for the moment forgotten the very existence of the person to whom he was alluding.

'I say,' continued Mr William, 'you may be cut out by somebody whom you little suspect, if you are not civil to that fellow Stanhope—as civil as I am to Lucy, for instance.'

'How can you talk of Lucy, uncle, in that way,' cried Ellen passionately, 'with dear Aunt Bess scarce cold in her grave?'

There was a long pause; the allusion was certainly not without its effect upon the widower; his face once more assumed a ghostly pallor, and even his lips turned white. Ellen began to think that she had given him too sharp a shock.

'Look here,' said he huskily; 'just mark me, once for all, you slut: you mind your own business. It is about your own affairs, not mine, that I am talking to you. You are not holding this man Stanhope tight enough in hand.'

'Mr Stanhope is nothing to me, uncle,' said Ellen firmly.

'Ay, but he is, though; and he shall be too, at all events for the present. Don't you know what your grandfather wishes, miss, and ain't I here, as it were, in the place of your grandfather? You had better not make an enemy of me, I promise

Digitized by Google

you.' He grasped her roughly by the wrist, and wore his ugliest look. 'I am not going to be thwarted by any living soul. Do you hear *that*? If I think it well that you shall have this man, you *shall* have him; and if not, *not*. You are to hold him now fast, now loose, just as I tell you; or, by Heaven! it will be the worse for you. You don't know me yet, or—— Confound the wench, if she has not fainted right off! I'm glad I've given her a good fright, however; and here's the Curlew with plenty of water to bring her round.'

The next minute they had crossed the bridge over the stream; and the Fishery with its little garden lay immediately before them—as fair a dwelling as was ever seen by river-side.

CONCARNEAU.

Last summer, during a tour through Lower Brittany, we visited Concarneau, for the purpose of seeing the sardine-fishery. But though the capture of the sardine, and its preparation for the market, is a sight in itself well worth the trouble of a journey to Brittany, still, we considered the greatest attraction at Concarneau is the establishment for breeding and observing the habits of fish. The *viviers*, as these large aquaria are called, are supported by government—that is, they are under the management of government; but the official who has the charge of them informed us that the sale of the fish more than supported the cost of the establishment. The viviers are a series of large tanks about ten feet deep, cut out of the solid rock. The depth of water in them varies from two to three feet. In the side of each tank there is a flight of steps, roughly hewn in the rock leading down to the level of the water. The floor of the tanks is of sea-sand, and the water is supplied by a pump, which is worked by a small windmill. The first tank which we visited was full of lobsters of all sizes. Into this tank all the lobsters are turned as soon as they are old enough and strong enough to hold their own against their cannibal brethren. Our obliging conductor informed us that the lobster took five years in arriving at maturity, and that the female lobster then, for the first time, took upon herself the cares of maternity. As soon as a female is observed to have laid her spawn, which, as we all know, she carries about with her between her numerous legs, she is caught in a small net, and placed in a separate tank. This tank was partly covered over, most probably to protect the young from the glare of the sun. Here the eggs are hatched, and the young lobsters have plenty of room to grow without running the risk of being devoured. A pail was let down into this tank, and when it was drawn up, we could see that the water was full of tiny lobsters, who, strange to say, instead of being dark blue in colour, like their parents, were bright red, and looked as if they had been boiled. Adjoining the lobster tank is one devoted to the cultivation of the crayfish, and the whole surface of the water was bristling with the antennæ of these formidable-looking crustaceans. In spite of its very forbidding appearance, the crayfish is in some places almost in as great request as the lobster.

The curator next shewed us the turbot tank, in which, he said, there were more than a thousand turbot of various sizes. 'Surely Monsieur has made a mistake: in this tank we can see nothing but a few rock-fish darting about.' But wait a minute; Monsieur is going to throw in some heads of sardines, procured from the neighbouring *usine*, or curing-house, and then we shall see the turbot. And as the first piece of fish struck the water, the whole tank became alive; and we saw that the bottom was literally paved with huge turbot, who, lying with their dark sides uppermost, would have escaped the notice of the sharpest eye, so exactly did their upper surfaces correspond in colour to the sandy bottom on which they lay. Such crowding and pushing for the food! From all parts of the tank, the great flat-fish came flapping to the feast, till the corner of the tank below us was a struggling mass of turbot. The lithe and active rock-fish darted in and out between the unwieldy turbot, and often snatched the food out of their very jaws, trusting to their speed to escape the snap of the ill-treated creatures.

The next tank contained some specimens of the huge angel-fish. These gentlemen were very sleepy in their dispositions, and refused to move even when stirred with a long pole. They spend most of their time at the bottom of the sea, rooting and burrowing in the sand, and swallowing all the fish which they dig out. After this, we were conducted into the building attached to the viviers. The room which we entered was surrounded on three sides by glass aquaria; the fourth side was devoted to a series of square glass basins, all of which communicated with one another, so that a constant stream of water could be passed through them. In some of these basins, a series of curious experiments had been carried on with turbots, soles, and other flat-fish. Each basin was lined with different-coloured sand—black, white, gray, and yellow. The flat-fish kept in these compartments were found, in course of time, to change in colour, until their upper surfaces corresponded exactly in hue and shade to the sand on which they lay. So exactly did they assimilate themselves to the various-coloured bottoms of their tanks, that it was hard to distinguish them from the sand, even in the shallow basins in which they were kept. All these fish were quite tame, and answered to the whistle of the curator, coming to the surface to feed from his hand. So eager were they to seize the food, that one of them actually struggled out of his tank in the pursuit. In one small basin there was a solitary lobster of large size, who, upon being addressed by the curator as 'Fifine,' rose to the surface, and looked out from between his formidable claws, as if expecting some food. He was presented with a piece of sardine; but this had to be put into his mouth with great caution, as the ungrateful creature snapped fiercely with his huge nippers at the friendly hand that was feeding him. In some of the tanks there were invalided lobsters, who had lost one or both of their claws. These were kept separate, for the purpose of watching the very wonderful process of reproduction; for when the lobster loses a limb, he is not a hopeless cripple to the end of his days, but in due time grows a new claw in the place of the lost one. This accounts for the number of lobsters which are brought to the market with claws of unequal size. The lobster parts with his claws with great facility, for he is a very quarrelsome fellow, and frequently loses one of these members in an encounter. Besides this, any sudden noise, such as the report of a gun, will cause the lobster to shake off his

Digitized by Google

claws. As soon as the limb is gone, he retires into private life, and in a short time a new claw buds forth from the joint, and grows rapidly. We could not discover whether the new limb ever attains the same size as the other.

In a circular stone basin in the centre of the room were kept a number of conger-eels. These creatures were supplied with several earthenware pipes, into which they crawled. These pipes were supposed to replace in some degree the crannies and holes in the rocks in which the conger-eel delights to hide himself; but as most of the eels were lying with their heads out of one end of the pipes, and their tails out of the other, the concealment was about as complete as that of the ostrich, who is said to hide his head in the sand, and fancy that, 'because he can't see the hunters, therefore the hunters can't see him.' We were told that but little is known of the habits of the conger-eel, more particularly of its manner of breeding, and that this tank was made especially with a view to observing the manners and customs of this species. One of the most curious things that we saw was the egg of the dog-fish. The dog-fish, being a kind of shark, would be a dangerous neighbour to other and less voracious fish, so a separate glass tank of considerable size was assigned to a female dog-fish and her eggs. These eggs are the same as the curious leathery pouches which are so common on the sea-shore, and are known by the name of 'devil's purses.' But the living egg with the young shark in it is a very different-looking thing to the dried horny devil's purse. In the first place, the egg is provided with a long tail-like filament at each corner; these filaments are entangled in and attached to the weeds at the bottom, and serve to keep the egg moored, and prevent it being dashed about by the waves. In the second place, the living egg, instead of being black in colour, like the empty purse, is of a brownish yellow, and semi-transparent, so that the young shark is plainly visible through the outer covering. This dog-fish appeared to be quite blind by daylight, for she took no notice of a piece of sardine that was dropped in front of her, until it was pushed under her nose, when she devoured it greedily.

In another compartment were several of the pretty little sea-horses. The curator kindly shook the weeds to which they had attached themselves by their prehensile tails, that we might have an opportunity of observing their very curious mode of progression. This fish glides through the water in the most curious attitudes, and, at a first glance, one would think without any visible exertion; but upon looking closer, the beautiful dorsal fin can be seen vibrating with tremendous rapidity, and with a curious wavy motion. The extraordinary attitudes assumed by this fish, both when at rest and in motion, together with the strong resemblance in its head to that of the quadruped from which it takes its name, gives it a most quaint and unique appearance. After shewing us these and many other curious things, the curator offered to conduct us to the laboratories, which occupy an up-stair room. We were unable, from want of time, to avail ourselves of this offer, but we were informed that they were fitted up with every convenience, and contained all the apparatus necessary for investigating the natural history and structure of the inhabitants of the sea. These laboratories are accessible to any student of natural history. We were altogether highly delighted with our visit to the viviers.

On coming away from the viviers, we saw that the fleet of fishing-boats was returning from the capture of the sardines. After watching the first few boats pass into the harbour, we directed our steps to one of the usines, as the curing-houses are called. On arriving at the gates, we encountered a stream of boys and men carrying baskets full of sardines. These were carried into a long room, and thrown down upon heaps arranged in rows along the floor. Beside each heap was seated a girl or woman, armed with a sharp knife, whose occupation was to cut off the head of the sardine, and prepare it for the salting. The decapitation was performed by a stroke of the knife from the back of the head obliquely downwards; and in this manner the head and intestines were removed together, and the trouble of cleaning each fish separately was saved. The heads and entrails were thrown into pails, and carried away for manure, and the bodies were passed on in tubs to the salting-room. Here women were again employed arranging the sardines in layers, in large rectangular tubs, and spreading salt over each layer. The fish are allowed to remain in salt from two to three hours, and then they are taken out and arranged on wire-frames. Each frame accommodates a dozen fish, and these frames are lowered into large caldrons of boiling oil for about thirty seconds. They are then carried out, and hung upon racks in the open air, and in about two hours are ready to be packed into boxes, and soldered down for exportation. If the weather is damp or rainy, the sardines are dried before fires in an underground room. The tin boxes in which they are packed, and which are familiar to all of us, are made in the usines, and the copper labels are attached to them afterwards by the different houses who buy them from the exporters. A great number of the sardines consumed in England come from Concarneau, but, of course, our market is also supplied from other fisheries.

A SEA-SIDE SKETCH.

The sun sinks down a round red disc;
And seen against it, tapering thin
(Relieved of all the cares of risk),
The fishing-smacks come riding in.

Slow sinks the orb beyond the bay,
Or so, at least, it seems to sink—
A thirsty charger, shall I say?
Slow stooping in the sea to drink.

And beating shoreward, sea-gray gulls
Come sailing up the Sound in flocks,
Then clean their wings, and seek their holes,
Aloft amid the rifted rocks.

The soft winds play round poop and prow,
Too weak to climb the rocky cliff,
Within whose deepening shadow now
Lie bulky barge and tiny skiff.

And over all the scene anon
A denser darkness draws around;
The village lights shew one by one,
And night comes hushing every sound.

ANTIQUARIAN LOGIC.

A TRUE STORY.

THE recent discovery of Roman antiquities has been followed by a correspondence, the tone of which occasionally reminds one of the disquisitions of Mr Jonathan Oldbuck. It would be invidious to particularise, where the correspondence is so recent, and where, doubtless, all that has been called forth by a discovery of considerable interest has been written in perfect good faith. But here and there we notice traces of that quality which seems peculiar to the true antiquary—the power of establishing the widest possible inferences upon the narrowest possible basis of fact.

It may not seem malapropos, therefore, to relate, at this time, a circumstance which rather more than a century ago set all England laughing, and has been made the foundation of two of the most humorous episodes in modern fiction—the famous 'prætorium' scene in the *Antiquary*, and the story of 'Bill Stumps his mark' in *Pickwick*. Amusing as both those stories are, they yield in interest to the real event on which they are founded. Mr Oldbuck had but four letters to saddle with a meaning, and although these four (A. D. L. L.) were very amusingly rendered by him into *Agricola dicavit libens lubens*, his views were not met by rival absurdities. The story also halts a little, for it requires a strong exercise of imagination to conceive that one of the 'kale-suppers of Fife' should have been at the pains to carve a representation of 'Aiken Drum's lang ladle,' with the initials of its description appended. There is a similar inconsistency in the story of the stone which bore the sign-manual of the apocryphal Bill Stumps, to say nothing of the forced aspect of Mr Pickwick's attack of archæological enthusiasm, which nothing in the recorded conduct of that famous man would have led us to expect.

To turn, however, to the true story, on which these humorous episodes are founded.

Rather more than a century ago, some labourers at work in a marshy heath in Northumberland discovered a fragment of stone which bore marks of squaring, and on which also could be traced a few symbols which seemed to the labourers to represent letters. They carried this stone to the squire of the parish, who had it cleaned; a process which led to the detection of several more letters, forming with the others an inscription of some sort. But the letters were so badly drawn, and so disfigured by time and ill-usage, that it was not possible to make out very clearly what they were; and as for making any meaning out of their collective force, we shall see presently that that required the exercise of far more learning and ingenuity than were to be looked for from a simple country squire. The inscription appeared to run much in this wise:

K·EEP·O·N·T
H·ISSI·D·E

But the letters, as we have said, were severally indistinct, so that some latitude was permissible in their interpretation.

The squire presently called in the aid of the rector, and together these worthies conned the worn old stone. What theories they formed respecting it, what disputes, perchance, they had over it, history sayeth not; all that is known is, that they were unable to form any satisfactory hypothesis; but feeling certain that the stone was a valuable relic of antiquity, they looked about them for proper authorities to whom they might refer the interpretation of the inscription.

It was at length decided that the parson should take a copy of the inscription, and forward it to the Antiquarian Society, with the request that the members of that learned body would favour the world with their opinion on the relic. Nothing loath, the Society proceeded to debate with their customary acumen upon all the circumstances connected with the stone and its discovery; and not satisfied with this, several members sent in written papers, which were duly read before the Society, published in its Proceedings, and copied into most of the public journals of the day.

The first theory was put forward by a writer

Digitized by Google

whom we will call Mr A. His lucubrations are too valuable to bear mutilation, so we shall give them in his own words. 'On the first examination of this stone,' he says, 'I was not able to form any satisfactory conjecture concerning the inscription; but as the identity of the place where it was found ought to be materially considered, I wrote to a gentleman of the district for information, if there were any vestiges of antiquity, such as camps, fortifications, or the like in the vicinage. In answer to which inquiry, I was informed that there was nothing of this kind which he knew of, except the ruins of a priory about a mile distant.' One might have supposed that A. would have been disheartened at this circumstance, since an inscription having relation to the priory could hardly be expected to have turned up at so considerable a distance from the building itself—or rather its ruins. But so far from being disheartened, A. was perfectly satisfied. 'This is indeed sufficient for our purpose,' he wrote, 'and clears up the matter at once. *Clemens* (K·L·E·) *pontifex* (P·O·N·T·) *hic jacet* (H·I·) *sanctus* (S·) *servus* (S·) *dei* (I·D·E·). The second letter of the inscription is clearly an L, and the I·D·E· a transposition of D E I, from the ignorance of the sculptor; the meaning altogether being, that the stone was erected to the memory of one Clement, a dignified brother in the convent. (Literally, Clement the priest here lies, a holy servant of God.) Nothing can be more plain and easy than this.'

It may be worth while to dwell a few moments on this interpretation of the inscription, because it embodies one of the most marked peculiarities of antiquarian logic. We notice, first, that a 'dignified brother in a convent' could never have been called 'pontifex' by his fellow-friars, unless they were remarkably ignorant; and even then, it would be difficult to explain why they should have gone out of their way to adopt a mode of expression which must have been wholly unfamiliar to them. But the coincidence that three letters which can be taken to stand for the name Clement, should be followed by four which form the natural abbreviation of the title 'pontifex' is too much for our antiquary. And when he finds the name and title of the departed brother followed by the usual symbols for *hic jacet*, confidence gives place to absolute certainty. Otherwise, the difficulty in the last three letters would have proved too serious even for a professed archæologist. That a sculptor, however ignorant, having to engrave the letters D E I, should have begun with the last letter, seems to ordinary minds inconceivable; but to an antiquary *who has already formed his theory*, the mistake appears the most natural thing in the world. After this, the *prava latinitas* of the inscription is scarcely worth mentioning as a difficulty.

But A.'s solution was not satisfactory to all his brethren, however plain and easy it appeared to himself. Let us see what B. had to say on the subject. Again we quote the *ipsissima verba* of the ingenious archæologist. 'I was never so much astonished in my life,' says B., 'as at the perusal of Mr A.'s solution of the inscription in question. What a forced construction! What a preposterous idea! I will grant him that K is often found on monuments of antiquity in place of C; but how, in the name of wonder, could he imagine the two following letters to be L E, which are plainly Æ? But the cream of the jest is I·D·E·, a transposition of D E I.' B. is very ready, it will be noticed, to point the finger of scorn at the theory of his brother antiquary; he is equally ready to put forward his own solution of the difficulty. Let us see whether it is as plain and easy as A.'s. We must premise, however, that he had the advantage over A. in having actually visited the spot where the stone had been discovered, and the ruins of the supposed priory. 'On a personal survey,' he writes, 'I have discovered that the stone was found near an old Roman *military road*. Here, indeed, we have a light thrown upon the subject which will clear up all manner of difficulty. First, K is often found in inscriptions for C, and here standing for Cælius—*Æ, ædilis*, an officer whose business it was to see the roads kept in proper order; P·O·N·T·, *pontem;* H, Hadriani (the same person who built the wall to prevent the incursions of the Picts—thence called Hadrian's Wall); I S S I, *jussu*, the first *u* and the former part of the latter *u* being obliterated; D·E, *demolisit*. (In all, *Cælius ædilis, Hadriani jussu, pontem demolisit*—Cælius the ædile, by the order of Hadrian, demolished the bridge.)' Nor does B. fail to assign a reason for the demolition of the bridge, a fact which at first sight might seem surprising. The morass had been drained, it appears, and thus 'the bridge was rendered unnecessary.' As for the priory, that had no existence except in the brain of A., for the ruins belong to the old bridge, says B.

It is possible that, had B.'s interpretation come first, A. would have found as much to laugh at in it, as B. found in A.'s. He was in all probability preparing to demolish the new theory, and to rehabilitate his own, when a third hypothesis was set up by C., who scoffed at the two former views as 'the most ridiculous that ever entered the head of an antiquary.' C. remarks that, in inscriptions such as this one, each letter must be taken to represent a word. Just as Mr Oldbuck found a word for each letter of the inscription A. D. L. L., so C. boldly constructs a complete sentence from the fourteen letters of the Northumberland stone. 'I have taken,' he says, 'the most obvious and generally received meaning of the initials, and find the solution to stand thus: "*Cæsaris ex edicto per orbem nuntiatur templum hic instauratum sacrum sibi ipsi dicatum est;*" that is, "Through the edict of Cæsar, it is announced over the world that the temple here erected is consecrated to himself." Here we find Cæsar—after having, like Hercules, finished the greatest of his labours—after having extended his conquests over the Britons, usually called fierce and indomitable—erecting a temple on the limits of his ambition, and, flushed with victory, assuming the honours of a god! This,' he adds, 'is the most easy and natural construction, and perfectly consonant with the precise terms in which their inscriptions were generally couched. We need no other proof to convince us of the certainty of the fact; but, as a corroborating testimony, if we look into Horace, we shall find a passage, evidently referring to this very circumstance:

> The rank of god Augustus shall obtain,
> With wild Britannia added to his reign.'

C. does not explain how it is that history has omitted to record the fact that Augustus had 'extended his conquests over the Britons, usually called fierce and indomitable,' or had indeed ever

Digitized by Google

set foot in Britain. Apparently oblivious of this somewhat important omission, he dwells enthusiastically on the historical value of the antique relic dug up in Northumberland. 'What,' he asks, 'would a Camden or a Holinshed have given to have traced the footsteps of Augustus Cæsar so far as the northernmost parts of the Brigantes (one of the divisions of the country under the Romans), or to have seen him introducing the Roman temple into Britain!' For C., like B., had been at the pains to visit the northern shire, in order to examine the now celebrated ruins, and he had come to the conclusion that both A. and B. had been mistaken as to the character of the stones. 'They bear a much greater resemblance to the remains of an old temple,' he says, 'especially one which has the uncouth figure of a sword upon it.'

C.'s labours were not unappreciated by the learned body to which he had sent them; for we find that he was at once elected as a member of the Antiquarian Society, and without a single dissentient voice.

And now there seemed nothing to prevent D., E., F., and all the other letters of the alphabet, from having their own account to give of the interesting relic. An inscription which had been so satisfactorily interpreted in three different ways might fairly be held to admit of other meanings; and as each new inquirer met with increased attention, there is every reason for believing that the world would have profited by an extended series of labours on the subject of the relic, but for an unforeseen and disastrous catastrophe.

It had not occurred either to B. or C. to make any inquiries respecting the treasure-trove in the neighbourhood of the place where the stone was found; whether they feared that others might step in and reap the reward due to their own labours, or from whatever cause, certain it is that they carried on their investigations with the most profound secrecy, until the time had come to divulge a theory—*totus, teres, atque rotundus*—to the outer world. But the results of their labours were too remarkable to remain unnoticed, even so far north as Northumberland; and thus it came to pass that in the course of time the news of the great discoveries which were being made reached the place where the stone had been found. An aged schoolmaster, amongst others, read in the papers of the day, or heard from some of his neighbours, about all the great things which had been done by the Society of Antiquaries. It is clear from the sequel that he must have been a man lost to all sense of the dignity of science. Had he but held his tongue, the world might still have admired the learning and the acumen with which our forefathers had dealt with an interesting relic of antiquity. But this hard-hearted and unfeeling old man would not hold his tongue; and it unfortunately happened that he was but too well acquainted with the real history of the stone. He remembered, he said, a kind-hearted cottager who had lived near the morass in which the stone was found. This cottager, anxious to warn all whom it might concern of the dangerous condition of the road in the neighbourhood of the morass, had been at the pains to carve upon a stone the injunction, 'Keep on this side.' But, like Bill Stubbs, the cottager was not an adept in the art of chiseling inscriptions, and accordingly the result of his labours was of a dubious character; and being valued rather according to its merits than according to the good-will of the carver, had been presently flung into the morass. Thence it had been dug out, under the influence of some malign star, to bring confusion and ridicule upon the learned antiquaries of England.

A YORKSHIRE COAL-CELLAR.

In the centre of the Yorkshire coal-district, that is to say, in the high undulating land round Barnsley, the usual characteristics of a coal-producing country, smoke, blackness, and desolation, are supplemented by the peculiar scenery of the county. The energy and rugged determination of Yorkshiremen prove them true sons of the soil, to judge from the persevering efforts nature makes here on all sides, that her woods and brakes shall retain their dominion. Let a colliery be abandoned, and nothing but barren heaps of slack and scoriæ remain to shew where busy tramways once ran, and 'hands' clustered round corves of coal; straightway, juvenile woods rise up in this district as by magic, while bluebells and faintly blushing anemones carpet their feet, and hide the cinders with a thin surface of verdure. The immense beeches and aged trees of all kinds that are found in this county, relics of old Sherwood Forest, everywhere look down with encouragement upon such praiseworthy attempts on the part of their scions. These are two distinct features of the Yorkshire coal-district. Then, again, the absence of brawling streams and slaty protruding rocks, the small farm-houses that nestle under every hill, and bring under cultivation at least some patches rescued from the woodland, contrast strongly with the dull-green rounded backs of the waste mountains in the Welsh coal-fields abandoned to bogs, and tenanted only by snipe and cotton-grass. Northumberland pit villages are squalid and wretched to the last degree: the vigorous arms of the 'Pogsmoor folk' suffer no dirty floors or broken windows in their neat rows of substantial stone-built cottages, where flowers brighten every lattice, and the children play, as yet happily unconscious of their doom. Perhaps, too, there are not so many public-houses; and there are certainly more schools here than in any other coal-district of our acquaintance.

With iron and coal, spite of the most rigorous laws, furnaces never seem to consume their own smoke; but in the Barnsley district, although both these substances are largely extracted and manufactured, though every form and shade of volleying, pouring, jetting, puffing, hissing, roaring, and shrieking steam and smoke abounds, the atmosphere is seldom overhung with a dark pall. Owing to its elevation, as compared with other coal-producing areas, these nuisances, together with their smuts and all other kindred abominations, are speedily dissipated. Doubtless Jack the puddler and Tom the collier will occasionally take more beer than is good for them, on exceptional Saturday nights, when their language may not be altogether parliamentary, but temperance and education have restrained much of the immorality in which they formerly claimed a vested right. The 'canny,' reserved, yet hearty character of Yorkshiremen has been tempered by participation in such calamities as have been but too frequent of late years, and of which the Oaks Colliery in its unworkable state, crowded with dead bodies, was of late but too

Digitized by Google

awful an instance. Seriousness has largely taken the place of profanity, and steadiness of disorder; while the love of horses, flowers, and fair-play, innate in Yorkshiremen, has not in the coal-district been corrupted to any great extent by the late immoral proceedings at Sheffield, or the low dog-races and similarly questionable amusements which still divert the grinders and saw-filers at that place.

But here we are at 'the bank,' having passed by two or three rows of white-washed houses, where the workmen live, and stumbled with some difficulty over divers heaps of slack and cinders, crossed by tramways, till we mounted the last 'tip' to the pit-head. We will call it the Higher Carton Colliery, belonging (as almost all the country hereabouts does) to Earl Fitzwilliam. Our guide, an old wizened man of seventy-six, but strong and hardy for his age, meets us with a brisk 'Gude morning! I'm thinking ye are rather behind time; but it does not matter'—and leads us to the pit-head. A thick wire-rope, worked by a steam-engine in a house hard by, is drawing up a 'corve' of coal at the same time that an empty one goes down; while active fellows are wheeling the full corves off as fast as they come to bank, on the afore-mentioned tramways. After watching the continuous ascent and descent of the full and empty corves for a minute or two, our guide steps on to the platform just vacated by the ascending corve, and bids us do the same. Though this platform is not much more than a yard square, we three take our places, holding on to two iron bars, which cross the cage somewhat higher than our heads, not without a little inward trepidation on the part of us strangers, and a whispered comparison of ourselves to Calcraft's subjects under the fatal beam. Not a moment is lost, however, and we immediately sink; this act is followed by the same disagreeable sensations in the neighbourhood of the midriff and diaphragm as those which accompany sea-sickness. Rapidly, with an instant's pause perhaps, our cage passes beams of wood and bricks, while the light fades, grows blue, disappears. Down, down, down into darkness we sink, till, after sixty yards' descent, appears a glimmer of light. We drop down by the side of a collier with a lamp, and at the shock of touching ground, are only too glad to jump out.

The sensation of sickness has disappeared, but left us giddy and faint for a second or two, like men who walk a ship's deck in a storm. At length we find our sea-legs, and are ushered into a cheerful white-washed passage, something like those seen in jails, and lighted at intervals by gas. At the end is an office, fitted with forms, desks, &c., where another and younger attendant takes our hats and coats, and metamorphoses us into amateur colliers by the aid of flannel-jackets and low-crowned caps. Providing ourselves with safety-lamps, and a short sharp-pointed walking-stick, we now sally forth to inspect the underground economy of the pit.

From the further extremity of the gas-lighted passage, we are first conducted to the stables. Hewn from the coal itself, and cheerfully lit and white-washed, many a horse on earth might well envy their warmth. They are kept scrupulously clean, and give favourable impressions of care for the comfort of their inmates, which are now, however, at work within the recesses of the pit. A cat rubs herself with loud purring against our legs as we emerge, just as happens in all well-conducted stables above ground, and we notice, with approval, that she is of the deepest black, as befits the locality and all its concomitants. Our preconceived notions with regard to coal-pits receive a shock as we leave the gas-light behind us and strike into the main working. There is no wet dripping from the roofs, and persistently trickling down your neck, as is the case in so many other subterranean abodes; no puddles stand in the gloom before your feet. From the drizzle and mud of a wet day in the upper air, we have all at once descended to a road strewed, it might be, with summer-dust. Dust lies thick on every projection of the black coal-wall on either side; the foot sinks deeply into it; it rises imperceptibly, and fills the eyes and mouth. The most curious sensation, however, is the perfect silence which prevails. It is almost oppressive to the ear—a silence which may be felt; and imagination increases its awe by picturing the many solid yards of rock and coal which lie between us and the active life of the upper world. No wonder that such influences are conducive to superstition with one set of minds, and to the glow of a healthy, if somewhat puritanic religion in another; that the Keltic miners of Cornwall hear the pixies sporting in their levels, and gnomes answering, knock for knock, from a vast distance inside the rock at which they are quarrying; to say nothing of the Cornish belief, which is almost universal, in the divining-rod; while their Teutonic brethren in Yorkshire are regular attendants at church or meeting, earnest-minded as a body, and many of them teetotallers—far too practical to put faith in 'aught like wizards or buzzards.'

As we pass into the darkness beyond the glare of gas, and our eyes are getting accustomed to the glimmer of the safety-lamps in our hands, all at once a strong odour of the country strikes upon our senses, a whiff it might be from a hay-field 'in the leafy month of June.' The mystery is soon explained. A door is opened on one side of the dark wall beside us, and discloses a spacious barn full of hay for the horses employed in the pit. Among the many contrasts of the place, this pleasant summer scent and sight is not the least. And now we commence descending a deep incline, laid with a set of rails, while the roof and sides are contracted till you have to stoop the head, as when walking the under-decks of a man-of-war. Respiration becomes more difficult, and the air is warm and close. At every twenty yards or so of this incline, holes are cut in the coal, by the side of the tramway, to act as 'refuges,' when the train of trucks runs down here. This is done by the order of government, to prevent the numerous accidents which would otherwise occur. Our guides look round nervously, and listen once or twice, but nothing is to be heard. At length, they make us enter one of these refuges, where, on seats cut from the coal *in situ*, we wait some minutes while they eagerly listen. 'I'm thinking, Sammy,' observes the younger one, 'we can make another, eh?' 'Very well,' replies he; and we hurry on to the next 'refuge.' Immediately, a low rumble is heard from the quarter by which we have just descended. 'Keep back, gentlemen,' says Sammy. The rumbling increases, and draws nearer with many a crash and rattle, till in an instant, as it seems, the corves swiftly rush past, impelled by their own weight, in a cloud of coal-dust, and with

Digitized by Google

a rattle and shaking which reminds us of an express-train passing through a small country-station in the upper world, combined with all the variations Southey imputes to the Falls of Lodore. These corves are small but substantially built, each holding half a ton of coal; but the impetus with which they shoot past into Stygian darkness, and the resounding echoes they leave behind them, cause us to congratulate ourselves on being off their track and safe in the refuge. On we push, dimly groping our way over blocks of coal, iron rails, beams of wood, and the usual *débris* of a mine, till the rattle of an ascending set of trucks is heard, drawn up by steam-power at the pit-head. Standing aside, we suffer this to pass; and then, after some few more minutes' walking, reach the junction (as the foot of the incline is termed), where we have leisure to rest a short time and examine the corves.

It is eight hundred yards from here to the pit-head, and all around it ramify numerous smaller roads, leading to the different workings. The corves are there filled with coal, and either pushed by boys, or more usually drawn by horses, along minor tramways to this junction. The corves are black and dusty; but a train of them is just starting for a distant part of the workings, and we cannot do better, if we would gain an adequate notion of what labour in a coal-mine really is, than accompany them. Sammy and I accordingly sit on the bottom of a corve, while the other two occupy another in a similar manner; the whip is cracked, and off we go. Our position is in nowise enviable. The heat is intense, the roadway very broken and uneven; we are packed like sardines in their tin box, or slaves during the horrors of a middle passage; and while one hand is busy alleviating the miseries of the frequent jolts (the corves having no springs), the other holds the safety-lamp, to make out where we are being hurried. Rattle, rattle! jolt, jolt! through a cloud of coal-dust we are whirled, along a narrow passage, whose sides and ceiling seem more closely converging upon us each instant. 'Keep your head down!' says Sammy, and we bend almost double. At the same moment, we are aware that a train of coal is passing us. Then comes a shock that sends our heart into our mouths. The corve we are in has broken away from the rest, and run into the wall, covering Sammy with the fragments it has torn off, while a large block of coal, weighing some ten or twelve pounds, drops off the passing train on to my shoulder.

Luckily, we are not hurt, only a little blacker than we were before. Another crack of the whip, a good deal of pushing on the part of our unseen drivers, and we are once more on the rail, and rattling away into what might be the jaws of Tartarus itself. At length comes a glimmer of lamps, and we draw up with a jerk that knocks the little remaining breath out of our bodies, beside several hirsute, semi-naked colliers, who lean on their picks, help us out of our cramped positions, and chaff our conductor. 'Why, Sammy, who'd a thought of seeing you here again!' 'Ah, lads,' he replies, 'I have brought you two new workmen to take your places;' and he points us out to the amused pitmen. A laugh, which apparently proceeds from the ground, causes us to discern a man lying at full length, clad only in a pair of trousers, under a shelf of coal. The lamp under his knee shews him where to direct his blows, his pick is busily plied, while beads of perspiration stand thickly on his muscular frame, as with a lump of coal for a pillow in this recumbent position, he takes his turn at the working. The others fill the corves as rapidly as possible with the proceeds of his toil. It is explained to us that we are now two miles from the pit-head; that each man fills some twenty or twenty-one of these corves daily, thus earning six or seven shillings, but that the work is too hard for more than four or five days a week; and then, with another glance at the dark limited space where so much human energy is expended to procure us warmth, we jump into our vacant corves, and are once more whirled back through heat, dust, and darkness to the junction. We have seen the inner life of a coal-pit, and must now grope our way by another road to the pit-head.

On our walk through a narrow pathway, we pass several deserted workings. These are dangerous, owing to the giving way of the roof, and thus have been disused. Weird, cold, and silent are they, as we penetrate a few yards into them, and with our safety-lamps well elevated, attempt to peer into their depths. Men have been killed or maimed in these horrid dens, ere the instinct of self-preservation mastered the love of gain, and dictated their abandonment. The men's dinners are hung against the side of the passages here and there as we pass; a needful precaution, as the pit swarms with rats. Now we arrive at the 'brattices,' or ventilating doors, which insure a thorough draught in the pit. A stream of cool air meets us, and now we reach the return current of hot and exhausted air, returning after its four-mile circuit from the other end of the pit. It is like the breath of the sirocco, causing our clothes to stick to us, and a perspiration to break out over our faces, and permeates the cooler strata of air much in the same manner as the Gulf Stream winds its long course, like a blue ribbon, unpolluted and unmingling with the colder waters of the Atlantic, for hundreds of miles. Occasionally, we pass a collier at work, with a candle stuck to a lump of clay on his hat. There is no danger of explosive gases in this well-ventilated mine; and both the dreaded fire-damp, and still more dangerous choke-damp, are almost unknown here; though not five miles from where we stood the Oaks Colliery still held its hecatomb of slain colliers, victims to imprudence and bad ventilation.

A little farther, and we reach a huge furnace, kept burning day and night, to secure an abundance of air and a thorough draught. The wooden beams which elsewhere hold up the roof, yield here to a walling of brick, and shew us that our pilgrimage is at an end, as we emerge speedily at the pit-head, from which we are soon elevated to bank. We are black with coal-dust from head to foot: our wives, indeed, would not recognise us. It is not till a week has elapsed that we can get rid of the coal engrained in our face and hands, and clinging to the roots of our hair. Still, it has been a new experience, given us an insight into the mode by which our domestic coal-cellars are supplied from the great natural coal-cellars of the nation; and last, not least, gained a large accession of sympathy for those who labour night and day in the bowels of the earth midst heat, discomfort, and danger, to fill our grates with

Digitized by Google

fuel. We gather up our treasures of coal-fossils, many of which we dislodged for ourselves from the roof as we passed along; say a few kind words of parting and thanks to our guides, accompanying the same with a more substantial gratuity; and then emerge, as we came, over coal-tips and tramways.

The sharp air of a spring day strikes fragrantly upon our heated faces. We welcome with delight the sights and sounds of upper life, the singing of the birds, the splash of the reservoir against its barriers, the transition from the chambers of darkness and silence to the bright and bracing atmosphere of earth.

A COUNTY FAMILY.

CHAPTER XXXIII.—AT THE COTTAGE.

It was no 'pride that apes humility' which caused the Blackburns to speak of their residence on the Curlew as 'the cottage.' It was indeed a miniature house, with everything about it, including the scenery, of the same duodecimo description. The river itself, although pretty deep, was but thirty feet across; the banks on each side, albeit quite precipitous, could scarcely be called cliffs; and although at the bridge on the road to Mosedale they diverged, leaving a broad view to the inhabitants of the Fishery, and allowing air and sun to visit it freely, at the spot on which Richard had built his bower, there was but just room for a narrow carriage-road, which led past it through the still contracting gorge to a mill about a mile up stream, after which it became a mere horse-track to Redmoor. On the opposite side there was not even a footpath, the bank descending quite sheer. Had the road not existed, the cottage would have been upon an island. As it was, it stood upon a curved promontory, the small portion of which not actually occupied by the building was devoted to the tiniest of flower-gardens; on to this the windows of the two small sitting-rooms looked, and indeed immediately opened, so that one step from either brought you among the roses, which seemed to grow in mid-stream. If there had been any object of size within sight, the whole scene would have been dwarfed, and made almost ridiculous, from the exceedingly small scale of everything; but being where it was, nothing could be more perfect and charming. It might have been transported, bridge and all, to the stage of Old Drury (on which there would have been plenty of room for it), and used with the lime-light for the performance of *La Sonnambula*. On the Curlew, there was sometimes a moon, which, in its humble way, was also not ineffectual; bridge and stream, cottage and garden, were then bathed in such dreamy splendours as no brush can portray.

There was a boat-house attached to this little territory, looking like a boat towed astern by a ship which is not much bigger; and it was for *it*, or rather its contents, that the whole place had been erected by Fisherman Richard without the slightest reference to the picturesque. For him the Curlew had had no other charms beyond that one caught fish in it. The decorations of the little dining-room were characteristic in a high degree of its former owner, and if not artistic, had a certain quaint and natural fitness of their own. It was a sort of fisherman's sanctum, where everything that is most dear to the lovers of the gentle art was reverently enshrined. Not only did every weapon—net, and rod, and spear—that is used against the finny tribe, find a place about its walls and across its low raftered roof, but even the very fishes were there that had fallen victims to them. Unlike those barbarians who eat the prisoners whom they take in war, Richard had preserved his finest captives and stuffed *them*. The grinning trophies of his skill swam, as it were, each in his ample glass case, round and round the room—here a vast pike with cruel jaws agape, and here a speckled trout, and here a fat round chub; each, too, had the particulars of its capture described with great minuteness upon a written label. 'This pike was killed a little above Curlew Bridge, by Richard Blackburn, Esq., of Blackburn Manor, with this hook' (a very rusty little weapon by this time), 'and part of this line. It weighed twenty-seven and a half pounds;' and so on. Stuffed water-birds, 'Shot by Richard Blackburn of Blackburn Manor,' alternated with their hereditary foes or victims, so that the whole apartment had the appearance of a natural history museum. The drawing-room was destitute of ornament, though literature and art were in a manner represented by the *Angler's Guide* and a book of artificial flies, which lay on the otherwise empty shelves.

Mrs Blackburn's efforts at decoration had been confined to the invalid's apartment, which had, in accordance with a suggestion of Ellen's, been wainscoted with mirrors, so that he could command from his pillow the bridge and all who passed over it, as well as the road and a long reach of river. If the poor squire had been acquainted with the poets, he might have likened himself to the Lady of Shalott, to whom the world was shewn in the same fashion; for he, too, 'saw the highway near,' 'the red cloaks of the market-girls,' the pack-horses of the miller with their white sacks, the farmer 'on his ambling pad,' and all the life that the place afforded. For him, too, 'the river eddy whirled' continuously, and the still pool dimpled, while the stealthy rush of the main stream close by soothed him with its monotone. 'Men may come and men may go,' it doubtless said to him, if not in those very words, yet with their full significance, 'but I flow on for ever.' It was a tender and provident thought that had thus supplied him with visions of a world to which he would have been otherwise blind, and it seemed to afford him pleasure. That very afternoon his eyes were seen to brighten as across the little bridge rode Lucy Waller, who even so soon had come on horseback, doubtless to inquire how the sick man had borne his journey. He saw her stop to look up with pity at his open lattice-window, and to kiss her hand to Ellen standing in the garden beneath.

Lucy found her friend somewhat pale from the shock she had lately suffered, but of which Ellen said not a word. Her uncle's conduct was inexplicable to her. She had often known him dictatorial and menacing, but always with some definite object to be gained. But what could his design be now in bidding her, as he had expressed it, 'play fast and loose' with Herbert Stanhope? As for obeying him, the idea never entered into her mind; but it was scarcely less degrading to have had such a shameful course of conduct enjoined upon her. Upon the

Digitized by Google

whole, taking into consideration his behaviour on the previous portion of the journey, she was inclined to think that her uncle's brain was getting disordered through his intemperate habits. But even that was not a comforting reflection, for he was not likely to amend his ways in the seclusion of the Fishery, where there was still less to occupy him than at the Manor.

'What a paradise you have got here!' cried Lucy when she found herself in the rose-garden. 'To me, just come out of smoky Mosedale, it seems too beautiful to be real. I think, as I look at it, surely this will all melt away before my eyes.'

'It is very pretty,' said Ellen sighing; 'and yet, though I have begun to miss you so already, I would not have you here with us if I could.'

'Not have me here! Why not?'

Ellen coloured; for she had uttered that wish involuntarily, with Uncle William's words about Lucy still ringing in her ears.

'Well, it seems so lonely,' said she, 'and so shut out of the world. The river, too, has such a melancholy sound.'

'As one thinks, darling, so the bell tinks,' said Lucy archly. 'What would you say, now, if I made the stream discourse music to you, and the sunshine stay here all day?'

'O Lucy, you have seen John.'

'What an excellent guesser of riddles you are, my dear,' cried Lucy laughing. 'Yes, I have seen him, and that is partly why I came so soon here to see you. I thought it would please you to know that he is so near—that if, for instance, you dropped this rose-leaf into the swift stream, it would float to him in a few minutes.'

'How good and kind you are to think of John and I, when'—— There was something, if not of annoyance, yet of embarrassment in her friend's face that made Ellen hesitate to finish the sentence, as she had intended to do, with some reference to Lucy's dead lover. Something, too, there was in the nature of Lucy's last remark which suddenly struck her and made her pause. Lucy was always kind; but such a tender thought as that of the mere nearness of her lover making Ellen happy, was somewhat uncharacteristic of Mr Waller's daughter. Could love itself, new love, have possibly suggested it to her?

'What's that?' said Ellen, pretending to be interrupted by a sound that broke upon her ear—the slow beat of a horse's feet. 'There is some one coming down the road from Redmoor; I wonder whether it is Mr Stanhope.'

'It is likely enough,' said Lucy carelessly, and turning her head in the opposite direction.—'What a pretty picture might be made of yonder reach, with the arch of the bridge for its frame.' She had suddenly grown pink to the ear-tips.

'And what did you say to John, Lucy? Or, if you will not confess that, what was it he said to you?'

'Well, my darling, the fact is, he has come down again to Mosedale upon the same business as before, it seems; there is something wrong again with the reservoir. You must not be angry, dear Ellen, but I am afraid papa is vexed with Mr Denton.'

'Vexed with John?' cried Ellen, in a tone that would have fitted 'Vexed with the sunshine? vexed with the blue air?' 'What can he be vexed with John about?'

'I can't tell, dear; but so it is. Papa is greatly worried by other matters just now—grievously troubled, I may say—and doubtless he was easily put out. There has been, at all events, some difference of opinion between them; and Mr Denton declines to be our guest. I am more annoyed by it than I can tell you.'

'But what did John say, Lucy? I mean, what were his very words?'

'Oh, of course he said nothing within *my* hearing but what was pleasant: regretted exceedingly that he felt himself unable to take advantage of our hospitality, and so forth. He will be some time in the town, however, and I hope the matter will be made up: indeed, I heard him tell papa that a day or two would decide which of them was in the right.'

'But did he send no message to *me*?'

'Well, papa was with me, darling, so that he could not be very communicative; but when I spoke of you, it was easy to see in whose safe keeping he had placed his heart. I told him, of course, that you had come here, within a mile or two of Mosedale. "What! at the Fishery Cottage?" cried he; and you should have seen how he flushed up. Though you may not write to him, there would be no harm in your gathering a rose, and giving it to him by deputy, would there?'

Ellen plucked a flower, and smiling her thanks, kissed Lucy fondly.

'What! am I to give him that too?' said the other laughing.—'There, how serious that has made you look! What a thing it is to be jealous!'

'No, dear, it was not that; what makes me grave is the thought of there being any quarrel between John and Mr Waller. I can't understand it.'

'That is because you don't understand business, dear. So long as men have nothing to do with each other's affairs, they consort together as peaceably as women, and more so. They chatter and laugh, and tell stories to one another, like school-boys in holiday-time. But directly a question of pecuniary interest arises to set them in antagonism, they grow hard and rude enough.'

'But John is never hard nor rude, I am sure.'

'Well, I don't know Mr Denton so well as you do,' said Lucy laughing; 'but I must confess he was rather excited in his manner this morning—quite as much so as papa: though papa was most to blame, since he was in his own house. But, O Ellen, he is so full of trouble, if you only knew, you would forgive him all, I'm sure.—But hush; don't let us talk about it. Here is some one coming.—Why, how slowly you ride, Mr Stanhope! We have heard your horse's hoofs this quarter of an hour. We thought it was the miller's nag with the sacks.'

'I am glad to hear that any grist comes to my mill,' said Herbert rather ruefully. 'Mr Moffat has just been proving to me that it never does.—How is your grandfather, Miss Ellen, after his long drive? And how do you all like your new quarters? At present, I can scarcely congratulate you upon the change: I have not seen you look so pale these many weeks. I am afraid you had an anxious journey.'

'I am quite well, thank you,' said Ellen coldly; for there was something just then unpleasing to her in the manifestation of Mr Stanhope's interest; 'but we are all a little tired.'

Digitized by Google

'Don't you believe her,' cried a gruff voice from the dining-room, where Mr William had been keeping himself private with the object of ascertaining whether Ellen should say anything to Lucy of his recent behaviour, but had only overheard enough of the conversation to make him suspicious. 'We are only moped to death in this rat-hole. Come in, and let's be jolly. What say you to our taking the young ladies on the water? Miss Lucy will come with me in the skiff, and you can take the punt with Ellen.'

'Thank you, Mr William, but I have no time just now,' said Lucy, gathering up the skirts of her riding-habit. 'I promised papa to return home as soon as I had seen how you all were.'

'And I must go up to grandfather,' said Ellen, 'and take him these flowers.—Good-bye, dear Lucy; you will be here early to-morrow, will you not, and spend a good long day with us?'

'As soon after breakfast as I can get papa away, dear; and I will be sure not to forget your message.'

'Message! what message?' inquired Mr William testily, with a mistrustful glance at his niece.

'Never you mind, Mr William,' said Lucy gaily; 'that message is under the rose.'

CHAPTER XXXIV.—THE WARNING.

As is usual with folks who find themselves in new quarters, the household at the Fishery were astir early the next morning, which was a warm and sunny one. Mr William—who had retired late, as was his wont, and kept Stanhope from his bed with urgent appeals for another cigar and one more glass of grog—rose earlier than any. He was heard fussing about the house a little after dawn, and rousing up the old fisherman, who was attached to the premises much as the punt was, without which he rarely moved. He had been Squire Richard's factotum on the river, and had gauged the capacity of every curve, and fall, and pool with respect to fish. The previous night, he had cast bread upon the waters in the shape of a gallon of worms, in a particular spot miles away down stream—from which investment he had promised Mr William great results; and the two were off together, long before the breakfast-hour, on that hopeful expedition. They had taken plenty of provisions with them, and it was understood that they would not return till late in the afternoon. Ellen at her chamber-window heard their gruff voices mingle with the grating of the punt-pole, and saw them glide aslant across the yielding lilies, and into the shadow of the bridge; and sighed. They were going whither she would fain have gone, poor girl; and would presently pass Mosedale, and perhaps see *him*.

The swallows were skimming across the stream, and dipping their wings; the dragon-flies were flitting about like living light; the fish leaped high in air, and sank in widening circles; and all the life of the river was awake and glad. The garden beneath, new dipped in dew, sent up its grateful incense; and the fresh voices of the air seemed to call to her to come forth and enjoy. Ah! if she could only have been free to welcome him to that new home, how fair and bright a place it would have seemed! For a moment she was almost tempted to inquire why that slender skein of duty should bind her hand and foot as it did, and keep her from him she loved, when the least effort of her own would have snapped it. But she put the thought away from her as swiftly as it had intruded, and descended, all the more charming for her victory, to gather a posy for the breakfast-table, and, as fresh and bright as any rosebud of them all, to busy herself with household cares. Then, after breakfast, as usual, to grandfather's room, there to stay for the long morning.

Virtue had its reward for her in at least this respect, that the loving forethought that had supplied the sick man with these living pictures of the world without, now bore fruit for her also. It was almost as good as being out of doors that day—bright herald of the coming summer though it was—to sit in that mirrored chamber, and watch all things move around her; for all things had motion; even the bridge would change from gloom to gray, from gray to gloom, as the light clouds flecked the sun, or left it bare; and the one willow for which the road had room, hanging its disheveled hair in the restless stream, 'shook alway' like a poplar. The feathery reeds in the island below bridge danced like the daffodils, and, like them, made a picture in her mental eye for ever. Suddenly she started up with a muffled cry, and looked towards the window; on the shining wall beside her had been cast the reflex of an approaching horseman; and he is now upon the bridge. His eyes are fixed upon the cottage, upon the window, upon her. He touches the red rose that blushes in his button-hole, and doffs his hat. What can have brought John Denton hither, whom her grandfather has forbidden to visit her? whom she has passed her word she will not receive? The sick man has seen him also, and fixes on her a reproving look. It seems to say as plainly as spoken words: 'I am obeyed no longer, then, being smitten thus sorely, and already half dead; and yet I have loved you so, Nelly, and tended you in the days gone by.'

'You do me wrong, grandfather,' cried she passionately. 'I know that you think I have disobeyed you, and broken my word, but indeed it is not so. I don't know why John is here. If you forbid it, I will not see him—if you do forbid it.' And although her tone might have melted a harder heart than his, he did forbid it. Had he been lying for months with nought to comfort him but the thought of how the Blackburn race might still hold its own and keep its place, through her, to forego his desire now, when all but accomplished—with the very man beneath his roof to whom he looked to have her wedded? Had he not even given him his Will in keeping, in token of that confidence? Was not the world aware and expectant of her matching with him? Had not his reprobate son himself submitted to the arrangement as inevitable? And now, should he risk all being undone by permitting this John Denton to see Nelly? No, no.

'Do not fear, grandfather; since you forbid it, I will not see him; I will stay here;' and she drew her chair behind the curtain of the bed, out of his sight, and listened with pale face, pressing her hand against her beating heart. Presently Mrs Blackburn's hurried step was heard upon the stairs, and she came in looking confused and troubled.

'Nelly,' whispered she, 'I want you a minute; come outside with me.'

'Grandfather knows,' said Ellen quietly. 'He saw John Denton come over the bridge.'

Digitized by Google

Mrs Blackburn glanced at the sick man; his eyes were moist, and had an expression in them of unwonted tenderness.

'Has he given you leave to see him?' said she. 'If so, why, of course, I shall say nothing: though it seems a pity, after matters have gone so far with Mr Stanhope; and I am afraid Willy will be very angry.'

'I care nothing for Uncle William's anger, grandmother,' said Ellen proudly; 'but I have promised not to see John, and I will keep my word, since grandfather will not loose me from it.'

There was a knock at the door: a gentleman had come, said the servant, to see Mr William Blackburn on very important business.

'To see Willy? What can John Denton want to see my Willy for? He has no right to pick a quarrel with *him*, you know, Ellen,' said Mrs Blackburn apprehensively.

'John Denton is not quarrelsome, grandmother, whatever folks may choose to say,' answered Ellen resolutely, and piqued by the recollection of Lucy's words the previous day; 'and if he has important business, it ought to be listened to.'

'Well, we all know what the business is about,' responded Mrs Blackburn tartly; 'and, for my part, I won't see him, and that's flat; and I am sure if Willy was here he would say the same.—Go down to the gentleman, Mary, and say Mr William is from home, and will not return till the evening; and say that I am very sorry, but that I am engaged in Mr Blackburn's sick-room.'

Ellen thought, with indignation, that her grandmother might at least have gone down and spoken civilly to John, who had been always so kind to her; but she was too proud to say so. She sat where she was, following with reproachful eyes the movements of Mrs Blackburn, who affected to busy herself about the room, but who was in reality sufficiently uncomfortable. She knew in her heart that she was not acting well; but she feared to meet John face to face, who had always had great influence over her, and whose present grounds of complaint she could not gainsay.

Anthony lay with eyes fast closed, but perhaps listening as eagerly as the others.

The maid came up again with a second message. 'It was impossible,' the gentleman said, 'that he could leave the house without making the communication he was charged with to some member of the family.'

'Then let Mr Stanhope see him,' said Mrs Blackburn, 'for there's nobody else to do it.'

'Stop!' said Ellen decisively; 'that shall not be, grandmother. You may treat John as ill as you please, but not falsely. If Mr Stanhope is to see him, it must be only as grandfather's friend. I have borne enough as it is.'

'You are a naughty, disobedient girl,' said Mrs Blackburn angrily. 'If your grandfather could only speak, you would not dare to behave so.'

'I should be sorry, indeed, for him to think ill of me,' said Ellen firmly; 'but if you persist in your intention to insult John in the way you speak of, I will go down to him myself, and take his hand—and—and you will never see me here again, grandmother.'

'Do you hear *that*, Anthony?' cried Mrs Blackburn with indignation. 'Willy always told me that you were wrong in thinking so highly of Ellen; and yet they say you have left all your money to this girl, who flouts you thus away from him.'

'I do not want grandfather's money,' said Ellen quietly, 'as he well knows. I have never tried to win anything from him but his love.—If you think it is right that John Denton should be told what is not the truth, grandfather, look at me now and say so with your eyes.—See, he keeps them fast closed! I knew he was not one to approve of what is false, in order to gain his ends.'

'Well, well, I will go and see Mr Stanhope myself, and explain matters,' said Mrs Blackburn in a conciliating tone.

'Nay, grandmother, but I must send the message,' said Ellen with quiet determination.—'Come in, Mary' (for the girl had been bidden to wait outside the door). 'You are to tell Mr Denton from your mistress, with her compliments, that no member of the family can see him to-day; but that if the nature of his business will permit him to do so, he can communicate it to Mr Stanhope, who is in the dining-room.'

The servant departed, repeating to herself Miss Ellen's words, for fear she should forget them; and in a minute or two Stanhope's step was heard leaving the apartment below for the drawing-room, into which the visitor had been shewn.

John Denton and the young Squire of Curlew Hall had never met since they had stood together on Slogan, eighteen months ago; and during that interval, short as it was, there had been considerable change in both of them. John, always self-reliant and self-composed, had become even more conscious of his own powers, of which his improved position in the world had also afforded ample proof, had he needed such. Instead of the somewhat coarse attire which he had worn as overlooker, he was now dressed, although very plainly, in all respects as a gentleman; and he looked every inch a gentleman, and something more. If there was an absence of that careless ease which sits (not ungracefully) upon those for whom all things have been made smooth from the cradle to manhood, the steady purpose of his face was far from hard or egotistic; while, as he now regarded his rival (as he well knew him in intention to be), a certain chivalrous courtesy lit up his fine features, and gave his tone a gentleness with which genuine feeling could always inspire it, but which, in conventional intercourse, it lacked.

Perhaps the knowledge that Ellen's heart was his, not to be won from him by this man, nor any other, permitted him to be thus generous; or perhaps the straitened, if not desperate circumstances of his rival, of which he had heard reports (unfounded, indeed, though, as it happened, true enough) in Mosedale, affected him with pity, and gave softness to his air and manner.

Herbert Stanhope was even more altered in appearance, though not, as in the other's case, for the better. He had grown paler and thinner of late months; and anxiety and wounded pride had set their marks upon a face that had once evoked Denton's antagonism by its calm insouciance.

The two young men shook hands, if not with cordiality, yet with perfect frankness.

'I am sorry to have been thus obliged to trouble you, Mr Stanhope,' said Denton, 'but, since Mr William Blackburn is not at home, I have no choice; the matter on which I have come here

Digitized by Google

being, unhappily, of the last importance, and not admitting of delay.'

'No apology is at all necessary, Mr Denton; the occupation you have interrupted was only that of making artificial flies; and I assure you that the arrival of any visitor in this place, whatever his business, is quite a godsend to us. I think I should remark, however, that if the matter in question, which you say is so important, has any private and particular reference to Mr Blackburn, I have no authority, and indeed must altogether decline to be its recipient.'

'The matter I have in hand,' said Denton gravely, 'touches Mr William Blackburn only as it affects every one else in this house, yourself included. It is not, I confess, upon his account I have come. I mentioned his name merely as being the most proper person to receive my communication; and yet, if there had been none dearer to me under this roof than he, I should still have thought it my duty to have made it. I must beg of you, first of all, Mr Stanhope, to take upon trust, with only my word to guarantee it—that I am well acquainted with certain matters connected with my profession, which is that of civil engineer, that I am not one to be mistaken, for instance, about the strength of an embankment. And it is with the acutest sense of the peril in which you and all persons now resident on the Curlew stand from the state of the reservoir on Redmoor, that I have ridden here this day, and with no other object whatsoever.'

'Do you mean to tell me that there is any danger of the great embankment on the moor giving way, Mr Denton?' asked Stanhope, starting to his feet.

'There is, in my opinion, very great danger of it; I should say, indeed, if the wind were east instead of south, as at present, the most imminent danger. In that case, the wind would bring the waves right down upon the embankment; and it is not in a condition to resist it, sir, it is not indeed. I entreat you, I adjure you, Mr Stanhope, to give heed to what I say.'

'There is no fear of my neglecting such a warning, Mr Denton. Independently of the risk to our friends in this house, and to human life generally, supposing I were so brutal as to disregard it, I have property on the Curlew which, even if this catastrophe should be delayed, must sooner or later be destroyed by it. I will not only do my best to persuade Mr Blackburn and his family to quit this spot, but I shall not lose a moment in representing to the authorities at Mosedale, with whom I have some influence'——

'That would be time wasted,' interrupted Denton solemnly, 'and there is, in my judgment, not one hour to waste. I have spoken—I have warned in vain. The directors of the company, in the person of their chairman, have refused to accede to my request that the reservoir should be examined.'

'But I thought that matter was looked to last year, and, if I remember rightly, you yourself, Mr Denton, were the engineer appointed for that very purpose.'

'I was, sir; and I made my Report, wherein, as you may read for yourself, I even then contended that not enough had been done for safety. From personal observation of the embankment the last two days, I am confident that mischief of a magnitude such as those people yonder'—and he pointed westward with his hand—'have no conception of, is—— Good Heaven! what is that?'

'It is my miller's fowling-piece, if I am not much mistaken,' said Stanhope smiling, 'though the echoes of the Curlew make its sound somewhat portentous. Did you think it was the bursting of the dam?'

'Do not jest, Mr Stanhope—do not treat my apprehensions as if they were idle fears. I am a young man, but not ignorant of the things of which I speak. I am as sure of what I now tell you as I am of my own existence.'

'But it seems so strange, Mr Denton, that these directors should not in so important a matter have taken action upon the Report of their own officer.'

'I was not their ordinary engineer, sir, but only the substitute for him. My friend Mr Flywheel delegated me to act for him in the affair, which he did not understand to be of the magnitude and importance which it really was. If he were on the spot now, I would stake my existence that his view would be the same as mine—that he would have the dam blown up this very hour, so as to decrease the water-pressure. There was a crack in the embankment last year that was sufficient to admit a penknife; there is one to-day in which I can almost place my hand.'

'But why is not Mr Flywheel at his post?'

'He is abroad, sir, employed on an Italian railway. I would to Heaven he were here.'

'But you in his absence are his representative, are you not?'

'I was, sir,' answered Denton, with flashing eyes, 'until yesterday. But when I found I was not listened to by the Reservoir Board, I at once threw up my appointment. To hold it for another day, would be, in my judgment, to be accessary before the fact to—— But Heaven only knows to what; there is no limit to the ruin which may happen.'

'Then you are not come here in any official capacity, Mr Denton?'

'In none whatever, sir; though, of course, if my profession were not what it is I should feel no cause for these apprehensions. I have lately been appointed resident engineer on the Mosedale Railway, or I should not have been in the town at all. If, if'—and the young man hesitated, and crimsoned to the forehead—'if circumstances had not brought one that is dearer to me than life itself into this perilous place, I should not perhaps have visited Redmoor at all. God grant that I have not done so, even now, in vain. You will not neglect this warning, Mr Stanhope—promise me that; or beware lest the guilt of blood—the destruction of man and woman, as well as the ruin of hearth and homestead—should lie at your door.'

It was curious to see how, as the one seemed to grow more earnest and impassioned with every word, the other became more calm, and even incredulous.

'I will certainly put our friends here on their guard, Mr Denton. I am sure it is most kind of you.'

'It is nothing of that sort, Mr Stanhope,' broke in the other. 'You do not say it is kindness to warn a bather who cannot swim of a current which you know will sweep him to his death. It is my duty, and nothing more. *You*, sir, can have no miserable reasons, founded on a few pounds of cost, to refuse to listen to me, such as have made those in Mosedale deaf and blind; nor, as I trust, have

Digitized by Google

you any personal prejudice so strong against me as to make you discredit my words because they are mine.'

'Indeed, Mr Denton,' returned Stanhope, flushing in his turn, 'you do me no more than justice. It is impossible to misunderstand your motive, or to fail to be moved by such generous earnestness: you may depend upon it, so far as my influence extends in this household, your warning shall have all the attention which it deserves.'

'Thank you, Mr Stanhope, thank you,' said Denton fervently, as he held out his hand. 'You have taken a weight from off my mind such as I can scarcely bear to think of, even now that it is gone.—Good-bye, sir; and God bless you.'

Stanhope accompanied him to the door, and saw him mount and turn his horse's head towards Redmoor. 'Are you going to take another look, then, at the embankment yonder?'

'Yes, Mr Stanhope, though it is useless. I am also going to Curlew Mill to give my warning there. I am not permitted to avert this peril, it seems; but, so far as in me lies, I must strive to abate its consequences;' and with one look up at the sky, where the light clouds were floating leisurely to eastward, he shook the reins and cantered up the gorge.

NONSENSE-VERSES.

WHOEVER, in these days of struggle and hard work, adds to 'the public stock of harmless pleasure,' is peculiarly deserving of a word of praise. Even the wit that is most common at present consists chiefly in verbal ingenuity, and is at best but an intellectual puzzle, which rather strains than relaxes the brains that have so much need of repose. It is something that nobody can urge against *The Bab Ballads*,* the charge that they weary the mental faculties, and it is more to promise that they must needs elicit a hearty laugh from all who are capable of understanding fun at all. The author himself has affixed to them this modest motto: 'Much Sound and little Sense.' But the sound that belongs to them is one of the healthiest—a hearty roar; and their sense is at least sufficient to tickle the heart-strings. Their excessive simplicity—their utter absurdity—take the reader by storm, and forbid him, unless he is one of those unfortunates who are nothing if they are not critical, to speculate upon the why and wherefore of his mirth. In illustration of the letterpress there are numbers of funny little pictures, it is unhappily out of our power here to reproduce, but which doubtless heighten the whimsicality. In this respect, as in others, the author-artist reminds us of Tom Hood, a few strokes of whose pencil could give a marvellous effect to his humour; but in the present case, the sketches are well drawn as well as intensely funny. Pride and Humility, Dissipation and Puritanism, Ferocity, Despair, and even Beauty, all receive in turn their grotesque impersonations in this little volume. The ballads themselves, as will be seen, are also like the verse of him who was wont to supply us with metrical mirth in those absurd annuals characteristically entitled *Laughter from Year to Year*. But Mr Gilbert (bless him!) is more absurd even than Hood.

* *The Bab Ballads*. By N. S. Gilbert. Hotten: London.

Take, for instance, his ballad of *Captain Reece*, the model captain of that model ship, the *Mantelpiece*, with his advanced ideas of promoting the happiness of his men, and doing his duty by them.

If ever they were dull or sad,
Their captain danced to them like mad,
Or told, to make the time pass by,
Droll legends of his infancy.

A feather-bed had every man,
Warm slippers, and hot-water can,
Brown Windsor from the captain's store,
A valet, too, to every four.

Did they with thirst in summer burn?
Lo, seltzogenes at every turn;
And on all very sultry days,
Cream-ices handed round on trays.

Then currant wine and ginger pops
Stood handily on all the 'tops;'
And, also, with amusement rife,
A 'Zoetrope, or Wheel of Life.'

New volumes came across the sea
From Mister Mudie's libraree;
The *Times* and *Saturday Review*
Beguiled the leisure of the crew.

Kind-hearted Captain Reece, R.N.,
Was quite devoted to his men;
In point of fact, good Captain Reece
Beatified the *Mantelpiece*.

Yet, even as it was, he doubted whether enough had been done for their comfort, and inquired of them how he could pleasure them further. William Lee, the kindly captain's cockswain,

A nervous, shy, low-spoken man,
Then cleared his throat, and thus began:

'You have a daughter, Captain Reece,
Ten female cousins, and a niece,
A ma, if what I'm told is true,
Six sisters, and an aunt or two.

'Now, somehow, sir, it seems to me,
More friendly-like we all should be,
If you united of 'em to
Unmarried members of the crew.

'If you 'd ameliorate our life,
Let each select from them a wife;
And as for nervous me, old pal,
Give me your own enchanting gal!'

Good Captain Reece, that worthy man,
Debated on his cockswain's plan:
'I quite agree,' he said, 'O Bill;
It is my duty, and I will.

'My daughter, that enchanting gurl,
Has just been promised to an earl,
And all my other familee
To peers of various degree.

'But what are dukes and viscounts to
The happiness of all my crew?
The word I gave you I'll fulfil;
It is my duty, and I will.'

One would have thought that this complaisance would have been enough, and perhaps the cockswain was content with it, and touched with the captain's reflection that he should now be 'the only bachelor on board;' let us hope that it was no mere wish to aggrandise his own family which induced him to reply in this manner:

Digitized by Google

'I beg your honour's leave,' he said,
If *you* would wish to go and wed,

'I have a widowed mother, who
Would be the very thing for you—
She long has loved you from afar;
She washes for you, Captain R.'

The captain saw the dame that day—
Addressed her in his playful way:
'And did it want a wedding-ring?
It was a tempting ickle sing!

'Well, well; the chaplain I will seek;
We 'll all be married this day week—
At yonder church upon the hill;
It is my duty, and I will!'

The sisters, cousins, aunts, and niece,
And widowed ma of Captain Reece,
Attended there as they were bid;
It was their duty, and they did.

The portraits of the obliging captain, of the 'enchanting gurl,' of Mr Lee, and of the 'tempting ickle sing' (fancy Mrs Gamp being chucked under the chin!), are quite worthy of the immortal verse to which they are wedded.

The *Periwinkle Girl* contains a moral not inferior to that of *Pamela*, and, we may add, is infinitely more amusing. Our author himself had taken a prejudice against winkles in early life. He had reflected that he would not himself have exchanged places with that delicacy even if he could; for a winkle, as he put it to himself, could seldom flirt, and never dance,

Nor soothe his mind by smoking.

But then he had not become acquainted with Mary who sold them.

Both high and low, and great and small, fell
prostrate at her tootsies;
They all were noblemen, and all had balances at
Coutts's.

Dukes with the lovely maiden dealt, Duke Bailey
and Duke Humphy,
Who eat her winkles till they felt exceedingly
uncomfy.

Duke Bailey greatest wealth computes, and sticks,
they say, at no-thing;
He wears a pair of golden boots and silver under-
clothing.

Duke Humphy, as I understand, though mentally
acuter,
His boots are only silver, and his underclothing
pewter.

A third adorer had the girl, a man of lowly
station—
A miserable grov'ling earl besought her appro-
bation.

This humble cad she did refuse with much con-
tempt and loathing,
He wore a pair of leather shoes and cambric
underclothing.

'Ha! ha!' she cried; 'upon my word! Well,
really—come, I never!
Oh, go along; it 's too absurd! My goodness!
Did you ever?

'Two dukes would make their Bowles a bride,
and from her foes defend her'—
'Well, not exactly that,' they cried; 'we offer guilty
splendour.

'We do not offer marriage-rite; so please dismiss
the notion!'
'Oh, dear,' said she, 'that alters quite the state of
my emotion.'

The earl he up, and says, says he: 'Dismiss them
to their orgies,
For I am game to marry thee quite reg'lar at St
George's.'

He 'd had, it happily befell, a decent education;
His views would have befitted well a far superior
station.

His sterling worth had worked a cure; she never
heard him grumble;
She saw his soul was good and pure, although his
rank was humble.

Her views of earldoms and their lot, all underwent
expansion;
Come, Virtue in an earldom's cot! Go, Vice in
ducal mansion!

It is only rarely that our author ventures to lay down his fool's bauble, and deal in a little sentiment; but when he does so, his resemblance to his great master becomes more striking than ever. The whole poem entitled *Haunted* might be taken for Hood's own, and would do his memory no wrong if it were published as such.

Haunted? Ay, in a social way,
By a body of ghosts in dread array:
But no conventional spectres they—
Appalling, grim, and tricky:
I quail at mine as I 'd never quail
At a fine traditional spectre pale,
With a turnip head and a ghostly wail,
And a splash of blood on the dicky.

Mine are horrible, social ghosts,
Speeches and women, and guests and hosts,
Weddings and morning calls and toasts,
In every bad variety:
Ghosts that hover about the grave
Of all that 's manly, free, and brave:
You 'll find their names on the architrave
Of that charnel-house, Society.

Black Monday—black as its school-room ink—
With its dismal boys that snivel and think
Of its nauseous messes to eat and drink,
And its frozen tank to wash in.
That was the first that brought me grief
And made me weep, till I sought relief
In an emblematical handkerchief,
To choke such baby bosh in.

First and worst in the grim array—
Ghosts of ghosts that have gone their way,
Which I wouldn't revive for a single day
For all the wealth of Plutus—
Are the horrible ghosts that school-days scared:
If the classical ghost that Brutus dared
Was the ghost of his 'Cæsar' unprepared,
I 'm sure I pity Brutus.

I pass to critical seventeen;
The ghost of that terrible wedding-scene,
When an elderly colonel stole my queen,
And woke my dream of heaven.
No school-girl decked in her nurse-room curls,
Was my gushing innocent queen of pearls;
If she wasn't a girl of a thousand girls,
She was one of forty-seven!

I see the ghost of my first cigar—
Of the thence-arising family jar—
Of my maiden brief (I was at the bar),
(I called the judge 'Your wushup!'),

Digitized by Google

Of reckless days and reckless nights,
With wrenched-off knockers, extinguished lights,
Unholy songs, and tipsy fights,
Which I strove in vain to hush up.

Ghosts of fraudulent joint-stock banks,
Ghosts of 'copy, declined with thanks,'
Of novels returned in endless ranks,
And thousands more, I suffer.
The only line to fitly grace
My humble tomb, when I've run my race,
Is: 'Reader, this is the resting-place
Of an unsuccessful duffer.'

I've fought them, all these ghosts of mine;
But the weapons I've used are sighs and brine,
And now that I'm nearly forty-nine,
Old age is my chiefest bogy;
For my hair is thinning away at the crown,
And the silver fights with the worn-out brown;
And a general verdict sets me down
As an irreclaimable fogy.

The echoes of other metrical jokers beside Hood linger about this little book; you are reminded here of Thomas Ingoldsby, and there of the joint authors of *Bon Gaultier*; but in almost all the ballads there is something quite original too: the author holds the patent for a certain monopoly in absurdity which we have never seen infringed. The difficult quest upon which Elvira despatched her Ferdinando, was surely never hit upon before as a test of true affection.

Send me to the Arctic regions, or illimitable azure,
On a scientific goose-chase, with my Connell or my Glaisher!
Tell me whither I may hie me—tell me, dear one, that I may know—
Is it up the highest Andes? down some horrible volcano?

But she said: 'It isn't polar bears, or hot volcanic grottoes;
Only find out *who it is that writes these lovely cracker mottoes!*'

Again, who but our author himself would have conceived the idea of one curate, famed for his mildness, planning the assassination of another, because he exceeded him in that virtue!

Wild Croquet Hooper banned, and all the sports of Mammon;
He warred with Cribbage, and he exorcised Backgammon.

But the Rev. Hopley Porter, at Assesmilk-cum-worter, was even milder—

He labours more than you, at worsted-work, and frames it;
In old maids' albums, too, sticks seaweed, yes, and names it.

The beadle and sexton are therefore despatched, as bravoes, and demand a change of habits in Hopley Porter, or his life, at their daggers' point. So far from becoming a martyr to his principles, he accedes to their demands with almost indecent haste.

'What?' said that reverend gent;
'Dance through my hours of leisure?
Smoke?—bathe myself with scent?—
Play croquet? Oh, with pleasure!

'Wear all my hair in curl?
Stand at the door and wink—so—
At every passing girl?
My brothers, I should think so!

'For years I've longed for some
Excuse for this revulsion:
Now that excuse has come—
I do it on compulsion!!!'

He smoked and winked away—
This Reverend Hopley Porter—
The deuce there was to pay
At Assesmilk-cum-worter.

And Hooper holds his ground,
In mildness daily growing;
They think him, all around,
The mildest curate going.

The colonial Bishop attending the Pan-Anglican Synod, who learns posturing (oh, such pictures!) of a street acrobat, in order to impress his people at Rum-ti-Foo—

His people—twenty-three in sum,
Who played the eloquent tum-tum,
And lived on scalps served up in rum,
The only sauce they knew—

is a charming creation. So is the precocious Baby, who turned up his little nose at the food provided for him—

'My friends, it's a tap, that is not worth a rap'
(Now this was remarkably excellent pap);

who chucked his old nurse under the chin, with his

Fal lal lal, you doosed fine gal;

and who finally—a warning to all precocious babes—died 'an enfeebled old dotard, at five.' Baines Carew, gentleman, and attorney-at-law, who is so overcome with sympathy for his clients that he faints on the floor at the recital of their wrongs, and they are obliged to go elsewhere for a lawyer, is also one of these touches *contrary to* nature which makes the whole world kin—or, at all events, so much of it as loves a joke. But the very best of all these Ballads, and one that seems to us quite unrivalled for its grotesque humour, is the yarn of the *Nancy Bell*, which is, it seems, set to music and published as a song; and much we should like to hear it.

'Twas on the shores that round our coast
From Deal to Ramsgate span,
That I found alone, on a piece of stone,
An elderly naval man.

His hair was weedy, his beard was long,
And weedy and long was he;
And I heard this wight on the shore recite,
In a singular minor key:

'Oh, I am a cook and a captain bold,
And the mate of the *Nancy* brig,
And a bo'sun tight, and a midshipmite,
And the crew of the captain's gig.'

And he shook his fists and he tore his hair,
Till I really felt afraid,
For I couldn't help thinking the man had been drinking,
And so I simply said:

'Oh, elderly man, it's little I know
Of the duties of men of the sea,
And I'll eat my hand if I understand
How you can possibly be

Digitized by Google

'At once a cook and a captain bold,
And the mate of the *Nancy* brig,
And a bo'sun tight, and a midshipmite,
And the crew of the captain's gig!'

Then he gave a hitch to his trousers, which
Is a trick all seamen larn,
And having got rid of a thumping quid,
He spun this painful yarn:

'"Twas in the good ship *Nancy Bell*
That we sailed to the Indian sea,
And there on a reef we come to grief,
Which has often occurred to me.

'And pretty nigh all o' the crew was drowned
(There was seventy-seven o' soul);
And only ten of the *Nancy's* men
Said "Here" to the muster-roll.

'There was me, and the cook, and the captain bold,
And the mate of the *Nancy* brig,
And the bo'sun tight, and a midshipmite,
And the crew of the captain's gig.

'For a month, we 'd neither wittles nor drink,
Till a-hungry we did feel;
So we drawed a lot, and, accordin' shot
The captain for our meal.

'The next lot fell to the *Nancy's* mate,
And a delicate dish he made;
Then our appetite with the midshipmite
We seven survivors stayed.

'And then we murdered the bo'sun tight,
And he much resembled pig;
Then we wittled free, did the cook and me,
On the crew of the captain's gig.

'Then only the cook and me was left,
And the delicate question: "Which
Of us two goes to the kettle?" arose,
And we argued it out as sich.

'For I loved that cook as a brother, I did,
And the cook he worshipped me;
But we 'd both be blowed if we 'd either be stowed
In the other chap's hold, you see.

"I 'll be eat if you dines off me," says Tom.
"Yes, that," says I, "you 'll be."
"I 'm boiled if I die, my friend," quoth I;
And "Exactly so," quoth he.

'Says he: "Dear James, to murder me
Were a foolish thing to do,
For don't you see that you can't cook *me*,
While I can—and will—cook *you!*"

'So, he boils the water, and takes the salt
And the pepper in portions true
(Which he never forgot), and some chopped shalot,
And some sage and parsley too.

"Come here," says he, with a proper pride,
Which his smiling features tell;
"'Twill soothing be if I let you see
How extremely nice you 'll smell."

'And he stirred it round, and round, and round,
And he sniffed at the foaming froth;
When I ups with his heels, and smothers his squeals
In the scum of the boiling broth.

'And I eat that cook in a week or less,
And—as I eating be
The last of his chops, why, I almost drops,
For a wessel in sight I see.

* * * *

'And I never larf, and I never smile,
And I never lark nor play;
But I sit and croak, and a single joke
I have—which is to say:

'Oh, I am a cook and a captain bold,
And the mate of the *Nancy* brig,
And a bo'sun tight, and a midshipmite,
And the crew of the captain's *gig*!'

NODDY'S SITUATION.

IN FIVE CHAPTERS.—CHAPTER V.

PEOPLE did talk; and the bitterness of it to Mrs Muciller was that it was all her own doing. However, she was equal to the occasion. She had made one attempt to bring Julia out at eighteen with indifferent success. As a shopkeeper, whose goods have been exposed in his window for a few weeks, and become a trifle soiled, will remove them to the back of his shop, that they may come out fresh again by-and-by, so Mrs Muciller, whose daughter had become a trifle fly-blown by the exposure, resolved to send Julia to France to finish her education for the second time, to come out fresh at eighteen again in another twelvemonth. It took a few weeks to complete the necessary arrangements for Julia's departure, during which time Mrs Muciller's attention was distracted from Noddy's affairs. The only *sentiment* of emotion at the *contre-temps* exhibited by Julia consisted in a renewed expression, in song, of something like regret that the 'two leaves were parted in the stream;' but as to any *feeling* of emotion, she probably had about as much as the 'other leaf,' that 'floated forward all alone.'

Towards the close of September, a very few days after Miss Julia had become a *pensionnaire* of a Parisian establishment, Mrs Muciller pounced upon an advertisement in the local paper.

'At last!' she exclaimed to Noddy; 'here is the very thing for you. It seems like a providence. Here have we been trying the London papers for weeks, and the very identical thing suddenly turns up in our own little print. I 'll read it:

"Wanted—a Governess. The advertiser wishes to obtain instruction for a child turned eight years old. English only required.—Address W., Pinewood, Lyndhurst, Hants."

Just what you want—no accomplishments whatever mentioned; so write directly.'

'Yes,' said Noddy, 'I will. I like the look of that advertisement. There is not too much said, and not too much required.'

Noddy wrote three or four notes before she could manage one to suit the conciseness of the advertisement. The one she sent was this:

'*September* 26, 18—.

'To W.

I think I am competent to undertake the situation.—NORAH CRAY.'

Return of post brought the following reply:

'*September* 28, 18—.

'To MISS NORAH CRAY.

If Miss Cray is of that opinion, she is requested to be at Lyndhurst Station at 7.15 P.M., to-morrow. Carriage will be sent.—W.'

'P.M.?' Mrs Muciller remarked. 'Not a very suitable time to engage a governess. However, that is not my affair.'

Noddy was so really anxious to secure a situation for which she thought herself qualified, that she would have gone had it been M.M.—twelve o'clock at midnight.

Digitized by Google

'You will not make any frivolous objections about accepting this situation,' Mrs Muciller said. 'The family, whoever they are, seem evidently disposed to engage you, and you will understand I have *no* further occasion for your services with me. Should you be engaged at once, I do not even see that it would be needful for you to return. You forgot yourself more than once in your demeanour to a visitor of mine; it is not my wish you should have another opportunity of making a similar mistake. If you return at all, it will be your own fault; and if you suffer for it, it will be a consequence of your own folly.'

'I will really try,' returned Noddy; 'for indeed I am in earnest for employment. But you will not be angry if I return unsuccessful? You would not turn me away?'

'If you return, I do not think I should turn you away. People might talk. I should not turn you out of doors; but if, after once shewing you a separate path from my own, and you refuse it, there should be a way I have not yet tried to make you feel my resentment, I will try to find that way. Until you had the prospect of a situation, I have restrained myself, because to exhibit my feeling would be useless and purposeless. Now, let me tell you that I know something of your deceit and treachery. Thanks to your poisoning Mr Geogagan's mind against my daughter Julia, he left in the sudden and disgraceful manner he did. You need not pretend to innocence. You were walking with him the day we went to the picnic, and your lies have brought all this disgrace about.'

'I assure you it was not so. I never said a word to'——

'You own you walked with him, then?'

'I did,' said Noddy quietly; 'but'——

'Oh, you did! Vastly fine! You did! Mrs Muciller's upper servant and parlour-maid walked out for an airing with Mrs Muciller's guest! *Indeed*. Cat!' and Mrs Muciller bent herself forward, the better to project her indignation.—'Leave the room without a word, or I may forget my own interest, and once out of the house, may be fool enough to forbid your return, even to such a reception as *I* can give you. Go!'

Noddy was too angry to cry. She went. Mrs Muciller's words were too unjust to stab. No one knew their injustice better than Noddy. The one bit of truth, that she had taken a walk with Mr Geogagan, she was not ashamed of. Mrs Muciller's deduction from it, about its being the means of breaking off Julia's expected match, needed no contradiction. Noddy knew that, and, what is more, knew that her step-mother knew it too. The mistake of women's disputes is their predilection for hanging a quarrel on any peg but the right one. Had Mrs Muciller confined herself to saying she hated Noddy, and always had done so, she would have been completely justified, and would have succeeded in making her victim cry.

The 7.15 train set Noddy down at a little country station, in the middle of the New Forest, amid a wilderness of tree-beauty, with no other habitation in sight for miles than the station-master's house, and the long red roofs of Lyndhurst Union peering out from the distant green. The air was scented with flowers, and musical with bird-voices, and the golden evening haze lay on all the sombre trees, and burned them into a red misty glory. A few minutes, and a shaggy pony became visible, drawing a small phaeton out of the forest shade! The man drove up, and asked for Miss Cray.

'No luggage, mum, I think?—No. Perhaps you won't mind sittin' by me. The road is roughish, and the front seat is more springy.'

So Noddy perched herself beside the coachman, and the shaggy pony began a shuffling sort of running trot, and the 'carriage' began to glide and bump over the grassy forest-path.

'How far is Pinewood?' Noddy inquired.

'A matter of five mile, mum—miss, I *should* say—but the road is a rum un.'

So it seemed. Over humps and bumps in the lawny way, and the forest-path twisting and winding about among the majestic trees; the wheels singing pleasantly on the grass, grating a stone here and there, or going over a bough yonder, but the pony shuffling along over everything with a happy see-saw swaying of his head.

'Are they at home?'

'Yes'm—leastways, miss.'

'Who did you say your master was?' Noddy wanted to know something of the folks she was going to.

'I didn't say he was *no* one, did I?' He thought this too sharp, however; for he added: 'He's the governor—that's what he is.'

'And the child?' asked Noddy, a little rebuffed. 'A girl, I suppose?'

The coachman looked at her severely. 'No,' he said doggedly; 'it ain't a girl.—*Come* up, Peg, can't you?'—the last remark being addressed in a surly tone to the pony.

It was getting dusk when Noddy arrived. She was shewn into a spacious room, comfortably furnished, but plenty of room to walk about. The windows looked out on the billowy forest, now fading into purple gloom, all save the nearer trees, which stood in a silhouette of black lacework against the twilight sky. Presently, an old lady in black silk entered the room. Not the lady of the house, Noddy judged—more like a motherly housekeeper, than that; but there was a comfortable smile on her face as she said: 'Miss Cray, I believe—in answer to the letter? Will you follow me, my dear?'

Noddy followed her out of the room, and along a cool white hall, to a door. The old lady knocked. 'My master is within; please to enter.'

Master! thought Noddy, and trembled at the prospect of the approaching ordeal; but the housekeeper had opened the door, and Noddy had to go in. The room was larger than the other; it was also darker, inasmuch as the blinds were half-way down, and no lights to enliven the gloom. Noddy could only distinguish dimly the figure of a man, in a great chintz-covered easy-chair, at the far end of the room. She judged him to be elderly by his reclining as if with gout, his legs making two great bolster-like parcels in front of him. The hair that strayed out beneath his velvet skull-cap appeared white, and he addressed her in a slow voice of some firmness. 'Be seated, Miss Cray, if you please.'

Norah took a seat.

'Your letter appeared to me straightforward.'

Norah bowed.

'You think yourself competent for the situation, you say. I hope you have thoughtfully considered the terms in which I advertised, before venturing to make such a statement? It is a situation which will involve some amount of responsibility, as I

Digitized by Google

wish to depend entirely upon the person whom I may select for the education and general oversight of her charge. I will not conceal from you that that charge, in addition to being a responsible one, may prove a difficult one—the lad to whom I refer having many objectionable propensities, that will require to be watched and corrected.'

'I think you stated in the advertisement the child is eight years of age,' Norah said.

'"*Turned* eight," are the words employed. He is, in fact, "turned eight."'

'Then, I think there is every hope that those propensities may be subdued.'

'I hope so. And in proof of your ability to bring about such a result, I conclude you can give me some testimonials, received from previous situations.'

She had not thought of that. 'I have never been out before,' Noddy said.

'H'm. Then your method of procedure would be tentative? That is a grave consideration.'

'I would try to do my best,' said Noddy eagerly, 'if the child is not too old, and not beyond my capacity to teach. I'm not clever nor accomplished, but it was your plainness in advertising led me to think I might suit. You said: "English only required."'

'Exactly, but the best of English. And you will bear in mind that there are many more English persons who can talk three or four foreign languages than can speak their own with correctness.'

Noddy's heart began to sink. 'The advertisement doesn't say the best of English,' she said.

'No, it says *English*, and only the very best can be called that.'

Noddy thought of Mrs Muciller and of her own prospects at Braithfield, if she lost this place. She determined on a despairing battle for it.

'But the child is yet young, only eight; and I can teach him till he is ready for some one wiser. Indeed I will do my best.'

'*Turned* eight—if you please. He is in fact "turned" nine. He is at least ten years of age.'

'Then,' Noddy said, just ready to cry with disappointment, 'I suppose I am not competent? You may know better English than I do, but you have not made a brave use of it to torture a poor girl who wants work.'

'Miss Cray, I believe you are so far competent that I have no hesitation in offering you the situation. You speak truth, in spite of its being calculated in many a similar case to lose you an engagement. I therefore see you are likely to give instruction. Will you accept my situation of governess?'

Noddy hardly believed her ears. 'I will,' she said with heartfelt thankfulness.

'You have not mentioned terms, remember.'

'I am content to accept what you may please to offer.'

'Then I have only one other question to put. You may think it a strange one, but I shall be obliged if you will answer it. Do you know what you are?' There was a distinct alteration in the old gentleman's voice that sounded queer.

'No,' Noddy said, blankly enough.

'Then I must ask another. Do you know what day this is?'

'The 29th of September.'

'Then you are the biggest little Michaelmas goose that ever was!' and the elderly gentleman kicked off his gouty legs, and pitched his skull-cap and wig into the fender; 'and you had better own it, Noddy!'

There stood Mr Frank Geogagan.

'*Turned* eight, Noddy,' he said; 'and turned eight-and-twenty, for the matter of that. Behold your pupil! Of the establishment, you see I am the gover*nor*. You have already given me your promise to be gover*ness*. Do you wish to withdraw it?'—and he came towards her.

Noddy was utterly disconcerted for the moment, but she got out of his way. 'Mr Frank,' she said, 'I answered your question, now please answer mine. Do you know what you are?'

'No,' said Mr Frank.

'You are a most dreadful horrid story; that's what you are. You said you had lost all your money.' Noddy was nearly crying.

'No. I said, "all I had in India"—which was quite true, and six thousand pounds. I did not tell you I had brought four times that sum home with me.'

'You told me you were going to seek employment.' Mr Frank was dodging her about the room.

'I did—you told me to go and dig—I came down here and took this little farm, and I have gone and dug, or digged, whichever you prefer.'

'But you don't want a governess, after all; and that was a wicked cheat.'

'But I do, Noddy. I want to be made such a man of as you can love, and you have given your word, you will not refuse. You won't take it back again? you will forgive me the artifice? For I love you as I can love no other woman.'

Mr Frank caught her up. 'It is a very bad story,' she said. But Mr Frank gathered her to him in his arms; and Noddy did not refuse. He folded her to him against his breast, and Noddy did not refuse. He hushed her sobs as she lay nestled against him like a bird that has found shelter. 'I love you with all my heart,' she murmured, 'and I'm so happy!' (in proof of which she was wiping tears from her eyes); 'but you don't think I loved you for your money?'

'I'm sure you didn't, little goose,' said Frank, soothing her with kisses.

'I had rather you hadn't any at all, and that we had to work together.'

'Nonsense, Noddy; you have forgotten you are a little woman of property yourself. Just come out with me and take the first instalment of a quarter's interest for your twenty pounds.' He led her through the house, and out into the dairy, to have a draught of warm new milk. It was from Noddy's investment—the finest milch cow on the farm.

Somehow, the comfortable old housekeeper didn't seem altogether surprised at Mr Frank walking about the shrubbery with his new governess on his arm; I think she must have been in the secret.

Noddy did not return to her step-mother. In three days she was Mr Frank's wife, and as there were no cards, this is how Mr Geogagan informed Mrs Muciller of Noddy's marriage:

'MADAM—I beg to inform you that Miss Cray has accepted the situation. FRANK GEOGAGAN.
Pinewood, Lyndhurst.'

POPULAR

LITERATURE, SCIENCE, AND ART

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 296. SATURDAY, AUGUST 28, 1869. PRICE 1½*d.*

ON 'CHANGE.

STANDING in the centre of a wilderness of alleys, distinguished by nothing but that dull and dingy tone of colour which may be called the hoar-frost of age, within a stone's-throw of the Bank and the Royal Exchange, is a plain white-washed court, as insignificant in appearance as the outer walls of the Alhambra, which through its price-current controls the policy of half the courts of Europe, regulates the rate of exchange at San Francisco and at Calcutta, and governs the value of money in the bazaars at Cairo and in the gold-room of New York. This is the Stock Exchange. In form it is a *cul de sac;* and except that its glass doors are guarded by a porter, and that there is a slight attempt at architecture in the form of a pillared portico, there is nothing to distinguish Capel Court from the rest of those courts and alleys that form the heart of the city of London. It is simply a bit of old London, of the London of Sir Thomas Gresham and Sir Dudley North, the London of the merchants who, in the early days of international commerce, laid the foundations of that vast and complicated system of credit which has linked all the nations of the earth together.

To men of business in all parts of the world, in the Gulf of Mexico and the treaty ports of the Chinese Seas, this court is holy ground—the Mecca of commerce—and, like holy ground, it is guarded against the intrusions of the profane by a system of police which is an odd compound of superstition and lynch-law. Despotism in miniature is the only phrase by which I can aptly characterise this system of police; and woe to the belated sightseer who presumes to pry into the theatre of its mysteries! In a freemasons' lodge, possibly he might find some sort of mercy; but he must not look for it on 'Change. The word itself is not in the vocabulary of its committee. It forms part of the *lex non scripta* of stock-jobbing that any sightseers caught within the temple of its mysteries shall be danced round the Exchange, yelled at, bonneted, punched, nudged, and generally exposed to the treatment inflicted upon pantaloon at Christmas; and if you understand the dialect of Capel Court—the most puzzling and barbarous of all the dialects spoken within the four seas—you will soon discover by the sign that flies from desk to desk, from group to group, when a bird has been caught in the meshes of the spoiler. It is not often that this law is put in force; but in the course of the past five or six years more people have gone through the process than care to recollect or talk about it. Only five or six months ago, a foreign gentleman who happened to stroll through those mystical glass doors found himself very much in the position of Marshal Haynau in Barclay and Perkin's brewery. To the shout of 'Number forty' the bears fell upon him. One knocked off his hat, and kicked it into the centre of the court; another threw his newspaper into the air; others hustled him like a band of garrotters; and when, recovering his courage, he plucked up spirit enough to turn upon his assailants, they simply called the porters to kick him out. It is necessary, of course, if business is to be carried on with anything like pleasure within the four walls of a narrow court, that sightseers should be kept out of the Stock Exchange as they are kept out of the House of Commons; but this bit of lynch-law is a relic of the rough and lawless past, when stock-brokers were not reckoned in the category of gentlemen, and when gentlemen west of Temple Bar thought it an aristocratic exploit to bonnet the watchman.

The customary hours of business on 'Change are from 11 to 2 or 3; and none but those who keep their eye on the City Article of the *Times*, and can read between its lines, can form anything like an adequate conception of the amount of business that is got through in those three or four hours of chitchat and speculation by the two hundred or three hundred gentlemen in frock-coats and buff waistcoats who represent the plutocracy of the city of London, and, as its representatives, give the cue to all the money-markets of Europe. To say nothing at all of our own funds, representing in themselves many millions of capital, the official list of the Stock Exchange comprises the funded debts of not only every power in Europe, but, with the exception

Digitized by Google

of Persia, of China, and of Japan, the debts, I believe, of every government to be found upon the face of the globe three degrees out of the picturesque civilisation of feathers and paint; and over and above all these government stocks, the scrip of all our own railway, banking, mining, and telegraph companies, mounting up probably in value to a higher figure even than the amount of the largest debt in Europe, those of Great Britain and France. It is impossible to say with anything like precision what the total amount of these stocks is. A keen man of business, to whom I once put the question, answered as a guess: 'Probably over a thousand millions;' and assuming that only one per cent. of this paper changes hands every day, the average business of the Stock Exchange is ten millions. Frequently, of course, it is double and treble that amount; and in times of excitement, when a whisper may put the Bourses of Paris and Frankfort in a panic, when every fresh paragraph in an official or semi-official newspaper brings orders to buy or sell this or that, stocks may pass from hand to hand to the tune of a hundred millions in three or four hours.

It is at times, not like these of comparative quiet, but of excitement and panic, when every moment has its whisper, and every whisper is big with the fate of a bank like Overend and Gurney's or Masterman's, when a strip of yellow paper with a few ciphers upon it, passed secretly from hand to hand, may announce a war or proclaim a peace—that the Stock Exchange ought to be seen in its most characteristic form, although even in such moments the visitor will see little but what I may call suppressed passion. There is nothing theatrical about the Stock Exchange. It is talkative, and now and then noisy. It can occasionally work itself up into what is called a panic. But in comparison with the gold-room at New York or the Bourse at Paris, it is like the lobby of the House of Commons in contrast with the gallery of Drury Lane Theatre on a boxing-night. On the Paris Bourse, when there is anything like a storm in the air, you may meet men and women of all ranks, from countesses to ballet-girls, from senators to cab-drivers, elbowing each other, to get to their brokers, and shouting at the tops of their voices to the brokers to sell or to buy this or that stock; and though the gold-room at New York is a little more select, it is hardly less passionate and demonstrative than the Paris Bourse, especially when millionaires are manipulating the shares of the Erie Railway, or politicians in the White House at Washington are talking commercial treason about Five Twenty Bonds. Anything like tumult or passion or enthusiasm is as religiously tabooed in Capel Court as it is round the gambling-tables of a German Kursaal; and with the exception of a spurt now and then among the bulls and bears—the professional gamblers of the city—you will see nothing more in the Stock Exchange, where hundreds of thousands are changing hands every ten minutes, than you will see in the Cloth Hall of Leeds or on the Liverpool flags. Now and then you may hear a call for Egyptian Bonds or Russian Railways or Peruvian Bonds, Midlands or Metropolitans, but this is only when speculation for a rise or fall runs high, and stocks are scarce; but, as a rule, the business of the Stock Exchange is carried on as quietly as the business of a provincial corn-market.

Here, as everywhere else, there is a division of labour: this man takes one description of stock; that man takes another. At this stall you may find American Bonds or American Railways; at that you may find French Rentes or Greek Coupons. This man is a jobber, and that man is a broker. All, therefore, that the broker with a commission to lay out, say, ten thousand pounds in consols, to sell or to invest one hundred thousand pounds in Indian Railways, has to do, is to walk into the court, find out the jobber who deals in these stocks, and make a bargain. The transaction is but the work of three minutes, and an entry of a couple of lines in a note-book. The delivery of the scrip itself generally stands over till settling-day, perhaps ten days or a fortnight hence. The broker is paid for his share of the trouble by a slight percentage on the purchase or sale, a percentage varying from an eighth per cent. on consols to a fourth on, say, Turkish Consolides. The jobber looks for his profit from the turns of the market, that is, from those variations in the daily price of stocks which the press note with such particularity as to fractions.

This is the general course of *business* on 'Change. To the broker, it is little more than a matter of routine; for he is only a professional go-between—a link between borrowers and lenders. All he has to do is to give the best advice he can to his clients as to the prospects of this or that stock, and to buy or sell as he is ordered at the market price. Strictly speaking, these are his only functions. To buy or sell on his own account is against the etiquette of the Stock Exchange. The fluctuations in the value of stock from day to day are, therefore, to him merely the fluctuations in the readings of a barometer. The position of the jobber is very different. To him all these fluctuations are fluctuations in an account of profit and loss. His business is speculation—speculating for a rise or fall of values; and speculation of this kind in a market where competition is as keen as it is on the Stock Exchange, is a game partly of skill and partly of hazard, one requiring on the part of the player skill, wit, courage, and capital, a keen appreciation of the personal characters of the five or six statesmen and soldiers who just now hold the destinies of Europe in their hands, with an intelligent comprehension of their policy and its motives, and of its prospects of success. To these men every line in Reuter's telegrams is of personal interest; and it is their business to discount every phrase that may be uttered by the rulers of France, Prussia, Spain, or Italy, to calculate its consequences on the holders of stock, and to lay their account accordingly for a rise or fall of prices. Every morning, therefore, you will find these men standing about in groups discussing the politics of the day, the prospects of war or of peace, the rates of exchange, the state of the Bank balances, the prospects of the harvest, and the value of money; for the tone of business on the Stock Exchange is influenced by every variation in the barometer of politics and trade. Acting thus from calculation, and acting against people who in the mass may be said to act merely from impulse, buying or selling upon the strength of the day's rumour, or the caprice of the hour, the jobber who has his wits about him can hardly help finding himself at the end of the year with a handsome balance in his bank book. Of course

> Gang aft a-gley;

Digitized by Google

and the jobber may now and then find himself on the wrong side of the hedge. But the chances are ten thousand to one in his favour; and it must be very strange indeed if in this game of 'pull devil, pull baker,' where the mass of investors are acting from nothing but a haphazard reckoning of profit or loss, with no basis for their calculations but their own hopes or fears, a newspaper article, a speech in the House of Commons, or a prospectus; and where the bull and the bear, working upon different lines of attack, are acting nevertheless upon profound calculation, and perhaps upon secret information, the public do not go to the wall.

We have at present no further space to explain the secret working of the professional gamblers of the Stock Exchange. The bulls and bears do a great deal of mischief, to-day perhaps inflating stock far above its value, and to-morrow depreciating it far below its natural value; but they are both necessary on the Stock Exchange; and in these days of speculative finance, of international banks, and of co-operative associations for working mines in Brazil, for planting tea plantations on the slopes of the Himalaya, for cultivating the Pampas of the river Plate, for intersecting China with railways, and for working out every chimera that the wit of man can suggest and that capital and skill can accomplish, it is impossible to deny that these men do a great deal more of good than of evil in testing the *bona fides* and the prospects of success of the schemes that are every day floated into the market through the agency of the Stock Exchange.

MY CASUAL ACQUAINTANCES.

At five o'clock one August afternoon, a few years ago, it was hot in Piccadilly.

'Must one dress?' I asked in pathetic tones.

'Of course,' replied Tibbit. 'You are in London, my dear Stumps.—You will excuse my leaving you now, but I have important letters to write before dinner. Remember, half-past seven to the fraction of a second: till then, fare-you-well.'

Important letters I knew meant adjournment to his chambers in the Albany, the removal of his coat and neckcloth, a glass of sherry and bitters, a cigarette, and a sound nap till it was time to adorn himself for the event of his day; and I thought that he might have kept company for once with a poor provincial, who had but his hotel to go to when he was weary of strolling about the streets. But still a dinner at the *Apician* is doubtless a very great treat, and I felt ashamed of my ungrateful repinings.

Ah, here was one of the bliss-houses of my youth, still open, and shewing by large announcements that it continued to cater for sightseers. My heart was forty-two, and did not beat on approaching the Egyptian Hall so violently as it had done thirty years before, but it gave a decided though slight wobble; so fresh do hearts keep in the country. Any entertainment would be more amusing than sitting alone in the hotel smoking-room reperusing the newspapers. What! the Victoria Cross Gallery? Why, that was one of the things I had wished to see directly I heard of it. An old schoolfellow had shot six Russians with his own revolver at the affair of the Ovens in the Crimea, and another had spitted several mutineers in India with a regulation sword: a wonderful feat to the mind of a fencer, who finds one of those weapons clumsy enough in his hand after the foil. I turned in, paid my shilling, and ascended the well-remembered stairs, hoping that the room would not be crowded that hot afternoon. The selfish wish was gratified: the only living being in the place was an official seated behind a green baize table at the entrance, who wanted me to buy a catalogue, and write my name in a large book spread open before him for the purpose. To the first request I gladly acceded, but not to the second. The name of Stumps is not beautiful in itself, and I could not flatter myself that it would awaken any particular enthusiasm in the mind of a subsequent visitor who might read it; unless, indeed, he was a monomaniac about cricket. So I left the half-filled page unenriched by my autograph, and gave myself up to the enjoyment of a real treat. The room was cool, there were seats at intervals, and the pictures were just what I enjoy; full of action, and representing stirring scenes. A man named Stumps cannot be expected to appreciate high art; or at anyrate *I* don't. I own with shame that I like Music with a tune, and Painting with a story; that I am a being without culture in short, fit to make all Mr M——w A——d's nerves jar horribly if I came within five yards of him. Now, with the exception of a few French works, like the 'Gorge du Malakoff' and the 'Prise du Malakoff,' all the battle-pictures I had hitherto seen were disappointing representations of smoke and impossible horses, with a broken gun-carriage and a few dead soldiers in the foreground. But there was a vivid, thrilling episode in each of the paintings which now engrossed my attention, and to study them seemed as good as reading Napier.

I was roused from rapt admiration of a couple of midshipmen in the ditch of a fortified place at midnight, one of whom was quietly lighting a portfire with his cigar, by the sound of voices and the rustling of dresses, and turning round I saw five new-comers clustered round the visitors' book. *They* had no objections to signing their names. Paterfamilias, who was round and stout and pleasant-featured as the ideal middle-aged gentlemen in *Punch*, said: 'Eh, what?' and scratched his signature with the rapidity of a man who was constantly performing that operation. His wife, a portly lady with an imposing nose and proud demeanour, took longer about it, evidently reading the names which preceded her own. Her two pretty daughters—the relationship was written on their faces—signed next; and then a young man in flower-show apparel, with silky hair parted in the middle, took the pen, whispering something to the youngest girl, who simpered. I'd have taken slight odds he uttered an allusion to a ceremony which is performed in vestries.

Of course, I was not staring, but took this little

Digitized by Google

by-play in out of the corners of my eyes, which were still apparently riveted upon the midshipmen who were engaged in patriotic arson. Why only apparently? Because the proper study for mankind is man; because, though Art is very fine, Nature sometimes beats it; and because, even at forty-two, if one lives in the country, a pretty girl is still a pleasing object.

I soon discovered a fact, however, which modesty and experience alike prevented my calculating upon; *they* were noticing *me*. I remember a story, told, I think, in this *Journal*, of a man who flattered himself that he was stalking a lion, and hearing a rustle in the bushes behind him, found that the lion was stalking him. I sympathised with that sportsman. There could be no doubt about it. Madam was the first to gaze on me, as though she thought she knew me, whenever she fancied herself unperceived; then she nudged her husband, and whispered in his ear, whereupon he too inspected me, as if I had formed part of the exhibition; then a mysterious communication was conveyed to the girls, and they examined me in a quiet sort of way, shyly but perceptibly. The young man, too, gave a glance in my direction, but evidently did not think much of me—his attention being engrossed by the charms of the younger-looking of the two sisters, though indeed neither of them appeared more than twenty. An incident soon occurred which I am almost ashamed to mention, lest it should appear to be insinuated that it was not entirely accidental, as of course it must have been. The whole party, making their tour of inspection, passed behind me in single file, Materfamilias bringing up the rear; and just as she passed me, she dropped the pencil with which she was marking her catalogue, without perceiving the loss until she was two pictures off, when she suddenly called to her eldest daughter: 'Oh, do look here, love; here is dear Sir Henry Slasher, whom you danced with the other night, cutting a horrid native's head off! I must put a cross against that.—Dear me, what has become of my pencil?'

I picked up the little golden toy, studded with turquoises, which lay at my feet, and presented it to her. Her gratitude was amazing. She set a particular value upon the article; would not have lost it for worlds; was so *much* obliged to me. Perhaps you are aware how fascinating the manners of a proud matron with a Roman nose are when she condescends to make herself agreeable. I was quite charmed, and being very sociable in disposition, preferring, indeed, almost any one's society to my own, I was glad enough to accept the advances towards conversation which were made to me, in a cordial manner. Presently Paterfamilias chimed in; and then the eldest girl asked some question about a picture, which was referred to me, and so in a little while I found myself chatting away indifferently with the whole party. They were a very diffident family, at least so far as opinion of their own judgment about works of art went, for they listened to my crude observations with a respect which seemed almost tinged with awe. I was cautious at first, fearing lest the young man with silky hair might be either a painter or a soldier; but when I found that he was perfectly ignorant about the things represented, and the merit of the representations, I launched out. It is not often that a commonplace dweller in the provinces finds an appreciative audience, and it is therefore just as well for him to make the most of the opportunity when he does.

The time slipped pleasantly away, till it was necessary for me to go and adorn myself for Tibbit's banquet; and then I took a cordial leave of my new acquaintances, and left the place, feeling rather as though I deserved a Victoria Cross myself, for had I not stormed the reserve of a respectable British family? I rather wished that they had gone away first, and so afforded me an opportunity of looking at the visitors' book, and finding out what their names were; especially the Christian name of the elder of the two young ladies, who had a peculiar droop of the eyelids and a certain dimple on the left cheek when she smiled, which made me feel that perhaps I had been wrong to put off from year to year the crowning of the edifice by the election of a Mrs Stumps. Pooh—pooh! absurd; I was as old as her mother! 'But oh, my heart is an evergreen,' and would not be pooh-poohed.

But however fresh the heart may be, it is apt, after beating for forty years, to find a powerful rival in the stomach, and I certainly forgot all about smiles and dimples when the table-napkin was across my knees. Tibbit has not many merits, but he does understand how to order a dinner, and the artist of the *Apician* can execute that order in a manner to satisfy the most exacting gourmet. In the smoking-room afterwards, however, those drooping eyelids came back upon me, and I spoke of the acquaintances I had picked up to Tibbit.

'Very curious, their shewing such readiness to be friendly with a complete stranger, was it not?' I observed.

'Very,' replied Tibbit. 'The younger man said nothing about the game of skittles, I suppose?'

'Absurd!'

'Neither did the cheerful father propose subscribing seventy-five pounds to a hospital, if you would put down another twenty-five to make up the hundred—eh?'

Tibbit has a most absurd conceit of the superior wisdom of dwellers in cities, and supposes that a man who, like myself, is for the greater portion of the year 'buried,' as he calls it, in the deepest wilds of the agricultural counties, must be ready to fall an easy prey to the first sharper who chooses to bait a hook for him. But, except in gastronomy, Tibbit is shallow.

My reason for making my home so far from London is, that I cannot afford to gratify my passion for field-sports on any other terms. The hire of a moor is also quite beyond my means, so, when trout-fishing ends, it is a dead season for me till September; and at the time I am speaking of, I was therefore 'on the rampage.' This unsettled period comprised a month at Scarborough (spent), three weeks in London, two of which had also expired, and the rest of the time in Paris, or at one of the gay German baths. So seven days after Tibbit's dinner, I went to London Bridge Station to catch the tidal train, and in consequence of three separate and distinct blocks on the road, nearly missed it.

'Look sharp, sir, and I'll manage it for you. First class? All right, sir. Take the portmanteau in the carriage with you? Two places; here you are.'

Moralists may write what letters to the *Times* they like, but that porter deserved his shilling. I

Digitized by Google

should certainly have had to go back ingloriously to my hotel, and remain there till next day, if he had not been remarkably spry. The guard was whistling shrilly, and some official was calling out to another that all was right behind, as the tipped one shoved my portmanteau under the seat; and when I plumped down, panting, and he slammed the door to, the train was actually in motion.

When I ceased to be a flurried package, and grew capable of observing, I discovered that the four occupied seats besides my own were filled by my acquaintances of the Victoria Cross Gallery, *minus* the young man with silky hair. I greeted them, and they returned my salutations most cordially. The drooping-eyed one was sitting next to me, and was faced by her mother, to whom, of course, I directed my conversation, not, however, with the same complete success which had attended my efforts to interest her on the former occasion, as her mind seemed to be much occupied with a peculiar class of phenomena.

'I beg your pardon,' she observed, soon after we were clear of the station, 'you are next the window, can you tell me if the smoke from the chimneys is going straight up?'

'Not quite,' I replied; 'it is waving about, as smoke usually does.'

Soon we were in the open country, and then she put another question. 'Are the trees still, or swaying to and fro?'

'They seem pretty quiet, I think,' said I wondering.

And then Paterfamilias leaned forward, and spoke of some matter about which he had been reading—a *Times* article.

His wife soon interrupted us. 'There is a windmill somewhere about here,' she said, 'on the left.'

'O yes; I can see it,' I replied, looking out of window.

'Tell me, oh, do tell me, is it going round?'

'No,' said I, beginning to think her rather cracked. 'It is quite quiet; no grinding going on to-day.'

I suppose that the young lady sitting next me saw a bewildered and curious expression on my face, for she offered an interpretation. 'Mamma dreads sea-sickness during the crossing so very much,' she said, 'and takes great interest in the wind.'

'Oh!' cried I, much relieved in mind, 'then I am glad to say that it seems to be very calm.'

'Thank goodness!' exclaimed the mother.

What brutes husbands almost invariably are. A man standing in any other relation to this poor lady would have let her take what encouragement she could from the motionless windmill; but her rougher half must needs blurt out: 'You cannot tell inland what the weather is on the sea; I daresay it is blowing half a gale of wind at Dover.'

'Prophet of evil!' said his wife, 'I will not listen to you.'

'You think too much about it, and frighten yourself into being ill,' continued he.—'Are you, sir, a good sailor'——

'Stumps—Mr Stumps,' added I, observing that he paused.

There seemed to be a prospect of our travelling together, for I was quite alone and unfettered, and glad enough of their company, while they apparently liked mine. So, as it is very inconvenient for people who are thrown much together not to know one another's names, I was glad to have the opportunity of at once avowing mine.

But I could not imagine why it should give them all an electric shock, which it did: if they had been joined hand in hand, and the word Stumps had been the brass knob of a charged Leyden jar to which one of them had advanced a knuckle, they could not have started more simultaneously.

Of course the involuntary movement was very slight, and might not have been observed, but that I was somewhat thin-skinned about my name, and therefore on the watch for the smile which it sometimes evoked; but there was no smile, only a thrill of surprise, which was immediately suppressed.

'Oh, indeed,' said Paterfamilias. 'I did not mean to—to be inquisitive; but since—in short, self-introduction—my name is Draper; this is Mrs Draper (bows); this is my eldest daughter, Caroline (bows); this my youngest, Julia (bows).'

'And the young man who was with you at the Egyptian Hall the other day, was he your son?' I asked.

'O no, *Mr Stumps*,' replied Mrs Draper, with a strong accentuation of the word Stumps. 'He was only a friend, no relative.'

I looked across at Miss Julia, who tried to appear unconcerned, but coloured slightly. It was evidently as I had supposed. What taste in the lad, to think twice of the younger sister while the elder was there!

Caroline is nice; but her family called her Carry, which was intoxicating. It was impossible for me to help shewing a certain anxiety to please when speaking to her, or paying her any little ordinary attention, quite different from my manner towards her parents or sister; and I thought she noticed it, and seemed rather pleased than otherwise. There is no fool, you know, like an old fool.

There were opportunities enough of shewing civility to all of them before we got to Paris; for—though Mr Draper did his best, and was not inactive for his figure—to wrestle with so much luggage as the ladies found it necessary to travel with, was quite beyond the powers of any one man who was not a Briareus, or an Argus, or a Hercules, or some other peculiarly gifted myth. And then that overtasked gentleman's anticipations about the weather proved correct; it *was* blowing very hard in the Channel, and he did not get off much better than his wife on this occasion. Indeed, the whole Draper family were thoroughly prostrated, and as I am not subject to the malady of the sea, they looked up to me very much as people do to a doctor when there is illness in a house. The romantic boy breaks ground by presenting the girl of his heart with a nosegay; I, middle-aged and practical, insinuated myself by handing a basin.

When we were in the train on the other side, and my fellow-travellers had recovered, they seemed really hurt and ashamed at having put me to so much trouble; not that they bored me by dwelling much on the subject, but what they did say was evidently genuine.

Then they deferred to me in everything. 'Which is the best hotel to go to, Mr Stumps?' 'How long ought we to stop in Paris, Mr Stumps?'

That was a queer thing: they never spoke to me without mentioning my name with an emphasis, pausing upon it, as it were, as if to impress it upon their memories. And when Miss Carry grew

Digitized by Google

playful, as she did under my attentions, she said 'Mr Stumps' in a sly way, as though there was some joke in the word, which I did not at all like, seeing that I soon began to contemplate the possibility of asking her to assume it.

For I went to the same hotel as they did; walked, drove, dined, and visited the theatre with them. When they were tired of Paris, we went to Cologne and up the Rhine together; and by the time we had settled down at Wiesbaden, I was quite like a member of the family; and the continued deference they, and particularly Carry, paid to everything I said, might well have tickled the vanity and softened the heart of a man even older than I was.

At last I determined to declare myself, and took the opportunity of speaking to Mr Draper after the *table-d'hôte*, when we were taking cigars and coffee at a little round table in the courtyard of the *Rose*. I told him that I knew I was rather old for his daughter, and that I was not possessed of that wealth which in these cases often makes up for lack of youth; but that I was not exactly poor either, and would do my best to make Carry happy.

'Well, my lord,' said he, 'of course I am deeply sensible of the honour a man of your rank does my girl by such an offer'——

'My lord! What on earth do you mean?' interrupted I.

'Surely it is time to throw off your incognito when such a serious matter as marriage is being discussed,' he said.

'Incognito! What are you driving at? Whom do you take me for?'

'Why, for the Marquis of Walden,' he replied.

'Marquis of Walden!' cried I. 'Come, come, if you have other views for your daughter, say so; but there is no need to banter me.'

'Do you mean to tell me you are not the marquis?'

'Of course I am not; there never was a title in my family yet.'

'Then who are you?'

'The man I profess myself, to be sure—plain Mr Stumps.'

Mr Draper remained utterly dumfounded for a while; but at last roused himself sufficiently to say: 'I beg your pardon for the mistake; but why, may I ask, did you sign yourself the Marquis of Walden in the visitors' book at the Victoria Cross Gallery?'

'I never committed such an absurdity.'

'It was the last name in the book when we entered, and you were the only person in the room.'

'I can't help that,' cried I, losing patience; 'I never signed my name at all.'

Mr Draper sat still a little while with his lips tightly compressed, and his fat sides and shoulders heaving convulsively at intervals. At last he could bear it no longer, and exploding with irrepressible laughter, he rose and rushed into the hotel; while I strode off in a state of boiling indignation to the Rooms, and lost a couple of pounds worth of florins, to relieve my feelings.

The cold manner of Mrs, and alas! also of Miss Draper towards me on the following morning was so extremely disgusting, after their late cordiality, that I packed up my portmanteau and left the place at once. I must say that Draper himself looked hurt and ashamed, and, I doubt not, would have apologised for his own mirth the evening before, and his wife and daughter's behaviour afterwards, if he could have got hold of me alone. Poor hen-pecked wretch! Well, if I had been a marquis or a millionaire, I might have been hen-pecked too at this present writing; but that I may now safely say I never will be. I have learned my last lesson.

KING ARTHUR AND HIS TIMES.

PERHAPS no story has been so overlaid with fable or so tinted by romance as that of Arthur, the greatest of British kings. Geoffrey of Monmouth and the Welsh bards, his chief chroniclers, relate such marvellous stories of his life and exploits, that one can scarcely blame authentic history for discarding him altogether, and handing him over to tradition. His very existence was doubted at an early period, but poetic embellishments have since given to that shadowy phantom the brightest colour and reality. It is difficult to sift the few grains of truth from the mass of fanciful stories, but not on that account should everything be rejected, and Arthur declared a purely mythical personage. There is no reason for disbelieving that he fought twelve pitched battles against the Saxon invaders; but to say that he killed nine hundred men with his own hand is manifestly absurd. Of course the objection will be made that, if a writer is not worthy of belief on one point, he is not on another—a most true argument in many cases, but one that will not always weigh with those who consider the dark ignorance and credulity of those times, and how unquestioned truth is mingled with the sheerest fable in the writings of the monks and bards, almost the only historians. To account for this mighty imperial presence standing out from among the dim records of the long dead past, some have even gone to the domains of mythology, and discovered that Arthur and his twelve knights of the Round Table were meant as an emblem of the sun and the signs of the zodiac: a brilliant discovery truly, which may be easy of belief to the student dreaming of the myths of old Greece and the Homeric age, but not so credible to the reverent descendants of the Briton and Saxon, who gallantly warred together for the possession of English soil. It is not as if the disputed story was of the times of Druidical supremacy. These had passed away; the native Britons had for the most part become Christians; and as to the Saxons, they would certainly have resented such an intrusion into the kingdom of Odin, All-Father. Arthur must have lived and done some at least of the many famous deeds ascribed to him. The hero we may acknowledge, though not the divine vanquisher of giants, before whom, single-handed, whole armies melted away.

Men and manners were changed since Cæsar's cohorts landed in Britain and found it peopled by a half-savage race, and those they saw were chiefly emigrants from more civilised Gaul. The tribes of the interior were not half but wholly savage,

Digitized by Google

wandering through thick matted forests and desolate marshes in search of the animals whose flesh supported them, and whose skins clothed them in winter. They stained their naked bodies with woad and other herbs; and their Roman enemies speak of watching with curiosity the fading colours upon the poor Briton in his death-agony. Polyandry, the most primitive form of marriage, as it has been thought, was universal among them. Some of the most civilised sea-coast tribes had horses and rude chariots, with iron scythes fixed in the wheels, and they also used iron for their lances and hatchets, instead of the flint and bone-tipped implements of the earlier inhabitants; but the majority led as miserable lives as any Central African negroes, without the luxurious climate and sunny nature of the negro to brighten their dark existence. Unmoved by the accustomed sights and sounds around them, the low growl of a bear close at hand, the eyes of a hundred wolves gleaming through the darkness, or the vulture poised overhead waiting for prey, they fled terrified from floods or lightnings which the wicked elves had surely roused to torment them. No wonder they turned for help against invisible powers to the Druids, that strange priesthood with its white robes and golden amulets, and knowledge so infinitely above the common people, and then huge stone altars ran red with human sacrifices, and long-forgotten Celtic cries echoed through the oak groves. Such were the Britons as the Romans found them; but the civilisation of the conquerors took root. For five centuries it progressed, and a purer faith stepped in, lifting them higher and higher in the scale of nations; till in the reign of Uther Pendragon they were skilled in the arts of peace and war, possessing towns and cattle, rich clothing, jewels, armour, and fighting weapons equal indeed to those of their Saxon invaders.

Uther Pendragon died about the end of the fifth or beginning of the sixth century, leaving his son Arthur, a boy of fifteen, to succeed him in a fair kingdom. The old chronicler, Geoffrey of Monmouth, calls him 'a youth of such unparalleled courage and generosity, joined with that sweetness of temper and innate goodness, as gained him universal love,' which character he appears to have generally maintained throughout his stormy life. With this, however, he nursed a fierce hatred of the Saxon, a feeling shared by every Briton, who looked with dread at the ever-advancing footsteps of that gigantic, blue-eyed race. Hengist and Horsa were long dead, but the battle-axes of their followers fell no less heavily. Against them were Arthur's unwearying efforts directed. His first enterprise was the siege of a Saxon army at York, a sufficiently ambitious one; so it may be supposed he staid quietly at home for a few years after his early accession. Upon the Saxons receiving reinforcements, he retreated to London, and after joining fifteen thousand men under Hoel, king of Armorica, his sister's son, the two kings together defeated the Saxons at Lincoln. They had another encounter with the Saxons in Somerset, where Arthur first appears as the chivalrous hero-king. He had a very tall, imposing figure, but beyond that, even those who knew him say nothing of his personal appearance. On this occasion he wore splendid armour, a golden helmet, which bore in front his well-known device, a dragon; and fondly did his people believe he was the dragon that should chase their cursed enemies back to the sea whence they came. His shield, named Priwen, was emblazoned with the figure of the Virgin Mary; his famous sword, Caliburn or Excalibur, was made at Avallon, and then, as afterwards, it scarcely needed to flash from the scabbard before the Goths fell back at the sight of that terrible weapon and the terrible arm that wielded it. He conquered in this battle—indeed the chronicles hardly tell of one which he did not win. This is cited as a strong proof of their inventive and lying propensities, and, as I think, unreasonably; for though it is certainly unlikely that any man, however superhuman his genius, should be invariably successful, yet, if we consider more modern historians, how many shall we find who faithfully record the defeats as well as the victories of their respective heroes?

Having settled the affairs of southern England, Arthur marched northward, and even penetrated to Scotland, to attack the Scots and Picts, who had long harassed the Border. Softened by their submission, he generously granted them a free pardon. That Christmas he kept at York, resting his wearied army, and ordering the restoration of churches demolished there by the idolatrous Saxons. About this time he married the beautiful woman whose name is variously spelt Guanhumara, Guenhyfar, and Guenever, modified by late writers into Guinevere. From this point the narrative is certainly largely mixed with fable. We are told, without much detail, that he next conquered Ireland, Iceland, 'Gothland,' and the Orkneys, and then reigned peaceably in Britain for twelve years, his fame spreading widely through the surrounding countries, and numbers coming from far to add to the increasing splendour and refinement of his court. Out of the many brave knights surrounding him, the king chose twelve to be his constant companions in battle and in council, and instituted for them the brotherhood of the Round Table. In it there was no distinction of rank; all took an oath to be courageous, honourable, and loyal, ready to assist ladies or any other persons in distress, to fight for God and King Arthur, and even if need be, lay down life itself in defence of a good cause: and the king was foremost in all he prescribed to his chosen knights. Daring in battle, wise in council, he was beloved for his gracious sweetness, and above all for the tenderness with which he cared for the soldiers who were expending their blood for the country. In battle he used to set up a golden dragon as a standard and a place of refuge for wounded or exhausted soldiers.

The nine following years, Arthur employed in subduing Norway, Dacia, Aquitaine, and Gaul, concluding with a grand assembly of people from

all parts that he called at *Paris*. It is difficult to imagine how the most ignorant monk of the twelfth century could have made this absurd assertion, yet Geoffrey of Monmouth delivers it with the utmost gravity and confidence. At that time, Arthur may have been engaged in some wars, mainly successful, that his eager biographers magnified into immense proportions, thinking perhaps, good souls, that it was not easier to deceive their few contemporary readers than the microscopic eyes of their cavilling descendants. After this truly marvellous campaign, he returned home, and 'celebrated Pentecost' at Caerleon, or the city of legions. Here his coronation took place. In the midst of a multitude of people, and all the nobles and clergy of the kingdom, the Archbishop of Caerleon, uncle of the king, crowned him and Guinevere with great pomp and rejoicings that lasted many days. Arthur had never paid any tribute to the Roman emperors, for the excellent reason that they existed no longer; and the Byzantine monarchs did not trouble themselves with the affairs of Britain. Rome had fallen into barbarian hands at least sixty years before we are told that an embassy arrived at Caerleon from the Roman general Lucius, rebuking Arthur for want of respect to his sovereign power, and desiring him to go immediately to Rome to answer for his conduct. A council of knights agreed with the king in returning a defiant message, and the whole country was roused to prepare for war. On his way to Cornwall to meet the Roman army, two incidents occurred: Arthur had an ominous dream, in which were foreshadowed the evils coming fast upon him; and on St Michael's Mount he killed a giant, who had carried away the niece of Hoel, king of Armorica. This latter story is related with the amusing solemnity of a fairy tale. Having defeated the Romans several times, he was going on to Rome, when the news came that his nephew Modred, to whom he had committed the care of the kingdom and the queen, had betrayed his trust, placed himself upon the throne, and won the love of Guinevere. Undaunted by the king's hasty return, Modred boldly met him on landing, but was finally beaten and obliged to flee to Winchester, while Guinevere entered a cloister at Amesbury. Too glad of the opportunity, the Saxons joined Modred, and they fought a desperate battle with Arthur at Camelan, in the year 542, in which the traitor was killed. Mortally wounded, Arthur was borne from the blood-dripped field, 'to be cured of his wounds in the island of Avallon,' that mysterious place undiscovered to this day, though some think it may be Glastonbury. And so he vanishes for ever into the misty night, while our eyes strain to follow, if only to know what manner of death the hero died; but the darkness reveals nothing. He flames like a meteor over the shores of ancient England, then drops down into the red western sky, and is lost in the gloom of centuries.

Thus far we have traced the old chronicles, such as profess to be history, though I would not dismiss the *Morte d'Arthur* as belonging purely to romance. The question is, where lies the boundary between truth and invention in this strange story? Does it not seem as if these biographers had commenced building upon the truth—for the first part is certainly the most probable—and that, warming with the subject, they magnified small incidents into amazing exploits, and coloured them with what appears to us an air of fiction? Most of these wild stories must have a basis of truth. At St Michael's Mount, King Arthur may have fought with some arrogant knight, who wished to match his unusual strength and courage against the king, famous for both; and may not wars with some distant unknown tribes, of whom there were many in those half-barbarous times, have been soon transformed into conquests worthy of Alexander? The *Morte d'Arthur* is simply a tissue of romantic tales, woven over the few known facts of Arthur's history. It is filled with the adventures of his knights, the most renowned of whom were bold Sir Gawaine, Sir Tristram, Sir Galahad 'the pure knight,' Lancelot's son, and bravest of all, Sir Lancelot himself. A myth, though a noble one, is the quest of the Sangreal, that holy vessel which appeared to many, filling the place with a heavenly light and sweetness and fragrance. None saw the hands that bore it but such as were stainless, and none found it but Sir Galahad at his death. Our laureate has drawn deep inspiration from this romance; and indeed some stories, as those of Elaine, and of Sir Bedivere throwing the sword Excalibur into the lake, are scarcely bettered, the originals are so beautiful and pathetic. The love of Lancelot and Guinevere is related chiefly here and in those antique poems bearing the same name. They say that Modred, hating Lancelot, revealed to the unconscious king what had long been whispered, that the best and dearest of all the Round Table and his golden-haired queen were false to him, and that he was away fighting with Lancelot when Modred seized the kingdom and the remorseful Guinevere. Mr Tennyson alters the story still further, representing Modred as having nothing to do with Guinevere, but all turning upon her passionate devotion to Lancelot, to the neglect of Arthur, 'blameless king.' The old chronicles hint that she was not insensible to Modred's insinuating grace, but they scarcely mention Lancelot. The Welsh bards, those truthful echoes of a bygone age, do not attribute to Arthur that superhuman character with which he is invested by later writers, but while shewing his superiority, they are more moderate in their praise, and can even find room for others beside him. Llywarch Hen, who fought under him in one of his earlier battles, calls him 'emperor and conductor of the toil;' but the Prince Geraint—'the unflinching,' 'enemy of tyranny'—is almost entirely the subject of the poem.

In the *Black Book of Caermarthen*, it is said of Sir Bedivere, that before him his foes fell by the hundred—a poetical exaggeration, it is needless to say, but meaning he was an accomplished soldier. Sir Kay is represented in the *Morte d'Arthur* as a sleepy, thick-headed knight, a butt for the merry ladies of the lake, a fate from which his beauty ought to have saved him. The same ancient *Book of Caermarthen* speaks in great praise of 'the handsome Cai.'

> Brave was his disposition,
> With sword and shield,
> Vanity were the foremost men
> Compared with Cai in battle.

So that romance does not always exalt its subject. His proficiency is also celebrated in an acquirement much admired in those rough old times, and indeed in much later ones, the power of hard drinking: 'he could drink with four.' Of all the bards,

Digitized by Google

Taliesin shews the greatest admiration for Arthur. One of his poems begins:

> I will praise the sovereign, supreme king of the land,
> Who hath extended his dominion over the shore of the world—

that is to say, the world that lay within Taliesin's limited vision. In his opinion, fighting under 'Arthur the blessed' was 'a splendid labour,' and he speaks of 'his wisdom and his swift irruptions,' and of the 'restless activity on his face in battle.' No one, he says, who was not at Caer Wydre (a battle fought near the Picts' wall), could conceive the prowess of Arthur.

The name of Merlin the seer is bound up with Arthur's memory. First attached to the service of Uther Pendragon, he afterwards filled the same post, under the son, of confidential adviser and communicator with the spirit-world, of which it was imagined he knew so much. Very likely, he was cleverer than most people of his time—had studied the nature and properties of herbs, and learned a few of the closely veiled secrets with whose vast powers modern science is but slightly acquainted. These may have given him a reputation for magic; but beyond this, he aspired to foretell future events. His prophecies and maledictions are very curious, and there are those who profess to trace their fulfilment in the course of the following centuries; but they really appear a collection of horrors intended to disturb the popular mind, and gain a certain influence over it. He and his arts were brought to an end—so runs the tale—by his being, in a moment of weakness, outwitted by Vivien, the cunning lady for whom he conceived a foolish attachment in his old age.

In most histories of England, one may read that in 1189, King Henry II., being at Glastonbury Abbey, where Arthur was reputed to be buried, caused his so-called tomb to be opened, and they found therein the remains of a man of extraordinary size, corresponding with the description given of him; but, strangely, it also contained a woman with long hair, that crumbled as a monk touched it. If this was Arthur, the other could scarcely have been Guinevere. Perhaps it was his sister, Morgan le Fay, who, with Enid and Vivien of the lake, conveyed him to Avallon—at least so says the *Morte d'Arthur*. But the whole story of this discovery is apocryphal, to say the least.

Romance, in magnifying its hero, has rather injured than added to his fame. Not content with his being the son of Uther Pendragon and his wife Igerna, it has invented stories of his miraculous birth—of his being found by Merlin, who prophesied strange things of him. But Arthur the Dragon's Head he was in right of his father. For a long time, the British people refused to believe in his death—they thought he was only lying hid in mysterious Avallon, and would come forth again to lead them to victory; but year after year waned away, while they looked for him as eagerly as the Jews for their Messiah. There came no sign, and the wild Saxons were pressing on, shouting their grim sagas, and rushing into the midst of battle, in the hope of meeting that bloody death that should open for them the doors of Walhalla. So this mighty race of gods, sons of Odin and Thor, from the North Land, drove the despairing Britons back and back to the hills of Wales, to fair Devon and rugged Cornwall, till they saw, standing high and solemn above them, enduring as the name enshrined in their hearts, Tintagel Castle, the birthplace of Arthur; and there they rested.

A COUNTY FAMILY.

CHAPTER XXXV.—KNOWING THE WORST.

'I AM sorry you and Mr Denton did not agree this morning,' said Lucy to her father as they sat in their home at Mosedale on the evening of the day on which we last saw her: 'he seems a very straightforward and unselfish young man.'

'Does he?' returned Mr Waller vacantly, and passing his hand wearily across his forehead. 'I really paid but little attention to him in other respects, except that he seemed to be very fidgety and importunate.'

'That's because he feels everything that he says, papa; his every word seems to come from his heart.'

'It would be better if it came from his head when he talks about business matters,' observed Mr Waller drily.—'Did he say anything more about that confounded reservoir, Lucy, this afternoon?'

'No, papa; but I met him on horseback, and I fancy he was riding out to Redmoor, to take another look at the embankment. I hope and trust you are right in the matter, papa, dear: it would be so terrible if what Mr Denton is so apprehensive of should come to pass.'

'Yes, yes; I am right enough, Lucy; I must be right, for did not Flywheel tell me so himself. This Mr Denton's Report, he said, made far too much of the matter last year; and I have no doubt he is again alarming himself unnecessarily. A young man always likes to make out a serious case out of anything in which he first gets employment; it is only natural; and I bear no grudge against him whatever on account of the fuss he made. His throwing his appointment in my face, indeed, was petulant enough; it looked very fine, but it was not much of a sacrifice. He has a good salary from the railway company, I am told; and is likely to get on in the world. I daresay, so far as means go, he will soon be quite as good a match for your friend Ellen as Mr Stanhope. I don't wonder that a sensible girl like her should prefer a man with a steadily increasing income to one who has scarcely anything but his good blood to recommend him. It is not every young lady who has the chance of securing a man who is rich and also well born.'

This was a subject not pleasing to Lucy, and she made an effort to avert its continuance.

'But if all Mr Denton wants is to have the embankment thoroughly inspected, why should it not be done, papa? Cross-examination, as I have heard you say, is the key that lets out the truth; and is it not something the same with inanimate objects as with human beings?'

Digitized by Google

'It can't be done, my dear,' sighed Mr Waller, 'for, to be candid with you, I can't afford it.'

'Is it so very expensive, then? Mr Denton said it would cost only a few pounds.'

'Nor would it, Lucy, so far as the mere work was concerned; and my share of the expense would indeed be insignificant enough. But once let the folks here know that the reservoir needs repair, and down go the shares, as they did last year. Since you have pressed me on this matter, my darling, I will take the opportunity to tell you exactly how my affairs stand—if those can be said to stand at all, which the breath of rumour might topple over in utter ruin.'

'I am quite aware, dear papa, you are in sad straits,' said Lucy faintly; 'I have always entreated you to let us live more in accordance with our actual means. The luxuries with which we are surrounded have given me no pleasure since I came to know the shifts to which you have been put to maintain us in them. I would rather give up everything to-morrow, and live ever so plainly, than remain in our present false position.'

'You don't know what "giving up everything" means, Lucy,' said Mr Waller gloomily, 'nor can any one guess, who has not put it into practice: no rich man, and certainly no rich woman, has any real conception of actual poverty. You have the same idea of it as your would-be Sister of Mercy has of tending the sick in hospital; she fancies only wasted features with grateful looks on them; she has no idea of what would really meet her eye—and her nose.'

'I don't know about abject poverty, papa,' said Lucy simply; 'that is, I don't know so much as I ought to know, though it always seemed to me, even in that case, that a little care and taste'——

Mr Waller cut her short with a bitter smile. 'Taste!' cried he; 'yes, that would mend matters indeed; you would have cut flowers and a musical-box in every two-roomed house, I daresay.

> Thy gallery, Florence, gilds my humble walls,
> And my low roof the Vatican recalls.

You and the man who wrote those lines had much the same conception of cottage-life.'

'Well, papa, I know at least how our lodge-keeper and his daughter live; and Heaven knows that I would gladly exchange places with them.'

'Yes, Lucy; but even if I were adapted for a lodge-keeper (which I confess I do not think I am), that is unfortunately not the question. There is no middle course for us left; there is no alternative for us but this—either the life we are now living, or positive beggary—destitution. There is not one brick of this house, nor one article which it contains, that we can with strictness call our own. I thought that I had hinted as much to you already.'

'No, papa, I did not know that.'

Lucy was very white, but her voice was firm. It was ill news indeed, but she was preparing herself for worse tidings which she saw by her father's face were on the way.

'Yes, dear Lucy, the time has come when I must use plain words. Those reservoir shares are all—absolutely all—that I now possess in the world; and I must sell them to-morrow to meet a bill which will then fall due, unless it is met by some one else.'

'By some one else? I do not understand.'

'William Blackburn's name is on the back of it.'

'O papa, did you persuade him to do that on my—through any hope'—— She leaned back breathless in her chair, and gazed upon him with terrified eyes.

'I made no promise, darling, certainly not. But I did say, as indeed I thought, that time might have its influence upon you in his favour. He was very reasonable—he said that he was content to wait. He did not wish to press matters at all, and I am sure he will not do so; and in time, who knows but that fortune may befriend us. I have many an iron in the fire, and though I have been unfortunate of late, that cannot last for ever. On the other hand, what is it makes this match so repugnant to you, which many a young girl in the county'——

'Do you ask me that, papa, who know this man?'

Mr Waller cast down his eyes, and fumbled with trembling fingers at his watch-chain. 'You cannot have a husband made to order, Lucy: there is something to be said against every man, if you come to that.'

'And do you really ask me, father, to take William Blackburn for my husband, for my companion—for my master all my life?'

'No, only for all *his* life,' returned Mr Waller boldly. 'I would fain have kept silence upon this matter, but, after all, it is a mere conventional reticence. We take into account the chance of death in every marriage settlement, and why not in our considerations of a match, as now? William Blackburn's life is not worth five years' purchase: Mr Allcase told me so himself. He has undermined—I mean, when he was abroad, and isolated, as it were, poor fellow! from his family and friends, he was driven to take more to drink than was good for him; and though he sees the evil of it now—you must yourself have noticed a marked change in him of late for the better in all respects; he is certainly grown more social and pleasant in his manners—well, as I was saying, though he is so improved in his habits, the mischief has been done: he is bound to be a short-lived man.'

'And how many years, father,' asked Lucy in hollow tones, 'would it take a man like that to break a heart like mine, think you?'

'He shall never do it, my girl; he shall never have the chance of doing it,' replied Mr Waller vehemently. 'If you are not happy with him, you shall come back to me. Do you think that I could not manage that and him? I tell you I could wind that fellow round my finger, compel him into doing what I pleased, and become his master wholly, if only I once got free from the meshes of this net. I feel like some strong swimmer whose limbs are caught by the lithe weed beneath, and rendered useless: if it be but severed, he rises to the surface buoyant as ever; but else he is dragged down and drowned. Nay, worse than he, for the drowned man is buried, and there's an end; but of dishonoured bankrupt *me*, they will make a shameful spectacle, and at their shouts

Digitized by Google

and jeers my daughter may well shudder, since one word of hers might have saved me, and yet she would not speak it.'

'Then I will speak it, father,' cried Lucy suddenly. 'You shall never say that I hesitated to make the choice between my happiness and yours—I will tell this man that since you have sold me to him, I will ratify my part of the bargain.'

'My dear Lucy,' said Mr Waller, taking his daughter's icy hand within his own and smoothing it fondly, 'this is really a most unpleasant view to take of the matter. You must forgive me—but it is not good taste—and it is also most painful to myself. I have only done what any man in the county would have been glad to have done in securing you this good position, although I confess I was impelled to it by cruel necessity. If I were a rich man, I would afford you the indulgence of wedding whom you pleased, and welcome; but as it is, the luxury is not within my means. I sincerely wish, for both our sakes, that it were, my dear. Then it is not as if I were tearing you from the arms of one on whom you have set your heart; you know that I was far from offering the least obstacle when'——

She held her hand up for a moment pleadingly. 'Pray, spare me that, papa, since I have promised to do your bidding. Why torture me further?'

'Torture you, my child? Heaven forbid!' said Mr Waller earnestly. Deeply moved by his daughter's wretchedness, he was now characteristically bent upon shewing her that, after all, matters might not turn out as she feared. 'I was obliged to put the whole matter before you—to let you see the extent of the sacrifice (as you persist in viewing it) which might possibly be demanded, but to tell the worst is always to exclude much that is hopeful, something that is even probable. As I said before, William Blackburn is in no hurry to wed; nor, indeed, would it be fitting that he should be. Six months at the very least must elapse out of respect for his late wife. I should insist, even if it were not his own desire, upon so much of delay myself. And in six months, why, you don't know what a man like me can compass, if he has but room to turn about in: you don't know what Time can do, my child.'

'I know what Time has done for me, papa,' said Lucy bitterly, 'but fifteen months of time! Heaven help me!' and then at last the silent tears began to fall.

Mr Waller rose, stooped over her white face, and kissing her forehead, left the room without a word. He understood what his daughter felt, and perhaps even sympathised with her more than many a less selfish man would have done. The faculty of insight, untrammelled by the weakness of sentiment, had made Mr Waller a strong man, and armed him for the battle of life. If in every case he did not know exactly what should be said, he always knew when he had said enough.

Lucy sat where she was for hours, gazing vacantly before her, through eyes now tear-dimmed with the memories of the past, now coldly fixed in contemplation of the future; busy with the dream of what might have been, and with the harsh realities of what might be.

One circumstance only, to which indeed her father had alluded, though really with no other intention than to diminish her sorrow, by placing it at a distance from her view, gave her some spark of comfort. There was still time before her. William Blackburn had never actually proposed to her; and she knew him far too well to suppose that any delicate feeling with regard to his late wife had caused this reticence. There was doubtless some material reason which turned the scale with him in favour of delay: perhaps he was waiting to see in what position he would be left by his father's will, and desired to hold himself in a condition to cry 'off,' should circumstances induce him to look for a bride elsewhere. Never was reflection, so wounding to a young lady's self-esteem, so gladly entertained and cherished.

CHAPTER XXXVI.—MR WILLIAM'S AUTOGRAPH.

Scarcely had the young engineer passed out of sight upon his way to Curlew Mill, when the carriage bringing Mr Waller and his daughter to spend the promised 'long day' at the cottage made its appearance on the bridge. Stanhope saw it with satisfaction, as he stood at the dining-room window pondering in his mind the communication he had just received, and in some doubt as to the course he should pursue in consequence. While his late visitor had been with him, Denton's earnest manner and pleading words had had more or less of weight with him, but his *laissez aller* nature was antagonistic to all press and promptitude, and now that he was alone, he already began to think that the other might have overstated his case through professional enthusiasm, if not through pique at his advice having been disregarded by his superiors. It was a serious thing to terrify the little household, with its prostrate head, by fears that after all might be without foundation, and he gladly welcomed the arrival of astute and practical Mr Waller, as one who could give him good advice in such an emergency.

'I did not expect Miss Lucy would have inveigled you here so early,' said he, when that young lady had gone up-stairs with Ellen to take off her out-door gear; 'but, as it happens, you are come in the very nick of time, for I want you to help me out of a difficulty.'

Everything of difficulty took with Mr Waller a pecuniary shape: was it possible that this young man was so hard pushed for money that he was going to ask a loan even of *him*, of whose embarrassments he was doubtless not altogether ignorant? Of course he could have lent him nothing; but it was disagreeable to him to have to refuse anything point blank. He therefore at once began *more suo* to anticipate the catastrophe. 'Yes, I am earlier than I thought to be; but the fact is there was a confounded fellow worrying me about a claim, which, just at present, it would be very inconvenient to me to satisfy; and I was really glad to get bodily away from him. There are some creditors who seem to be quite cannibalish, and ready to eat one up alive.'

The real explanation of his early visit was that he did not wish Lucy to come without him; notwithstanding her promise of the previous night, he mistrusted her fortitude, and thought it best that she should have his personal support in the society of Mr William, whom she was now to meet for the first time as her acknowledged suitor. The business he had to arrange with that gentleman in the course of the day was exceedingly likely to bring

Digitized by Google

matters to a head, and would indeed have necessitated his yesterday's plain speaking to Lucy, had not the discussion about Denton led to the question by another channel.

'Don't talk to me of creditors, my good friend,' said Stanhope laughing; 'it's like speaking of ropes in the house of a gentleman who is to be hanged. But that reminds me we are not to be hanged in this house, but drowned, it seems. The embankment on Redmoor is far from safe, I hear; and the reservoir—— But, there; what a fool I am about all these business matters; why, now I remember, you are connected with that thing yourself.'

'Connected with it, sir?' said Mr Waller with a smile upon his shrewd face, that masked considerable trepidation; for if this news had really got about, it might have the same ill effect as the official inspection he had refused to permit. 'I am very glad to say I *am* connected with it, since the shares are at a high premium, and I hold a good sheaf of them. The reservoir, sir? Why, *Le réservoir c'est moi.* I am myself the chairman of the Board.'

'Of course you are; I remember hearing you say so last year.'

An indifferent joke about the information having only gone in at one year to go out at another, was Mr Waller's reply.

'Ah, but I can tell you it is no laughing matter, Waller. I do really believe there's something wrong. I never saw a man more earnest and confident in his manner in my life than Mr Denton was this morning.'

'Oh, Mr Denton was your informant, was he?' returned the other with irritation, yet secretly well pleased to find that the news had come from a source he was already prepared for. 'You are not aware, I suppose, that that very young gentleman, who at best was only the *locum tenens* of a much abler and wiser man, now holds no official appointment with us whatever?'

'He told me so much as that,' said Stanhope; 'but I understood him to say he had resigned the post.'

'Well, I suppose he has a right to call it a resignation, if he so pleases,' said Mr Waller coldly. 'But we should certainly not have retained him, even had he wished it. I don't say that he is not an able young fellow enough, but he is too full of fancies for a profession so practical as he has chosen. Flywheel, who has a European reputation, quite laughed at his Report last year; and I don't imagine that the six months' interval has rendered him more logical and judicious. So he has been down here already, has he, with that cock-and-bull story which he told me yesterday? Well, considering he is no longer in our employment, I think it would have been better taste in him to hold his tongue. What the deuce business is it of his, I should like to know?'

'Nay, but surely it *is* his business, considering we live here in this swan's nest upon the river itself, to let us know if he thinks the reservoir may come down upon us any morning, or even at night, which would be less agreeable still.'

'My dear Stanhope,' said Mr Waller, throwing his palms outwards—an action which he had always found of service in convincing the mercantile community—'do, pray, let us take a reasonable view of this matter. Am I—a practical man, and yet, I hope, not without some human feeling—the sort of person likely to let life and property be endangered to the frightful extent to which it would be exposed if there was really any fear of such a catastrophe as you hint at? Why, my own place at Mosedale—let alone this cottage, with its little host of friends—would be among the first to suffer, for it lies low, and close to the river; and you will at least grant that I have a sharp eye to my own interests.'

'Perhaps it is insured,' answered Stanhope laughing. 'I wish my mill was.'

'There, now, you are treating the matter as it deserves to be treated,' said Mr Waller approvingly. 'The danger, I do solemnly assure you' (and it must be added that the speaker believed what he said, because he wished to believe it), 'has no existence whatever, except in the brain of this sucking engineer.'

'Still, it must have taken very firm root *there*,' observed Stanhope, not quite convinced, 'for him to have ridden down here this morning, with no other purpose than to put us on our guard.'

'Are you quite sure he had no other purpose, as he certainly had some other *attraction* to this spot?' said Mr Waller shrewdly. 'For my part—though,' added he hurriedly, 'of course there are exceptions—I don't believe in the disinterestedness of young men.'

Stanhope's colour heightened. 'Disinterestedness you think, then, is only a product of mature years, Mr Waller? Well, that is as it may be; but certainly men of your age have a better reputation for sagacity than your juniors. I suppose we must place ourselves in your hands, and disregard this young fellow's warning altogether; else I had certainly meant to speak to Mrs Blackburn on the subject.'

'My good sir, you would surely not have been so injudicious; it would have put her beside herself with foolish terrors; she would have been for getting her husband and the whole household out of the cottage at once, and placing them on the most elevated spot in the country. She is far from well, my daughter tells me, as it is; and, indeed, we are planning to take her away with us to Mosedale for a day or two, if she could only be persuaded to leave Miss Ellen in sole charge of our sick friend.'

'But one must give some reason for Mr Denton's having called this morning.'

'Yes, yes; but you may leave that to me, Stanhope. It will be much better so; because, you see, any reference to his visit places you—considering this gentleman's pretensions in a certain quarter—in a somewhat delicate position. I will tell my daughter, who is already acquainted with Denton's ideas upon the reservoir matter, to inform Miss Ellen of the whole affair.'

'Then I wash my hands of the matter altogether,' said the other, glad to close the question. Never before had Mr Waller made direct reference to his young friend's matrimonial scheme—he was too well bred, or rather too much man of the world to do so, unless his own interest seemed, as now, to urgently demand it; and the allusion made Stanhope wince. Mr Waller was made of sterner stuff.

'Where is our young friend, Mr William, to-day?' inquired he gaily.

'He is gone fishing down Mosedale way; I wonder you did not see him as you came along.

Digitized by Google

He talked of being out all day, but I fancy he 'll be back at luncheon-time.'

'I hope so, indeed,' said Mr Waller involuntarily, and taking out his watch. 'I rather wanted to have a word with him before the post goes out.'

'Upon business?' inquired Stanhope drily.

'Yes, upon his own business. Moffat, who can't get on with him, asks me occasionally to put this and that before him.' This was true; and Mr Waller knew that Stanhope was aware of it. 'For my part,' continued the former, 'I find little difficulty with our friend. And certainly of late he seems to me to be getting more practicable and like other people—don't you think so?'

'Within the last day or two there has, without doubt, been a noticeable change in him,' answered Stanhope coldly, 'otherwise I should not call his manners conciliatory.'

Mr Waller smiled: he knew that his companion was making reprisals for his late allusion.

'Manners,' rejoined he, 'are, after all, but the result of early training, which is in no case within one's own power. They may make the man; but it is birth and acres—provided only that they are unencumbered—which make the county gentleman.'

'Talk of the devil,' said Stanhope with irritation; 'here *is* Mr William coming through the bridge.'

'How are you, Blackburn? Good-morning to you,' cried Mr Waller cheerily. 'What sport have you had? What have you got?'

'Nothing,' grunted Mr William, awaking desponding echoes.

'Not even an appetite for luncheon?' laughed Mr Waller. 'Come, let us hope you've got that. Stanhope here was just remarking you would be pretty sure to be back at feeding-time. It is then that one has best chance of fish.'

'Oh, fishing is all rubbish. This old fool here took me to a place which he said would be like a stewpond, and where he had dropped four quarts of worms, for which he charged two shillings; and there wasn't a blessed fin.'

'It's all them poachers, Mr William,' pleaded the professional angler; 'they comes up from Mosedale every other night in the week.'

'It's your business to catch 'em, sir,' returned his master, 'or, at all events, to see that I catch fish.'

'But then you broke the rod, Mr William,' remonstrated the other—'Mr Richard's rod, as has whipped Curlew for five years, and killed a'most a ton of trout!'

'Never mind, Blackburn; spare the rod and spoil the stream, says Solomon,' observed Mr Waller encouragingly.

'Oh, I don't mind,' said William sulkily, 'whether Solomon said so or not.—Come, put me ashore here, old Groundbait;' which was done accordingly. Mr William's time was of course much too valuable to be consumed in the foolish custom of hand-shaking, but he nodded graciously to both his friends.

'The idea,' said he, appealing to their sympathies, 'of that fellow's charging sixpence a quart for worms!'

'Frogs are much dearer, my good sir, in France,' said Mr Waller, who, notwithstanding his boast of 'getting on so well' with this county gentleman, was always shooting over his head, and irritating him by opposition, when intending to conciliate him by badinage.

'Then all I can say is fools must be plentiful in France; and I never want to go there,' growled Mr William.

'Oh, then, he never has been in France, after all,' thought Mr Waller. 'Come, I've picked up *something*. A day will come, my young friend, yet, when I shall have you entirely under my thumb;' and he smiled upon him in the most genial and unaffected manner.

'You have not come without Miss Lucy, have you?' inquired Mr William suddenly, and in a manner which, if complimentary to the person sought for, was certainly not courteous to the person found.

'No, no,' said Mr Waller, smiling; 'I know too well what sort of a welcome an old fellow like me would receive at the hands of you young gentlemen, unless he brought some one else to recommend him.'

'Just so,' said Mr William bluntly. 'Where is she, then?'

'The young ladies are up-stairs with your mother,' observed Stanhope, speaking for the first time.—'Perhaps, before they come down, you had better get that business over, Waller, with Blackburn—at least, I mean, don't mind me: I can stay here among the roses.'

'A proper place for such a pretty fellow!' said Mr Waller. 'I am much obliged to you for reminding me of the matter, which else I do believe I should have clean forgotten.—Yes, I want to have a few words with you, Blackburn. Just come into the dining-room for five minutes, will you?'

'Well, be alive,' said William, when they had stepped within, and the other had carefully closed the glass door, 'for the fact is I want a cigar; and if I have one in any room of this wretched hovel, they make such a fuss about the smoke getting up-stairs. I hope you are going to tell me that that fellow Moffat is inclined to be less pig-headed?'

'Well, yes, I think I shall be able to bring him round; though, without doubt, your father's condition makes matters uncommonly embarrassing.'

'You have not got the money, then?' said the other in a tone of disappointment.

'No, I have not got the money at present,' said Mr Waller quietly. 'It is not about that that I wished to speak to you. It is about that bill.'

'What! *your* bill? Oh, that explains matters. I thought you shewed yourself deucedly interested in my affairs. Well, it falls due to-morrow. You do not expect *me* to meet it, I hope?'

'Well, I am afraid I must, Blackburn.'

'And how the devil am I to do it? I tell you, if I gave you every farthing I could scrape together, including the purse I've saved for a little fling in London, which I am sure I deserve, after having been moped up in a sick-house for half a year—I say, even in that case (which I promise you is not very likely to happen), I could not muster such a sum.'

'My dear Blackburn,' said Mr Waller, smiling, 'you could muster ten such sums with as many strokes of your pen.'

'What! by signing my name? Oh, I daresay. You have had one of my autographs already, and that is enough. I tell you once for all that I will not lend myself to help you to another shilling unless I see my way to the *quid pro quo*.'

Digitized by Google

There was a long pause, during which the last speaker looked at the other significantly.

'The security you ask for is up-stairs,' said Mr Waller at last.

'I know *that* well enough,' answered William; 'but I must have it here—if not in my hand, at all events assured to me.'

'I have spoken to Lucy for you, William—I pleaded your cause with her only last night; upon my word and honour, I did.'

'I don't doubt it,' said the other coolly. 'I know you are upon my side in the matter, because it is the side on which your bread is buttered; but it is not to gain you for a father-in-law that I am so particularly anxious, but to gain your daughter for a wife. When she herself has said to me: "Ask papa," then I shall be satisfied.'

'And that she shall do some day,' said Mr Waller cheerfully. 'Indeed, between ourselves, she has promised as much already.'

'Some day means nothing,' said William resolutely. 'Lucy herself must tell me to-day that she is ready to become Mrs William Blackburn.'

'To-day! That is impossible, sir,' cried Mr Waller.

'Then I shall find it equally impossible to-day to put my name to paper,' said the other with determination; 'and it seems to me that you can't wait.'

Mr Waller's usually tranquil face was greatly agitated; anxiety and rage alike made prey of him. It was true that he could not wait; but he had had no idea that William also would be so urgent. Whenever the subject of his marriage had been hinted at before, he had shewn no sign of impatience.

'It is a harsh thing, Blackburn, to demand to have my daughter's answer from her own lips, under circumstances like yours, so soon. But my necessity, as you observe, is great and pressing. If you are really fixed in your resolve'——

'You need not say "if." *I am.*'

'Then I will ask Lucy, as a favour to myself, to waive those feelings of delicacy, which, though you do not seem to possess them, should actuate you far more than her.'

William stared at him with dogged wonder; he had no idea to what he was alluding: the recollection of how short a time had elapsed since his supposed bereavement, did not even occur to him.

'I say I will ask my daughter to forget what you have not chosen to remember; and to give you her promise, that when the fit time comes, she will become your wife.'

'The fit time!' returned the other fiercely; 'what the deuce do you mean by that? I think I have been put off and put off sufficiently long as it is; but it's no use mincing matters with you, I find. When she says "yes," she must also name the day, sir: any day she pleases, of course; but it must be a pretty early one, I can tell her—within six weeks at farthest.'

'Six weeks?' exclaimed Mr Waller angrily, for every moment of this man's companionship made the idea of his daughter's marriage with him more hateful, and the sense of his own helplessness more galling. 'You must have lost your wits, Blackburn, as you have surely lost your memory. Do you know how many days it is since you were *free* to wed?'

William had risen from his chair, in token that he had given his *ultimatum*, but he now sat hurriedly down again; his face had turned deadly pale, and his brow was overspread with dew; his tongue clave to the roof of his mouth, and when he got it free, it was only to moisten his suddenly parched lips. As he sat there, damp and venomous-looking, with protruding eyes, it came involuntarily into the mind of his father-in-law elect how like he was to that order of reptiles which is called Batrachian.

'I am glad to see at least that the recollection of your late bereavement moves you,' said Mr Waller gravely. 'Doubtless your affection for Lucy may be some excuse for your oblivion of the past; but still, sir, these common decencies of life, or at least of good society, should never be forgotten. Your proposal shocked me, as you saw; nor could it, believe me, fail to shock others also. To marry so soon after your wife's death, would not only provoke antagonism to yourself, but to Lucy, and would prevent her from being of that social service to you with your neighbours, of which you stand so much in need. Nay, sir, I do not hesitate to say, that any such hasty marriage would provoke the most injurious reflections and inquiries respecting your late wife. How, it will be asked, did he treat *her*, and when and where—— But there, I see I have said enough, William. I am sorry to have pained you so, but your most injudicious proposition left me no alternative.—See, there are the young ladies in the garden. Now, if you still wish to see Lucy'——

Mr William shook his head. 'No, no; not now—another time. I don't feel well; the sun upon the river has made me faint and shaky.'

'It always has the same effect upon me,' said Mr Waller cheerfully. 'If you don't feel quite equal to run your eye over this little document, I'll read it over to you. There; if you will be so good as to put your name where my finger is, in your usual handwriting as much as you can, please. Dear me, you *are* shaky!—Thank you. And now, let's go out and join the ladies; I shall be glad to discuss that other little matter with you whenever you please.'

But Mr William was in no mood to join the ladies, but withdrew himself to his own room, perhaps for horizontal, more probably for spirituous, refreshment; and Mr Waller himself remained where he was, busy with his own reflections.

'It's my belief that fellow's half-cracked,' soliloquised he. 'If his heart was not softened just now, it must be his brain that's going. Allcase is right enough: he won't last long. Gad, I almost think it would have been better to let him have his way, for, after six weeks' time, there is no saying whether he may be alive. And yet I don't think I could ever let my dear girl marry such a creature even for a day. I am sure he treated that wife of his ill—*very* ill, or his conscience would never have stung him as it did just now. He's a bad fellow, and a deuced ugly one too sometimes: he looked more like a toad than a man when I began to talk to him.—Yes, my dear, I 'm coming;' and he kissed his hand to Lucy, who was looking furtively towards the dining-room window.—'Well, I've got his name here for a thousand pounds, if they will only believe it *is* his name, and that's a good morning's work, at all events. There 's something wrong about his late wife, that 's clear. I wonder whether the screw lies there, after all,

Digitized by Google

to which Master Stanhope yonder applies his chisel with such effect?—What a lovely day you have provided for us, Miss Ellen, and how charmingly your little bower on Curlew looks!'

THE MONTH:

SCIENCE AND ARTS.

THE meeting of the Royal Agricultural Society at Manchester, besides shewing improvements in live stock and farm and dairy produce, made clear to all beholders that the application of machinery to agriculture has become more and more practicable. There were nearly eight thousand machines and implements exhibited, and this fact alone implies a large and lively demand. Among them were horse pitchforks, which, by a combination of poles, ropes, and pulleys, will fork hay or barley from a wagon to the top of the tallest rick with surprising rapidity. Ploughs are now made to effect eight furrows at once by the aid of a steam-engine; and steam-cultivators loosen at once breadths of from nine feet to eighteen feet, and work to a depth of six inches. No wonder that the number of those enterprising persons increases who undertake to plough farms in any part of the country by contract. Another contrivance lays down iron shoes as a sort of endless rail under the wheels of carts on soft roads; and thus another farming difficulty is overcome. And hard roads are not neglected, for a fifteen-ton roller has been constructed which bites up the surface of an old road, and presses down solidly a layer of new macadam at the rate of half an acre in ten hours, and at a cost of a farthing a square yard (superficial). We hear that the Manchester meeting was unprecedentedly successful, and it seems to have deserved success.

The Postmaster-general asks for L.6,750,000 to buy up the electric telegraphs of the kingdom, and seems likely to get the money. In return, he not only promises cheap messages, a large increase in the number of offices, and other facilities, but after paying interest on the sum expended, he will have, in the first year, a surplus of L.77,000. This surplus will of course increase with the increase in the number of messages despatched. As regards the scientific part of the question, it is thought that the demand for improvements will be so constant, that invention will be stimulated, and that we shall see a succession of methods for applying the wondrous power of electro-magnetism excelling all hitherto compassed.

The Society of Arts have now given a definite shape to their suggestions for 'cab reform,' by offering gold and silver medals as prizes for best and second best cabs of sundry kinds, one kind being the most convenient open hackney carriage for two persons; another, the most convenient closed carriage for two persons, and the most convenient for four persons either open or closed. The specimen carriages are to be ready by the 1st January 1870; they are to be strong and yet light in construction, and must, of course, be a great improvement on our present cabs. This condition will not be difficult to realise, for in some country towns the cabs are much better in all respects than those of London. Besides the foregoing, the Society offer a silver medal for the best odometer, or way-measurer, which can be fixed to a hackney carriage of any kind, and shew the distance travelled. If this can be done, it will be perhaps more acceptable to the public than even the new cabs, for it will prevent disputes, and vexations innumerable. It will be of no use for cabby to insist on charging for three miles when his way-measurer shews he has not travelled two.

The Royal Institution of Cornwall held their annual meeting at Truro, and were entertained by Mr W. J. Henwood, F.R.S., who delivered the address, with interesting information on the products and industry of the county. Among the former, fish and early vegetables hold a prominent place. In 1868, nearly 20,000 hogsheads of pilchards were exported; from St Ives and Penzance, 3675 tons of mackerel were despatched by railway; and from a comparatively small district near the Land's End, there were sent away in the same year 3571 tons of broccoli, and 2732 tons of potatoes. In speaking of mining, Mr Henwood took occasion to remark that the waste water of the copper mines was no longer treated as waste, but was made to precipitate, on its way to the sea, the copper held in suspension. That this is worth saving is shewn by the fact, that before the precipitation works were established, there had been poured into the sea from the mines in the Gwennap district, copper to the value of at least L.150,000.

Sir John Lubbock has published a pamphlet in which he recommends that the young men who seek employment in banks and mercantile houses should undergo an examination similar to that required of candidates for the civil service. Considering the magnitude of banking and mercantile operations, there is good reason why the men who have to carry them on should be thoroughly competent; and if a few of the leading City firms would organise a board of examiners, a beginning might be made. Besides testing intellectual capabilities, the examiners should take into consideration the age, the general state of health, and the moral character of the candidates. It is a deplorable fact that under present circumstances a number of young men get into banks and counting-houses who are quite unfit for the work and the responsibilities they have undertaken.

By accounts received from Sir T. Maclear, director of the Observatory at the Cape of Good Hope, we learn that the meteor shower of last November was well seen at the Cape, and we thus have evidence of the wide range over which the brilliant phenomenon was observable. It was seen in England, in the United States, and the southernmost points of Africa.

A good deal of discussion has been carried on of late among geologists on earthquakes, volcanic eruptions, and their causes, which of course involve considerations as to what the inside of the earth is composed of. Mr Poulett Scrope argues that the interior of the globe is solid, because of the weight and pressure constantly surrounding it, but that the interior solid is highly expansible, and ready to fly off when the internal heat has generated steam enough to force a way to the surface. Mr David Forbes, on the contrary, holds that the interior of the globe is in a liquid red-hot molten condition, composed of silicates and the heavy metals, and that this molten mass at times boils up into and through the solid crust which forms the surface of the earth.

A lecture has been given by Mr W. H. Perkin, at the Royal Institution, on 'The Newest Colouring

Digitized by Google

Matters.' Among the many interesting facts then put forward was the discovery of a beautiful blue colour, by a German chemist, on treating rosaniline with sulphuric acid. Unfortunately, it was not a 'fast colour.' A dyer made many trials therewith, in the hope of turning it to account, but all in vain. He happened to mention his difficulty to a photographer, who, knowing that hyposulphite of sodium would fix a photograph, recommended the dyer to try that. The trial was made; when mixed with the hyposulphite, the blue became a beautiful green, and better still, a 'fast colour.' This was the origin of that brilliant dye commonly known as 'Night green,' because of its remaining unmistakably green in appearance when seen by artificial light. Let it be remembered that nearly all the new colours are extracted in some way from coal-tar, that the first was discovered not more than thirteen years ago, and that the annual value now manufactured is L.1,250,000, and it will be seen that in the industry created by these new products there is an admirable example of the results of scientific investigation. The best of it is that the field is inexhaustible: for many years to come it will yield a rich harvest of discoveries.

Gold has been brought from San Francisco to London in twenty days, which may be taken as a proof that the great railway all across America is in working order. Of course, if metal can travel so quickly, passengers can, and we may perhaps see some curious results of a sudden influx of a new population into new localities. What will become of characteristics of race when large intermixture has taken place? Early ethnological history abounds, as is well known, with accounts of multitudinous migrations from the East, and it seems as if history were about to repeat itself, for the Chinese and Japanese are swarming into California in greater numbers than ever. From 2300 in 1866 the tale rose to 10,000 in 1868, and that it will be largely increased in the present year may be regarded as certain, seeing that these oriental labourers are in demand, not only in the Pacific States, but are to be introduced into the Atlantic States between the Potomac and Mississippi. It is found that as labourers on railways and on farms, the Chinese are more trustworthy than American (which includes Irish) labourers. Hitherto, the arrivals of Chinese women have been but scanty; but on one day in June last, 1250 were landed at San Francisco. Are the yellow race going to supersede the Blacks and the Irish in the struggle for existence; and will they in time exert a modifying influence on the Anglo-Saxon race among whom they dwell? We may anticipate that these and other questions will one day occupy the attention of the American Ethnological Society.

WAITING.

'Mors janua vitæ.'

I have waited till Spring's first breath came over the rippling streams,
And kissed the opening flowers as it lightly skimmed along;
Till the woodland lilies waved all white in the morning beams,
And the deep dells echoed again to the sound of the wild-bird's song.

I have waited till Summer came forth all wreathed in a thousand flowers,
Shedding a luscious balm o'er the meadows, and glades, and hills,
Twining the daffodil sweet with the rose in her fragrant bowers,
And fringing, with verdant moss, the sides of the bubbling rills.

I have waited till Autumn has gone from the woods' waning sigh,
Leaving the half-dead trees of their emerald tresses all shorn;
When the branches revealed in the night the stars in the far-off sky,
Or shook in a tremulous chill at the sob of the early morn.

I have waited through dreary December's hours of darkness and gloom,
Till the Old Year, weary and worn, had passed away to his rest;
Till his midnight knell had rung in the dark with a tongue of doom,
And floated above the snow that lay like a shroud on his breast.

I have waited a dreary time on the verge of the Border Land,
Consumed by languishing pain, and shadowed by grief profound;
Living again in the thrill of the grasp of a long-loved hand,
Lingering over the tones of a voice of the tenderest sound.

I wait in the balmy hours of the twilight soft and still,
Watching the crimson flecks in an azured western sky;
Lulled by the vesper chimes from the church on the far-off hill,
Borne on the softest wings of the night-wind's tenderest sigh.

I linger here on the verge of this shadowy Border Land,
How long, Lord, yet to stay, from the Land I have seen afar?
Thine own time, Lord, then lead me up with a gentle hand!
And open Thou wide the gates that have stood so long ajar!

LIFE AND DEATH AT ST BREACA'S.

IN EIGHT CHAPTERS.—CHAPTER I.

THE Gray House stands fifty feet above the sea, on Penmaur Cliff, and looks as if it had been flung there. It is built of granite, and consists of two wings, three stories high, united by a centre one-third of their depth, and one story lower. In it is the principal entrance, and on either side of that are four small-paned sash windows. Facing the bay, the space between the wings is filled by a plain strong stone colonnade, raised two steps above the semi-natural terrace on which the house is situated. From thence, black rocks descend to a noble sea. They stretch a quarter of a mile away to the south, and a mile to the west, where they give way to the small fishing-town of St Breaca's in Cornwall.

In the year 1795, a picturesque old native, by name Dan Quick, returned from forty years' wandering, no one knew where, and with money which every one believed to have been amassed irregularly, built the Gray House. It was large enough to accommodate ten persons. He took two to live with him: an ancient sister, his only surviving kin; and Sam Williams, an active orphan lad, who hit his fancy. After his own fashion, he settled himself comfortably: filled a large kitchen with domestic conveniences, and made a parlour quaint with curiosities, savage and civilised; provided his sister Peggy with a tent bedstead with printed linen hangings; and slung hammocks for the boy and himself. He was an object of curiosity, and fear even, to the townspeople; and of suspicion to the coastguard; but for twenty years he baffled the former, and did not infringe the laws which the latter were appointed to enforce. The keeping the house as neat and clean as a man-of-war, shooting sea-fowl, managing a couple of boats, and fishing, filled his time. Peggy died in the eighteenth year of their residence: he buried her in the garden, in a coffin made by himself and Sam; paid her trim grave a visit before breakfast every morning, and smoked his last pipe there the night before he died, two years after her. Sam missed his early footfall, and found that he had passed quietly, while sleeping, into the unseen world. The curate of the parish had called on him once, and been, as he conceived, discouraged. The Wesleyans, more zealous, or more persevering, had paid him many visits, and addressed to him many stirring exhortations, which had elicited only sarcasms. The sole clue found by his fellow-men to the state of his conscience was in his will. He provided for being laid decently by Peggy; left one hundred pounds, his boats, furniture, curiosities, and clothes to Sam; and bequeathed his remaining property—the Gray House and three thousand pounds in the funds—to the king, with the remark that he had the best right to it.

The Gray House was shut up, the site of the garden graves lost, the wind and sea-fowl broke most of the windows; and as no railways gave facilities to tourists, and Cornwall was then very much off the world's highway, Dan Quick's residence remained for many years as solitary as his inner life had been.

St Breaca's had known better days. Architects point to striking beauties in the church, built in the thirteenth century; but as a piece of preferment, the incumbency cannot be called valuable, though its income has been augmented by a grant from Queen Anne's Bounty. This ecclesiastical promotion was obtained about the year 1826 by the Rev. Marcus Secker. Three years previously, he had been appointed curate of St Breaca's, St Mary's in the Mines, and St Ann's on the Moor. The three parishes lay wide of one another, so wide as to involve a hebdomadal walk of ten miles, in order to give, according to agreement, and for a stipend of seventy-five pounds, one full service in two each Sunday, and prayers in a third. Mr Secker decided that this had been endured too long; and, being talented always, and occasionally judicious and conciliating, he worked upon the bishop and archdeacon to effect a change. St Breaca's became a perpetual curacy, with one hundred and twenty pounds per annum; St Mary's and St Ann's fell to another labourer.

Digitized by Google

Mr Secker was one among several officers in the army who, at the close of the Peninsular War, felt themselves called to spiritual leadership. Not that he was 'serious,' but that he was versatile. First a spoiled boy, and then a spoiled man, he had bought a commission in the line, after a fond widowed mother had prepared him liberally for the medical profession. Four years' experience of the delights of dépôts and garrison towns satisfied him that he was tired of the army, and fit for something better. He had made himself a favourite of Dr Sophton, the Bishop of Merton, who believed that his penetration detected a theological bias in the handsome young soldier. He offered to ordain him without university education, on condition of his residing three years under his eye.

Mr Secker was pleased with the proposition. It was complimentary; it commended itself to his taste and imagination. A bishop who was a gentleman combined in himself all social perfections: blended refinement, dignity, and learning, with delicate zest for the indispensable duties of hospitality. Mr Secker saw himself a bishop in no very remote future, accepted the offer, and developed gracefully into the clerical aspirant. He passed through his probation delightfully, and charmed a brilliant circle, assembled on the occasion at the palace, by the success of his début. His first sermon, adapted safely from an old Catholic divine, was delivered faultlessly; his melodious voice and fine ear made his reading perfect; and his splendid dark eyes were capable of every variety of expression. Nevertheless, equally to his annoyance and astonishment, he was appointed to the obscure curacy of Willowlea, in Lincolnshire. There was no consolation but in believing that jealousy of his superior powers had banished him thither, and in perceiving that many regrets would follow him. The Misses Sophton indeed excused themselves, on various pretexts, from wishing him good-bye publicly; and avoided being seen by each other for some hours after his departure. When they met, they were all silent in his regard, for each pitied her sisters for their infatuation, believing that she was herself the object of his warm attachment, and that diffidence about his prospects alone prevented his declaring his passion.

He did not stay longer at Willowlea than to get his title. There was no society, and he could not exist without it. He must have died, he said he thought, but for the excitement of fighting the Wesleyans, who were numerous and respectable in his parish. He wrote pungent pamphlets at them; reviled them in his pulpit; called the local preacher 'a prig-eared, hypocritical, sneaking snip;' and behaved otherwise so intemperately, that by the time he left Willowlea, the place had become 'too hot to hold him.' He thought himself fortunate in being chosen to be curate of Somerton, a parish adorned by the residence of a peer of the realm, and families likely to appreciate what he called his 'knowledge of the pulses and passions of high life.'

It was curious that Mr Secker had all this time remained a bachelor. He might, over and over again, have made his fortune in the matrimonial market. Perhaps it was because of the easiness of the step that he was careless about it. At last, he pronounced himself actually in love with one of the half-dozen daughters of an old naval officer. They sat in the pew under the reading-desk, looking like a bunch of wild roses, and the youngest and shyest caught his eye and what heart he had, as she drank in with wonder and admiration a sermon (a piracy) which he was delivering admirably. He, one of the most artificial of men, decided on the spot that he would, with as little delay as possible, marry Nannie Gray, a simple, modest country-girl, who thought it a tremendous thing to go out to tea in Somerton; who had no fortune, and was twenty years younger than himself. His income at the time was one hundred and twenty pounds; his respectable patrimony had melted away, he knew not how, for he was utterly ignorant of, and indifferent to, the value of money; and he owed about two hundred pounds, which he had not the remotest prospect of paying. It was, however, alas! easy to blind honest Captain Gray, who had never deceived anybody. He and his wife thought Nannie fortunate. They had not a penny to give her; and, by their humble standard, one hundred and twenty pounds, and the vicarage to live in, seemed ample provision. *They* had no debts; they practised self-denial and were industrious; and it did not occur to them that a clergyman, a gentleman, and one who evidently stood well in society far above their own, could stoop to deceive them. It is but justice to Mr Secker to say that he did not think he was deceiving them; he meant to cherish their daughter, to improve her immensely, and to fit her to share with him that preferment for which he felt himself as surely destined as—in his own estimation—he was undeniably qualified.

Nannie was not in love, and probably she never would have been; she was one of the women whose deepest affections are all reserved for their children; but she thought Mr Secker the most gifted and perfect of men, and accepted his offer as great promotion, and the earnest of sure protection for life. She only sighed to think how unworthy she must always be of such a husband, and marvelled honestly what he could see in her. Poor little thing! When she had been married a month, she knew that he was in difficulties, that he despised and was ashamed of her family, that her ignorance of conventional usages irritated him, and that his violent suspicious temper made him sometimes positively cruel. And she was hardly seventeen when this 'iron entered into her soul.'

It was not long before Mr Secker became so obnoxious to his vicar, that he was dismissed from Somerton, and the fact involved exposure of the real state of his affairs. A few old friends, and some persons who admired and pitied his pretty, gentle, young wife, paid his debts, and obtained another curacy for him. It was, however, less valuable, for the vicar resided; and the curate, with the same stipend as at Somerton, had to provide himself with a dwelling. He, however, scouted economy. When poor Nannie, trembling, remonstrated, he desired her, savagely, to be silent. 'What could she, the daughter of a beggarly half-pay officer, know of the wants—the absolute necessaries required by a gentleman? She would be glad—he saw through it all—to pull him down to the true quarter-deck level; but it would not do. He would have wine, and clean linen every day—twice a week, indeed!—and he should continue to order the *Quarterly* and *Edinburgh*, and to

Digitized by Google

have a weekly paper. It was all very fine for her—she had not a soul above saucepans—to hint at doing without this, and that, and the other. He desired to have it distinctly understood that he would brook no interference.'

But it is hard for an empty bag to stand upright; and as year succeeded year, and preferment did not come, and creditors clamoured, and Mr Secker felt privations in spite of himself, he sank socially, and made his wife, while her soul sickened, give evasive answers to tradespeople; and sometimes, worse even, compelled her to write pitiful letters, asking help from people whom they knew but by name. Perhaps the answers were harsh, or reproachful; they implied that a wife who knew her duty, was self-denying, and a good manager, would make Mr Secker's income sufficient; and that she ought not to make appeals derogatory to her husband's position. And she had half-starved herself, and been often, often cold from insufficient clothing! She said nothing; but prayed a great deal, read comforting passages in the Psalms and Gospels, and hid weeping eyes in her lovely little children's plump shoulders, and wondered what was to become of them all. Mr Secker was essentially touchy and quarrelsome. No consideration of expediency or gratitude could prevent his expressing, as offensively as possible, his conviction that he had been ill used or insulted. No one had experienced this more frequently than his diocesan, who had been specially kind to him. Mr Secker's conduct to him became at length so insolent, that self-respect, and respect for his own position, made it imperative on the bishop to punish him. On his throwing up his curacy in a fit of pique, Dr Verity refused to license him to another, or to countersign his testimonials; but he stated that he would not put any obstacle in the way of his giving temporary assistance to clergymen willing to employ him. His sentiments on the occasion were conveyed in the following note:

My Lord—In submitting to the sentence your lordship has been pleased to pronounce on me, I have the lofty satisfaction of knowing that it is not in any man's power to deprive me of my claim to be considered a gentleman; and I do not disguise from myself the fact that I should have been more acceptable to your lordship if destitute of pretensions to social standing and good descent. There are men so essentially low that they cannot forgive another for possessing superior advantages. I shall not avail myself of the permission to exercise my sacred calling in the way your lordship indicates. The consequences to my unoffending wife and children, I lay at the door of your lordship's conscience; and I am, my lord, your lordship's most obedient servant,

Marcus Secker.

Mr Secker read this astounding document to his bewildered wife, who dared not express her opinion of it; and, looking like one who had relieved his mind of a heavy burden, or settled a vexed question, went blithely to post it. It was by no means the most intolerable letter he had inflicted on the bishop, a learned, kind-hearted man, and perfectly innocent of any assumption that could palliate an attack on his origin. He read it quietly, and handed it to his secretary, remarking: 'Now, that man is not mad enough to be placed in confinement, and yet it would be, in the fullest sense, uncharitable to treat him as of sound mind; in fact, he is certainly not. For the sake of gratifying his malignity—which really I cannot charge myself with having provoked—he throws up all his prospects for life, and makes his family paupers.' The good old gentleman had it intimated to Mrs Secker that if she could work on her husband to apologise, or to let her apologise for him, he would recommend him into another diocese—where, possibly, he might do better—and contribute towards the payment of debts and the expenses of removal. When Mr Secker had relieved himself of an atrocious letter, as well as when his ebullitions of temper had wrung his wife's heart, and terrified his little children into shrieks, he overflowed with amiable emotions. He accepted Dr Verity's benevolence, and wrote:

My Lord—You have 'heaped coals of fire on my head.' I cannot lie as low in your lordship's eyes as I am in my own; but you can exercise a vast benignity, and, preferring mercy to justice, forgive, my lord, your lordship's most grateful and devoted humble servant, Marcus Secker.

So, in the year of our Lord 1823, Mr Secker arrived at St Breaca's, and took the small shabby house at the corner of High Street and Water Lane, at a rent of twelve pounds, rates and taxes not included, and was in a few weeks settled in it, with his wife, seven children, and a scrub of a local servant-girl at a shilling a week; and he remarked complacently and truly that, the poverty notwithstanding, there was a certain something about the establishment which made it evident that the dwellers there were a gentleman's family. It did not occur to him that this was mostly due to the industry and exquisite domestic skill of the patient, loving wife and mother, who sat up late and rose early, and did 'him good and not evil all the days of her life.'

CHAPTER II.

'I'm the most unfortunate man in the world,' said Sir Geoffrey Monsey to his wife. 'No one hates trouble more than I do; no one interferes less with others. I hate politics, I hate business, I hate family troubles, and they are all thrust upon me.' Sir Geoffrey was a handsome man of sixty, with a fine unencumbered property; and, save annual liability to hay-fever, excellent health; but he uttered this lamentation at breakfast in his grand old country-house, on a lovely June morning.

'Never mind the politics,' returned Lady Monsey: 'you have decided not to stand again for Northshand.'

'Yes; thank Heaven! But I shudder at the bare recollection of the canvassing and noise, and dining and bills. I never would have borne it, but for you; and how I did bear it, and why you made me submit to it, I have never understood.'

'What makes you think of so many grievances this morning?'

'My letters;' and he sighed so sadly, that the wife, who had all the energy and purpose that he had not, and who had understood and loved him for five-and-twenty years, felt that he had a real vexation, and looked at him kindly and questioningly. 'Yes; here they are. By-the-bye—it is not to the purpose, but Honoria is to be married next

Digitized by Google

week, and they want me at the wedding. I asked Thompson if I had any clothes fit to go in, and he said: "No, Sir Geoffrey; you have hardly any clothes fit for a gentleman."'

'You have spoiled him.—What did you say?'

'Say! I said: "Then why don't you order me some? You don't expect me to take the trouble to order my own clothes, do you?"'

It was told in such simplicity that Lady Monsey could not help smiling; but he did not perceive it, and went on.

'I have a letter from my unfortunate brother Arthur.'

'Where is he?'

'At Baden, but coming to England directly. He says he cannot live abroad any longer—that he is tired of it—that his children want education—that he cannot afford to give it them—that his income must be increased—and that he looks to me, as the boy is my heir. Of course, he cares nothing about the children; he is dunned, and he wants to make sure of cigars and brandy, and a cook. He talks of bringing his family to Dover, and leaving them there, while he comes here to see what I mean to do for him.'

'That must be prevented.'

'Certainly. He might have delirium tremens in the house; and, besides, his conduct to me has been invariably so atrocious that I will hold no personal communication with him.'

'How soon can the yacht be ready?'

'I believe she is ready now. Dare wanted to start next week: he thinks the weather is settled; but as I had had no hay-fever, I thought of waiting.'

'Do you not think we had better go at once? Your brother could not follow you. Tell him that your letters will be forwarded.'

'Yes; but I must have some plan.'

'True; I have been expecting this; and I think you had better promise to double his income, and send the boy to Eton; provided that he, Arthur, will live where you choose—in England, if he will.'

'I can do that,' said Sir Geoffrey; 'but I am certain he will try to force himself here. He has lost all self-respect, all gentlemanlike feeling.'

'He may not. His wife has, at anyrate, behaved well since her marriage; and whatever her faults have been, she no doubt loves her children, and she may try to make him do what is best for them. She must have some sort of influence over him.'

Lady Monsey sighed. It seemed to her so hard that the reckless, worthless, younger brother had children, and she had none; hard that those children had a bad father, when Sir Geoffrey would have been such a good one; hard that they had a mother whose name had been breathed on, while she was unimpeachable.

The schooner-yacht *Zephyr* was ready. Sir Geoffrey had said that he knew every nook of the Mediterranean, and would cruise off the Cornish and Devonshire coast, which he had never seen, and Captain Dare knew well. Off Land's End, the vessel suffered material injury in a squall, and there was no resource but to put into St Breaca's for repairs. Sir Geoffrey availed himself of the occasion to grumble. He did not dispute the beauty of the little harbour, but he was certain that St Breaca's smelled of fish; that there could be no decent inn; that there was nothing for it but to post home as fast as possible, and rush, perhaps, into his brother Arthur's arms. Lady Monsey represented that the accommodation could not possibly be worse than they had often put up with on the continent; that if they could only get rooms, they had on board wherewith to make them habitable; that he would infallibly have hay-fever if he left the coast; that they could amuse themselves very well there for a fortnight; and that it had been often the unexpressed desire of her heart to become acquainted with Cornwall and the Cornish. So, as usual, he groaned, and yielded, and regretted the concession ultimately so little, that he staid a month, and commenced negotiating for the purchase of the old Gray House. He thought it capable of being made a very pleasant temporary seaside residence, and that if he were disappointed in it, he could let his brother Arthur have it.

St Breaca's had never been so stirred. The yacht was a gem, and the clever shipwrights were enthusiastic about her. Mrs Rowe of *The George* had 'real people of quality in the house, and so affable, to be sure.' All the women admired Sir Geoffrey; and the men said they felt they could do anything for Lady Monsey. Mr Secker cannot be classed. His imagination had been fluttered. Next day would be Sunday. He selected two of his best sermons. They would be at church once at least, probably in the morning, and come to the vestry after service, and ask him to dinner: he should go, of course. Poor Nannie would fidget about his cotton pocket-handkerchiefs, clumsy shoes, and so on. It was impossible to make any one, born and brought up as she—dear creature!—had been, understand that a perfect gentleman could afford to be shabby. If her poor father had been going to dine with a baronet, he would have dressed himself so as to look quite new, and have felt that he had no social standing but what he owed to his clothes. The little-great people of the town would see how the Sir Geoffreys regarded Mr Secker, the poor parson, though he had not their mine-and-fish-bought finery. How he should enjoy being once more in good society! How had he dragged on for weary years, away from the polished men, the fascinating, perfectly feminine women, with whom he had been born to be familiar! Sir Geoffrey and Lady Monsey would understand it all, and feel for him. Perhaps they had church preferment in their gift. Here nature welled up, and his eyes grew moist, and he said aloud: 'My blessed, blessed, patient wife, you should not then be such a slave, and my precious darlings should have all the advantages they ought to have; and they would know how the fond, foolish, passionate father loved them.' And he went into the parlour, and played with the baby—no one could do that better than he—and talked innocent nonsense to all, building vicarages in the air, till Mrs Secker said: 'I have often and often wondered if I should ever go up that hill again' [St Breaca's is in a deep valley]: 'it seems impossible, we are so completely out of the world; but as long as we have the dear children, it does not signify where we live.'

Sir Geoffrey and Lady Monsey did ask Mr Secker to dine on that Sunday, and often afterwards. All his dormant social talents woke under congenial influences. Sir Geoffrey said: 'It is really a pity that man is buried here. He is a

Digitized by Google

gentleman; he reads well, preaches well, and, a few crotchets apart, talks well. He should have had St Cuthbert's, if I had not given it away: I am sorry for it. He must be half-starved here. The loaves and fishes of the establishment are very unequally distributed.'

TERRESTRIAL MAGNETISM.

One of those periods is now approaching when the earth is thrilled through her whole frame by magnetic throes of unusual intensity. Physicists will be able to trace in the silent indications of the suspended magnet the action of the most remarkable of all the forces to which the earth is subjected. In telegraphic offices, the occurrence of these disturbances will be made apparent by the interruption of communication for longer or shorter intervals of time. And the self-recording instruments at Kew and other such observatories will indicate by unusual movements the progress of those mysterious electric convulsions known as magnetic storms. But except for such indications as these, and one or two others which have only of late years been referred to the agency of terrestrial magnetism, the inhabitants of this earth will not be made sensibly aware that anything unusual is in progress. For ages these magnetic disturbances have thrilled through the earth's framework without being recognised; and even now it seems almost as by an accident that our physicists have been led to understand the significance of one of the most remarkable of all terrestrial phenomena.

The facts which have been ascertained respecting terrestrial magnetism are so interesting and so little known, that we may confidently claim the attention of the reader while we state some of the most striking and noteworthy of them.

The most generally recognised property of the magnet, its power of indicating the north point, was discovered by the Chinese many ages before it became known to European observers. We learn that the Chinese, when journeying over the great plains of Central Asia, used a magnetic car, in front of which a floating needle bore a figure, whose outstretched arm pointed continually southwards. The Greeks and Romans were aware that iron could be magnetised; but it never happened that a suitably balanced fragment of magnetised iron exhibited to them the earth's directive force. Humboldt remarks that 'on this accidental circumstance alone the great discovery depended.' It must be remarked, however, that such accidents have been common in the history of discovery and invention.

Had the western nations discovered the magnet's principal property so early as the Chinese, we should probably have gained valuable information respecting the next property which has to be considered—the fact, namely, that the magnet does not commonly point due north. It is not likely that the Chinese discovered this property, because over the whole of Eastern Asia the magnetic compass points very nearly towards the north. But even if they had, it is not so much the divergence of the compass from the north point which would have rendered the discovery interesting to us, as the knowledge which ancient observations might have given us respecting the laws on which the *changes* of that divergence depend. In Europe, as we shall presently see, these changes are very conspicuous.

It was in the thirteenth century that European observers first detected the fact that the magnetic needle does not point due north.* For a long time it was supposed that the direction of the needle was the same for all places; but during the first voyage of Christopher Columbus across the Atlantic it was found that this is not the case. He had travelled six hundred miles from the most westerly of the Canary Islands, when he noticed that the compass, which had been pointing towards the east of north when he was in Europe, was now pointing due north. The actual day on which the discovery was made was September 13, 1492. As he sailed farther west he found that the westerly declination gradually increased.

But here we have at once to call attention to another peculiarity of the magnetic compass, otherwise the reader would form a mistaken notion of the present nature of the needle's declination. We have spoken of the needle as pointing to the east of north in 1492. This is no longer a true description of the declination in Europe. The needle now points far to the west of north. It is a peculiarity of the science of terrestrial magnetism that variations are thus mixed up with variations, until it has become a matter of exceeding difficulty to present all the facts of the science in such a sequence that the student shall not be in any risk of being led astray. Properly speaking, the change of the needle's declination from time to time should be kept wholly separate from the changes which are noticed as the needle is changed from place to place. Yet, if this were done in describing the original discovery of the latter change, erroneous impressions would be given respecting the present state of the needle's declination in various countries.

At present, the terrestrial globe may be looked upon as divided into two vast but unequal portions, which may be called the region of westerly magnets and the region of easterly magnets. In the former must be included all Europe, except the extreme north-easterly parts of Russia, the whole of Africa, Turkey, Arabia, the greater part of the Indian Ocean, and the western parts of Australia. Returning westwards, we must add to the region of westerly magnets the greater part of the Atlantic Ocean, the north-eastern parts of Brazil, the eastern parts of Canada, and the whole of Greenland. All the rest of the world belongs to the region of easterly magnets except an oval space, which is situated in the very middle of the region, yet has a contrary character. This space includes the eastern parts of China, Manchooria, and the islands of Japan.

Such is the present arrangement of the two divisions; but fifty years ago, the description would have been incorrect, and fifty years hence it will again be so; for over the whole world the declination is steadily changing—here in one direction, there in the contrary; quickly at some places, almost imperceptibly at others. And we may mention in passing, that, as a general rule, where the declination is least either westwards or eastwards, there it is changing most rapidly; and

* It may be well to notice a certain peculiarity about the nomenclature of this deviation. Seamen always call it the needle's *variation*; but among scientific men it is called the *declination*.

Digitized by Google

where it is greatest, it is hardly changing at all. But there appear to be some places where the range of change is so small, that, though the declination is never large, it does not change rapidly—as in other places of small declination. As yet, however, much remains to be learned respecting the progress of these strange changes in countries where magnetic observations have been only commenced in recent times.

Some idea of the complexity of the question will be suggested by comparing the changes which have occurred in two places so near to each other as London and Paris. We shall see that not only are the declinations different in these cities, but their range of variation is different, both as to extent and as to the period in which a complete oscillation of the needle is effected.

The easterly declination of the needle in London was observed to disappear in about the year 1657. From that epoch, the needle continually travelled westwards, until it began to be thought that it would move ever in that direction, and so come at length to point southwards. In Paris, the easterly declination had not disappeared before the year 1663, and there also the needle travelled continually westwards, though not quite so rapidly as in London. In 1814, the needle pointed about 22½ degrees towards the west in Paris, and some two degrees farther west in London. In that year, however, Arago startled the scientific world by announcing that in his opinion the needle's westerly motion was flagging, and he asserted his belief that that motion would presently give place to an easterly movement. Only three years passed before the prediction was fulfilled; and on the 10th of April 1817, Arago was able to announce that the needle had begun to return towards the north. But observers in London pronounced against this view. The London needles were still travelling westwards, though with a slowly diminishing motion. It was not until the spring of 1819 that the London observers admitted that the needles had really reached the limit of their westerly oscillation. And whereas in Paris the needles had not travelled more than 22½ degrees towards the west, in London they had passed no less than 25 degrees from the north point. Corresponding to this circumstance, we see also that the duration of the half-oscillation (for the needles had not been watched from their greatest easterly declinations) was a hundred and sixty-two years in London, and a hundred and fifty-four years in Paris.

It gives a grand idea of the nature of those ever-acting forces to which terrestrial magnetism is due, to consider that the sway of the magnetic needle from limit to limit of its range should occupy so long an interval as three centuries in both these instances. Conceive the scale on which a pendulum should be constructed in order that its oscillations might have a period of as many seconds!

It was while they were engaged in tracking the progress of this long oscillation, that physicists detected minute oscillations superposed, so to speak, upon the main one, and even more singular in their character. The case is somewhat as though to the bob of a long pendulum there were attached a short one, and that it was to the motions of this short pendulum (beating with its own rapid swing, while carried slowly backwards and forwards by the main movement) that attention was primarily directed.

Each day the magnetic needle sways backwards and forwards *twice* across its mean position. Shortly before midnight, it begins to travel from west to east, reaching the limit of that motion soon after eight in the morning. Then it sweeps westward to its greatest westerly limit, which it reaches soon after one. Then back again towards the east, until half-past eight, and so to its original position at about eleven o'clock.

It must be understood that these motions are so minute in comparison with the great secular oscillation, that they never affect the general direction of the magnet to any noteworthy extent. For instance, we have just spoken of the two easterly limits of the daily swing, but throughout the day the magnet always points far to the west of north. The mean declination, in fact, is (roughly) about 20 degrees, whereas the daily swing never ranges over more than the fifth part of a degree.

It will be noticed that the oscillations above described correspond closely with the diurnal motions of the sun. They are such, in fact, as the needle would exhibit on the supposition that it tries to follow the sun during his complete apparent revolution round the celestial sphere. It is believed that the daily motions of flowers, and in particular that class of motion which has given to the sun-flower its distinctive appellation, are due to the same magnetic properties which cause the diurnal swing of the suspended needle.

But besides the daily sway of the magnetic needle, there is an annual oscillation of a somewhat different character. In fact, properly speaking, the annual change is not oscillatory, though it has a regularly recurrent character. The daily swing is variable. Now, this variability would be somewhat confusing, on account of its general irregularity; therefore, physicists consider the mean of several days, and thus get rid of what for the present we may term accidental variations. When this has been done, it is found that the average daily swing of the needle is subject to a slow progressive increase, followed by an equally slow diminution; and the period of these slow changes is a year.

The peculiarity of this annual change is that its progress is the same for both hemispheres. It might have been expected that it would attain its maximum in summer, when the solar influence is strongest; but this is not the case. It attains its maximum in January, which is indeed near midsummer for the southern hemisphere, but nearly the least sunny of our northern months. The secret of this peculiarity lies in the fact that the sun is nearest to the earth in January. The peculiarity is a very meaning one, as shewing that the magnetic influence is not a local matter, however variable the magnetic declination may be as we shift from place to place. The real fact pointed to by this, as by many other phenomena, is, that the earth must be looked upon as a single gigantic magnet, gaining or losing power throughout its whole frame simultaneously.

The consideration of the *power* of the great earth-magnet must be for a moment laid on one side, while we deal with a form of deviation as remarkable as the declination. We refer to the *dip* of the needle. The ordinary compass is, we know, suspended horizontally, and, for anything which appears to the contrary when we examine such an instrument, that might be the needle's position

Digitized by Google

of rest. But when a needle is so suspended by a silken thread as to be free to assume an inclined position, it is found that the northern end dips perceptibly. We are assuming, of course, that in its non-magnetised state the needle would rest horizontally. In our latitudes, the dip or inclination is so great that the needle is inclined only about 22 degrees to the vertical. When we travel northwards, the dip increases; when southwards, it diminishes, until we reach a place near the equator (travelling always, it is assumed, in the longitude of London) where the needle becomes horizontal. After passing that point, the southern end dips, and the inclination continues to increase as we travel southwards.

The same is true for other longitudes, only the place of 'no dip' is differently situated. The line along which there is no inclination lies near the equator, crossing that circle at two opposite points, one in west longitude 3 degrees, the other in east longitude 177 degrees. The magnetic equator is not a strictly circular curve, however; it is noteworthy that it departs most from the figure of a true circle where it traverses the Atlantic Ocean.

We have seen the variations which are exhibited in the declination of the magnet, not only at different places, but at different times in the same place. Changes of precisely the same character are exhibited in the dip of the magnet: in London, for example, the dip has diminished four degrees in less than a century; in Paris, during the last two centuries, the dip has diminished about seven degrees.

Seeing this, we must accept with some little question the locales usually assigned to the magnetic poles; because we have every reason for supposing that these poles must be continually shifting their position. In fact, the motion of the magnetic equator, which is continually sweeping from east to west along the true equator, suffices of itself to demonstrate that the magnetic poles are continually travelling around the true poles. What the laws of this motion may be, it would not be easy to determine in the present state of our knowledge; but it is worthy of notice that the same motion would serve to account at once for the change of dip and for the change of declination. For example, in 1663 the magnetic pole may be reasonably supposed to have been due north of Paris. In the latter year, the inclination was 75 degrees in Paris, so that we can judge that the magnetic pole was on the nearer side of the true pole. As the magnetic pole passed away from this position, travelling westwards, there would naturally result both a westerly declination and a gradual diminution of dip. And the fact that when Sir J. C. Ross determined the position of the northern pole in 1837, it was found to be somewhat more than 90 degrees west of the longitude of Paris—in other words, the fact that it had traversed somewhat more than a quarter of a complete revolution soon after the westerly declination at Paris had attained its maximum value—seems strikingly confirmatory of this view. If this theory is correct, the inclination will continue to diminish until the magnetic pole has completed half a revolution, so as to be again due north of Paris, but on the further side of the true pole. Then the declination will be nothing, and it will afterwards become easterly.

It must be admitted, however, that there is much more complexity in the laws according to which the declination varies, than the above view, taken alone, would imply. Doubtless, the peculiarities of the earth's structure, the arrangement of land and water, mountain-ranges, table-lands, and valleys, have much to do with the matter.

The variations of the intensity of magnetic action, either from time to time, or as we proceed from place to place, are among the most interesting of all the phenomena of terrestrial magnetism. The latter class of change is associated so obviously with the changes of declination and dip, that we need not enter on its consideration. The former, however, points to problems of extreme interest in connection with the probable character and source of the whole range of forces included under the subject we are dealing with.

We have seen already that from hour to hour, and from day to day, there are changes in the extent of the minute oscillations of the suspended magnet, and that these changes indicate variations in the intensity of the magnetic force under diurnal and annual solar influences. When we add to these variations a change which has a period corresponding to the motions of the moon, it becomes evident that it is to an influence as subtle and as pervading in its character as gravitation itself, that the terrestrial magnet owes its powers.

But there are other variations still more significant.

A long series of researches had convinced Colonel Sabine, one of our leading authorities on the subject of terrestrial magnetism, that the intensity of the magnetic action is subject to a process of change having a period of somewhat more than ten years. Scarcely had this law been established, when the results of a long and elaborate series of solar observations exhibited to the world the strange fact, that the spots which stain the sun's face vary in frequency according to a precisely similar relation. It was found that the changes of solar spottiness, and of magnetic intensity of action, are not merely characterised by an equality of period, but that the maximum effect under one period is absolutely coincident with the maximum effect under the other.

We might have looked upon this as merely a very singular coincidence, had we not independent evidence of an association between the sun's action and the intensity of terrestrial magnetism. Part of this evidence has been already referred to. But the evidence founded on the exact coincidence of magnetic storms, thrilling in a moment through the whole frame of the earth, with solar disturbances actually witnessed by astronomical observers, is even more striking. Thus, no room is left to question the dependence of terrestrial magnetism on solar action, and the relation between the sun's spots and the vibrations of the needle—a relation which, when first propounded, was received even by eminent physicists with ridicule—has been accepted as one of the most well established of all the circumstances known respecting terrestrial magnetism. Of the meaning of this singular relation, we have not at present space to speak; indeed, we should be led into a variety of considerations, which would be out of place in such a paper as the present. The appearance presented by the solar spots, the processes by which they are formed, the laws on which their changes depend—all these, and many other questions of the sort,

Digitized by Google

would have to be dealt with, to say nothing of the planetary movements on which, according to modern researches, the habitudes of the solar atmosphere are dependent. We may note, in conclusion, that the solar face has recently presented all the signs which we have learned to associate with the intenser phases of terrestrial magnetic action. Enormous spots and clusters of spots have broken out during the past few months; and probably the spots which will shortly make their appearance will be yet larger, since the epoch of maximum disturbance has not yet been fully reached.

A COUNTY FAMILY.

CHAPTER XXXVII.—THE TEMPTATION.

If the sentimental emotions evoked in Mr William Blackburn with reference to his late wife were more powerful than we might have been led to expect, they were not, on the other hand, lasting, for, after a very brief retirement, he came forth and joined the rest of the party in the garden without the least sign of his recent depression; nay, he was even in high spirits—clumsily brisk,—grotesquely genial, like some wild animal whose vagaries would not be unamusing, if one could only be certain how they would end. 'Is this, now,' thought Mr Waller, smiling encouragingly at his young friend, 'merely the effect of his favourite stimulant, or does he wish to shew me that what I have just seen in him was only a momentary weakness?'

Lucy also secretly regarded him with a shuddering interest she had never experienced before. She had long been in possession of her father's scheme, of course, but he had not directly confided it to her. She had not pictured to herself the actual possibility of this man's being her lord and master. Doubtless, the reader has seen a parallel case, for there are many such in good society (indeed they are most numerous in the best); but if not, let him imagine how much more noteworthy the gambols of the Greater Ape would appear to him in its cage in the Regent's Park, if it were enacted that, after a certain time, the creature should exercise a personal authority over *him*. She wondered what arrangement had just been made by her father with this man in yonder room, and augured ill for herself from Mr William's boisterous mirth. Ellen on her part was scarcely in lighter mood than her friend; she had told Lucy of Denton's visit that morning—but that young lady was at present unable to enlighten her as to its cause, and this filled her with vague alarms. Stanhope was, for some reason best known to himself, by no means at his ease—nor had he been so of late when Ellen and Lucy were present, so that on Mr Waller and William devolved the task that day of making conversation, and what is vulgarly called 'doing the agreeable.' It was as though for some evening party too fashionable to amuse themselves, the most accomplished singer or elegant pianist had been engaged, and also a gentleman whose only art was to stick pins into the fleshy part of his legs, or draw yards of tape out of his mouth—although it must be granted that Mr William was certainly no conjurer. It would have been much more difficult, however, even under less adverse circumstances, to make time pass at the Fishery than at the Manor. There was not room and verge enough in their present picturesque but contracted position to do as they pleased; all were thrown together in that narrow space, and except for the malady of the sea, might almost as well have been fellow-passengers shipbored, compared with whom all companies ashore, even in their quarter of an hour before dinner, or when enjoying a 'little music' afterwards, are hilarity itself.

When the postman came that afternoon, who took away with him a letter (with an enclosure) in Mr Waller's fine flowing and yet business hand, he brought one of a different appearance for Stanhope. To judge by its superscription, which was 'Mr Stanhope, Esq., care of Mr Blackburn, Esq.,' it had been written with a skewer, and excited, in that dearth of subjects of interest, quite a topic of conversation as to whom such an eccentric correspondent might be.

Mr Waller opined that it was a love-letter from some young lady of rank whose education had been neglected.

'More likely,' observed dull William cunningly, 'it 's from one of his turf friends.'

'Who uses, characteristically, a horse's shoe-nail, instead of a steel pen,' added Stanhope good humouredly.

He read it and crumpled it up in his pocket, carelessly saying that Blackburn was so far right—that it was a begging-letter from poor old Jerry the card-seller, who had come to grief.

'Why, you don't mean to say that any one begs of *you*?' was Mr William's coarse rejoinder; and so the matter ended.

But when the long afternoon came to its close at last, and the visitors had departed, taking Mrs Blackburn with them—whom they had persuaded with difficulty to be their guest for the next day at least—Stanhope took no further pains to hide that something had annoyed him deeply; and the more he shewed it, the higher Mr William's spirits rose. As he watched him involuntarily take out again and again the missive he had received, only to thrust it back into his pocket with a muttered curse, he chuckled to himself and whistled merrily. 'Uncle Dean has done the trick,' thought he. 'O yes, it 's a begging-letter, right enough; but it has none of old Jerry's whine in it. It 's a stand-and-deliver affair, from one of his Goodwood friends, I 'll take my davy.'

And for once in his life at least Mr William might have made a statement upon oath and yet not committed perjury. It was a letter of the 'You-call-yourself-a-gentleman' sort, which those who owe debts of honour to persons of no honour, and which they are unable to pay, ought to make up their minds not to wince at; but it galled its present recipient to the quick. 'As for your being abroad, I know it 's all Dawlish's gammon,' ran one of its sentences, 'and I for one am not going to be fobbed off with promises. It 's true that I can't get my rights by law; but if Stokes and I—for he 's my pardner—don't get our cool four thousand within the week, mind this, *I 'll post you*.'

Presently, as they sat in the twilight over their brandy-and-water and cigars, at the open window, a boat glided slowly by up the stream.

'Now, I 'll stake my life,' cried William, who was always offering this tremendous wager (as in his own idea at least it was) upon the most trifling

Digitized by Google

events, 'those two young rogues there are after night-poaching.'

'Very likely,' answered Stanhope curtly. 'I don't care a farthing whether they are or not.'

'But it's my river, sir, every yard of it, from here to Mosedale.'

'Then I wish 'em luck,' said Stanhope, draining his glass, and mixing himself another.

'I say, what the deuce is the matter with you, old fellow?' inquired William, always conciliatory, when another shewed signs of fight. 'You seem uncommon down upon your luck to-night.'

'Well, my luck is rather down upon *me*,' returned the other bitterly—'my usual luck, that is.'

'Bosh! what have you got to complain of?—a handsome, gentlemanly young fellow, whom all the girls are wild for, with a fine house and an old name, and whose estate, if it *is* a little dipped'——

Mr William stopped; he could not quite conceal the delight he took in thus torturing his friend, and the other's eyes flashed fire.

'I have no estate, sir, as perhaps you know,' said he desperately. 'Read *that*,' and he tossed him over Mr Stokes's partner's letter.

'What an impudent scoundrel!' ejaculated the other, when he had mastered the contents. 'Of course'—and here he lit a fresh cigar, as an excuse for not meeting his companion's gaze—'of course you'll pay the beggar off at once, and have done with him? And yet four thousand pounds is a large sum to have to pay all of a sudden.'

'To me at least it is,' said Stanhope sternly. 'Indeed, I have not got the money.'

'Not got the money?' exclaimed the other, raising his bushy eyebrows. 'Dear *me!* What will you do, then? Bolt?'

'No; it has not come to that yet, I hope. I must raise this sum how I can. Redmoor Firgrove is still mine to sell, and that will fetch it; and in the meantime I must trouble you to advance it to me.'

'The trouble would be a pleasure,' said William coolly, 'but, upon my life, I have not fifty pounds I can call my own. If you had asked me at breakfast-time, I might have lent you a little more, but my father-in-law that is to be was so very pressing this morning, that I had to lend it to *him*.'

'Is this really true, Blackburn? Can you not help me in this strait at all? If you will only make the advance, I will pay you ten—twenty per cent. You know that I am one to keep my word.'

'This gentleman here does not seem to know it,' said William carelessly, pointing to the letter; 'although I daresay what he writes is all lies.'

'No; it's true,' said Stanhope hoarsely, taking no notice, in his fierce excitement, of the other's irritating manner. 'I believe I have been the greatest fool alive;' and he ground his teeth so that the cigar fell from his lips bitten clean through.

'I know one way, and only one, by which you may still be a rich man,' said William slowly.

'To-morrow?' cried the other bitterly.

'Yes, to-morrow; that is, as soon as you like.'

Stanhope shook his head.

'It is not,' continued the other, 'the way which you have in your mind, but another way.'

'What do you mean?' There was something in Blackburn's voice which, wretched as Stanhope felt, gave him a thrill of horror.

'Well, I'll tell you, upon two conditions. First, that you don't fly into one of your foolish passions—enough to make a fellow's blood run cold to look at you; and secondly, that, whether you agree to my proposal or not, you'll keep it a secret—never breathe it to any human being—never speak about it again, even to myself, unless I ask you.'

'You are mystery itself, sir,' said Stanhope, forcing a laugh; 'but I have no objection to agree to both your terms. It is impossible to make me more savage than I am'——

'I am not so sure of that,' interrupted William. 'When you happen to take a different view of a thing from what another man takes, who is perhaps as good as yourself, only without the same finical notions, I have seen you burst out at him like a—like an unchained bull-dog.'

'Oh, you are afraid of wounding my honour, Mr Blackburn, I perceive. Well, I think, after that infernal letter, I can bear most things. Pray, don't consider my feelings.'

'Very good. And you'll keep it quiet?'

'Certainly. Why not? Secret as the dead who lie in their graves'——

'Never you mind *them*,' interrupted the other hastily.—'You'll never speak about the matter, even to me, whether it is agreed to or not, and you won't fly at my throat like a bull-dog?—Good. I know a way, then,' and here he sank his voice, 'by which you may get four thousand pounds within the week, and five times as much, and even more, when the old governor yonder,' and he jerked his thumb towards the ceiling, '"hops the twig." What do you think of *that* for a prospect? And yet it all lies within reach of your hand. Can't you guess the riddle now?'

What with his caution and his excitement, Mr William had brought himself so close to his companion that his cunning face was almost touching his, his brandied breath pervading him, his whole being anxious, as it seemed, to become one with his in rascaldom and fraud.

'I feel as if I were being tempted by the devil in person,' observed Stanhope frankly; 'and yet I've no conception of what you're driving at, or how what you suggest is to be effected. As for what may occur after your father's death, it would be idle, in talk with such a man as you, to conceal from motives of delicacy'—and yet, notwithstanding his words, the speaker hesitated.

Mr William nodded and rubbed his hand, as though he was being overwhelmed with compliments.

'I say, of course I am well aware that in the event of a certain contingency, which, however, may, after all, never take place'——

'And which you have no desire *should* take place,' struck in the other vehemently; 'which you had rather did not happen, if only the desired consequence could be insured without it. Oh, I know all that; I have watched you, I have marked you, my friend. I am not such a fool as I look, not such a fool as you and some others have been in the habit of taking me for.' And as Mr William spoke those words, he really did not look like a fool, but resembled a sharp and exceptionally malignant Satyr. 'When a chap's sweet upon a gal himself,' continued he, with his finger at his nose, to impart additional significance to his philosophy, 'then his eyes are sharpest to see through other chaps as have *their* fancies.'

'Really, Mr Blackburn, these sagacious reflections

Digitized by Google

are entirely thrown away upon me,' said Stanhope carelessly, but with his face scarlet to the brow, nevertheless. 'What I was about to observe is this; that, supposing the contingency—to which no more direct allusion need be made, sir, since it is not only an impertinence to me, but an insult to one whose feelings are much more worthy of consideration—supposing the contingency to take place, then I understand as well as you do that I shall have considerable command of money. But as for these four thousand pounds within the week, I should like to know where, in the Fiend's name, are they to be found?'

'I will find them,' said Mr William triumphantly. 'When I told you I had not got them, I told you truth; but Mr Waller let fall a word to-day which assures me that I could raise them—for an intimate friend in his last extremity, that is.'

The speaker wore a look so very much out of keeping with the benevolence of his words, that Stanhope involuntarily ejaculated: 'Yes, he *is* the devil, and I shall presently have to sign his bond with my heart's blood.'

'You will have to sign nothing at all, my good sir,' returned the other persuasively. 'I am only about to ask you to give up something to which you have really no just claim.'

'If you refer to any hope I may entertain of securing your niece's hand, Blackburn, I promise—on the terms you mention—to forego at once all pretensions.'

'Bah! you may marry Ellen to-morrow for all I care, supposing, that is, we agree beforehand upon this little matter. I simply require of you to place in my hands—which are certainly the properest to hold it—that bit of paper which you took away with you to Curlew Hall the other day.'

'What! your father's will?'

'Yes, my father's will.'

CHAPTER XXXVIII.—AFTER NIGHT-POACHERS.

As William Blackburn uttered those last words, it seemed that Stanhope had clean forgotten his promise to keep his temper. He leaped from his chair with a great oath, and dashed his open palm against the table. But the next moment he moved slowly to the unshuttered window, and leaning his hot brow against the pane, looked out into the moonlit night in silence.

'Surely,' thought he in the bitterness of his soul, 'my degradation is now complete. For six months have I been fortune-hunting, despised by all lookers-on, and discouraged by the girl that I have made pretence to love; for six months have I been in hiding from men, such as he who has written to me to-day, and who believes me to be a liar and a thief; and now this villain here has asked my price for betraying a sick man's trust. Six months ago, I would have struck him to the earth for daring to hint as much, but now I have no such dainty sense of my own honour, and yet I am only twenty-five: I wonder what I shall be when I reach this man's age.'

'Well, Stanhope, what say you?' inquired Mr William, whose greedy eyes had followed his every movement, and were fixed upon him still, though he had to twist his own neck half round for that purpose. 'Come and sit down again, and let us talk over it quietly.'

'I can't sit down,' said Stanhope, opening the glass door as he spoke—letting in the cool night-air, and the sweep and swirl of the stream: he felt as if he needed air, space, movement, to save him from suffocation.

'I don't like that,' said William peevishly; 'you must shut the door—one does not know who may be at some open window listening.'

'But the secret's out, isn't it?' asked Stanhope with a harsh laugh. 'You have no other piece of roguery to propose, have you?'

'Roguery!—who said it was roguery? It's only natural, I suppose, that a man's only son should wish to be the custodian of the thing I spoke of, instead of a stranger.'

'Oh, it's merely a question of sentiment, is it?' rejoined the other carelessly. 'I had no idea you set so high a value upon such delicate ware.—Four thousand pounds down, did you not say, and twenty or twenty-five thousand to follow?'

'Say twenty-five,' said William, 'and one more. Upon the whole, then, you will clear thirty thousand pounds by riding home to-morrow, and bringing back with you—you know what: after that, you have only to hold your tongue.'

'It is really princely munificence,' said Stanhope in tones that mocked himself at least as much as his companion.

'It is worth my while, or else I shouldn't give it,' said the other coolly. 'You're not such a fool as to suppose I have not read the thing, and made my calculations accordingly; and indeed, I have no doubt you have done the same.'

'No, sir; curiously enough, I have omitted that precaution; and I should like to know, before giving you a final answer, how you propose to recoup yourself?'

'You had much better ask no questions,' said William significantly. 'If you are disturbed at my giving too large a sum for so slight a service, take less; or comfort yourself with the assurance that it is not I who shall have to pay it.'

'He is telling me now,' thought Stanhope, 'that he means to destroy the will, thereby making himself sole heir, and to pay me out of what is in fact his niece's money. He has made up his mind to beggar her, to begin with; and Herbert Stanhope, whom she has refused to listen to as a lover, is, he thinks, the very man to acquiesce in the arrangement. Thirty thousand pounds!—in another minute he will be proposing to make it guineas, if I will only smother the old man up-stairs. And yet, scoundrel as he is, he must have at least as bad an opinion of me as I of him. He and that imperative gentleman whose letter I have here in my pocket, have done me a good turn so far: they have made me for the first time see myself as others see me. From this night, I am no longer Squire Stanhope of Curlew Hall—shall no longer wear borrowed plumes. As this is the villain of this melodrama, let me be that less interesting character who is "poor but honest." I'll dispose of the Firgrove at once, no matter at what loss, and the rest of the property shall be advertised for sale. I'll take that will, and put it into Moffat's hands to-morrow morning for safe keeping. In the meantime, and since this is the last night I shall ever pass beneath his roof, why should I perplex this gentleman with a show of virtue?'

'My good sir,' broke forth William impatiently, 'you have not given me your answer? There is no fear but that you will keep a whole skin

Digitized by Google

in the matter; it is only my mother who knows that you have the thing in your possession, and I can answer for *her* silence. Your hesitation is altogether without reason.'

'I daresay it does seem so,' said Stanhope gravely. 'However, the will shall pass from my keeping to-morrow, that I promise you.'

'That's good!' cried William excitedly, holding out his hand, which the other took.—'To-morrow, you shall have my bond for the four thousand, and for the rest; I thought we should come to a mutual understanding, when once I could make up my mind to speak; but the fact is, you were so devilish high and mighty about that unlucky affair at Chester, that (although of course I knew it was all put on) I was almost afraid to trust you with my little plan. However, I knew you were a man of honour—not to blab if you passed your word to keep anything dark; and so I risked it.'

'I am sure I am much obliged to you for your good opinion,' said Stanhope curtly; 'but truth is only to be expected in a man in liquor, and I'm sorry to see you don't drink.'

'I never drink when I have business in hand,' answered the other with a cunning wink—albeit he had already taken half a bottle of brandy—'but when it's satisfactorily concluded, I will soak with the best man alive. Come, fill your glass, and let's make a night of it—we two. I hate the night, and like to kill it.'

'The sentiment does you the greatest credit, Mr Blackburn, as indeed all your sentiments do. If you don't like darkness, let us set fire to the house, and have a good blaze. What is a little arson more or less, when one is determined to have things as we wish them?' and Stanhope burst into a fierce shout of laughter.

'I say, what the deuce is the matter with you?' inquired Mr William apprehensively. 'They will be sure up-stairs to think it's me, and that I'm drunk.'

'Impossible!' exclaimed Stanhope mockingly; 'that is only your modest notion of what other people think of you.' And again he laughed, so that the low rafters shook again. He was really getting excited, not with drink, but with the very tumult of his thoughts, which found a natural vent in this bitter raillery. It was impossible to converse soberly with such a man as his companion had shewed himself to be, and his scorn and loathing of him seemed to long for utterance in some shape.

'I do wish you would make less noise,' said William petulantly; 'you will really cause people to suspect something by such unusual behaviour. Even as it is, your obstinacy in keeping the door open may have done mischief. I heard something stirring in the garden just now, I thought, but of course that must be fancy.'

'Why, I heard something too. Look there!'

Mr William dragged his chair from where it was, and placed it behind Stanhope's. 'What!—where?' cried he, looking with terror over the other's shoulder. 'I wish you'd lock that window, and close the shutters, else what's the use of the candles?'

'Why, my good friend, why? I am sure, with your admirable sentiments, you cannot but be an admirer of the picturesque. I was only calling your attention to that sudden splendour of the moonbeams; a moment ago it was all gloom, and now it is as light as day, look you. So beautiful, and yet so cold and ghastly, like the face of some dead woman.'

'Be quiet, can't you; I hate such talk,' cried Mr William nervously.

'But it's only moonshine, my good sir,' said the other, grimly pleased to find an unexpected weapon of annoyance so ready to his hand. 'You don't mean to tell me that an intellect like yours is capable of superstition? That this gutter in the candle, for instance, which some would call a winding-sheet'——

'It's that infernal window being open that does that,' said William hastily.

'Of course it is; there speaks the practical philosopher. But I know men—that is, who call themselves such—who would consider it an omen—a sign that something ugly was about to happen—that Death itself was hovering about us even now. Do you know, Blackburn, I'm almost ashamed to say it, but I feel a little "all-overish" myself to-night. I think I shall go out into the air, and have a row in the skiff, to shake it off.'

'What! and leave *me?* You wouldn't be such a beast as that, surely, when you have promised to sit up with me all night?'

'Very well, why not sit in the boat? I shall most certainly have a row;' and Stanhope rose from his chair.

'No, no,' implored the other; 'I can't be left alone to-night; and the skiff won't hold us—that is, it is never safe when anybody rocks it, and I know you'll rock it, because you're drunk. If we must go, let's take the punt.'

'Very well, then, the punt let it be; and look you, although I am sober as a judge, I am ripe for anything to-night, except going to sleep; so let's go after those poachers. They must be somewhere between here and the mill for certain.'

Stanhope, although, as he protested, quite sober, was in that state of mental excitement to which inaction is hateful, and the ordinary surroundings of life seem burdensome and oppressive. 'The blind wild beast of Force that lies within the sinews of a man,' was roused in him, and he would have welcomed fight and peril. Mr William's case—afraid to start on such a dangerous errand, and still more averse to be left alone, a prey to nameless terrors—was pitiable indeed; but eventually he got cap and coat, and seated himself with as much of courage as his brandy-flask would hold, in the stern of the punt, while the other used the pole.

It was, as Stanhope had said, as light as day; every jut and coign of the cottage, every stone of the bridge, stood out in strong relief as they slid up stream. The wind had chopped to the east, and was blowing sharply, so that the trees that fringed the steep right bank of the river shivered and swayed; but down in the sheltered channel it was scarcely felt, though the stream bore here and there a silver curl that marked a wavelet, and against the broad flat prow of the punt the water chafed and whitened angrily. It was hard work pushing against wind and stream, and Stanhope enjoyed it; and when he ceased from his exertion, it was never to rest, but to gaze eagerly about in search of those who had preceded them.

'I see nothing of those rascals,' exclaimed he presently; 'I am afraid they have done their work, and put their boat up at the mill; in that

Digitized by Google

case, they will escape us, confound them, for I suppose one must catch them in the very act, eh? —that's the law, isn't it?'

'Of course it is,' replied the would-be county magistrate; 'though I must say I should have rather enjoyed a tussle myself.'

'Hush! be quiet!—we shall have them yet; I hear something.' And Stanhope noiselessly pushed the boat beneath a bluff of the right bank, where it could lie in shadow; above them the steep rose sheer, with one strong sapling growing from it almost at right angles, so that the branches dipped to within a few feet of them.

'What a strange noise that is, Blackburn. If it was warmer weather, I should have said that it was distant thunder.'

His companion, who did not care what it was, so long as it was not poachers engaged in breaking the law, and thereby inviting deeds of violence, expressed his opinion that whether warm enough or not, it *was* thunder, and 'deuced near thunder too. A storm is brewing,' said he, 'and it's my idea we had better get home at once, with dry skins.'

'A storm, with a sky like that! Pooh!—nonsense! Hark! there's a horse coming down the gorge, and at full gallop too; it must have got loose, and been frightened at that noise; and I don't wonder. How it swells and roars! God of heaven! can the reservoir have burst?'

'The what?' cried William, starting from his seat with such a piercing yell, that, even in that moment of anxiety, Stanhope stared at him speechless with sheer amazement. His face, though in shadow, shewed as white as though the moonlight were full on it, and his eyes seemed to be starting from their sockets. But at that same instant another spectacle presented itself—a horse and rider at full speed came round an angle of the opposite bank, and thundered down the road. It was John Denton, riding as if for life.

'What has happened?' cried Stanhope; 'for God's sake, tell us.'

'The embankment's gone, and the water is coming down,' roared the other. 'Up the bank, or you are dead men!' And he did not even turn his head, but was out of sight before the echo of his words had died away.

Then, for the first time, the thunder of the torrent broke unmistakably on their ears. Stanhope sprung at the drooping sapling, seized a branch, and swung himself a few feet up the bank, not nearly far enough, as he well knew, for safety; but then he stopped, for William did not stir. 'Up, up, Blackburn; there is not an instant to lose. Don't you hear the flood coming down?'

Yes, he both heard and saw; for, following the direction of his eyes, the other beheld, just in the act of rounding the next reach of the little river, a huge wall of water, forty feet high as it looked, and crowned with foam, which came on *en masse* with an incredible swiftness, and the roar of a hundred seas. Stanhope turned, and digging feet and fingers into the hard cliff, struggled desperately upwards to the summit. Though even then scarce feeling secure, he could not resist the terrible attraction of the spectacle, but lying at full length upon the cliff-top, peered down upon the ruin beneath. His late companion was standing in the same spot, not, as he had expected to see him, paralysed with terror, but gesticulating vehemently, and apparently (though nothing could now be heard but the fury of the flood) ejaculating something at the top of his voice. He was pointing to the creaming top of the hurrying wall, where he seemed to see some object visible only to himself. Then, as the mighty mass swept by him, and him along with it, he suddenly threw up his hands, and once more, ere he was whelmed in the wave, that piercing shriek rang out above its thunderous roar. The next instant, a river was rushing by, nearly on a level with the spot where Stanhope lay, and at the rate of some twenty miles an hour, in place of the babbling little Curlew.

'Thank God, she is safe at Mosedale!' ejaculated Stanhope; 'but alas! for poor Ellen.'

GREENWICH HOSPITAL.

GREENWICH HOSPITAL, the grand old place which we all so much admire during our trips up and down the Thames, and which really is one of our finest buildings, is undergoing a transformation—not architecturally, but socially. We shall see there fewer and fewer of the blue-coated veterans who remind us of the days when steam was in its infancy. There have been three periods in the history of the building—its gradual construction by kings and queens; its long-continued employment as a habitation for old worn-out seamen; and its gradual desertion, owing to the substitution of the out-pension system for that of the in-pension.

Built by kings and queens, we say. This was really the case to a considerable extent. A portion of the site was once occupied by that suburban palace which, after being in favour with most of the Tudor sovereigns (some of whom were born there), constituted Queen Elizabeth's *Pleasaunce*. We hear very little about it during the reigns of James I. or Charles I., or during the Commonwealth. In the time of the Merry Monarch, however, the old Pleasaunce was pulled down, and commencement made with the present structure. Although Inigo Jones was not the actual architect, his ideas were present to the mind of his pupil Webb, by whom the plans were prepared. Three reigns at least elapsed before the edifice was substantially completed; but happily the same architectural character was preserved throughout. It is a grand series of courts and broad avenues, separating four fine clusters of buildings, known as King Charles's, King William's, Queen Mary's, and Queen Anne's quarters. The two quarters or clusters bordering on the river have been, until recently, almost wholly given up to the officials who were supposed to manage the Hospital, but who really had very insufficient work imposed on them. The other two quarters, nearest the Observatory hill, contain the Painted Hall, the Chapel, the wards for the pensioners, the dining hall, and the kitchens.

This was the building which, after some of the Stuarts had resided occasionally in the north-west quarter of it, became an asylum for seamen of the royal navy. Mary, the queen of William III., is credited with the suggestion of this plan. Never was an institution supported by a more heterogeneous variety of revenues than this has been. First, donations were given by royal and princely personages; then others by nobles and wealthy subjects; then a tax of sixpence a month was levied on all the seamen in actual service; then the forfeited

Digitized by Google

estates of traitors and rebels were appropriated; then parliamentary grants were made; and then fines and penalties of numerous kinds were handed over to the Commissioners—including unclaimed prize-money, deserters' and forfeited prize-money, smugglers' fines, a percentage on the freight of gold and silver carried by royal ships, and at one time a portion of the coal-duty. For a century and a half, even the sailors of the mercantile marine, although receiving no benefit from Greenwich Hospital, were compelled to subscribe their sixpence a month towards its support; but this was commuted, a few years ago, by an annual parliamentary grant of twenty thousand pounds. So large have been the receipts during a period of a hundred and seventy years or thereabouts, that the invested capital of the Hospital now amounts to a sum of great magnitude. We have the accounts for 1868 before us; and from them we learn that there is (in round numbers) L.1,000,000 stock in the 3 per cent. consols, L.1,500,000 in the 3 per cent. reduced, and other stock, shares, and money out on loan to the amount of L.400,000—making altogether a very near approach to three millions sterling, all yielding annual interest or dividend. This interest and dividend are augmented by the rental of estates, and by the government grant, to a total sum not very far short of *two hundred thousand a year!*

During one generation after another, the wards at the Hospital were occupied by seamen of the royal navy, incapacitated either by wounds and accidents, by illness or old age. When one of those had gone through the formalities necessary to obtain admission (and they were rather troublesome to unlettered men), he was put in receipt of the requisites for existence—food, clothing, and lodging—together with a trifle in the shape of pocket-money. The old knee-breeches and cocked-hats of Queen Anne's time remained in use at Greenwich long after their abandonment by the other classes of society; but whether knee-breeches or trousers, whether cocked-hats or wide-awake hats, the old fellows have always been pretty warmly and comfortably clothed. As to their lodging, each man was assigned to a particular ward. The ward was a long gallery divided into compartments of different sizes, containing one, two, three, or four beds each. Each bedroom was called, in sailor phrase, a cabin; but it was little more than a sleeping-place, seeing that the men were not allowed to eat any of their meals there, nor to lie in their beds in the daytime. Some of the old fellows were fond of decking out their cabins with curious odds and ends, mementoes of foreign adventures. As to food, the men were summoned thrice a day to the dining-hall. The breakfast was (in later days, not originally) cocoa and bread; the dinner consisted of alternations of roast meat, boiled meat, soup, boiled puddings, baked puddings, broth, and vegetables, varied according to the days of the week and the season of the year; the supper (which served also as tea), bread, butter, and tea. Two pints of beer a day were allowed, and a shilling a week for tobacco and little trifles of miscellaneous kinds.

If the old Greenwich pensioner had been *contented* and *unmarried*, such a provision of board and lodging and clothing was by no means bad. But the men were not exactly happy. Most of them yearned for a little more freedom, a little more mixing with the busy world, a little less of the solemn dulness which always hung about the grand old building. So few of them had any fondness for books, even if they could read, that the library was very little used by them; and the authorities provided hardly anything in the form of amusements. Jack, in fact, was made a sort of monk in his old age, shut up in a monastery; and he didn't like it. Those of them who were married were rather miserably placed in regard to wife and children. Even so recently as ten years ago, there was no provision made by the state for the family of the married pensioners—except a portion of the broken victual from the dining-hall. The pensioner's wife was obliged to support herself and children, for he had nothing to give them. The only way he could manage was this: he had a choice of receiving tenpence a day instead of the regular three meals in the dining-hall; he was allowed to be absent from the hospital at meal-times; and his tenpence a day, *plus* a shilling a week pocket-money (making about seven shillings a week altogether), was all that he had to feed himself and to support his family. Many of the women worked as charwomen or washerwomen in and near Greenwich, but many of them became chargeable on the parish; and as the children were still more ignored by the state than the wives, some of them fell into evil courses, and grieved the hearts of the poor old fellows, who were powerless to help them.

In 1860, a series of reforms began. What was wanted was—to lessen the enormous cost of management; to add a little to the very scanty money pittance of the inmates; to improve the out-pension system, for those who might wish to quit the Hospital; and to do something for the wives, widows, and children of the old men. There used to be so many admirals, commodores, captains, lieutenants, and other naval officers quartered upon Greenwich Hospital, and provided with comfortable apartments within its walls—nominally to attend to the old pensioners, but really with scarcely any duties—that they absorbed one-half of the entire building, and made a deep inroad on the funds. Many useful changes have, however, gradually been made in this system. Then, as to the pocket-money, it was raised from one shilling a week to two, three, or four, according to the rank which the man had held in the royal navy. The married pensioner had an extra two shillings a week given to him, to aid in supporting his family; and still another two shillings if his children were motherless. The wives had medicines and medical assistance placed within their reach, and schools for the children were aided if not actually provided. The men had another privilege awarded to them, which they greatly relished; they were allowed to visit their homes for six weeks at a time, at stated intervals, taking with them all their pocket-money and ration-money—quite a fortune for the old bucks. But the great change of all has been in the substitution of out-pensions for in-pensions. It became gradually but certainly known that the men—except those who were really decrepit, or had no relatives or friends to go to—preferred the former to the latter; and that the change would be advantageous rather than otherwise to the nation generally. The Duke of Somerset drew up a memorandum of suggestions in 1864; and a committee of skilled officials

Digitized by Google

developed a complete scheme in 1865, for working out these results. One-half or two-thirds of the pensioners were, by degrees, to quit Greenwich Hospital, and support themselves in any way they might select, by means of an increased out-pension; none were permanently to remain, unless they were very infirm, or had no friends to go to. The out-pensioners are ten or twelve thousand in number, and receive a few shillings a week each, varying in amount according to the rank the man had attained, whether common seaman, able seaman, petty officer, or the like. An arrangement was made that all the men above fifty-five years of age should have an addition of about ninepence per day to their pensions; and that any of the in-pensioners who left the Hospital should at once become entitled to these advantages.

What has been the result of these changes, to the pensioners themselves and to Greenwich Hospital? Readers of the *Illustrated London News* —that storehouse of pictorial gossip—will perhaps remember a woodcut in 1865, representing the departure of a body of pensioners from Greenwich, in omnibuses provided by the government. It was merely one scene in a very extensive exodus. No sooner did the pensioners hear of the new Admiralty plan, than most of them hailed it with delight; and something like one thousand (out of fourteen hundred) have taken their departure from the establishment.

Very recently, the Admiralty have brought forward a plan for carrying out still more completely the intentions above noticed. They say: 'The key-note of the policy of 1865 is so to administer the revenues of the Hospital as to make the money, set apart for the advantage of seamen incapable of service, go as far as possible in the direction most agreeable to the navy itself; that is to say, that the greatest number of seamen and marines should be benefited in the way which they themselves would individually prefer, and which would most adequately carry out the original intentions of the royal founders of the institution.' In the year just named the in-pensioners were reduced from 1382 to 395, and very few of them have since applied for re-admission. The plan is to be carried out to a still greater extent, so as to leave in the building only so many pensioners as can be accommodated in certain outbuildings known as the Infirmary and the Somerset Ward—virtually clearing out all the four grand clusters of the original building. Some of the regular old inmates, incurable or broken down, will remain; some, received temporarily for medical treatment, will be well cared for at the expense of the institution until cured; and all the rest will be offered grants which, combined with their naval pensions and Greenwich pensions, will make up an annuity of thirty-six pounds ten shillings a year for life. Few of them are absolutely friendless out of doors, and there will be many a home glad to welcome Father Jack or Grandfather Benbow, especially when he brings fourteen shillings a week with him. Even the Infirmary itself, it is believed, will be emptied in a few years; for every invalided and decrepit pensioner will be offered the option of a money equivalent, if he would prefer to live among his friends. Even at the best of times, numbers of seamen who have been wounded, and perhaps injured for life, in the public service, have been left unprovided for, owing to formal rules and technicalities connected with the navy; but the Admiralty now entertain a hope that, owing to the vastly improved appropriation of the funds, 'parliament will have the assurance that no man who has long served his country at sea, or who has been invalided from the service, need become an inmate of a workhouse.' It is a shame to us that such words should be at all necessary; but we are fortunately not too old to learn. In 1859, the cost of one thousand six hundred in-pensioners ran away with one hundred thousand pounds, so extravagant was the expense of management, leaving nothing at all for out-pensions; in 1868, about four hundred in-pensioners and forty thousand pounds establishment charges left sixty thousand pounds for out-pensions; in future there may probably be two hundred inmates, all told, and there will be ninety thousand pounds a year for out-pensions.

As to the fine old building itself, the Admiralty purposely abstain from any present appropriation of it. It is to be kept in repair and insured, and applied to any such 'public purposes as Her Majesty's government may determine;' but (mark the proviso) 'the Admiralty shall have power to reclaim it for hospital purposes in the contingency of a naval war breaking out.' Many well-wishers of our seafaring classes have urged the government to hand over Greenwich Hospital to the mercantile marine generally, for sick and invalided seamen of trading ships; but the proviso above quoted interferes with this. There are, however, other arrangements planned, one whereby the admirable *Dreadnought* institution will probably be benefited out of the Greenwich funds; and another for giving small pensions to such merchant seamen as paid the Greenwich sixpence for ten or more years.

A MORASS ADVENTURE.

In the latter part of last summer, a scanty purse led me, in company with some relatives, to spend my holidays at a little village on the Welsh coast, out of the ordinary beat of tourists, but otherwise remarkable for nothing but its general air of bleakness and sterility. The place was very quiet, and the lodgings were cheap, and tolerably comfortable. These essentials being secured, we had to put up with the scenery, which was not very attractive. A long low line of beach, surmounted by a high pebble ridge, leading on the one hand to the foot of some bold jutting cliffs, and on the other losing itself in an estuary; behind this, a black and dreary-looking bog, stretching three or four miles inland, and intersected in every direction by wide, artificial ditches, and deep, natural fissures connecting the inky pools. A small river flowing into the estuary divides the bog, its course being marked by mounds of peat, cut from the firmer ground which forms its banks. Branching out at right angles to the river are other lines of peat-stacks, following the course of the larger drains, which herald the attempt to cultivate the dreary waste.

This was the view I beheld, as, standing one evening on the top of the stony ridge, I faced eastward. The sinking sun threw my shadow far over the bog, distinctly seen as it fell over the gilded rushes and the crimsoning pools. I had been

Digitized by Google

strolling out with my gun, in the hope of adding some specimens to my cabinet, and was thinking of returning homewards, when a long-legged heron slowly sailed high overhead, in the direction of the river. I watched the bird till it alighted near one of the peat-stacks, and carefully noting the spot, I proceeded to a careful stalk, hoping to secure an acquisition. I contrived to get within seventy yards of the heron, and as there was no cover of any kind nearer, I lay down behind the last mound I had reached, and with finger on the trigger, watched patiently, in the hope that my quarry would feed towards me. I was not disappointed: it gradually approached some yards nearer my hiding-place, and then either caught sight or scent of me, for it suddenly rose, but in so doing came within range. Bang! went both barrels. Uttering a hoarse croak, the heron flew heavily away, keeping close to the ground, and evidently hard hit. I sprang up and followed, jumping the ditches, and avoiding the soft ground as best I could. During one particularly long jump, I lost sight of the heron for a moment; I caught sight of it again just in time to see it fall to the earth as softly as a snow-flake, and lie still with wings outspread to their full stretch. Between the bird and me, however, there was a crevasse wider than any I had yet leaped, and a dozen yards on the other side lay the object of my pursuit. The black slimy sides of the ditch overhung the water, which lay deep and still some six or seven feet below, and a few yards to the right connected with a large pool, having equally high and muddy banks. To the left was a labyrinth of similar ditches. Some distance in front, a broader and straighter crack in the flat expanse shewed where the river lay. The bank on which I stood was a foot or two higher than the opposite bank. I describe the situation thus minutely in order to make the reader understand what afterwards happened.

Not liking to lose the prize so nearly in my grasp, I resolved to risk the jump. Laying down the gun, and taking my coat off, I made the effort, and cleared the ditch, only, however, by a few inches. I secured the heron, and smoothing its beautiful plumage, but little injured by the shot, threw it across to the bank from which I had just come. Then, on looking around, I found myself in a sort of *cul de sac*. The bit of firm ground on which I stood was an island, and the only way of escape was the one by which I had arrived. Having to 'take off' from a lower level, it was much harder to get back than it had been to come; but as there was no alternative, it had to be tried. I did not leap quite far enough, and pitched with hands and knees together against the edge. There was no vegetation to catch hold of, and after hanging on the balance for a few moments, vainly clutching at the mud, I fell backwards with a heavy splash into the water.

Fortunately, I am a good swimmer, and at first, while treading water, the ludicrousness of the affair alone struck me; but when I began to see that it might be difficult to get up those slimy, overhanging banks, I must confess I felt rather frightened. It was impossible to get out at the spot where I had fallen in. I swam farther up the ditch, and trying to bottom it, felt my feet touch the soft tenacious mud, that gave no support, but was ten times more dangerous than the water. The water became shallower as I struggled on, but the muddy bottom refused to give me a standing-place, and the muddy sides afforded no hold for my hands. It at last became so shallow that I had to turn on my back to avoid kicking the mud as I swam, and when in this position, I could push my arms into it with almost as much ease as I could push them through the water; but to draw them out again was far from easy. With a horrid fear of being unable to extricate myself from the mud, and of a slow suffocation, I made a sudden dash back into the deeper water, and tried the other ditches, only to be repulsed in the same manner. I swam round and round the pool, seeking for an outlet, and beginning to feel my boots and clothes very heavy. Even now I involuntarily smiled at the comparison which suddenly occurred to me between myself in this plight and a mouse swimming round a bucket of water; but the thought that I too, like it, might be swimming for my life soon drove all ludicrous thoughts out of my head.

Matters now began to look very serious, when I saw a root or branch of some long-buried tree projecting out of the bank. I caught hold of it; but it was not strong enough to enable me to lift myself out of the water. All that I could do was to support myself with my hands just sufficiently to keep my head above the surface. I took this opportunity of kicking off my boots.

Up to this time, I could scarcely realise my position; but now the conviction began to dawn upon me that I might never again see the mother and sisters I had left in the cottage a mile and a half away. I looked up at the sky, in which the twilight was fast giving place to the moonlight, and across which the clouds were merrily driving before the evening breeze; and then I looked at the black and slimy walls which hemmed me in, and felt as though I were about to scream with terror. From my childhood, I have always had a horror of confinement of any kind. I have felt strangely uncomfortable when I have been persuaded into exploring a cave, or when I have been shewn through a prison. This feeling I felt now more strongly than the fear of drowning. To die hemmed in by those gloomy walls would be terrible.

To add to the weirdness, a hollow booming sound, almost amounting to a roar, ran through the quivering bog, intensified to me, no doubt, by my imprisonment in the heart of the moss. This, though I had never heard it before, I knew to be the note of the bittern. During the night, it was repeated several times, and anything more weird and dismal it would be hard to imagine.

I had not as yet thought of shouting, but I now did so till I was hoarse. The only answer was the eerie scream of the curlew. The improbability of any one being near enough to hear me so late, struck me, and I desisted from the useless labour. The stillness was intense, broken only at rare intervals by the bittern or curlew. How long I clung to the branch, I do not know. Fortunately, the water was not cold. The clouds had cleared away, and the moon, near the full, shone brightly. Had

Digitized by Google

it been dark, my courage must have given way, and I should most probably have sunk. As it was, I cannot say that I quite despaired of a rescue in some way or other. If I could only hold out till morning, some one might, I conjectured, come for the purpose of carrying away the turf sods, and might see my coat and gun, which would lead to a search. I had not much hope in any search from the village; I had started in the direction of the cliffs, my favourite evening haunt, and I fancied that would be the direction the searchers would take. As the night wore on—oh, so slowly—with the moon so calmly gliding through the stars above me, I fell into a kind of stupor, and I can distinctly remember repeating scraps of verses totally unconnected with each other. From this state, I was aroused by the loud note of some night-bird, probably an owl, and found my arms very stiff from holding on to the root; while my legs felt like weights of lead suspended beneath me. While trying to change my position, I fancied I heard the gurgling sound of running water, and that not far off. I listened intently, and found it was no fancy. Water was evidently running into the pool, and I saw by the root I was clinging to that the water had risen some inches.

A cheering hope sprang up within me, as it flashed across my mind that the tide must be rising, and that the pool must have an outlet into the river.

The thought infused new life into me, and I struck out in the direction of the sound. Then, to my intense joy, I saw distinctly, in the clear moonlight, that the water was streaming in fast through several small inlets, and pouring in quietly and steadily, through one of the ditches I had previously swum up. I knew that if the tide rose another foot or eighteen inches, I could by treading water fast, spring up so high as to be able to catch hold of the top of the bank, and so swing myself up. I knew also that the water could not possibly begin to flow into the bog-pools until it was nearly high tide. Returning to my resting-place, I watched anxiously, the prospect of speedy deliverance banishing all weariness. The water continued to pour in steadily and in greater volume. The dawn was now breaking, and I had not much longer to wait. The water had ceased flowing, and the bank in one place was barely five feet above the water. Taking a long breath, I let myself sink low, and then treading water as strongly and quickly as possible, I threw half my body above the surface of the pool, and caught the top with one hand. Before the soft earth had time to crumble beneath my weight, I had obtained a firmer grasp with the other hand, and in another moment stood on the moss—saved, drinking in with eager gasps the fresh air of the morning.

The white haze was rapidly clearing away, and through it I saw five or six men hurrying towards me. I have a confused idea of being helped to my lodgings, and of afterwards telling my adventure to many eager questioners.

The soaking I had had, and the exposure to the unhealthy mists which rise from the morass in the night, caused an illness for a time, but the effects soon wore off.

The heron is stuffed, and adorns my cabinet, unconscious of the revenge which overtook its destroyer.

THE EJECTMENT.

The dusty road is fringed with green;
The hedges shelter from the heat;
Above, the woodbines blossom sweet;
Below, the toiling ant is seen.

And in the hedge, that rises high
Above the tangled grass and flowers,
A little bird beguiles the hours
With quiet homely minstrelsy.

It sings as day is drawing nigh,
Or when the idle noon is bright,
Or when the purple fringe of night
Is rising in the eastern sky:

Scarce noticed—yet perchance its song
Makes weary feet forget to ache,
Or dull despair again to take
Some hope and strength to toil along;

Or merely serves to bring a smile
On faces never touched by care—
On hearts that have not known despair,
To shed a brighter joy awhile.

But use must rule: the woodman's bill
Clears the green bank—the bird has fled,
In other boughs to hide its head,
The while its former haunt is still.

Yet hard to think another shade
Can be as loved as that one, where
It watched the primroses appear,
The springing of each tender blade.

Another hedge may bloom more sweet,
O'er richer fields be heard its strains,
But sweeter than all these remains
The memory of its first retreat;

And when alike the new and old
Fade in the autumn, and the blast
Clears the thick trees, the flowers are past,
The grass is withered with the cold;

Some pity rises in the mind,
To view the songster, silent now,
Seek shelter from the driving snow,
Or shiver in the cutting wind.

POPULAR

LITERATURE, SCIENCE, AND ART

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 298. SATURDAY, SEPTEMBER 11, 1869. PRICE 1½d.

IN THE TEMPLE.

'I'VE been laundress to gentlemen of all ages in my time, sir,' remarked Mrs Flanagan, my laundress, this morning; 'but of them all, you, sir, when you fust come to live in the Temple, was the very youngest I ever "did" for.'

What the nature of the preceding conversation between Mrs Flanagan and myself had been, and which had induced that excellent lady to make the above remark, it is not necessary for me to explain; but as she departed down-stairs, banging the outer door of my chambers after her, I found myself wondering how many years had really elapsed since I first became the occupant of the dingy set of chambers on the third floor of No. 5 Flag Court, Temple, which it has been my lot ever since to inhabit. As the result of my musings, I came to the conclusion that Mrs Flanagan was right. I *was* very young when, a few weeks after having entered myself as a student on the boards of the Honourable Society of the Upper Temple, I presented myself at the treasury-office of that learned body, and besought the clerk to inform me whether there were any chambers then vacant. That official looked at me over his spectacles—doubtless thinking, like Mrs Flanagan, that I *was* very young—before he replied that there were only two sets of chambers in the Inn then vacant. One, he remarked, was a handsome set on the first floor of Harper's Buildings (rent one hundred and fifty pounds a year), and which had just been vacated by Mr Quirk, Q.C., upon his appointment as one of Her Majesty's judges. The other set which was on the third floor of No. 5 Flag Court, Temple (rent thirty-five pounds a year), had been recently occupied by Mr Redtape, but had become vacant by the removal of that learned gentleman to another world.

Thinking that this last-named set of chambers might suit me, I requested the clerk to shew me them. It was a dreary November afternoon—how well do I remember it!—as the clerk and I left the treasury-office, and set forth upon our quest. The fog which hung over London that day was so thick that all the gas-lamps were burning on the staircase of No. 5 Flag Court, and looked to me like distant light-houses seen through a fog as the clerk and I slowly toiled up-stairs. The clerk was a portly man and plethoric withal, so he eagerly seized hold of the opportunity of resting himself afforded by each landing-place; and by way of filling up these involuntary pauses, he discoursed to me about the owners of the names which I beheld painted up over each door.

'Those rooms,' said he, 'are Mr Growler's. You know his great work, *Growler on Ejectment*. Those chambers opposite to his, are Mr Denhope's, the great parliamentary counsel. Ah,' remarked the clerk reflectively, 'I remember *him* when he entered the Upper Temple—I took his entrance fees myself not twenty years ago—and now he's making L.20,000 a year.' On the floor above Mr Denhope's rooms we found the name of Mr Waltham painted up. 'Yes,' said the clerk admiringly, '*he's* a Honourable!—the Honourable Arthur Waltham, youngest son of Lord Manleytowers.—As for that gentleman,' he continued doubtfully, pointing as he spoke to the name of a man who has since that time written one of the sweetest and tenderest poems in the English language, 'I don't know much about *him*, but I've heard that *he's* a literary character. However,' concluded the clerk hopefully, '*that* mayn't be true!' With this we reached the third floor, and knocked at the door of the late Mr Redtape's chambers. It was speedily opened, and we were forthwith confronted by Mrs Flanagan.

She was then a very portly widow of about fifty years of age. She was dressed in a seedy suit of black, and had a swollen red face, twinkling black eyes, and iron-gray hair. I trembled inwardly at the awfulness of her aspect as she shewed the chambers to me, enlarging, as she did so, upon her own merit as a laundress, and upon the devoted care which she had always taken both of Mr Redtape and of his household goda. I found that the chambers consisted of a moderate-sized sitting-room, an exceedingly small bedroom, and a third room so small and so ill contrived, that the only

Digitized by Google

use it could be put to was that of a pantry. The furniture of the late Mr Redtape still adorned the room, 'and could be had,' I was volubly informed by Mrs Flanagan, 'at a most moderate price.' The ceiling of the sitting-room was black with smoke; the wainscoting of wood running round the walls had originally been painted green, but was now so stained by age and dirt as to be almost unrecognisable. As for the windows, they looked as though soap and water had never been applied to them within the memory of man. The view out of the bedroom window comprised a horizon of chimney-pots; whilst that from the sitting-room looked into the dingy quadrangle of Flag Court, on the opposite side of which I could dimly discern the lights of the houses looming through the fog. My heart sank within me as I gazed, and I inquired shudderingly of Mrs Flanagan whether the late Mr Redtape had died in these rooms. 'O yes, sir,' replied that excellent woman cheerfully; 'he died here on this day fortnight. He made a sweet end, sir; nobody bein' in the room with him but the priest and me. God rest his sowl!'

To bring a long story to an end, I took the chambers. The Honourable Society very liberally repainted them from top to bottom; and, declining Mrs Flanagan's repeated entreaties to take Mr Redtape's ramshackle furniture, I had the rooms refurnished after my own heart, and in them it has ever since been my lot to live—for I decline to state how many years.

My experience of the life of a man in chambers in the Temple is, that though rough and uncomfortable in many respects, it is nevertheless far from being without its compensating advantages. It is amazing, for example, to find how much interest one can find in watching one's neighbours. Next door to my chambers are those of a late Attorney-general. As I lounge out of my sitting-room windows I behold attorneys' clerks bearing thither huge briefs. Thither, too, occasionally come, under the guidance of the solicitors engaged in the case, men who, from their anxious and excited looks, are clearly the plaintiffs or defendants, on whose behalf the services of the eminent Sir Longrobe Bigwig have been retained. On one memorable morning, I saw, moreover, no less a person than the then prime-minister of England walk across Flag Court, knock at the door of his Attorney-general's chambers, and with him remain closeted for more than half an hour. Opposite to me, again, on the other side of the court, are the rooms of Mr Dennis O'Flaherty, the sub-editor of the *Daily Intelligencer;* and on Saturday evenings, many a shout of laughter do I hear borne across from his rooms—testifying either to the goodness of O'Flaherty's wine or the piquancy of his jokes. On the right-hand side of my court are the chambers occupied by Mr Page, the 'leading junior' on the —— Circuit. Thither I behold each day five or six sprucely dressed young gentlemen proceeding, each of whom has paid to Mr Page a fee of one hundred guineas for the privilege of reading his briefs, drawing his declarations, and generally doing his work for him for the space of one legal year. The other day, I beheld an amusing incident at Mr Page's rooms. The afternoon was warm, and his windows were up. One of the pupils, in playful altercation with one of his fellow-students, jokingly threw at him the great bundle of papers at which he had been working. The pupil at whose head the ponderous missile was hurled, promptly ducked that valuable part of his person, and the papers thereby missing their mark, flew out of the open window. As ill-luck would have it, a London street-boy was passing through Flag Court at that moment; to seize hold of the valuable bundle of papers which fell ponderously at his feet, and to fly with it, was with him, as novelists say, but 'the work of a moment.' Hot chase was of course instantly given by the whole posse of Mr Page's pupils, assisted by the Temple porters; but from that day to this, the papers have never been recovered. An advertisement offering a reward for them, and stating (of course) 'that they were of no value to any one but their owner,' was ineffectually inserted in the London papers for weeks. It is said that the pupil who so rashly threw those valuable papers at his fellow-labourer's cranium is now a solitary exile on board a vessel bound to New Zealand.

Occasionally, even more pleasing incidents enliven my court. But a moment ago, I raised my eyes from this paper, and I beheld, crossing Flag Court, a gentle widow lady, supported on each side by two blooming daughters; the whole party was proudly escorted by her son, a young Hopeful, who evidently had taken, only a few months ago, the first step on the road which his fond mother doubtless feels sure will lead to the judicial bench. Candour, however, compels me to state that incidents of so agreeable a character as that which I have just described are rare in Flag Court. Policemen, gatekeepers, laundresses, attorneys' clerks, printers' devils, and porters, are, it must be confessed, its normal patrollers. By craning my body very far out of my bedroom, I am sometimes glad to remember that I can just discern the window of the chambers in which gentle Oliver Goldsmith breathed his *last sigh;* whilst immediately below his rooms are those which were occupied by Sir William Blackstone, whose temper, be sure, was sadly tried whilst he was engaged in the composition of his famous *Commentaries*, by the sounds of 'revelry by night' in Mr Goldsmith's rooms overhead!

Has my reader ever been present at a dinner in the ancient hall of the Upper Temple? If not, let me describe the scene for him. Let him imagine a well-proportioned hall of the Elizabethan style of architecture, with a lofty roof of dark oak, unsupported by pillars; down the length of the hall there run long narrow oaken tables, destined for the accommodation of barristers and students; whilst across the high end of the hall, upon a raised dais, there is placed the benchers' table. Does the reader ask who a bencher is? My answer is, that he is a Q.C. who, having originally been called to the bar at the Upper Temple, is created, upon his attaining the rank of a Q.C., a bencher of his own Inn, and so becomes one of its governing body. In the hall are to be seen men of all ages, who are engaged in keeping terms for the bar, by eating that prescribed number of dinners which, from time immemorial, has formed so essential a part in the preparation for the English bar. The majority of faces in the hall are those of young men fresh from the universities; but here and there you see a swarthy countenance, shewing that its owner is a native of the far East, and designs, when he is called, to practise before the High Court of Calcutta, Madras, or Bombay. Here and

Digitized by Google

there, however, are old men who wish, from some mysterious reason, to be elevated to the horse-hair before their approaching departure from life.

The men in the hall of the Upper Temple are very conveniently dined together in messes of four; and for each mess a complete dinner of soup, fish, joint, pastry, bread, cheese, ale, and a bottle of wine is provided. Each mess has a 'captain,' whose duty it is to see that the wine is properly decanted, &c.; and to bully the waiters, should they be remiss in their attentions. Barristers and students alike dine in gowns, but without hoods. If you want a subject for reflection during dinner, you can find it in the thought that the hall in which you are now dining is the only building still standing in London in which a play of Shakspeare's was acted during the lifetime of its author. For the knowledge of this interesting fact, we are indebted to a chance entry in the Diary of John Manningham, a member of the Temple, who records the event thus: 'Feb. 2, 1601, at our feast we had a play called *Twelve Night, or What you Will.*' It is probable that Shakspeare himself looked down upon the performance that night from yonder music-gallery—the exquisite wood-carving of which I would advise you to observe before you finally quit the hall.

Whenever any country friends of mine call upon me in town, and behold the open grassy space known as the Temple Gardens, they invariably exclaim: 'What a capital place for you to walk in! One would never have imagined that, in the heart of London, there would have been such a fine open space!' 'My dear friend,' I invariably reply, 'it *is* a fine open space; but I must tell you that no one who lives in the Temple ever walks in the gardens! This may surprise you, O Rusticus, but it is quite true.'

When, however, it is my lot to pass outside the iron railings of the Temple Gardens, I never fail to observe several nursery-maids, with troops of young children under their charge, walking in them. It has always been to me a subject of wonder to reflect upon the possible district of London from which these nursery-maids and their charges come. If I lie sleepless at night, I ruminate upon the matter. What district of London is there—I ask myself—so well to do as to employ nursery-maids to look after its children, and yet sufficiently near to the Temple Gardens as to render it reasonably probable that it would send its nursery-maids and its children to walk therein? Although I have reflected upon this question times innumerable, I have never yet been able to arrive at a satisfactory conclusion. Can any of my readers help me? Yet these same Temple Gardens, though now frequented chiefly by nursery-maids and children, are not without their romantic memories. Does not Shakspeare, in the fourth scene of the second act of *Henry VI.*, make the red and white roses—the badges of the two Houses of Lancaster and York in the famous wars of that name—be plucked in these gardens? Did not Mr Spectator frequently walk here, looking at the ladies in their mighty hoops, and pondering, doubtless, whether he could not write a paper about them? Have not Johnson and Boswell, Garrick and Goldsmith, all sat and talked under yonder tree—whose aged limbs are so carefully supported by iron bars, or 'crutches,' as Longfellow, when he visited the Temple last year, so happily termed them? Does not Charles Lamb devote one whole charming *Essay by Elia* to a description of the old benchers who solemnly paced along the river-terrace in these gardens? Was not Mr Arthur Pendennis seated in yonder arbour when Miss Fanny Bolton so entirely unexpectedly met him? Above all, did not Mr George Warrington walk here with Miss Laura Bell during those happy summer evenings of Arthur Pendennis's convalescence—the history of which has been also told to us by Mr Thackeray? It is pleasant also to me to know that for two whole months in the year these Temple Gardens still ring with the happy cries of children, for, in accordance with an old custom, they are thrown open from six to eight every evening from the twelfth of June to the twelfth of August to all the 'gutter children' of London, who pour into them from the filthy alleys of Clare Market, the Strand, Fleet Street, and even Southwark and Lambeth. During last summer, the Temple Gardens were visited by two hundred thousand of these children, and—to their credit be it said—they did no damage to shrub or flower. So thickly do the children crowd into the gardens, that upon a fine summer night I have seen the grass absolutely black with them.

I had to remark just now that no one who lives in the Temple ever walks in the gardens, and I am afraid that—to a limited extent—the same thing must be said as to the attendance of resident Templars at the Temple church. When country-cousins come up to town, and call upon Mr Briefless, in all probability that learned gentleman will escort them on Sunday to the grand old Temple church, with its wonderful 'round,' its tapering columns of Purbeck marble, its roof all ablaze with devices of the arms of the two societies of the Temple, and last, not least, its splendid organ and famous choir. Possibly also, upon such occasions, Mr Briefless may intimate, in sufficiently general terms, that 'he attends the Temple church;' but I am afraid that, excepting on rare occasions, the residents in the Temple do not affect the Temple church, and that the proverb, 'The nearer the church the farther from God,' is painfully true in their case. Should my reader ever feel the sermon dull at the Temple church, I may suggest to him a subject of thought. It is said that the benchers of the Temple spent seventy thousand pounds, about twenty-five years ago, in restoring the church. Query, how on earth came they to spend so much money? and where are the results thereof?

How many men do actually reside in the Temple, I have never been able satisfactorily to ascertain. Probably their number is nearly three hundred. The majority of them are young men lately called to the bar, and who reside in a state of briefless-ness in chambers upon the third and fourth floors. Most of these men live alone; but occasionally two friends are to be found who chum together. Upon each man what is termed in the Temple a 'laundress,' but who would be called at the universities a 'bed-maker,' attends. Most of these women 'do' for two or three men, and as their wages run from five shillings to seven shillings a week, they make, considering the lightness of their duties, a very good income. The whole work of these women can usually be performed by them in a very few minutes daily, for it only consists in coming to the chambers in the morning, kindling a fire, laying breakfast, and making a bed. In the

Digitized by Google

evening, usually, the laundress again comes in, lays tea, kindles a fire, and departs. This is their whole daily duty. I know of one laundress, who, in addition to attending to her own house and family, acts as laundress to five barristers in the Temple, and thereby earns for herself the yearly income of a curate. It has been the fashion in several popular novels to represent the Temple laundresses as being in a state of perpetual drunkenness, as continually helping themselves to their masters' viands, and, in short, victimising them in every possible way. I must say, in justice to the Temple laundresses, that, although no doubt some of them do imbibe occasionally a little too freely, whilst others of their number unquestionably entertain ideas upon the subject of *meum* and *tuum* which are hopelessly at war with those of their masters, still they are, generally speaking, an industrious and honest body of women.

On the whole, I am disposed to think that the chief drawback to life in chambers in the Temple is the great 'dinner question.' During term time, the members of the Upper Temple can get an excellent dinner in the hall of that society at a most moderate price; and why they should not be permitted to enjoy the same privilege out of term time would require no less a person than a bencher satisfactorily to explain! If the members of the Upper Temple happen to be also members of a good club, of course they can dine there comfortably enough when the hall of their own society is closed to them. The great majority of the residents in the Temple are, however, compelled nightly to sally forth to dine at the *Cock* (where, by-the-bye, I have often looked in vain for that famous waiter whom Tennyson has immortalised), or the *Mitre*, or the *Cheshire Cheese*, or the *Rainbow*, or at some other of those ancient taverns with which Fleet Street has abounded from time immemorial. Right opposite to the Temple gateway, too, is the famous *Prossers*, where at two o'clock on any day the junior bar of England may be observed engaged in the delightful occupation of lunching. Upon the whole, notwithstanding the drawbacks of the dinner question, and some other disagreeables, I am disposed to think that living in chambers in the Temple is, by a bachelor, to be in every way preferred to living in lodgings. Bad as a Temple laundress may be, she is in every respect to be preferred—so far as my own experience has gone—to a lodging-house 'slavey.' Unquestionably, as Mr Thackeray observes, 'those venerable Inns which have the Lamb and Flag and the Winged Horse for their ensigns, *have* attractions for persons who inhabit them, and a share of rough comforts and freedom which men always remember with pleasure.' As I transcribed the above passage from *Pendennis*, the casual mention therein of the Lamb and Flag and the Winged Horse, which are the arms of the two societies of the Temple, recalled to my mind the witty lines which some one, unknown to fame, composed upon those emblems:

As by the Templars' haunts you go,
The Horse and Lamb displayed
In emblematic figures shew
The merits of their trade!

That clients may infer from thence
How just is their profession—
The lamb sets forth their innocence,
The horse their expedition!

'O happy Britain, happy isle!'
Let foreign nations say,
'Where you get justice without guile,
And law without delay!'

Some one—also, I regret to say, unknown to fame—upon reading these lines, at once 'capped' them by the following *jeu d'esprit*:

Deluded men their holds forego,
Nor trust such cunning elves!
These artful emblems tend to shew
Their clients—not themselves!

'Tis all a trick—these all are shams,
By which they mean to cheat you!
But have a care, for you're the lambs,
And they—the wolves that eat you!

Nor let the thought of no delay,
To these their courts misguide you!
For you're the showy horse, and they—
The jockeys that will ride you!

No article which professes to treat upon *Life in the Temple* could possibly be deemed complete unless a few words in it were devoted to the numerous race of barristers' clerks who are to be found within the precincts of the Temple. Of no class of men, assuredly, is the saying more true that 'there are clerks and clerks.' Barristers' clerks are to be found who are grave and portly men, fathers of families, and heads of society in districts like Islington and Walworth. These are men who render valuable and well-remunerated services to eminent Q.C.s, and who, if their masters should happen to be elevated to the judicial bench, drop forthwith into the snug position of a 'judge's clerk,' with a salary of L.600 a year. There are also barristers' clerks to be found who, though termed clerks, are really errand-boys. These are lads of from twelve to fourteen years of age, who add to the impudence of boyhood the freedom of manhood, and who attach themselves ordinarily to the fortunes of some junior barrister who lives in chambers upon the third or fourth floor. These lads may be seen in the Temple at all hours of the day, lounging (in the absence of their masters) so very far out of top-story windows, as to suggest horrible thoughts of the probability of their coming to grief upon the pavement below. They pass their unoccupied time in reading blood-and-thunder novels of the worst class, and in holding mortal conflicts with other boys of their own age, who are employed in similar capacities in the same house. These are the young gentlemen who, if you tell them to remain strictly in chambers during your unavoidable absence, whilst you are calling upon a friend, straightway, the moment your back is turned, affix a notice upon your outer door: 'Mr Brown at Westminster; will return at five; clerk gone out, but will return at 1.45 precisely;' and forthwith depart upon a round of visits to *their* friends. Some excuse undoubtedly must be made for these lads. Shut up all day in a back-room, with nothing to do except to open the door to their master's callers, or to clean his boots, or to run out into Fleet Street to buy him some tobacco or an evening paper, their life is so dull and monotonous, that I have often wondered how they contrive to bear up under it. Did not most of them enjoy, to the full, that enviable power of 'turning to mirth all things of earth as only boyhood can,' I am disposed to think that Bethlehem or St Luke's would claim them as inmates.

The manner in which the evening hours are spent by the residents in the Temple is of course very various. Some men read hard, some men write hard, some men smoke hard; others speak nearly every night at some of those numerous debating societies which abound in the neighbourhood of Fleet Street; whilst another class sit down to a quiet rubber at whist in their own rooms with two or three friends, who share their liking for that game. Some quiet men, again, spend their evenings in having an enjoyable chat over a pipe and glass of grog with another man of their own tastes. Four times a year, the serene calm which generally broods over the Temple in the evening hours, is broken by the noisy 'call parties' which, upon the occasion of his call to the bar each man gives to his friends. At these gatherings, a good deal of wine is drunk, a number of very bad speeches are made, and usually some good songs are sung. Only last evening, 'night was made hideous' to me by the boisterous shouting which came from a call-party which was being held on the other side of Flag Court.

There goes the horn which, in accordance with a custom—doubtless originating in an age when clocks and watches were not—is still blown by an official of the Temple, in each court of the Inn, half-an-hour before dinner-time, as a warning to the members of the society to prepare for that repast. I must lay down my pen, or else I shall be too late for that event, which is to me not the least important one in each day's Life in the Temple.

A COUNTY FAMILY.

CHAPTER XXXIX.—THE RIDE FOR LIFE.

It was not without reason that William had warned Stanhope that his fierce mirth would rouse the cottage, for it woke the sick man above stairs, whose eyes asked of Ellen, his night-watcher, what the noise might mean, then once more wearily closed. Ellen herself, always alert when it was her turn for duty, was rendered more wakeful by it; she knew that it was not her uncle's laugh, and yet how unlike it was to Stanhope's! She had heard the two in serious talk, and then the opening door and their embarkation. Why they should have chosen such an hour for a river-trip was a mystery which excited her. They went up stream—was it possible to examine for themselves the state of the embankment at its head, about which dear John seemed so solicitous? It was much more likely to be a mere drunken frolic of her uncle's; but Ellen preferred the less obvious solution, because it had reference to her lover. She had looked to see him recross the bridge that day, but he had not done so, having probably returned to Mosedale by way of Redmoor. How beautiful the stream and garden looked! Now grandfather had dropped asleep again, and those men were gone, and all the house was still, why should she not go out into the moonlight? She was dressed, of course, and had only to put on her bonnet and shawl—she would be back in a few minutes; her head ached, and the cool air would do her good.

She leaned over the old man, to listen to his breathing, and to smooth his pillow ere she went. The moonbeams seemed to make his white beard whiter, and his pale face still more pallid. Poor grandfather! how long was this to last? Her thoughts were entirely of him and for him. It never crossed her mind, How long is he to linger on, a barrier between John and me?

Then she stepped down-stairs, without a sound, through the little dining-room—still reeking of spirits and tobacco, notwithstanding its open window—and so out. The cottage stood between her and the quarter from whence the wind was blowing, so that she was quite in shelter; but she noticed a ghostly shiver in the willow, and that the rushes on the island below were all blowing one way. Presently, upon *her* ear too fell the weird sound which had struck on Stanhope's only a minute or so before; but it did not move her as it did him. Another and more attractive sound mixed with it, the galloping of horse's feet. It must, thought she, be John coming back at last. Of the two ways home, he would surely take the one that led by her door. And yet, if it was he, what could have kept him up yonder all the livelong day?—What a hurry he was in, now that he did come. He must be riding at full gallop—as fast, so it seemed, as the horse could lay legs to ground. How foolish of him to run the risk of a fall by using such headlong speed in that uncertain moonlight! She was not going to speak to him, of course, for that was forbidden, but she would just go to the road-side, and shew herself, so that he might not gallop past in his mad haste, and miss her altogether. He would, of course, imagine that at such an hour—for it was just midnight—she would be fast asleep, and perhaps not even cast his eyes towards the house—although, in truth, he could scarcely have avoided that.

A few steps brought her to the little gate that opened from the garden (there was no room for carriage-sweep) immediately upon the road. There she stood and listened. Besides the horse, there now seemed to be some heavy wagon rumbling along the way, and yet it was a strange time, surely, for carts to be coming from the mill. But all other thoughts or fancies vanish as a horseman comes round yonder bend, whom she knows well; the wind—and it is no wonder, considering the pace at which he cleaves the air—has taken his hat; yet he has not stopped for that, but rides on at the same mad speed bareheaded. There is peril behind him for certain; and hark! how that rumbling of the wagon increases, just as though, urged by four fleet horses, it was flying after him, and he knew there was no room on the narrow way for him and it. What with the bright sheen of the moonbeams and the silence of the midnight, unbroken save by that weird sound, the whole scene seems to Ellen unreal and eerie. The translation of some German ballad which Lucy has been reading to her, of late, respecting a spectre horseman who comes to claim his false bride, and carries her off from her kith and kin to his home the grave, flashes upon her brain as Denton gallops up. She notices how pale he looks, instead of ruddy, as might have been expected after such a ride, and how his horse is bathed in foam. He draws his rein and holds his arms out, as if to embrace her, and with a glad cry she rushes into them. 'Mount, mount!' cries he; 'up, up! for your life.' And by sheer force—for, in the extremity of her surprise, she neither aids him nor resists—he has swung her up before him, and again the horse is at full speed.

Digitized by Google

'John, John, are you mad?' exclaims she, beginning to struggle.

'The flood, the flood!' was his reply. 'The reservoir has burst! Look yonder!'

'But grandfather, poor grandfather!' She would have struggled down, if he had not held her with a grasp of iron, even then—even then, as they flew across the bridge to gain the hill beyond, and when all the horror of the scene burst on them both for the first time. The Thing from which Denton had fled with such fiery speed—the thing with which he had raced so far—the goal herself (for whichever reached her first must needs indeed possess her), was upon them at last. The watery wall, just breast high with the bridge, dashed on to it at the same moment as they, and drenched them through and through; it was lower than it had been when it rushed past Stanhope, because the bed of the river was less narrow, otherwise both horse and riders would have been swept over the low parapet at the first shock; but as it was, they galloped through the flood. Once on the hill-side, they were safe; and Denton stopped his panting steed and gazed behind him with unspeakable awe. The spectacle was indeed sublime as well as terrible. The bridge over which they had just passed was *gone:* a seething, weltering mass of waters occupied its place, with only the angry waves—made fierce by the vain resistance of battlement, and plank, and pier—to mark the place where it had been. The cottage—because on the side of the main channel—still stood, but through every door and window on the ground floor poured the mad river; and the whole house was visibly trembling to its fall. What a scene must the mirrors in that upper chamber have presented to poor helpless Anthony, awakened by that inexplicable thunder!

'Save him, save poor grandfather!' gasped Ellen, thinking of this, and scarce knowing what she said.

'I have saved *you*, dearest, God be thanked!' said Denton gravely. 'To do more is not in human power.'

Even while he spoke, the pretty cottage, which but a few minutes ago had looked like a fairy bower, nestled in that quiet stream-washed nook, collapsed like a house of cards, 'caved in' on all sides, and sank; and there was nothing to be seen but the wild waste of waters!

There was no sign of human entreaty or despair—the whole household, as well as its helpless master, had apparently been caught in their beds, and so, only half-conscious, perhaps, of their terrible doom, were drowned.

Ellen closed her eyes, while her white lips moved in prayer; and when she looked forth again, the river was hidden from sight—Denton was pushing on for Mosedale.

'Where are you taking me? Let me stay here!' exclaimed she wildly—'let me stay by poor grandfather!'

'His body will be at Mosedale before us,' answered Denton sadly. 'Your home is no longer here, since it does not exist. I am taking you to the Cedars;' which was the name of Mr Waller's residence.

'Yes, take me to grandmother; she is there, and safe, thank Heaven! But surely this is not the way?'

'It is not the shortest way, dearest, because that is impassable: the road by the river must be ten feet under water by this.'

'Alas for the poor cottagers on the marsh,' sighed Ellen.

'They will have neither fever nor ague more,' was the solemn reply.

'And the family at Island Grove,' continued Ellen, as her mind rapidly travelled over the space through which the flood, at scarcely a less speed, was hurrying.

'Death is busy to-night both with rich and poor; and their blood is on the heads of them who would not stay him whilst they could,' returned Denton sternly.

'O John, you were right, then, after all. Lucy told me that her father'——

'Hush, dearest. Do not mention to me that man's name to-night, for I cannot bear it.'

Presently, they reached a suburb of the town, whither the flood itself had already brought its own evil tidings. Notwithstanding the lateness of the hour, there were lights in all the houses, most of the inhabitants of which, however, had gone down to the river-side, to behold the scene of devastation. Others, half dressed, were running thither from all directions; and so excited were they, that they did not even notice the double burden borne by Denton's horse. At the gate of the Cedars, over which the once pleasant garden could be seen a tangled mass of slime and ruin, Ellen dismounted; but Denton rode on, refusing to set foot within that house.

CHAPTER XL.—AFTER THE FLOOD.

There was no rest for any in Mosedale for the remainder of that night. The passion of the raging flood had indeed much abated by the time it reached the town; and the mischief it wrought was comparatively small, by reason of the greater width of the stream; yet its sudden rush through the unsuspecting streets had not been without its human victims, and had smitten the place with universal terror. Almost the whole population were out upon the river-bank within half an hour of the catastrophe; and while they regretted their own losses, there went forth an awful whisper of how ill it must have fared with them who lived 'up Curlew.' Two women and four children had been drowned in their beds, within a stone's throw of the very market-place, and it was almost unintelligible to those who looked upon the row of cottages where this had occurred, and then at the narrow thread of river which wound beside it, how such a mischance could be. The stream had shrunk to its usual limits; and a broad muddy strip on either hand was all that remained of its late outbreak, except the ruin it had caused. Houses were gutted as completely as though that other element, which we commonly term 'destroying,' had been at work. Strong walls were swept away, and scarce one stone upon another left to mark their place; gardens were become swampy wildernesses; the town bridge had stood, but shewed great gaps, where stone and iron had alike yielded to the watery shock. It would take months to repair, and years to obliterate the traces of that night's ruin. And if all this had happened at Mosedale, miles away from the spot where the waters had first burst their prison-house, what must have taken place 'at the marsh' and the mill, the great water-wheel of which, it was rumoured the next day, was found at Bromfield,

Digitized by Google

ten miles below Mosedale—one human body, it may be here said, was stranded, thirty miles from the spot where the flood first clutched it for a prey.

It was the season, although early in it, when Mosedale folk were wont on holidays to flock 'up Curlew,' by land or water, and feast and make merry among its woody steeps and winding gorges; but never did so great a company take that road before as on the day which followed the bursting of Redmoor Reservoir, albeit bent on a very different errand. There is no need here to describe what they saw, save so far as it has connection with this story—the bodies that lay stark and stiff by scores upon the muddy shore, or shewed a limb above the still turbid stream; the shattered relics of what had been human homes; the objects of domestic care and pride, which, soiled and shattered, strewed the torn-up road and barren swamp—so lately fertile fields—that fringed it: you may buy photographs—such pictures as the bold-faced sun alone can paint—of that wreck and ruin to this day.

Stanhope and Denton were in a skiff together, having a common object of which they were in search. The former, whose feelings had been hitherto, if not hostile, at least unfavourable towards the latter, was in that respect, as in others, wholly changed; unfeigned admiration for this young man, who had risked his life, and, indeed, only preserved it by a hair-breadth, to save another's, had taken possession of him. True, he would himself, in like circumstances, have hazarded as much, but the opportunity in his case could not possibly have occurred. He had no knowledge of any sort that would have served *him* to scent out any danger which was not patent to all the world. How much more useful, much more valuable, had Denton proved himself, than he could ever have been or be! Not only Ellen, but the tenant of his own mill, together with his wife and child, had escaped death through the unselfish foresight of the young engineer. After visiting the mill on the previous morning, Denton had gone up to Redmoor, and found the crack in the embankment which had already excited his apprehensions, manifestly increasing. He had remained at the reservoir all day, examining it yet again with the utmost minuteness; and having still further convinced himself of the menaced peril, had made up his mind to lay the case before the municipal authorities of Mosedale the next day, since the Board of Directors would not listen to him. At the same time, although he still remained on the moor with only a couple of workmen for his companions, he had not conceived the danger to be so alarmingly imminent as it really was, until late at night. Then the wind still rising, and bringing the mass of water to bear directly upon the bank, certain indications shewed themselves which, to his practised eye, convinced him that the catastrophe was at hand; and he had sped down the gorge, as we have seen, but with feelings not to be described, listening, as he urged his horse to utmost speed, for the sound behind him that should give notice that the water-fiend was loose, and roaring for its prey. He lost a minute or two waking the sleepy miller, whom he had not the heart, notwithstanding his own safety and that of one far dearer than himself was imperilled by the delay, to leave to drown. Scarcely had the warning left his lips, when the thunder of the torrent gave its terrible corroboration to his words. And yet he had not now a word to say of his own efforts, except what was incidentally extracted from him by Stanhope's eager questions.

The young engineer shewed himself much more solicitous for his reputation for professional sagacity than to be considered as a hero. With reference to Mr Waller, he said: 'I could not get that man to believe me, sir, simply because his giving credit to my words would have cost him a few pounds. Did he suppose I did not know my own business? No, sir. It was mere selfishness and saving, and those are the fruits of it;' and he pointed to where some men were even then taking into a larger boat close beside them a sad freight—the bodies of a mother and the babe whom she embraced even in her last sleep.

'Forgive me,' said Stanhope humbly, 'if I venture to differ from you, Mr Denton, who have hitherto shewn yourself so wise and in the right throughout this sad affair. But I know Waller well. He may have—nay, he has doubtless been both obstinate and foolish, but I am sure that a few pounds were not the cause of his opposition, even if they had anything to do with it at all. He has lost a much larger sum than such as you hint at by the destruction of his own property, as we have just seen. You are a very young man, and he is not one to credit young men with the wisdom you have shewn; he judges them by myself and those like me—fools enough, Heaven knows. Even Mr Flywheel seems to have scouted the idea of the reservoir being in danger from the first.'

'Yes, but he had no personal knowledge of the thing, which makes all the difference. Now, *I* had, and I pleaded with Mr Waller as I never pleaded before with man or woman. He is not one to underrate genuine earnestness, though he has so little of it himself. No, no, sir; his obstinacy was wilful; reparation he cannot make, but he will have to answer for this mischief to God and man.'

'To God he must needs answer,' said Stanhope gravely. 'But I pray you, Mr Denton, to take counsel of your own heart before you publicly brand him, as I fear your purpose is, with a mark compared with which that of Cain was as nothing, before you make him an object of execration to the widow and the fatherless throughout this valley for last night's work. It is not my way to talk like this. I daresay you have always thought me an unprincipled and vicious fellow, as indeed I have been—nay, for all that I have shewn, I am. You see in me even now, doubtless, a frivolous and idle nature brought for once face to face with the realities of life and death, and for the moment impressed by them; but before this ruin was wrought—before I heard your warning cry upon the river last night, Mr Denton, which saved a worthless life, I had, believe me, formed—— But there, that is no matter; let it suffice to say, that I hope you will some day have cause to think better of me, since your good opinion is one I fain would earn. It is difficult, I know—for my own conduct has made it so—to persuade you to credit me with an honest purpose, but indeed I have no other in thus appealing to you. I saw the man whom you would punish so harshly, but two hours ago; he is borne down to the very earth with sorrow and contrition. He accuses himself, as you would accuse him (and, as it seems to me, with the like injustice), of all that

Digitized by Google

has occurred. The tremendous nature of the evil that has been reaped does not make him more guilty of having sown it. No doubt, he ought to have listened to you—the event has proved it—but he did not foresee the event. I give you my honour (not a very material guarantee, you may say perhaps, but still the best I have to offer) that he did not credit your scientific forebodings. Why should you doubt it, who found myself unquestionably a disbeliever in them? You were earnest, passionate, eloquent enough with me also, at the cottage yesterday morning, and yet you see, like the wicked of old, I did not credit you till, with overwhelming evidence indeed, the Flood came. Forgive me, Mr Denton, but are you quite certain that there is nothing of wounded *amour propre* that mingles with and embitters your just wrath?'

'There may be something in what you say,' answered Denton frankly. 'Heaven forbid that I should feel more angry with this man because he has underrated my intelligence and despised it; personally, at all events—though, I trust, in a matter of the public service—in my duty as a citizen—such a consideration would not weigh a feather's weight—I say, personally, it would be most disagreeable for me to act as Mr Waller's accuser, since even now under his roof'——

The young man hesitated—then stopped.

'Mr Denton,' said Stanhope, resting on his oar, and speaking with deep feeling, 'this is no time for false delicacy, although I honour you for your unwillingness to speak upon a subject which might give me pain. It is a scruple which I have not deserved. I have no claim to be coupled in your thoughts with the young lady of whom you were about to speak. Her heart has always been yours; although I own with shame that, after I knew that it was so, I strove to win her hand.'

'Let us say no more about that, Mr Stanhope, since you have at last taken the just view of the matter,' said the other quietly.

'Since I have lost my own self-respect, you would say, Mr Denton, and yet that was a small part of the penalty. I lost also—for though I can not justify myself, I wish to shew you that I have suffered—the respect of one in whose estimation I now feel it is misery indeed to have thus fallen.'

'I think I can help you there,' said Denton good-humouredly. 'It is not eight-and-forty hours ago that I had proof that, notwithstanding what you say, you are not altogether out of the pale of somebody's good graces. A woman does not defend a man in his absence with such vigour as somebody then defended you without a very sufficient cause. I ought to know, because it was I who attacked you—for, indeed, I have not spared you, Mr Stanhope, whenever you have formed the subject of my discourse.'

'I am sure that I deserved all that you could say,' returned the other. 'I only wish I could see how I deserved the defence of which you speak.'

'I don't say you did deserve it,' returned Denton slyly; 'indeed, I honestly confess that I don't think you did. But that should give you the better ground for hope. For when Truth fails to offer a justification, who is it, among the virtues at least, that can suggest one, save Love itself?'

'She told me with her own lips,' said Stanhope in a low voice, and like one who communes with himself—'it was on the terrace at Redcombe, and not a week ago—that I was mean and base, a hypocrite and a coward—that, so far from having any longer a claim to be considered a gentleman, I had not even common honesty; and when I strove to palliate my offence, she hinted that I was little better than a liar.'

'Which, under the circumstances,' observed Denton, in his soberest tone, 'was equivalent to a declaration of love. She told *me*—who had not asked for the information, and, to say truth, was far from desirous to hear it—that she had known you from your boyhood, and that a nobler nature, until idleness and its consequences had warped it, did not exist in any man. It is a subject with which I am incompetent to deal, and far less with the eloquence which the young lady used—but if it is any pleasure to you to hear it, Mr Stanhope, I may tell you that I also am now of Miss Waller's opinion.' And the engineer, who was pulling stroke, stretched his hand behind him, which Stanhope took and wrung in silence. From that moment dated a friendship between these two young men, which distance has never weakened, and time has cemented.

The skiff had now reached the place where the Fishery had stood, and where the further progress of those on land had been staid by the absence of Curlew Bridge, of which only a few jutting stones on either side were left. It was impossible to recognise the scene by any other means. The boats, where formerly Squire Richard's punt and skiff had commonly formed the whole flotilla, were clustered so thickly that you could scarcely see the river; while masses of people lined the once solitary bank, who, as though they had not already supped full enough of horrors, watched the operations of the boatmen on the other side with feverish excitement. It was here that the stream began to narrow, and indeed from Curlew Mill down to this point it ran through what was but a ravine—yesterday a scene of exquisite beauty, to-day one of ravage and desolation. For upwards of twenty feet in height, where a broad black mark was to be seen, such as the tide leaves at high water, the banks were denuded of every scrap of vegetation; while the road on the left hand, along which Denton had spurred a few hours ago, no longer existed, but was a mere shelving mass of mud and rubbish. But the river-bed itself, and what had once been the rose-garden, afforded the strangest spectacle. In the former stood vast rocks, torn from the gorge just below Redmoor, and set up here, as if in perpetual token—and indeed they long remained so—of the water's wrath; while in the latter the action of the flood, which some obstruction had maddened into a whirlpool, had dug vast holes many feet in depth, and more or less circular; just as in other streams with stony beds there are found similar excavations, which, however, it takes hundreds of years to form. It was in these holes the boatmen were looking, and when they chanced to find what they sought, a hoarse murmur from the spectators evinced that interest which horror alone can evoke, and even of horrors only one—the visible presence of Death. The flood, in fact, after slaying its victims, had, as though ashamed of its murderous work, in this place, in a manner buried them. In other parts, where its course had been more free, it had hurried rocks and trees indiscriminately with its human prey, so that the latter were in many cases so crushed and mutilated that it was almost

Digitized by Google

impossible to recognise them as men at all, far less to identify their remains; but none of the inhabitants of the cottage had been thus swept away; their bodies were all found within a few feet of the spot where death had seized them; and most of them without signs of violence. That of Anthony Blackburn, in particular, was quite uninjured both in limb and feature, and over that still and solemn face more than one genuine mourner dropped a tear that night in a chamber at the Cedars, where he lay, as it almost seemed, 'so grand he looked when he was dead,' in State—his strange eventful life, with all its wear, and fret, thus strangely ended.

PHOTOGRAPHIC WONDERS.

Surely light never will have revealed all its marvels! Every year, if not every day, it is telling us something which we had not known before, something calculated to excite our surprise and admiration.

Plates can now be engraved, and *are* engraved, for printing without any draughtsman and without any engraver. The thing has been done in more ways than one in past years, by a combination of photography with electrotyping—photography to produce the drawing, electrotype to produce the engraving; but now a method has been devised without any electric or galvanic agency whatever. Chemistry is the engraver, and chemistry in the very simple form of solution or dissolving. The process is not for producing a *sunk* engraving, such as the engraved lines of a steel plate, but a *raised* or *relief* engraving, such as a wood-cut block. Light, dissolution, and pressure: let us see how they respectively do their work.

The photographic picture is taken upon sensitised glass, just as in the ordinary *carte-de-visite*, producing a negative from which any number of positives may be taken. The picture may be a portrait, a landscape, a group of sculpture, an architectural façade, or what not—anything, provided it assumes the form of a glass negative. The positives obtained from this are not upon sensitised paper, but upon a thin film of gelatine, combined with bichromate of ammonia. When light has been allowed to pass for a sufficient length of time through the negative to the positive, it shews its action in a peculiar way on the film: wherever the light is the strongest (as in the high lights of the picture), the film is rendered insoluble; wherever it is the weakest (as in the shadows), the film remains easily soluble; wherever it is intermediate (as in the half-tints), the gelatine becomes partially soluble. It is the bichromate of ammonia that renders the gelatine susceptible to these peculiar varieties of effect. We may add that the electric light now furnishes a wonderful aid in taking the positives, rendering the photographer independent of times and seasons, day and night, bright days and dull days.

We have, then, a positive picture, taken upon a film of gelatine containing bichromate of ammonia. This film being next placed in warm water, the substance dissolves away in the unequal degree just intimated; it becomes thinner in the parts least acted on by the light; the parts most acted on are scarcely dissolved at all; while the medium degrees of action produce medium degrees of dissolving or thinning. What is the total result? The film has become a sort of *bas-relief;* there is a picture of raised parts and depressed parts, owing to variations in the thickness of the film; and these variations are so beautifully graduated as to produce all the tints and half-tints from high lights to deep shadows.

The pressure, which next ensues, is not the least curious part of the operation. It seems scarcely conceivable that a thin film of gelatine will act as a mould to impress its inequalities upon a plate of metal; yet such it certainly does. A beautifully smooth metal sheet is prepared, consisting of lead alloyed with a little antimony; the alloy is nearly (but not quite) the same as stereotype metal; it has a nicely determined degree of hardness (or softness, whichever we like to call it), settled after a number of experimental trials. The gelatine film is placed upon the lead plate, and the two between two steel plates; the group is placed in a hydraulic press, where an intense pressure is brought to bear upon it. This pressure amounts to as much as forty tons, even for a small picture, and rises to two hundred tons (nearly half a million pounds) when the dimensions are large. We might suppose that this overwhelming force would crush the delicate film into undistinguishable fragments. Nothing of the kind. The protuberances or raised parts press themselves bodily into the surface of the lead, producing a sunken or *intaglio* effect in all the places where the film presents a raised or *cameo* effect, and *vice versâ*. It is wonderful to see how perfect is this action upon the plate, the picture appearing almost as if the graver had produced it. And it is scarcely less wonderful that the thin film of gelatine will bear twenty or thirty of these pressures, transferring its picture to twenty or thirty plates, before being worn out.

Lastly, comes the printing. If the lead plate were inked in the ordinary way with inking-rollers, and passed through an ordinary printing-press, the print obtained would consist simply of masses of black and white, without any gradations or half-tints whatever: this would result naturally from the peculiar mode in which the plate is prepared. An ink or colour, however, is got ready, consisting of water and gelatine mixed with some kind of pigment or paint. This ink, instead of being lightly applied by means of a roller, is poured as a liquid all over the plate; a sheet of paper is placed upon it; a light pressure is applied, sufficient to squeeze out all the superfluous ink; and the paper is allowed thus to remain until the gelatine in the ink has 'set,' or slightly solidified. The print, when removed, is dipped in a fixing-bath, which renders the ink permanent.

Such is Mr Woodbury's photo-relief process. We have seen it all in operation, and have seen the resulting prints; and certainly the prints present a remarkable resemblance to photographs in their beautiful gradations of tone; the pictures can be produced in any shade of any colour, and all the copies of the same film correspond in tone. The commercial capabilities of the system we do not touch upon; they involve considerations to which only printers and publishers can do justice.

Another curiosity in recent photographic art is an accident, not a design: a peculiarity in the camera-lens, not a purposed mode of producing negatives and positives. A photographer, taking a photograph with a particular lens, detected in it not only the usual portrait of the sitter, but at

Digitized by Google

some little distance a copy, phantom, ghost, or double of it—producing what was certainly a startling effect, and one not likely to be very pleasant to the sitter, especially if of a superstitious turn of mind. Fortunately, science came in, and left no room for the creations of marvel-mongers. At a meeting of the Photographical Society, it was shewn that these phantoms (if we may so call them) present two different varieties, and spring from two different causes: (1.) A photographic image is sometimes so deeply impressed in the glass of the negative by the action of light, that the subsequent cleaning of the glass plate, even with strong acids, will not completely remove the picture. When such a plate is used for receiving another picture, the original image faintly makes its reappearance. In this case the phantom is not the 'double' or 'fetch' of the sitter in the second picture; it is a very faint photograph of one person on the same plate which contains a fully developed photograph of some other person; and the juxtaposition may, perchance or designedly, produce very startling Pepper-like ghost effects. (2.) When a lens has inequalities in its substance, due to an imperfect process of annealing, or when it is subjected to unequal pressure in different parts, it acquires the property called double refraction—two images of the same object being produced by it at the same instant. This explains the production of the double or fetch phantom. An English photographer found out this matter accidentally. When he took a *carte-de-visite* portrait with a particular lens, there could be seen not only the portrait of the sitter in the usual way, but at some little distance another and a fainter image—a second portrait of the same person.

In both these cases, the Photographic Society set the matter right by shewing that, in the first instance, the negative glass retained a faint image of a former picture; and that, in the second instance, the lens glass was subject to the influence of double refraction. Thus, two ghosts have been 'laid,' and rational explanations given of seeming mysteries. It was not always so. The reader will probably recollect a little incident some half-dozen years ago, in which a photographic curiosity, instead of being honestly explained on scientific data, was made instrumental to a trading dodge. An announcement appeared in some of the American journals to the effect that a photographer took his own portrait, no one else being present in the room; that besides his own form, there appeared on the picture the image of a young girl twelve or thirteen years old; and that this image was the portrait of a cousin of his, who had been dead several years. The young lady appeared to be sitting in the same chair as the photographer himself, as a sort of 'dissolving view.' The outline of the upper part of her body was well defined, though dim and shadowy; the chair was distinctly seen through the body and arms, as also was the table, upon which one arm rested; below the waist (which was apparently attired in a dress with low neck and short sleeves), the image faded away in a dim mist, which simply clouded the lower part of the picture. Now, it has been clearly ascertained that all this would really occur under certain conditions. If the glass negative had been already used for a portrait of the young lady, and if it had been insufficiently cleaned before the second application in the camera, precisely such a double picture might result; the fully developed portrait of the photographer being superposed, as it were, on a faint portrait of the young girl. All this is curious and instructive; but it led at the time to a traffic in 'spirit photographs.' Wonderful pictures appeared in great variety in the United States, each presenting a faint portrait in addition to one more fully developed; and there was usually some one or other ready to declare that the phantom was a portrait of a deceased relative of the sitter. The various journals devoted to spiritual literature were in great excitement on the subject. Certain tricky dealers got up packets for the London market, consisting of three of these spiritual couplets; the purchaser was not allowed to see them until he had paid three-and-sixpence for the packet; and when he *did* see them, the fraud was at once detected by any experienced photographer, as an example of a negative plate used twice over. One photographer, we are told, had a negative glass which would persist in shewing a faint portrait of the Prince Consort, let him rub and wash as much as he might. Another found that the portrait of a lady contained a faint impression or ghost of the print on a piece of newspaper in which the glass negative had been wrapped. We may add that the Stereoscopic Company produce very striking examples of phantom or ghost photographs; but this is quite fair; the pictures are sold for what they really are, optical curiosities, and not as (so-called) spirit manifestations.

LIFE AND DEATH AT ST BREACA'S.

IN EIGHT CHAPTERS.—CHAPTER III.

The family of Mr Arthur Monsey were by no means interesting, but it is necessary to say somewhat about them. He was no uncommon specimen of his class; positively cold-hearted and self-indulgent; negatively unprincipled. Short, fat, and plain, his handsome hands and courteous bearing alone hinted at his good birth. He liked drink and play. He had been dismissed civilly by a clergyman who took private pupils, expelled from a public school, advised by his colonel to sell his commission. After these experiences, and when he was about twenty-five, he suggested to his parents that it might be a good plan to send him to travel. They acquiesced readily, and for five or six years they heard from him only when he wanted money. He was amusing himself in his own way in the pleasantest capitals of Europe. Then, at Vienna, without exactly intending it, he proposed to a young lady, half English, half Austrian, who had been sufficiently conspicuous for levity to be very unacceptable to an old-fashioned, well-regulated, well-descended British family; and he applied for an income that would enable him to marry. 'The bare fact of her being willing to marry him is quite enough to stamp her,' said his father. And his mother could only suggest that he could not expect anything better; that no prudent father would give a daughter to him; that he might do even worse; that there was just a chance of his settling if he had children. So they agreed to give him one thousand pounds a year; and Miss Lydia Courtenay became Mrs Arthur Monsey.

When Sir Geoffrey received the letter which has been mentioned, he had been, in consequence of his father's death, several years the head of the

Digitized by Google

family; and Arthur had three children—a boy of ten, and two girls younger. The boy, as future baronet, interested him: he was proud, and perhaps even fond of him. For the girls he cared little, and was simply not unkind to them. Their mother had fallen into ill health, lost her good looks and zest for flirting. She loved her children better, and thought and did more for them than might have been expected of a woman who had grown up without any moral or religious training. For her personal comforts she depended on a certain Suzanne, who had been her nurse, and was her maid; and, provided she would not leave her, she had no objection to live in England. She only stipulated that the climate should be as mild as possible; and as far as she could, she influenced her husband to accept Sir Geoffrey's terms. And so he did, protesting the while that he was treated infamously, but sacrificed himself to his children. The boy was to go to Eton; the girls were to be dealt with as their mother chose; and they were to live rent-free in the old Gray House at St Breaca's. When Sir Geoffrey had made a good road thither, and altered it into a comfortable dwelling, he decided that it would be a pity to have it occupied only a few weeks in the year.

The Arthur Monseys being settled in it, two summers after that visit of Sir Geoffrey's which made him acquainted with Dan Quick's house, it acquired again a questionable character in public opinion. The dark foreign servants, who spoke, two of them, no English; the gentleman with occasional doubtful visitors, and actual intemperate habits, who was said to be up half the night, and in bed three parts of the day, who lounged about smoking, followed by three or four useless dogs: and the fact that none of the household went 'to church or meeting,' made the St Breacans very uncomfortable.

'Only that Sir Geoffrey told me hisself as the gent as was coming was his brother, I never would ha' believed it—never,' said Mrs Rowe of *The George*. 'Chalk and cheese b'ant more unlike one another; and I ha'n't no patience with parson for going out there as he do. He don't booze, I knows—the Lord forbid I should say so!—but them as does, a'n't fit company for a minister.'

Such talk as this reached Mrs Secker, though she was no gossip; and seizing what seemed to her a favourable time, she repeated it to her husband. At first, he said that St Breaca's detested and calumniated Mr Monsey simply because he was a gentleman. Mrs Secker thought not, for Sir Geoffrey was exceedingly popular; so was Mr Treheren, the nearest resident squire.

'Then,' replied he, 'they hate him because they see that he and Mrs Monsey are superior to their tea and twaddle; because they are parts of an elevated social system into which they never were, and never can be admitted. Mr and Mrs Jenkins, and Mr and Mrs Trezize, would tell a different story if they were asked out there to eat mackerel-pie, and drink gin and water.—Ha, ha!' he ejaculated with tone, look, and gesture which might have made the reputation of a tragedian denouncing a conspiracy, 'I see it all' (he was great in attributing small motives): 'the low, mean, dirty spite! They cannot brook that *I* should be welcome to Mr and Mrs Monsey! They have always felt that there was something in me which they could not drag down to their own level; and it was: "Oh, Mr Secker is so very eccentric." But gentlemen come among them, men of birth and social standing, and these men choose the eccentric Mr Secker for their frequent guest—shew pointedly that he is one of themselves; and then the venom of envy overflows, and Mr and Mrs Monsey are—immoral, forsooth!' He walked rapidly about the room, his face working. A clever woman, if even inexperienced in Mr Secker, would have let the subject drop; but Mrs Secker was not clever, and she never learned how to manage her husband. She was very resolute when she thought principle concerned, and, though trembling a little, she remarked: 'A clergyman is different from every one else.'

'Certainly; in St Breaca's he is a finished gentleman and man of the world.'

'I mean'—she felt frightened, but would go on—'we are told to "avoid all appearance of evil;" and if people think that you encourage what is sinful'——

He stopped, and confronted her, glaring. She thought he was going to strike her; so did the children, and they shrieked. He seized the only arm-chair, lifted it high, dashed it furiously on the uncarpeted floor, so that it was shattered; hissed at her with frightful distinctness: 'Confound your low, vulgar, cursed cant!' snatched his hat, and left the house.

'O mamma,' said a little intelligent, nervous-looking girl, twelve years old, 'why did you speak to him? It is never any use. I am always so sorry when you do.'

'Hold your tongue, Sophia,' returned the poor, pale, tearful mother, petulantly; 'I am a better judge of what I ought to do than you are.'

'But it will be dreadful when he comes in again; and perhaps he will make me go for a walk; and he will say horrid things of every one—even of you; and he will make me cry, and then scold me for crying, and tell me not to make an exhibition of myself—as if I could help it—and terrify me. I have often thought he would kill me; and suppose he should—and be hanged! I wonder we have not, all of us, fits. And perhaps, in the night, I shall hear him roaring at you, and you answering, crying; and I shall think he is murdering poor baby or you; and I shall be in the dark, and it will be horrible—*horrible*. I wish we could all run away; and I cannot help it—I am so ashamed too. I know the people next door must hear him, and opposite too; they look very oddly at him, often. And what must Patty say? When he has made me cry dreadfully out of doors, if we have met any one, he has led me up to them—he did it to a man the other day—and said: "There, pray, gratify your curiosity. This is my daughter. Would you like to ask any questions?" The man looked foolish, and walked off, but I 'm sure he thought papa was mad. I wonder if he is—*is he?*'

She asked it vehemently, and as if she believed that her mother could and ought to answer her.

'Hush, hush! my darling,' she replied; 'it is not right to talk of a parent in that way. Your poor papa is a very clever man, and very superior to every one here, and he was never meant to be poor. He is not fit for anything but to lie on a sofa, in a silk dressing-gown, and read, and have letters brought him on a silver waiter. I suppose he cannot help his temper—at all events, we ought

Digitized by Google

to think so; and you know, after all, that he is fond of us, and sorry when he has been angry. I am sure I don't know how I am to get that chair mended, and it is the only one he likes to sit on. Bryant would not mend it for less than half-a-crown, and I cannot spare the money. You had better put the pieces away somewhere, or he will say something about them. And mind, dear, there's One above who knows all, and does not let anything happen but for our good.—Now, play with baby while I sew on these buttons.'

This scene was a fair sample of the moral training given to Mr Secker's children. His wife did not again attempt remonstrance; and he dined occasionally—often on Sundays—with the Monseys, and spent frequent hours, early in the day, with Mrs Monsey, attracted chiefly by her good piano. He was an ardent lover of music, and played exquisitely by ear. It is due to him to say that he had never seen Mr Monsey intoxicated; that gentleman preferred to stand well in his opinion, and for the sake of his really pleasant companionship, deferred his deeper potations, willingly, till Mr Secker had started on his early walk home.

During their first two years at the Gray House, the little girls, Lotty and Teresa Monsey, had no manner of instruction, and were confided implicitly to Suzanne. They spoke French, German, and English equally fluently and ill; played a little by ear, danced by instinct, and were utterly unlike what young English ladies of their age are prescribed to be. Partly from indolence, and partly because she did not like to check them, Mrs Monsey did not trouble herself to seek a governess. At last, when Lotty was eleven years old, Suzanne suggested that the young ladies were old enough for a school-room, and that it would be easy to find an accomplished young Frenchwoman. She had heard, she said, from her sister, who was confidential servant to a certain Madame Montansier, of a Mademoiselle Jeanne Royer, an orphan, just about to leave the Ursuline Convent at Rheims, and highly qualified to impart education. It has been implied that Mrs Monsey's training had been very defective; this may explain, in some measure, the irregularity of her allowing her maid to find and introduce an instructress for her children.

Mademoiselle Royer arrived—a little childish-looking creature of eighteen, with large, dark, coquettish eyes, abundance of brown hair, a neat figure, small hands and feet. Not pretty; no, certainly not. Her mouth was too large, and her lips were not full enough; her white teeth were uneven, and her nose was insignificant; but she was sufficiently attractive to arrest attention, and had force of character to detain it at will, to have secrets, and to keep them.

'Madame conceives that she is young and inexperienced,' said Suzanne.

'Perhaps,' said Mrs Monsey; and her husband shrugged his shoulders.

The children flew to her, and pulled her long hair down, and kissed her over and over, and told her they were very glad she was not old, that they did not mean to learn lessons, and she should walk with them and play with them from morning till night.

Mademoiselle's manner was irreproachable—deferential, slightly plaintive, to her superiors; and to her pupils-elect, caressing. That her private views of her position were unsatisfactory, must be inferred from her conduct when she was left in her bedroom on the night of her arrival. She threw herself on the bed, cried angrily till she was too weary to unpack, and at length fell asleep with her clothes on. She woke early, alarmed to find that she had burned out the candle, and from fear of being discovered dressed. She opened her boxes hurriedly, filled her drawers, arranged the dressing-table, undressed, and got into bed in time to tell Suzanne—who had undertaken to call her—that her head had ached from the fatigue of the long journey, and that, darkness being dismal in a strange house, she had presumed to keep her light in.

CHAPTER IV.

Mrs Secker had an annual vacation. It was disturbed more or less by her husband's temper, and the chronic struggle with poverty; but the joys of that vacation deepened the pretty bloom, of which years and wrongs had not robbed her cheeks, made her step brisker, and her voice cheerier. Once in twelve months, her handsome, good, loving, first-born, Augustine, came to spend six weeks at home. He had learned Greek, Latin, and arithmetic from a clever, hard-working schoolmaster at St Breaca's, till he was thirteen. Then the shrewd, hearty surgeon and apothecary at Loganstone, who came sometimes, seven miles thence, to hear Mr Secker preach, and chat with him afterwards, offered to take him and teach him his profession. 'Mind, I don't want any money,' he said. 'I 've feathered my nest, and my daughters are married comfortably, and the old woman and I are not extravagant. So, if you like to let the boy come, he's welcome; and I 'll see that he keeps out of harm's way, and learns his business.'

Mr Secker winced at the familiar, homely form of the generous proposal, and said stiffly: 'Indeed, my dear sir, you do me infinite honour, and I am proud that you think well of my son; but there is the walking the hospitals afterwards, and you know what my income is.'

'Surely; but one need not look too far ahead. There's no knowing what may happen—some one may leave you a fat legacy. "Give us *this day* our *daily* bread," you know, Mr Secker.'

'Ah! you have me there, doctor; but when I glance at the expense, I cannot feel justified. My dear mother paid Mr Bagot—he had a first-rate practice at Streatham—one hundred pounds a year for my board only, when she intended me for your profession, which, pardon me, I never could endure. I am not a little proud, though, that I was dresser to the great Cline.'

'Well, I 'm only a Cornish general practitioner, but that 's not a bad thing, let me tell you. I shall call and talk to Mrs Secker.'

'Do, my dear friend, do,' said Mr Secker, contending with irritation, which he had not nerve to express. Unless in a fury, he did not speak offensively, and his wife had said once confidentially to her sister that he was a thorough coward. He intended, however, to write such a note as should overwhelm Mr Hoskins with a sense of his inferiority—intellectual, genealogical, social. The folly happily exhausted itself in saying to Mrs Secker: 'I shall give the purse-proud, vulgar gallipot to understand that we are not dependent on his beneficence, and that I consider I do him

Digitized by Google

honour when I confide my son, and such a son, to his care!'

Augustine went to live with Mr and Mrs Hoskins, and became really dear to them—and they pretended not to understand, or not to have received, occasional queer, quarrelsome notes from his father—by which proceeding they secured the youth's love and gratitude more than by a salary of forty pounds, to which, when he became seventeen years old, Mr Hoskins said that his really valuable services entitled him. 'I hope you will put by some of it, Secker, every year, to begin a fund for hospital fees: if you do, and all else goes well with us, I will help you,' were the concluding words that accompanied the first payment.

Mrs Secker was watching for her son on a certain fine May evening in 1835. The weekly carrier had brought his box, and a hamper of comfortable good things from the Hoskinses. He would walk. On the box sat the little children, longing to have it opened. There were certainly presents in it for every one—there always had been—bought with Augustine's very own money. The day following would be his birthday, and Mr Hoskins had considerately arranged that his holiday should begin in time for him to spend it at home. Mr Secker had walked to the Gray House, and been kept, evidently, to dine. His wife and children were glad of it—his uncertainty of temper and artificialness were a restraint on them, and spoiled greetings. The room seemed to grow suddenly darker when they heard his voice, and not his only: he had brought Mademoiselle and the children. It was a favourite freak of his, and a special annoyance to Mrs Secker. She had always disliked the French girl, because she thought her forward and deep. She would have been ashamed to say so—for she might have been suspected of jealousy—but she was sure she tried to attract Mr Secker; and, in her opinion, he paid her by far too much attention. At that moment flashed the thought: if she should take into her vain head to 'set her cap at' Augustine! he was so innocent—yes, innocent, though in years as well as character a man. And in she came, chattering pretty imperfect English volubly, and speaking various languages with her eyes, only a few minutes before him. It was a great disappointment to him also. How could his mother throw her arms round him, and smother him with kisses? and how could the children seize him, and climb on him, and clamour to him, and about him, and enjoy him thoroughly before those strangers, to whom his father was doing elaborate politeness? Their pleasure was as completely spoiled as the tea and toast and crisp hot fish which had been calculated to a nicety for him. In about a quarter of an hour Mademoiselle said the children must go home, and there was some consolation in Mr Secker's saying that they must not walk alone, and that, as his son was dusty, he would have the pleasure of walking with them.

When their joint vexation had had some relief in words, Augustine said: 'So my father still goes there?'

'Yes; though he has taken offence several times, and written more than once to Mr Monsey; but he has never noticed the letters—perhaps he has not read them, or could not understand them. He must be often glad of some one to talk to, and your father is very pleasant when he chooses.'

'Yes, and how well he looks! And Mademoiselle is the better for Cornish air—does she come here often?'

'Oftener than I like—she interrupts me continually and most inconveniently. I suppose she does not know always what to do with herself, and your father will press her to come. He has taken an immense fancy to her, and she does not choose to see that I never ask her to come again, or say that I am glad to see her.'

'She does not understand, perhaps.'

'O yes; she does: she understands whatever she chooses.'

'I suppose I shall have to go and dine there two or three times. It is, of course, good-natured to ask me, but I do dislike it very much. I do not want to be patronised, and they are not in my line, and I am as well aware of it as they are; but if I say anything of the kind to my father, he will be irritable, and irritate me.'

'Yes; he will say you are consciously unfit for "good society," as he will persist in calling those people. It is very strange that he cannot see that they are really out of society. No one visits them. He is fond of calling himself a man of the world, but he is perfectly blind—I have never said anything to him about his visits there since he broke that chair, and I dare not say a word, except to you, about yourself—but it is not a house for a good young man to go to, particularly a clergyman's son. There is no doubt in the world that Mr Monsey drinks, and is unsteady; and I am sure Mrs Monsey has not been always what she ought to be. Before they came, Sir Geoffrey and Lady Monsey, who were so nice and unaffected that I quite liked to talk to them, told us that it was useless to conceal that painful family reasons sent Mr and Mrs Arthur Monsey here—that he had always given great trouble, and there was no hope of his reforming—but they hoped to save the boy—you see they never let him come here without a tutor, and then they stay at *The George*. Then that Mademoiselle Royer. What young girl, with prudent friends, would be allowed to stay there? And why should she choose to stay, if she had not some discreditable reason? She is clever enough to earn her bread anywhere. Perhaps they pay her very high. But how can she like to live in that wild lonely place, with no companions but two spoiled, wild, troublesome children? Of course, you ought not to go there, but I suppose you must, and pray God to keep you from the evil.'

'There's one comfort at anyrate,' said Augustine: 'the evil is, in this instance, no temptation to me.'

By this time Jeanne had been two years at the Gray House. Her pupils liked her: she was naturally obliging, and good-natured. Mr Monsey she saw seldom; Mrs Monsey took her for a drive sometimes, and had her frequently with her in the evening, and was civil to her. But she was often visibly depressed and weary. When released from the children, she took long wild walks, even late at night—sat on the rocks reading books, which she kept locked up, and wrote letters which she posted herself. This Mrs Monsey had remarked, for she kept the key of the post-bag, and had sometimes wanted Mademoiselle when she was writing. 'Perhaps she has a lover, Suzanne?'

'I am not in her confidence, Madame.'

Digitized by Google

'I wonder if she would like to go and see her friends—she may if she likes, and stay a month or two. She has been here a long time, and behaved very well.'

'Would Madame make the suggestion herself? It would be more gratifying to Mademoiselle, no doubt.'

The young lady was much obliged—deeply grateful; but she had no nearer relative than aunts, and no special tenderness for them. She had become much attached to England, devoted to her dear charge, and Madame and Monsieur were all consideration.

'I do not quite make her out,' said Mrs Monsey to Suzanne: 'she is a thorough flirt, and has no one to practise on here but Mr Secker, unless she has picked up some young lawyer or doctor in the town. I forget how I heard of her.'

Suzanne reminded her.

'O yes; but I don't remember what Madame de Montansier said about her. She suits us well enough, at all events—the children like her, and she amuses them, and does not bore me.'

'Can I see Mademoiselle Royer?' was asked a few days later by a bright-looking little elderly man, with a foreign air and accent.

The servant believed so. What name?

'My name would be of no use,' said he; 'Mademoiselle is unacquainted with me; but will you say that I bring a message from Madame de Cöitgourden.'

Jeanne, who had started at the announcement, looked alarmed, yet defiant, when she presented herself.

The stranger bowed, and said: 'I am le Père Jolivet; I brought a postulant last week from Paris to the convent at St Petroe—of which you may have heard. My very good friend, Madame de Cöitgourden, desired that I would ascertain personally how you were situated, and if I could be of any service to you. She regrets that she has heard nothing directly from you since you came to England, and you understand that, irrespectively of other motives, she remembers that she is your godmother.'

'Madame de Cöitgourden is very good,' returned Jeanne coldly; 'but I support myself, and I require nothing.'

'Possibly nothing temporal, but Madame thought of probable spiritual difficulties. She has been informed that the Monsey family are Protestant, and that you are cut off from opportunities of practising your religion. St Petroe's is thirty miles hence, and there is, I know, no direct communication with the place. Madame de Cöitgourden has a relative who has been a professed nun there, and much valued, several years. At her request, the Reverend Mother will procure you lodging and every suitable accommodation for a week, whenever you choose to avail yourself of the opportunity to approach the sacraments, and will consider that in so doing she only acquits herself partially of a debt of gratitude to Madame.'

'I am overwhelmed with so much condescension,' replied Jeanne petulantly, 'but cannot take advantage of it.'

'But why not, my child?'

'I do not conceive that I am bound to give my confidence to a stranger.'

'A priest accredited by your early benefactress can hardly be regarded as a stranger. Let me have the satisfaction of taking such tidings of you as Madame deserves, and is desirous to have.'

'Tell her,' said Jeanne angrily, her eyes flashing, 'that the Catholic Church is not popular in England; that no one suspects me of belonging to it; that I do not intend to acknowledge that I ever was a Catholic; that, if I did, this house would be closed against me; that out of it I am, in England, homeless, and that to Paris I will not return. You may say too, if you like, that I have no religion, and that I do not want any.'

'Hush! child,' said the priest soothingly; 'you are beside yourself. How have you endured life with such a weight of concealment on your heart? You cannot have forgotten all your good early training?'

'I have forgotten everything but that I came into the world to suffer for a man's wickedness and a woman's weakness—to feel, before I knew this, that I was in some way marked: that I was pitied, patronised: to hate everybody; to resolve to make a position for myself; to have no past; to let no superstition, or, if you like it better, no religion, stand in my way.'

'This is mere raving. How do you propose to make a position for yourself? Music might do it, or dancing; but to succeed in either way not only are great natural gifts necessary, but careful and laborious training. Looking at your case for a moment in a purely human point of view, I do not see how your temporal interests are to be served by your forsaking your faith and friends. What, for example, do you gain by living in a remote province with a family who, alas! do not stand well socially? Believe me, my dear child, you make a great mistake. Quærite primum regnum Dei, et justitiam ejus; et hæc omnia adjicieantur vobis.' He thought she was softening, and went on more earnestly: 'Let me tell Reverend Mother that you will come next week—nay, I know I may presume to take you back with me; I have a post-chaise at *The George;* you need not return here at all. There are ladies in the convent connected with some of the first Catholic families in England; they would easily find you a more suitable place than this, and give you shelter till you were provided for; and you might make a little retreat, and recover lost peace, and begin life with new resolutions.'

She had kept her eyes fixed on the carpet the last few moments, and better nature was stirring within her. She grasped the truth of the priest's representations; she realised in how utterly heartless an atmosphere she lived, and how insignificant she was. She knew how welcome, how rejoiced over she would be in the convent; but, strengthened by the duplicity she had practised, the demon pride conquered, and she said: 'I thought, my father, that I had stated distinctly that I did not want shelter, or spiritual retreat, or patronage—that I prefer to be as I am. It seems that all human schemes are liable to failure, but I mean to stand by mine. I am sorry you have had so much unnecessary trouble; and you will forgive my reminding you that your visit may be disadvantageous to me. The virtues of Catholic priests are by no means appreciated in England.' She stood up; so did he. He looked wistfully, compassionately at her—his whole demeanour silently besought her to relent. She understood it, and said: 'I made my resolution rather more than two years

Digitized by Google

ago, when, to escape from France, I stooped to accept a servant's mediation to procure me the place I hold. I parted with religion on the voyage. A small parcel containing my scapular, beads, and prayer-books is in the sea somewhere between Havre and Southampton.'

Her stormy eyes and hard voice seemed to him even worse than her words. With dignity, of which he had looked incapable, he said: 'Listen, you unhappy child, to words familiar to your ear in your better days: Qui enim me confusus fuerit, et verba mea, in generatione ista adultera et peccatrice, et filius hominis confundetur eum cum veniret in gloria patris sui cum angelis sanctis—and may God convert you!'

THE UMBRELLA.

Sir Gardner Wilkinson has engraved a delineation of an Ethiopian princess travelling in her chariot through Upper Egypt to Thebes, wherein the car is furnished with a kind of umbrella fixed to a tall staff rising from the centre, and in its arrangement, closely resembling the chaise umbrella of the present day. 'In shape,' says Mr Layard, 'it resembled very closely those now in common use, but it is always seen open in the sculptures. It was edged with tassels, and was usually adorned at the top by a flower or some other ornament. The parasol was reserved exclusively for the monarch, and is never represented as borne over any other person.' The umbrella represented on the Nineveh bas-reliefs in the British Museum is exactly like the *chattas* still in use among the Burmese and Indians.

The umbrella has, from time immemorial, been a symbol of authority in the East; it commonly accompanies the spherulæ and patellæ in the works of the old statuaries, and is laid at the feet of heroes. It, with the mystic fan, vannum or flabellum (also retained in the Roman worship), is specially an emblem of Bacchus. Pausanias and Hesychius report, that at Alea, a city of Arcadia, a feast called Scieria was celebrated in honour of Bacchus, in which the statue of the rosy god was carried in procession, crowned with vine-leaves, and placed upon an ornamental litter, in which was seated a young girl carrying an umbrella, to indicate the majesty of the god. On several bas-reliefs from Persepolis, the king is represented under an umbrella. In Aristophanes, we have the following stage direction: 'Enter Prometheus, muffled up and covered with an umbrella.' The word used is σκιάδιον (little shade), and the joke of Aristophanes is, that Prometheus, the great discoverer of all the arts, wishing to hide himself from Jupiter (the æther or atmosphere), covers his face with a parasol, as a lady now does who wishes to preserve her complexion.

It occurs on the Hamilton vases in the hands of a princess; it is of the modern form, with strips pendulous from the rim. The Romans used it, especially at the theatre, which was open to the sky, to keep off the sun. Women of distinction had it of ivory. The female slaves who carried it over the heads of their mistresses were called umbelliferæ. These parasols were made of green linen stretched upon a hoop. Du Cange mentions the custom of expanding or contracting them, and says that they were often made of skins. Coryat says that they were made of leather in Italy, something in the form of a canopy, hooped inside with divers little wooden hoops, to extend it.

In the basilican churches, that is, those built by the early Christians like the Roman halls of justice, the priest said mass with his face to the people standing behind the altar. In these basilican churches, a large umbrella was generally suspended over the priest; and it is said that the cardinal who takes his title from them asserts his privilege of having an umbrella held over his head in all solemn processions. All the cardinals had an umbrella with their red hats; but afterwards, the latter were limited to those only who took title from a basilican church. Beatiano, an Italian herald, says that a vermilion umbrella in a field argent symbolises dominion. In Liddell and Scott's *Lexicon*, σκιάδιον is given as equivalent to θολία, a round sun-hat—that is, an umbrella.

The distinctive appellation of the Mahratta princes who reigned at Poonah and Sattara was *Ch'hatra-pati*, or 'lord of the umbrella.' This was probably the origin of the term *satrap*, applied by Herodotus and the early Greek writers to the Persian governors of provinces in Asia. The *ch* in *ch'hatra* is pronounced like *ts*, so that *tsatrapat* comes very near the Greek σατράπης. Among the orientals, persons of rank not invested with the imperial privilege of the umbrella, use a flat, vertical, circular disc, called an *aftab-gir*, in contradistinction to the horizontal convex parasol.

The following is the superscription of a letter addressed by the king of Burmah to the Marquis of Dalhousie, Governor-general of India, dated October 22, 1855: 'His Great, Glorious, and most Excellent Majesty, who reigns over the kingdoms of *Thuna-paranta*, *Tampadipa*, to all the great *umbrella-bearing* chiefs of the eastern countries;' &c. (Yule's *Ava*, 354).

That umbrellas were known to the Anglo-Saxons is proved beyond a doubt by a figure in one of the Harleian Manuscripts, in which a servant is holding an umbrella over the head of a man who appears to be covered at the same time with a cloak or mantle.

We can find no mention of the umbrella in this country during the thirteenth, fourteenth, and fifteenth centuries.

Florio, in his *Worlde of Wonders* (1598), says: '*Ombrella*, a fan, a canopie, also a testern or cloth of state for a prince, also a kind of round fan or *shadowing* that they use to ride with in summer in Italy, a little shade.'

Thus, Thomas Coryat, in his *Crudities* (1611), i. 134, gives a curious account of the early use of the umbrella in Italy: 'Also, many of them' [the Italians] 'do carry other fine things of a far greater price, that will cost a ducat at least, which they commonly call in the Italian tongue *umbrellas*—that is, things that minister shadow unto them for shelter against the scorching heat of the sun. These are made of leather, something answerable to the form of a little canopy, hooped in the inside, with divers little wooden hoops, that extend the umbrella in a pretty large compass. They are used especially by horsemen, who carry them in their hands when they ride, fastening the end of the handle upon one of the thighs; and they impart so long shadow unto them, that it keepeth the heat of the sun from the upper parts of their bodies.'

An umbrella was actually an article of curiosity in the seventeenth century, for it is mentioned

Digitized by Google

in the *Museum Tradescantianum, or Collection of Rarities preserved at South Lambeth, near London, by John Tradescant*, in 1656. In Blount's *Glossographia* (1674): 'Umbello (It. *ombrello*), a fashion of round and broad fans, wherewith the Indians (and from them our great ones) preserve themselves from the heat of the sun; and hence any little shadow, fan, or other thing wherewith the women guard their faces from the sun.'

Kersey, in 1708, described it as a 'broad fan or screen commonly used by women to shelter them from rain.' Swift, in his description of a city shower (*Tatler*, 238, 1710), mentions umbrellas as in common use by women:

Now in contiguous drops the flood comes down,
Threatening with deluge the devoted town;
To shops in crowds, the daggled females fly,
Pretend to cheapen goods, but nothing buy;
The Templar spruce, while every spout 's abroach,
Stays till 'tis fair, yet seems to call a coach;
The tucked-up sempstress walks with hasty strides,
While streams run down her *oiled umbrella's* sides.

In the portrait of the beautiful Duchess of Bedford (who afterwards married the Earl of Jersey) at Woburn Abbey, painted about 1730, she is represented as attended by a black servant, who holds an open umbrella over her.

In Bailey's *Dictionary* (1737), a parasol is described as 'a sort of small canopy or umbrella to keep off the rain;' just reversing our order of description. And Lieutenant-colonel (afterwards General) Wolfe, writing from Paris in the year 1752, says: 'The people here use umbrellas in hot weather to defend them from the sun, and something of the same kind to secure them from the snow and rain. I wonder a practice so useful is not introduced into England (where there are such frequent showers), and especially in the country, where they can be expanded without any inconveniency.' This remark seems strange after the extracts before given. Horace Walpole (*Memoirs of the Reign of George II.*, vol. iii. p. 153), narrating the punishment of Dr Shebbeare for a libel, December 5, 1758, says: 'The man stood in the pillory, having a footman holding an umbrella to keep off the rain.' This seems a very aristocratic way of bearing that punishment.

In 1778, one John Macdonald, a footman, was ridiculed for carrying in the streets an umbrella he had brought from Spain; however, he tells us he persisted for three months in carrying it, till people took no further notice of the novelty. It was considered a mark of effeminacy to carry an umbrella, and the hackney-coachmen were loud in their complaints against their use, for it was during wet weather that these men made their harvest. In fine weather, people generally preferred walking to being jolted in a coach.

Disraeli says, that at first a single umbrella was kept at the coffee-houses, and lent, as a coach or a chair, in a heavy shower. The *Female Tatler* advertises: 'The young gentleman belonging to the custom-house, who, in fear of rain, borrowed *the umbrella from Wilk's Coffee-house*, shall the next time be welcome to the maid's *pattens*.' At noblemen's and gentlemen's houses, a large one was kept hung up in the hall, to hold over a lady or a gentleman, if it rained, between the door and their carriage.

In Beaumont and Fletcher's *Rule a Wife and have a Wife*, Altea says:

Are you at ease? Now is your heart at rest?
Now you have got a shadow, an umbrella,
To keep the scorching world's opinion
From your fair credit.

The umbrella was first introduced at Bristol about 1780. It created a great sensation, its colour being red; and it probably came from Leghorn, with which place Bristol at that time maintained a great trade.

James Hanway the traveller, who lived and died in a house in Red Lion Square, is often spoken of as the first man to walk the streets of London, in 1756, with an umbrella over his head; and after carrying one nearly thirty years, saw them come into general use. But this is clearly an error.

In the following passages from Cowper's *Task*, the umbrella appears to be equivalent to what would now be called a parasol, the two words being very loosely applied in the extracts given above:

We bear our shades about us; self-deprived,
Of other screen, the thin umbrella spread,
And range on Indian waste without a tree.
BOOK I.

Expect her soon with footboy at her heels,
No longer blushing for her awkward load,
Her train and her umbrella all her care.
BOOK IV.

As we call a cumbrous umbrella a 'Gamp,' in fond remembrance of *Sairey*, so is such a one called 'un Robinson' in France, from the machine beneath which the hero of Defoe sheltered himself from the rays of the tropical sun.

A writer in the *Book of Days* (i. 243) says, about thirty-five years ago, there was living at Taunton a lady who recollected when there were but two umbrellas in that town; one belonged to a clergyman, who, on proceeding to his duties on Sunday, hung up the umbrella in the church porch, where it attracted the gaze and admiration of the townspeople coming to church.

A FISHING-TOWN.

QUAINT clusters of gray houses crowding down
Unto a river's edge: the river, wide,
And flecked with fishing-boats beyond the town,
Incoming with the slow incoming tide.
Moored to the old pier-end a smack or two,
Slow dandled by the shoreward-setting swell,
And with their nets with every dip wet through,
Shew their black, pitchy ribs. Some far ship's bell
Comes in the capful of light wind that hails
From seaward; while still louder and more loud,
Beneath the lowering hood of ashen cloud,
Rings the hoarse fisher's shout. The nearing sails
Loom large and shadowy; and the sunset gun
Tells that another day is o'er and done.

CHAMBERS'S JOURNAL

OF

POPULAR

LITERATURE, SCIENCE, AND ART.

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 299. SATURDAY, SEPTEMBER 18, 1869. PRICE 1½d.

LOT 217.

'AT forty shangs!—going at forty shangs! Did I hear two guin-ness offered?—Thank you, sir. Two guin-ness is in time. For the first time, at two guin-ness! For the second time! Any advance on two guin-ness? For the third and last time—going at two guin-ness!'

Rap!

'Name, if you please, sir?'

'John Trumway,' I said, for the lot was mine—Lot 217. Whatever made me buy the lot? I am sure I didn't want it. I am afraid I am one of those great grown-up children who are not safe to be trusted out with money in their pockets, unless coppers. The coins in my purse always leap up with frantic desire to buy everything I see, and the result is, that no matter what sum I go out with, I always come home penniless.

What on earth could I want now with a second-hand, patent fire-proof, powder-proof, bomb-proof, thief-proof iron safe, constructed to resist fifty burglar-power (nominal), case-hardened, undrillable, unpickable, to be sold a bargain, owing to the key being lost, and the only man who knew how to make another having gone to sleep with his fathers? When I reflected about my purchase, I began to feel quite hot. There is no doubt it was a bargain, or might have been, to somebody; but then, patent, unpickable iron safes with the keys lost, and owner-proof as well as thief-proof, are not everybody's money, however cheap. I had a cold creeping doubt if they were mine. While the auctioneer was describing it, and the people all round the room were yearning for it in bids, I seemed to see many remarkable qualities emanating from the safe, like perspiration, so that its acquisition appeared to me then peculiarly desirable. Other people seemed similarly affected, for its value increased momently. Some ten or a dozen persons had all in turn desired to be its fortunate possessor, and all at increased rates. The man who bid 'forty shangs' certainly must have seen his way to turn the safe to account, or why have bid 'forty shangs' at all? And if so, of course it was plain there must *be* a way to turn it to account, and one which a few moments' quiet reflection, apart from the excitement of the saleroom, would doubtless reveal. It was something of this feeling made me bid the 'two guinness,' or, it may be, the vaguer conviction that here was an object suddenly become extremely desirable to a number of my fellow-creatures, which evoked a corresponding and envious desire in my own breast. But now that the thing was mine, all the latent value which had before perspired from it under the auctioneer's hands seemed absorbed again into its shamefully rusty iron sides—it had become a miserable hundredweight of useless old iron—and I loathed the very sight of it, especially when I thought of Mrs Trumway.

My wife is not a woman of many words; by no means the kind of woman verbally to upbraid me for buying inconvertible bargains, and she has had previous opportunities for so doing, if so disposed. Mrs Trumway never *says* anything. She didn't when I once bought two hundredweight of puffy, bloated cheeses at twopence per pound, and sold portions afterwards to some poor people I knew—as a kindness—at a trifling profit, and made them all very poorly; and got summoned before the magistrates, and fined for selling cheese unfit for human food; and lost cheese, temper, reputation, and L.4, 10s. No; at such times Mrs Trumway makes no remark; she only sniffs. But the amount of meaning conveyed by one of Mrs T.'s sniffs is voluminous—nay, encyclopædic. It means: 'O dear, yes; I knew how 'twould be. You 've been at it, again, have you? Been out with money in your pocket, and come home with nothing but your pocket left? Just like water in a cullender: the cullender don't run away—more 's the pity. No; it 's always ready for more. And here am I, pinching and screwing, and saving money, and allowancing the house down to one box of "Tandstickors" a week, and you going fooling money away like this. Remonstrance, John, is perfectly useless. I have awaked to the conclusion that I have married an incorrigible idiot; but I don't complain. No; a noodle you may be, but I

Digitized by Google

am your affectionate wife, Martha Trumway.' It means far more than this; it means every recriminatory epithet which a naturally sensitive person, like me, can apply to himself, after making the pleasing discovery that he has taken himself in.

I went home to dinner, which had been waiting an hour. I said nothing about my purchase. There was a small sniff—a very small one—expressive of: 'It 's not at all unlikely, John, though, mind, I don't accuse you of it without evidence; but, now I come to consider, it 's rather *more* likely than not that you 've something on your mind, and nothing in your purse.' After dinner, I escaped up-stairs to my study. In the evening, I saw It coming up my garden-path on a pair of trucks. Should I go down? No, I reflected; I would not go down. How I detested the thing now! It didn't look worth half-a-crown.

'Yes,' I heard the servant say in answer to the man with the trucks; 'this is Mr Trumway's.'

'So 's this,' said the man; 'and I wish him joy of it, and I shouldn't mind a glass of beer to wish it him in.'

Which conversation had the effect of bringing out Mrs T. Her comprehensive mind must have taken in the situation at a glance.

'Where is this from?' she asked the man.

'From the saleroom, 'm.'

'John!' It was the voice of my affectionate wife addressed to her husband. 'Have you been buying anything at a sale?'

'O dear, yes,' said I, calling down-stairs. 'Didn't I tell you? It 's a—a—safe.'

Although two pair of stairs separated me from the partner of my bosom, I was aware of the sniff which succeeded, and implied: 'O yes; you 're quite right, my man; this is Mr Trumway's. You needn't be afraid you 've mistaken the house. There isn't such another man in the neighbourhood as lives at No. 19.' But aloud, she proceeded: '*Quite* right; bring it in, please.'—'John! Do you wish the man to leave it in the passage?' Sniff (being interpreted): 'Or would I like it taken into the drawing-room; or placed on the dressing-table of the spare room, perhaps; or on the study mantelpiece?'

I thought it better to go down-stairs. 'Oh, leave it in the passage,' I said. 'No one will steal it.'

'O dear, no,' said my wife with a little smile. 'No one will steal it; that 's quite certain.' I admit it was not a seductive-looking object now.

When we were alone, Mrs Trumway asked me what I intended to do with the safe, which was the very question I had been asking myself ever since returning from the sale.

'What do I intend doing with it, my dear?' I repeated, to gain time. 'Why—yes—ah!—that is—do with it? Why, open it, of course.'

She sniffed a sniff equal to two columns of printed matter. Although my answer was not premeditated, I didn't think it altogether a bad notion. Accordingly, for the next two or three weeks my house became the constant resort of blacksmiths, whitesmiths, locksmiths, and people in the engineering way, all of whom, however, failed utterly in the attempt to open the unpickable, undrillable fire and thief proof Lot 217. They fairly owned it beat them. I wanted the safe opened, however, for the reason that, being opened, it might become an article perhaps useful or saleable, whereas now it was neither. One morning, an idea of unusual brilliancy occurred to me, and I put on my hat, and went out to put it in practice. I walked up to our great model jail, and saw the governor, with whom I had previously some acquaintance. I told him I should feel deeply obliged if he could render me assistance, and then came to the purport of my visit.

'Have you, my good sir, such a thing as a good strong burglar on the establishment that you could lend me for an hour or two?' And I explained what I wanted him for. But the governor shook his head, and said he was sorry to disoblige me, but it really couldn't be done, as all their burglars were in use, and couldn't be spared off the premises. —Very good; but supposing I were to send the safe up to the jail, did he think he could allow a burglar to while away a few hours of his leisure at a congenial pursuit?—No. He didn't see that he could: it would be against the rules; besides which, their burglars had become so reformed by attention to the ministrations of the chaplain, that it was exceedingly doubtful if they would be willing to return to sinful ways, such as breaking open safes, lest it might shew a worldly spirit that would interfere with their tickets of leave; and then, again, there were no burglars' tools in the jail.

'I 'll tell you what, though,' he said after a bit; 'I daresay I could find you a ticket-of-leave man who would do it. They report themselves to us at stated intervals, so that we always know where to find them. Indeed, I think I know just the very man, and will send him to you.'

One evening in the twilight, about a week afterwards, our servant came in, in some alarm, to say that two very ill-looking men were at the back door, who said they had 'come to crack the gov'nor's money-box.' They were not nice-looking men. One of them, a great brawny ruffian, with a head and neck like a bull, and a wisp of coloured handkerchief over a shirtless chest, hairy as Esau's, gave me a stolid nod when I went out.

'The boss up at the Model,' he said, pointing with his thumb over his shoulder in the direction of the jail, 'asked me if so be as I would oblige you by crackin' a little bit of a box you 've got. You see, guv'nor, I ain't any tools o' my own, so I 've brought a pal who 's got his "Lady's Companion" with him, to do the job;' indicating his friend, who carried a parcel of tools done up in matting. I should say he was not a nice man to have for a friend. A spare, short, cunning little fellow, with restless eyes; a face that gave you the impression of a weasel's; and a thin nose, with a continual nervous twitching in the nostrils, like a rabbit's, as though he was an animal always on the scent for game or hunters, which perhaps he was. His name was Toney.

I brought them in, and pointing out the safe, asked if they thought they could open it.

'Open it!' repeated Toney, with ineffable contempt, 'why, a kid could open it with a pen-nive! —It 's one of them Unimpeachables, Bill,' he said to his mate; 'you remember 'em; like what we had at ——' (some name I couldn't catch).—'Why, I could blow it open with an ounce of baccer in a quarter of a hour.'

'Well,' I said, 'I would give you five shillings to open it.'

'Would you, be-gar?' growled the big man. 'Our terms is 'arf a suv'rin—me and Toney—and two pots of beer, and two ounces of baccer; and

Digitized by Google

then it's a favour, on account of our doin' it to oblige the boss. And we ain't a-going to do it here, un'stan; but if you've got e'er a bit of a out-house out at the back, where we can be private, we'll do the job there on the quiet.'

I was obliged to accede to their terms (indeed, they were both persons I would not have had a difference with for the world). So they carried the safe into the tool-house in the garden, where I supplied them with the quantity of ale and tobacco agreed on, and they shut themselves in.

'It's only a case for the "alderman," Bill,' I heard the little man remark as I left them.

In twenty-five minutes, by my watch, the bull-headed man came and told me it was done. 'Not that we've been all this time about it, though, guv'nor, for Toney he prised it open in five minutes, easy as a oyster, but we've been settin' and doin' a quiet pipe together.'

They certainly had opened it—not by picking the lock, as I anticipated, but by wrenching off the back, so that the safe was completely destroyed. They had drilled two holes in the back-plate, to allow of inserting two immensely powerful steel crowbars in such a position that the leverage of the two bars would tell one against the other, and wrench out the intermediate piece. From the appearance of the holes and the smell in the out-house, I judged the men had previously lowered the temper of the steel back with a blow-pipe in the places where they intended to drill. I felt disposed to be angry at the destruction of the safe, and was going to say so, when Toney pointed out a dirty roll of papers lying inside. I took them out, unrolled them, and forgot my wrath immediately. A prize indeed! Fifty share certificates, each for twenty pounds, in the 'Undeniable Security and Unlimited Discount Banking Corporation (Limited);' Offices, Lud Street, City. I paid off my two burglars with a light heart, and returning to the house, I believe I danced a war-dance of triumph round Mrs T., exhibiting a thousand pounds worth of property, which had cost me but three.

'*There*,' said I, 'that's the good of going to sales!'

'Well, but, John, these shares are not yours.'

'But they are,' I retorted. 'I bought them, and they are "to Bearer," and no name on them to indicate whose they are.'

'But had you not better see the auctioneer, and tell him what you have found?'

'Why, no. I bought the lot, faults and errors of description, and all; and it is as much mine as if I had paid a thousand pounds for it.'

'Yes; but some poor man may be ruined by the loss of these shares.'

'Well,' said I, 'what I will do will be to go up to London to the company's offices, and ascertain whether these certificates are claimed on behalf of any one else, and if not, to claim them for myself.'

I found the offices of the 'Undeniable Security and Unlimited Discount Banking Corporation (Limited)' a most imposing edifice of Italian architecture, with immense plate-glass windows, and Purbeck-marble columns, and the name of the company, in medieval gold letters, running the whole length of the building. Evidently a very prosperous concern. On entering, there was not that amount of business doing which I should have liked to see; in fact, beyond two clerks—one of whom was paring his nails with the office penknife, while the other, and more elderly, was reading the newspaper—the place was empty. I stood quite five minutes at the massive Spanish-mahogany counter apparently without either of the clerks becoming officially aware of my presence, so intent were they on their duties. I therefore rapped on the floor with my umbrella, which made a great noise in the empty office, which was church-like for size and echoes. The elder clerk looked up impatiently from his paper, but resumed its perusal immediately. The younger got off his stool, and went to a looking-glass, where he commenced arranging his hair with a pocket-comb.

'I have called,' I remarked in a somewhat loud tone, 'about some shares in this company, the certificates of which I hold.'

'Eh?' said the old clerk, at last detecting my intrusion.

I repeated my business.

'Certificates Nos. 2034 to 2083—they are in my possession; in fact, I bought them.'

'Well, what do you want? Do you wish them registered in your name?—Simpson' (to the young clerk), 'get down the transfer book.'

'That is the difficulty,' said I. 'In the event, for instance, of any one else claiming the shares, for they came into my possession in a rather singular manner.'

'No difficulty at all. You say you've got the certificates, and you've bought them. It doesn't matter to us if you've stolen them. Just produce the scrip, and write me an authority to register the shares in your name.'

He looked over the certificates, and counted them, while I wrote the required authority.

'But,' I said, when I had done, with a view to satisfy my conscience in the appropriation of the property, 'I assure you the circumstances under which I acquired the certificates are so singular, that'——

'You needn't trouble about that,' he interrupted; 'our office takes no cognizance of the way you became possessed of them. You are the holder and the registered proprietor of the shares, and you may be *quite* sure no one else will ever claim them.'

This sounded satisfactory in one way; but the man's manner of saying it did not, I confess, leave a favourable impression on my mind. I went home rather uncomfortable, and feeling so oppressed with the notion of having property which my conscience would not concede was mine in strict justice, that it would have been a relief to have had an accomplice with whom to share the proceeds and the responsibility.

It may seem singular that when in town I had taken no steps to ascertain the value of my property; but, in the first place, I know very little of the ways of the money-market, and the share-list is as great a puzzle to me as *Bradshaw;* and in the next, to tell the truth, I felt timid at asking questions which might lead me to betray how I became the owner of the shares.

A month after this, I had been out for the day to a picnic with my wife. We had both enjoyed ourselves hugely, and come home flushed with the summer heat and braced up with the fresh air. I had got over all my qualms about the possession of the property, and begun to look upon it as

Digitized by Google

promising a very acceptable addition to my income. I am not sure I had not been regarding the scenery of trees and sky and rippling water with something of unusual complacency, for feeling that the acquisition of a thousand pounds removed me so much the farther from anxiety as to enable me to enjoy it in the greater peace.

A great oblong official blue letter awaited my return. It contained a blow—most letters dated from Basinghall Street do.

Re THE UNDENIABLE SECURITY AND UNLIMITED DISCOUNT BANKING CORPORATION (LIMITED).

SIR—I beg to inform you an order has this day been made by the registrar, calling upon you as a contributory in respect of your fifty (50) shares held in the above company (now under a winding-up order), numbered respectively from 2034 to 2083 inclusive. The amount of the call is five pounds ten shillings (L.5, 10s.) per share, making a total of two hundred and seventy-five pounds (L.275); which sum must be paid at my office between eleven and four on Thursday next the 26th inst. (Signed) ——,

Official Assignee in the Bankruptcy.

O fool! I began to vaguely see now why the clerk told me I might be *quite* sure no one else would claim the shares. They were not only of no value, but their possession was subject to heavy liability. And I, to be idiot enough to go and claim them when the company was actually bankrupt and worse!

Night as it was, I determined to go at once and see my wife's brother-in-law, Mr Blode. He was a barrister—had been one for ten years—but had never had a brief.

'Oh, I shouldn't take any notice of that,' he said: 'I don't think they can fix you with liability. I'll write to the assignee and manage it for you. Let me know if you hear any more of it. You are an innocent party; you didn't buy the shares, but the iron safe. But how on earth did they know you held the certificates?'

I told him I had given an authority to have them registered in my name.

He drew in his breath, and produced a long whistle like a sigh. 'Then you've endorsed their possession. You should have consulted me. However, I wouldn't trouble about it. Leave it to me.'

It would take too long to describe the harassing anxieties which each week brought me, while my case as a contributory was dragging along first through one court and then another; but the different lights which various luminaries of the law shed on my unfortunate two guineas' worth deserve to be particularised.

It was argued that, in buying the safe, I could not have bought the contents—that the safe was described in the catalogue *as* a safe, and nothing more, and that, consequently, as I had only bought a safe, whatever was found in it was no more mine than any other distinct article in the catalogue, and I could not therefore be responsible for liabilities attaching thereto. It was retorted by the opposing counsel, that should his ludship acquiesce in the view of the case propounded, certainly to his astonishment, by his learned friend, and decide that the certificates were *not* purchased by me, and *not* therefore mine, he would agree to a verdict, and immediately indict me for felony, for appropriating the shares to my own use, and authorising their registration in my name. He submitted that if I had bought the shares, I was liable as a contributory; and if not, as a felon. The learned judge said he could not entertain the issue of felony, as that was a question for a distinct tribunal, but he was inclined to rule that I *had* bought the shares. The conditions of sale were sufficiently explicit to his mind on that point—'the lots to be cleared with all faults and errors of description.' Indeed, the very term employed by auction custom appeared decisive. The item in question was described as 'Lot 217—an iron safe.' It was the 'lot' which was put up to competition, and, to use a common expression, Mr Trumway had bought '*the lot*'—that was, 'all the lot.' The question then arose: Could I be held liable as a contributory, when in fact I had purchased the shares on the very day of the company's bankruptcy, and the registry in my name was not completed until some weeks later? In other words, that seeing the company had contracted no liabilities during the time I held the shares (having, in fact, ceased business), could I be made a contributory? Against this it was urged that shares represented past responsibilities, and that as I should have been entitled to share in a dividend on the past year (had one been declared), so it was just that I should bear my proportion of the burdens. And again: it was clear that somebody must be liable as a contributory in respect of these fifty shares for twelve months prior to the bankruptcy, and the burden of proof as to the person so liable, if not myself, must be supposed to rest with their present possessor. The judge thought not, as it was not to be contended I could have had either interest or liability in the company before the date of the sale. The case, however, was complicated still further by the opposing counsel bringing evidence as to the previous owner of the iron safe, and endeavouring to prove that his liability in respect of the shares actually terminated twelve months previous to my purchase, so as to fix me with responsibility for the interim. It appeared that the safe and its contents, some eighteen months back, had belonged to a Mr Wendle, a shareholder in the company; that, in addition to the certificates, it had contained his cash-box and a quantity of gold and notes, and that the safe had been stolen from his office, the notes and gold and cash-box removed by the robbers, who had obtained a wax impression of his key, and the valueless safe, containing the shares, sold to an ironmonger, who put it into the sale. This Mr Wendle had applied for duplicates of the share certificates, which were refused by the company until he could prove the destruction of the old ones. Unsuccessful in this, and distrusting the reckless business of the 'Undeniable and Unlimited,' he at last applied to have the shares standing in his name cancelled, *which had been done*. It would therefore follow, it was contended, that my liability embraced the whole twelvemonth, from the time Mr Wendle's name had been erased, to the stoppage of the company, I being the next registered proprietor. Against this it was argued that whatever Mr Wendle might have written to the company, the certificates, *when found*, were *his* property; and that after they were stolen, they none the less ceased to be his property. And if

Digitized by Google

so, my counsel proceeded, there would be a very remarkable point for the decision of his ludship. For he went on to elicit that Mr Wendle, after losing nearly the whole of his money, had committed suicide under such determined circumstances, that even the charity of a coroner's jury had been constrained to pronounce it *felo de se*, and he had been buried without funeral rites. Wherefore, as the certificates of which he had been robbed were still his property in the eye of the law, it would follow, from his being a *felo de se*, that they became the property of the crown, consequent on his act. But if they were the property of the crown, the crown was liable for that twelve months; and again, the safe could not be legally sold without authority from the crown; and his client could not be the legal buyer, nor, consequently, have any right, title, interest, or liability in the shares aforesaid.

In addition to all this—— But no; I will spare the reader the further particulars of this involved case; suffice it to say that it was decided in my favour. But it was carried to a higher court, where I was required to shew cause why the verdict should not be set aside, and entered for the plaintiff, on the ground of the decision being contrary to evidence. There it was all gone over again, with the addition that the original thieves were produced, one of them no other than my burglar's friend Toney (and I was threatened with an action by the maker of the safe for stating that Toney broke open the 'Unimpeachable' in five minutes in my outhouse). Here the decision went against me. Finally, the case came before the bench of judges, where a majority of one reversed the ruling of the lower court.

I was therefore at last so far successful in the issue as to find myself in the Bankruptcy Court, on account of the legal expenses my precious trial had accumulated. The one satisfaction attending this result was, that I must inevitably have gone there had I lost.

The very sight of a sale-catalogue is now sufficient to produce from Mrs T. a sniff of about the capacity of a three-volume novel.

THE FRENCH ATLANTIC TELEGRAPH EXPEDITION.

It is now nearly three years since it was our agreeable task to lay before our readers a description of the laying of the Atlantic Cable of 1866, and the recovery and completion of the lost cable of 1865. Since that time a great many telegraph cables have been laid; but none have been of so much importance, or possessed so many features of interest, as that just successfully completed between France and the United States. In the first place, it is interesting as being longer by about fifteen hundred miles, and laid in deeper water by five hundred fathoms, than any direct submarine line yet in existence; then its track lies through a part of the Atlantic which until very recently had been unexplored, and the nature of the bottom comparatively unknown; and thirdly, we look upon it with interest, because it shews that the importance of submarine telegraphic communication is commending itself to other countries besides our own. Hitherto, nearly all the more important submarine lines have been the direct offspring, and have remained in possession of English companies; but the present cable, although manufactured and laid by an English firm, is the result entirely of French enterprise, and to a large extent owes its existence to French capital.

The English Atlantic cables have hitherto been the only means of conveying messages between the continent of Europe and America; but in the course of last year, it was very justly thought that the continental messages were of quite sufficient number to maintain an independent line from France. A company was accordingly started, the necessary capital raised, and the manufacture of the cable commenced. The design of the company was to connect by submarine lines exclusively Brest and Boston, thus having a means of communication altogether independent of land-telegraphs, such as the English company is compelled to use. It was also proposed to have the cable in two sections—from Brest to St Pierre, a French island to the south of Newfoundland, and from St Pierre to Boston—making altogether about three thousand five hundred miles.

In this sketch, we propose to give a history of the cable from its manufacture to its final submersion, passing briefly over those details which are by this time generally known.

Referring to the longer section of the cable—Brest to St Pierre—the vital part, or technically the 'core,' is a copper conductor of seven wires twisted together, insulated by four concentric coatings of gutta-percha, separated from each other by an equal number of coatings of the material known as 'Chatterton's compound'—exactly after the pattern of the cores in the last Atlantic cables—the only difference between them being in the weight of the conductor, which in the present case is four hundred pounds per mile, instead of three hundred pounds. This increase is to compensate for the additional length of the cable. Experiments have shewn that the speed of signalling through submarine cables varies *inversely* according to their length, and *directly* as the weight of the conductor; so that, by adding to the weight in due proportion to the increased length, the speed obtained is the same as through a shorter cable.

The core is surrounded with a serving of yarn, called the 'wet serving,' allowing of the ready access of the water to the core. Until comparatively recently, this serving was saturated with tar, but experience shewed that, should a slight defect occur in the gutta-percha, the tar from the serving being in itself an insulator would sufficiently stop it up to prevent its being discovered by the electrical tests, until perhaps it was too late to remedy it. The present wet serving, however, containing no insulating fluid, permits of the instant detection of a fault.

Around the serving are twisted spirally ten homogeneous iron wires galvanised, each of them embedded in five strands of Manila hemp. The

Digitized by Google

cable thus completed is of a diameter of about one and a quarter inches, weighing about thirty-six hundredweight to the nautical mile, and capable of bearing a strain of seven tons.

The core of the shorter section—St Pierre to Boston—is of the same description as that of the Brest to St Pierre section; but owing to its much shorter length, the weights of the copper conductor and insulator are only one hundred and seven pounds and one hundred and fifty pounds per mile respectively. This core is also covered with the wet serving, and then surrounded with about a dozen iron wires galvanised—the outside covering consisting of a silicated material known as 'Clark's compound;' the whole forming a cable of about one inch in diameter, weighing about two and three-quarter tons to the mile.

The Brest to St Pierre section was manufactured at the Telegraph Construction Company's Works at Greenwich, and transmitted piece by piece in old hulks to the *Great Eastern* steamship, lying off Sheerness. This section is of three kinds—namely, 1. The heavy shore-ends for protection against ships' anchors, tides, &c., weighing 360 hundredweight per mile. 2. The 'intermediate,' of a size between the shore-end and the deep-sea portion, 127 hundredweight per mile. 3. The deep-sea portion already described.

The whole of the above, 2788 knots in length, with the exception of 15½ miles of shore-end, and 20 miles of intermediate, was taken to the *Great Eastern*. We calculate that if the various component parts of it were laid end to end, they would make a chain of over 192,000 miles in extent, or nearly eight times the circumference of the globe. The whole of the work, including the manufacture of the two sections, and the fitting out of the *Great Eastern*, occupied little more than eight months.

For the accommodation of the cable on board the *Great Eastern*, three gigantic tanks were constructed, situated in the centre, stern, and fore part of the ship, and known as the main, after, and fore tanks respectively. Their diameters were as follow: Fore, 51 feet 6 inches diameter, by 20 feet 6 inches deep; main, 75 feet diameter, by 16 feet 6 inches deep; after, 58 feet diameter, by 20 feet 6 inches deep; with a total capacity of 169,760 cubic feet—being 27,750 feet greater than the capacity of the tanks in 1866. These immense structures were fixed to the sides of the ship, and supported by about 30,000 cubic feet of timber. The weight contained in them was about 5520 tons, distributed as follows: Fore, 1270 tons; main, 2580 tons; aft, 1670 tons: total, 5520 tons.

The cable paying-out apparatus, consisting of an elaborate series of break-wheels and stoppers, with the measuring-machine, and the 'dynamometer,' a machine for constantly recording the strain on the cable, contained all the improvements that science and experience have suggested. The dynamometer especially claims our notice, as being, to our mind, one of the most ingenious and useful contrivances connected with the apparatus. It is placed between the stern of the ship and the paying-out breaks, and consists of a vertical framework of iron, in the centre of which is fitted a grooved wheel, for the cable to pass under as it runs out over the stern of the ship. The wheel is made to slide up and down the frame, as the strain on the cable varies, or, in other words, as the cable becomes tighter between the stern and the breaks. At the side of the machine is a scale, with the calculated strains in hundredweights marked upon it; and a hand fixed to the sliding-wheel traverses this scale, and indicates at any moment the strain on the cable. From the indicated strain, of course, the depth of water may be judged, and the breaks arranged accordingly; but the dynamometer is of most service in cases of hauling back the cable, such as will be afterwards described.

The ship was also fitted with a powerful set of picking-up machines and tackle, together with buoys, buoy-ropes, mushroom-anchors, and everything requisite for picking up the cable in case of a breakage, as in 1865.

We must not forget to mention that the ship was also fitted with a complete set of 'Wier's Pneumatic Signals,' such as we believe are in use on several of the Cunard steamers. The uses to which this excellent apparatus is put are as numerous as they are effectual. The apparatus is rather complicated in its details, but simple enough in the principle on which it works. By pressing down a lever on a series of chambers of compressed air, the air from the latter is forced along a very small leaden pipe, producing instantaneously at the distant end some mechanical effect—either ringing a bell, or moving a hand, or lifting up a small flap, under which is written the signal meant to be observed. On the *Great Eastern* there were—1. An apparatus at both ends of the ship for communicating various messages to both screw and paddle engines; 2. An apparatus at each of the three cable tanks for signalling to screw and paddle to stop and reverse, in case of a hitch or foul-flake in the tank; 3. An apparatus connected, by means of cams, with the shafts of the screw and paddle engines, registering the revolutions of the same on a clock placed in the engineer's office; and 4. A communication was placed between the bows and the steering-wheel, to be used in case picking up should become necessary. Connected with some of the apparatus was also a tell-tale, which by an automatic action would indicate whether the order sent had been obeyed or not.

We have given so lengthy a description of this pneumatic apparatus, because we believe it to be one of the most useful inventions in the signalling department yet made. If properly fixed, it is almost impossible for it to get out of order.

With reference to the ship itself: so much has been said about the *Great Eastern*, that we do not wish to trespass upon our readers' patience with any long discourse upon the subject; but still the ship remains one of the wonders of the world, and we cannot pass on without some slight reference to its astonishing size and capabilities.

The increased size of the cable tanks has taken away considerably from the convenience and appearance of the cabin and saloon accommodation, but still the cabins more resemble rooms in a hotel than what we usually understand by ships' berths; and the saloons, especially the grand saloon, are still far beyond our ideas as to the size of any rooms to be found on board a ship. In fact, the

Digitized by Google

ship more resembles a floating town than anything else we can think of. On what other ship can one find full-sized premises for butchers, bakers, plumbers, carpenters, blacksmiths, and fitters, with sawmills, roperies, farmyards, sheep-pens, pigsties, and store-rooms big enough to contain stores for a small army? It cannot be doubted that for anything else besides cable-laying, the *Great Eastern* is *too* big. The expenses of keeping her in trim, and her daily expenses while at sea, are such that no ordinary number of passengers would, at the usual fares, make her pay. But for cable-laying, she is the ship *par excellence;* and we doubt very much whether either of the present Atlantic cables would have been laid but for her size and general adaptability to the purpose. In the first place, no other ship could have taken the entire cable on board, thus obviating all the risks attendant upon changing from one ship to another in mid-ocean, as was done with so much danger with the first cable in 1858. In the second place, her behaviour at sea fits her better than any other ship in existence for cable-laying. She rolls to perfection when she has a heavy 'swell' to encounter, but all her movements are of so regular and easy a character, that, in even heavy gales, the operation of cable-laying can proceed without any interruption whatsoever.

When the ship left Portland for Brest, after taking in her supply of coal, she had on board about four hundred and fifty persons, including the members of the electrical and engineering staffs, the cable hands, and the crew; and one would think, looking at the list of stores, that the whole of London had been ransacked for the sustentation and inner edification of this miniature army during the voyage to Newfoundland and back. Leaving out a thousand items of but little consequence, we need only refer to the 100,000 pounds of meat and poultry, 30 tons of vegetables, 35 tons of bread and flour, 15,000 eggs, and over 2000 dozen of liquors of various kinds, to give our readers some idea of the provision necessary to be made for a six weeks' trip.

We have made a rough calculation of the cargo of the ship, including her engines and boilers, when she left Portland, and believe the following to be a very near approximation—it is certainly not *over* the mark: Cable, 5520 tons; cable-tanks and water, 400 tons; timber shorings for tanks, 500 tons; paying-out and picking-up machinery, 120 tons; ship's stores, 250 tons; coals, 6400 tons; engines and boilers, 3500 tons: total, 16,690 tons. Her draught at starting was about 34 feet aft, and 28 feet forward. This, of course, decreased as the cable was paid out, until, at the end of the voyage, it was only about 25 feet aft, and 23 forward.

Before proceeding with a narrative of the laying of the cable, we wish to describe the arrangements made for the electrical testing of it during submersion. These were, with one or two slight exceptions, identically the same as in 1866. Their most interesting feature is the keeping up of a constant test on ship and shore for insulation, by a plan devised by Mr Willoughby Smith in 1865, at the same time allowing of tests for the continuity of the conductor, and free communication between ship and shore to be kept up without in any way interfering with the insulation test. By this means, should a 'fault' pass overboard into the sea, it is detected at once, and the paying-out may be stopped before any considerable length of the cable has been allowed to run out. The advantage of this system over the old is apparent from the fact, that formerly it was possible for three or four miles of cable to run out between the occurrence of the fault and its detection; whereas now, except under very peculiar circumstances, within two or three minutes after a 'fault' passes overboard, it can be detected, and the signal given to stop the ship.

In conclusion, nothing that could in the least possible way facilitate the execution of the great work was left undone. All the arrangements were of the most complete character, and were placed in charge of men who are unrivalled for their practical knowledge of submarine telegraphy.

The expedition started from Brest on Monday the 21st June, and the American end of the cable was safely landed at Duxbury, near Boston, on Friday the 23d July. The five weeks which elapsed between those two dates were enlivened with incidents of the most interesting nature, and it is to these we shall now refer.

For the first three days all went well. The weather was very fine; the paying-out of the cable proceeded without a hitch, and all were beginning to indulge hopes that, as in 1866, the voyage would be made without the occurrence of those unfortunate 'faults' which cause such delay and trouble. But our hopes were soon upset, for on the fourth day, the 24th June, shortly after daybreak, we were struck with consternation by the intelligence that there existed an electrical fault in the cable. The intelligence was conveyed all over the ship by means of a powerful gong, which was planted outside the electrical room, ready to be hammered upon as soon as anything of a suspicious nature was indicated on the testing instruments. In obedience to the gong, the ship was speedily stopped, and the engines reversed. The tests shewed the fault to exist very near the ship; so, without any more ado, the picking-up engines were set to work, and hauling back commenced. At every three hundred or four hundred yards of cable hauled back, a fresh test was made, until, in about a couple of hours, it was found that the faulty place had come inboard. Other two hours were sufficient to make a fresh splice between the cable paid out and that remaining on the ship, and then operations were resumed as if nothing had happened. Fortunately, the weather was very fine and the sea calm, and the hauling back was in consequence attended with but little danger. The occurrence of the fault was perhaps advantageous, inasmuch as it served more fully to impress the staff with the importance of having everything in complete readiness for an accident.

The fault was afterwards found to consist of a minute hole penetrating the coatings of gutta-percha; whether caused accidentally or purposely it is impossible to say. It may be asked why it could not have been discovered before it left the tank. The answer probably is, that it was of too minute a nature to indicate its existence on the testing instruments, until, by passing through the paying-out machines, and then undergoing the pressure of the sea, it became more fully developed.

To give our readers some idea as to how a fault is detected, we may (for this purpose only) compare the cable to a long pipe, sealed up at one end,

Digitized by Google

into which water is being forced. As long as the pipe remains perfect, only a certain amount of water can be put into it, according to its capacity, and once filled, there is no flow of water; but if, when the pipe is full, a small hole be made in it, the water will of course rush out at once, indicating the existence of the hole by causing a fresh flow of water into the pipe. Now, the cable is always kept charged with electricity up to its full capacity—or, in other words, till it can take no more—and as long as it remains perfect, there is practically no current flowing from the battery into it; but immediately on the development of a fault, or communication between the conductor of the cable and the earth, a portion of the charge escaping through the fault causes a fresh supply of electricity to flow from the battery. By having a delicate instrument fixed between the battery and the cable, this increased flow is at once made apparent.

Another similar fault occurred on the 26th, fortunately unattended with any more serious consequences than in the first case.

On the 29th June, the weather, which had up to that time been so fine, suddenly changed. A strong breeze sprung up towards evening, which, by the morning of the 30th, had increased to a heavy gale. The sea was very rough indeed; and the frequent violent lurches of the ship began to cause some apprehensions as to the safety of the cable. Everybody devoutly hoped that we might get through the gale without having to stop and haul back on account of a fault; but our hopes were frustrated, for just in the very height of the gale, the dismal notes of the gong announced that another fault had indicated its existence on the testing instruments. The engines were reversed, and the hauling back commenced, amid the greatest excitement. At every lurch of the ship, the strain indicated on the dynamometer rose to an alarming extent, and as the hauling-in proceeded, it seemed continually as if nothing could prevent the breakage of the cable. Still the testing shewed the fault to be outside the ship, and still the strain on the cable kept increasing, until at last, in one tremendous lurch of the ship, a whiz was heard, sending a thrill of horror into the bosom of every one on deck. The cable had parted; but by the greatest good fortune the rupture occurred inside the ship, and by a most admirable promptness, the breaks were successfully put on before the broken end could run out over the stern.

The gale was still far too heavy to risk hauling-in any longer, so, with not a moment's delay, the end of the cable was secured to a huge buoy, and sent adrift, to be picked up again as soon as the weather became more moderate. The remainder of that day and the whole of the next were spent in steaming about in the vicinity of the buoy, keeping as near to it as possible—the great ship continually rolling in a most ungainly fashion. On Friday the 2d July, the weather was sufficiently fine to enable us to pick up the buoy to which the cable was attached, and a very few hours sufficed to get the end of the cable on board. After hauling-in about a quarter of a mile of cable, the faulty place, which had been the original cause of the stoppage, was brought inboard, and very speedily the ship resumed her course.

These three faults well illustrated the advantages of the system of testing employed; for in each case, the existence of the fault must have manifested itself within three minutes after it left the ship—in fact, as soon as the pressure of the sea could force the water into the flaw. After stopping the engines, of course the 'way' of the ship would carry her seven or eight hundred yards before the paying-out could come to a *dead stop*, and this, added to perhaps a quarter of a mile run out previous to the detection of the fault, would account for the three-fourths of a mile more or less which in each case had to be hauled in before the fault was secured. Practically, however, we may say that each of the faults was discovered immediately on its leaving the ship—and this is the great advantage of Smith's system. Neither of the faults was bad enough to prevent the most perfect communication taking place between ship and shore while the tests for localising the fault were being made, so that ship could give any instructions whatsoever to shore which were considered necessary.

On the 5th July, we experienced another heavy gale; but as the testing of the cable remained perfect, the paying-out was not interrupted at all. In fact, after the 2d July, nothing occurred to interfere with the progress of the work. The St Pierre shore-end had been laid in readiness for our arrival by the *William Cory*, and the work of the *Great Eastern* was completed on the 13th July.

The rate of paying-out the cable was from five and a half to six knots per hour, the ship running five to five and a half knots. Very likely this speed might have been increased without incurring danger; but, considering the immense size and weight of the ship, and the difficulty of stopping her in case of accident, it was no doubt best to keep the speed within narrow limits.

As to the track of the cable, it seems from the soundings taken that the bottom is composed, the greater part of the distance, of the fine mud usually called 'ooze,' consisting of very minute shells—so minute that without a microscope the shape is not discernible. This 'ooze' constitutes the very best bed for a submarine cable. In fact, judging from the experience of 1866, the cable lies in it as securely and as free from harm as when coiled in the tanks at the manufactory; and if picking-up should become necessary, the softness of the 'ooze' renders the grappling of the cable comparatively easy.

The position of the present cable has one advantage over that of the English cables—namely, that it has been kept carefully off the Newfoundland Banks, and will therefore not be liable to the breakages by icebergs which have already caused such expense and trouble to the English company. The cable is conducted several miles to the south of the 'Great Newfoundland Bank,' and then proceeds in a north-westerly direction to the western side of St Pierre Island, passing along a deep gully between the 'Green Bank' and the 'St Pierre Bank.' The length of the course selected is about 2330 knots, and the amount of cable paid out 2580 knots—making about ten per cent. allowance for 'slack,' or spare cable paid out to cover the inequalities of the bottom, and to allow of picking up, should such become necessary. Without taking notice of the 300 knots from the Brest shore, and the 500 knots from Newfoundland, where the water is shallow, the depth varies from 1700 to 2700 fathoms, the deepest part being

Digitized by Google

situated in about latitude 45 degrees north, and longitude 43 degrees west.

Two days after the completion of the Brest and St Pierre section, the laying of the section from St Pierre to Boston was commenced. This cable was divided into three pieces, coiled respectively in the *William Cory*, the *Scanderia*, and the *Chiltern*.

The course of this cable runs through shallow water nearly the whole distance, and therefore the paying-out of it was not attended with that excitement which existed during the voyage from Brest to Newfoundland. It was felt that if even the cable should break, and be for a time lost, it would be a perfectly easy matter to grapple for it and pick it up; so that when, on the 20th July—through a 'foul-flake' or tangle in the tank of the *Scanderia*—the cable did actually snap, a very few hours sufficed to drop the grappling-iron, haul up the cable, make a fresh splice, and resume operations in the usual way. This foul-flake was about the only thing that caused any considerable delay in the paying-out of the cable, which was completed on Friday, the 23d July, in the presence of a large number of spectators, including about a hundred representatives of the American press, who came down *en masse*, each of them struggling to obtain the earliest information.

The landing-place of the cable was at Duxbury, a few miles from Plymouth, celebrated as the spot whereon the Pilgrim Fathers first landed—a coincidence which the Americans did not fail to make the most of in the speechifying which followed the completion of the work.

The length of this shorter section of the cable was 750 knots; adding which to the 2580 knots from Brest to St Pierre, we have continuous submarine communication for 3330 knots. The signals through the whole of this immense length are as distinct and readable as between any two points on an English land line, and can be sent at a much greater speed than the business of the line is likely to require. The signals at present consist of the oscillations of a spot of light on a screen, reflected from the mirror of a 'Thomson's Reflecting Galvanometer,' as in the English cables; but we believe this is likely to be superseded by a very delicate printing-instrument, also, if we are rightly informed, the invention of Sir W. Thomson.

Thus is completed the first direct line of submarine communication between Europe and the United States. No doubt there will be found plenty of room for it, without injuring, in any material degree, the interests of the English companies. We notice that the latter have already reduced their tariff, in order to keep up with the French company. This, of course, will be a great boon to a large section of the commercial fraternity, to whom the high tariff hitherto existing has been an insuperable barrier to frequent communication with America.

But, setting aside the interests of private companies, which are of comparatively little consequence, we believe that the present cable will serve still more strongly to unite in sympathy the Old World to the New, and to make it more apparent that the interests of the two worlds are bound up together. We would fain hope that by the increase of traffic induced by a decreased tariff, there will be found room for still another cable across the Atlantic.

We confess to a slight feeling of pride that this great work has been accomplished by Englishmen; but waiving this, we rejoice that the three greatest nations of the world—England, France, and the United States—have joined in the execution of a work which cannot fail to help forward in a high degree the progress of civilisation.

A COUNTY FAMILY.

CHAPTER XLI.—WHICH PLACES OUR FRIENDS.

Herbert Stanhope had not exaggerated the matter when he said that Mr Waller blamed himself exceedingly for his late obstinacy in resisting Denton's appeals, and was deeply touched by the fatal consequences arising from it. But in a day or two, and by the time the public inquiry was commenced, the quick-witted man had not only recovered his mental balance, but had persuaded himself that if he had not absolutely acted for the best, he had only committed an error in judgment, after all. By the time the inquest was concluded, Lucy, who remembered with a sharp but secret pang her father's statement with respect to the depreciation of the reservoir shares, was perhaps the only one not brought over to his own conviction, so earnest and plausible were his explanations. Had he not Mr Flywheel's letter, upon which, laying his hand upon it in the solemnest manner, he shewed that that eminent engineer, whose reputation was European, had had no misgiving of the embankment's stability, and had ridiculed those entertained, only a few months before, upon apparently precisely similar grounds, by Mr Denton? It was true that the latter gentleman had proved himself to be in the right, and thereby won a place for himself in his profession, elevated indeed for one so young; but was he, Mr Waller, to be blamed for taking his views from the master, and not the pupil? As to interested motives, of which, thank Heaven, he had, however, not heard a whisper, it was evident that he was the very last man to be accused in that respect. The expenses of such an official inspection as Mr Denton had demanded would have been trifling, though it was true, as one of the chief shareholders, he (Mr Waller) would have had to bear a considerable portion of it; but even as a matter of insurance to his property at Mosedale, it would have been worth his while to disburse a few pounds, if he had really thought there was occasion for it; whereas, what had actually happened to him, in consequence of his unfortunate though not wilful neglect to do so, was total and irremediable ruin. Yes, he stood before that court a ruined man; since, even if the result of that inquiry should not be to compel the reservoir Company to repay the enormous pecuniary losses which had been incurred by the catastrophe, let only the price of the shares at present be compared with what it had been a few days ago—but he did not care to enter into that subject. What was liability or pecuniary loss, that it was to be mentioned at such a time as that, when Rachel was weeping for her children, and would not be comforted, because they were not! And what was ruin or poverty to *him*, compared with the sting of that remorse which would never cease to torture him for having, however innocently—however much in accordance with the highest scientific authority—neglected precautions by which this great calamity, which had not spared even those who were nearest and dearest to him and his, might have been averted!

Digitized by Google

So ingenious and eloquent, indeed, was the ex-M.P.'s defence, that, next to the immediate sufferers by the catastrophe, there was no one who attracted so much public pity as the chairman of that Board which at first was looked upon as having been the culpable cause of all that had happened. Even John Denton, to whose sagacity Mr Waller paid so many compliments at the expense of his own, felt half convinced, and his evidence certainly bore less hardly upon the latter than might reasonably have been expected. Indeed, so far as his pecuniary affairs were concerned (if one left out of the question the expectations he had cherished respecting a rich son-in-law), Mr Waller was upon the whole exceedingly benefited by the bursting of the embankment, since, under shelter of it, he was able to become bankrupt himself—which must have happened at all events sooner or later—in a most honourable and gratifying manner, as he always spoke of it (and honestly believed it to be), though he only paid threepence in the pound.

There was no such excuse for Herbert Stanhope, who was greatly blamed in the county for disposing first of the great Firgrove, and immediately afterwards of the whole Curlew Hall estate, which was purchased by a commercial person of no family, and, it was greatly feared, with an eye to dispose of it on building-leases. He paid, however, a much larger price for it than had been expected; so that, after the mortgages were discharged, there was sufficient to pay all Stanhope's turf debts, and yet leave him a thousand or two to begin the world afresh with. Advisers were not wanting as to the most judicious investment of this little property. Sporting Dawlish, who had been rather 'hit' on the last Derby, pressed his friend very much to lay it out on a 'perfect certainty' for the ensuing Leger—no gammon about an animal that can't be beaten, like your *Vignette*, but a really foregone conclusion—a secret so valuable and momentous that it could not be trusted to ink and paper. Never since lords became blacklegs had there been such an opportunity, upon his honour. But Herbert, with many thanks for that and for a past kindness, which, he said, and truly, he should never forget, declined this tempting offer. He had 'a perfect certainty,' he wrote, as far as a promise could go, of his own, which was quite sufficient for him; in point of fact, he was engaged to be married to Miss Lucy Waller.

'Then Herby is distanced, and that fellow Denton has taken up the running with the other filly,' exclaimed Dawlish when he reached that part of the letter; and we, who have had such opportunities of observing for ourselves, may easily imagine that the sagacious young gentleman was right.

A second astute counsellor as to the disposal of the relics of Stanhope's property offered himself in the person of Mr Waller, who had consented, in the handsomest and most agreeable manner (though not till he had found opposition useless), to Stanhope's marriage with his daughter. Those two or three thousand pounds of his, he assured him, could be quadrupled in a year or two, by investing it in the submarine tunnel about to be constructed between Weymouth and St Heliers, in which adventure he could, by favour, still procure for him a few shares. But Stanhope declined even this glittering bait.

John Denton, on whose judgment he had had such good cause to rely, and who never expressed himself upon any subject of which he had not obtained considerable mastery, had communicated to him some facts received from a sure hand concerning a certain property on the Murray, near Sandhurst in Victoria, and he made up his mind to emigrate thither, and, if possible, to purchase it. He knew something of stock-farming; he was strong and active, and impatient for work for its own sake, even if he had not had the strongest incentive to it in Lucy, who herself in nowise shrank from the prospect of a new life, which, if somewhat hard and rough, should be at least neither hollow nor dishonest. She longed to leave Mosedale, with all its bitter associations, and where she could not persuade herself that her father was regarded by his neighbours as he believed himself to be; and the greater distance that was placed between them and it, even though it were half the world, the better. But, unfortunately, the relics of Stanhope's fortune only just sufficed for the purchase of the stock and land in question and for passage-money, leaving nothing for outfit, and the necessary expenses of setting up an establishment in the bush.

'You should have at least an additional five hundred pounds,' said Denton thoughtfully.

'That, at all events, makes my decision easy,' answered Stanhope, with the ghost of his old careless laugh, 'for it's plain I can't take the farm.'

'If you are not too proud to borrow the money from me,' said Denton simply, 'I shall have a real pleasure in lending it to you.'

Stanhope coloured to his very temples. 'No, I could not think of that,' said he decisively.

At this, Denton turned as red as he. 'I am sorry,' said he stiffly. 'I was in hopes that our relations with one another would have admitted of that at least, even if I had offered it as a favour, and not as I honestly meant it—as an eligible investment.'

'There is no man's money which I would borrow—nay, if you come to that, accept as a gift—so readily, and with so little sense of humiliation, as yours, sir,' said Stanhope warmly. 'Do not let us misunderstand each other again, my friend.'

'Oh, I see,' exclaimed Denton; 'you do not give me credit for having so large a private purse. You fancy I should be obliged to apply elsewhere.'

'Yes, to some one whom I respect and esteem above measure, but to whom I could not be pecuniarily indebted.'

'Well, she would not like to hear that, I know,' said Denton softly. 'But perhaps you are right. It is a delicacy, at all events, which does you honour. But, as I was about to say, this money is my own, worked pretty hard for, I flatter myself, and you will much oblige me by taking it. It is as good an investment as can be found, in my opinion, anywhere; so take it, and no thanks.'

'And this is the man whom I have been idiot enough to call "no gentleman,"' thought Stanhope, as he shook hands over that bargain.

We may say here that Stanhope and his bride went out to Sandhurst accordingly, and prospered fairly for some years. We trust even the fair sex will forgive Miss Lucy for not immolating herself, after the fashion of suttee, on the funeral pyre of a husband *in posse*. She frankly informed Herbert that she could never love him exactly as she had loved young Richard; but he quietly acquiesced in that arrangement, acknowledging bluntly,

Digitized by Google

Tartuffe that he was, that he had not merited such adoration. He had no doubt she had sufficient capabilities for affection left for the deserts of a vagabond like him; which indeed proved to be the case. She had always liked him; and when, after her lover's death had softened her, and made her sensitive to all such matters, she saw her once playmate and neighbour about to commit a baseness in endeavouring to win a hand that he knew had been promised to another, she took him soundly to task, received the confession of his enormous liabilities, and began to pity him immensely. *Facilis descensus amoris.*

They married, as we have said; and when they sailed across the world, Mr Waller accompanied them. He was not a man to bury his talents in the wilderness—good wine needs no *Bush*, he was won't, rather egotistically, to observe—but established himself in excellent quarters at Melbourne, where he became a great social success; entered the legislature, and is not without good grounds for believing that, on the next change of ministry, he may be intrusted with the management of the colonial finances. '"Advance Australia," will then,' he epigrammatically observes, 'be indeed its motto;' for he has several speculations on hand, which only need a little help from the government to turn out Eldorados, and they shall have it.

Of course we are much anticipating matters; but after some years of that fair prosperity to which we have referred as having been Stanhope's lot, the information which Denton had received from a scientific friend respecting the probable value of the Sandhurst property at length bore fruit. The very last gold discovery, known as 'the Spring Creek Rush,' took place upon Stanhope's own land, and he sold that portion for what his father-in-law, with some exaggeration, considering that it was hundreds of acres of the usual thickness, describes as 'its weight in gold.' At all events, Mr and Mrs Stanhope were among the arrivals from Melbourne in one of the Australian steamers this very year; and it is 'understood' by the chroniclers of such local pieces of information, 'that, thanks to a lucky but well-deserved stroke of Fortune's pick,' the estate of Curlew Hall is soon about to pass back into the hands of the same family that have held it for many centuries. In the meantime, the 'wealthy and respected pair' are staying at Blackburn Manor, the seat of John Denton, Esq., M.P. It is also announced by the same authority, that the whole of the debts of 'our late talented fellow-townsman, Mr Waller,' have been discharged, notwithstanding there being no legal necessity for such an act, in full.

John Denton, although a wealthy man, by no means owes his prosperity to the fact that he has married an heiress. He is a magnate of the world of cogs and wheels, a prince in his own right of the powers of steam and iron; idleness, albeit of course he has no need (in the vulgar sense) to toil, is impossible with him. But nobody grudges him either money or influence, since he uses both for good. Every man who shews signs of promise, no matter what his calling, yet lacks means, finds a friend, not a patron, in John Denton. His landed neighbours, who looked on him at first with considerable suspicion, and repeated to themselves their favourite shibboleth that 'it takes three generations to make a gentleman'—as if thirteen did not as often as not produce a scoundrel—have made up their minds that, notwithstanding those infernal radical notions of his, there is nothing very dangerous about him, after all. But in their secret hearts they are afraid of him. Mrs Denton herself, it is acknowledged on all hands, is one of the sweetest of gentlewomen; and notwithstanding that early experience of hers—'she was quite poor, my dear, at one time; indeed, abjectly poor; worked at pillow-lace for a livelihood; in fact, it's too shocking to talk about'—with manners not inferior to those of the lord-lieutenant's wife. 'But then she comes of a good old stock, and her children at least, of whom she has several, may be held to be members of *a county family.*'

CHAPTER XLII., AND LAST.

One of the most favourite of the evil phrases of the critic runs as follows: 'This story has been hurried to a conclusion;' and we are quite aware, under ordinary circumstances, that such a remark would not be wholly inapplicable to our present narrative. But then we submit that the being swept away *en masse* by a burst reservoir does really hasten the disposal of one's *dramatis personæ* most uncommonly. Suppose, for instance, the critics themselves had been feasting that sad night on the river Curlew, as they often do at Greenwich—which perhaps accounts, in one or two of them, for just the least tinge of biliousness in their reviews—suppose, I repeat, *they* had been assembled at 'the cottage,' discussing some whitebait, let us say, which had been discovered in the mill-stream above, what would have saved even them—let alone a respectable, but humdrum county family like the Blackburns—from being 'hurried to a conclusion?' The author, of course, would have risked his life in the attempt to preserve his friends and patrons; *he*, like Denton, would have thundered down the valley upon any quadruped—or bicycle—which his limited means might have enabled him to have hired. But unless the whole of the excellent company had happened to come out, like Ellen, into the garden to take the air (as is sometimes necessary after whitebait), what could have been done for them? It would have been no use for the poor fellow to—how shall I write it?—holloa. When did critic ever pay the least attention to an author's cries? The whole 'biling' of them, if one may use so vulgar a term in speaking of so sacred a subject, would have instantly been swept to their allotted places in paradise. Perhaps, being of a more ethereal construction than our commonplace tenants of the Fishery, they would not have been dibbled into the rose-garden, but have been carried down stream with the rocks and trees in a manner shocking to think of, so mutilated, perhaps, that the representatives of the *Saturday Review*, for instance, could scarcely be discerned from those of the *Pall Mall Gazette*. The subject is too frightful to dwell upon; but we repeat it *might* have happened; and in that case, would a surviving critic, when noticing some agreeable story founded on the catastrophe which had befallen his brethren, venture to say that it was 'hurried to a conclusion?'

Thus much of apology we think it right to make for having caused the funeral-baked meats, as it may have seemed, to furnish forth the marriage

Digitized by Google

tables. But time has fled, if we have taken no count of it, since that fatal night: though Stanhope and Lucy had married and quitted England within six months, at least a year elapsed before John Denton was wedded to his Ellen. In Mrs Blackburn they found no obstacle to their engagement, now that her Willy had been snatched away from her: she never had had any real objection to it, except in so far as it seemed to militate against her son's prospects; and indeed the young engineer had, but for that, been always a favourite with her. And he deserved to be so: though she never knew how deeply she was indebted to him, she felt grateful for the tender solicitude with which he endeavoured to soothe her declining days, and perhaps even for the reticence which his courteous delicacy used with respect to those weary eighteen months of unjust exile he had suffered partly at her hands; but she never guessed that, for her sake, he had hidden a secret in his own breast, and kept it to the end, a secret a hint of which would have brought her gray hairs with more than sorrow to the grave. At present, next to the loss of her son's life, what grieved her most was that his body had not been recovered, or rather, that it had formed one of that score of undistinguishable victims of the catastrophe whom not even their own mothers could have known. She had not even the sad consolation of feeling that her boy lay in the neighbouring vault with the rest of his long line of ancestors, and that one day—which was not far off, for she only survived old Anthony two years—she should be laid beside him. Thanks to her grandson-in-law, she was spared a far more terrible woe.

Denton of course had been one of the chief witnesses at the inquest, and among the dreadful incidents of which he had been the spectator was the identification, or the attempt at identification, of the victims of the flood. Now, there was one body—that of a female—which, although totally uninjured, remained unidentified to the end. It was recognised by a widow in Mosedale in humble circumstances, who let lodgings, as having been a tenant of hers for a few days, but she neither knew her name nor where she came from. The features were strange to all who looked upon them—except one man. Denton alone knew that it was no other than Mrs William Blackburn—poor Bess; and instinct, stronger even than his sense of justice, bade him hold his peace. There was much talk about this particular incident, for the case was very peculiar: this body had not been hurried down the river, like the rest, but was found in the reservoir itself, when the waters had drained themselves away; and, moreover, it was the opinion of the doctors that death had occurred some days before the general catastrophe. It was supposed that the unhappy woman, whoever she was, had gone up to that desolate moor, and there committed suicide. And in this idea Denton himself had at first coincided. It seemed to him, who knew her timid nature well, probable enough, that, being deserted by her husband—for it was now evident that his story of her having died at Formosa was false—she had ventured to come into the neighbourhood, perhaps with the hope of even yet winning him back to her, perhaps only with the fond desire of looking at his newly acquired greatness afar off; and that then having heard, as she was certain to do, of his unprincipled courtship of Lucy Waller, wretchedness and despair had caused her to commit self-destruction. But afterwards it was his lot to hear from Mrs Blackburn's own lips—how little she knew with what horror they were filling him!—a circumstance which convinced him that her son had been a guiltier wretch than even he had deemed him.

She was talking, as she took that grim pleasure in doing which may be noticed in all persons of her class, of the terrible events which had deprived her of son and husband at a blow; and Ellen, striving to evade the subject, had used some commonplace about the terrible unexpectedness of the calamity, when Mrs Blackburn said: 'Nay, Ellen; it may have been unexpected; but now that it has happened, I may tell you both that it did not come without warning—I mean without another sort of warning than that which John gave us; for I myself had a Message from the Dead.' Then she told them how she had seen the ghost of Bess in Redmoor Firgrove, and how, since she knew it boded ill to the Blackburn race, she had revealed it to her Willy.

'Then that accounts,' said Ellen gravely, 'for poor Uncle William's strange behaviour in that very wood when we were moving to the cottage;' and she narrated—of course omitting all mention of William's brutal conduct to herself—his wild bearing during that journey.

'Ay,' said Mrs Blackburn, 'doubtless that was the cause. I know for many a day after I had told him, my Willy used to go over the moor, in hopes, may be, of seeing his poor Bess once again, even though she was no longer flesh and blood. Heaven only knows whether he did or not; though it is now clear to me that she came on his account.'

Once again that day, when Denton was alone with her, the widow again reverted to this subject.

'I didn't like to talk more about it before Ellen this morning,' said she, 'because just now, you know, in her delicate condition, it might not be so well'——

'Forgive me, my dear Mrs Blackburn,' interrupted the young man gravely; 'but it is a subject that you should not talk of to *anybody*, and upon which, if you will take my advice, you will for the future be silent.'

'What! it's unlucky, is it? Well, I daresay it is; and I am sure we have had misfortunes enough without our bringing them upon ourselves; so I will never mention it again—only just tell me, John—you who are so wise about everything—do you think it possible that my poor dear Willy ever *did* see Bess on Redmoor?'

'Yes, madam,' replied Denton, with averted face and involuntary shudder—which Mrs Blackburn ascribed to superstitious fear—'I think he did.'

THE END.

SOME VIEWS OF A UNIT.

THE ROYAL CHERRY-STONES.

In days of old, it would have been in the highest degree impertinent in a Person of No Consequence, like myself, to entertain either views or opinions, and far less to express them. But to-day I am the cynosure of all intelligent eyes. I am one of those Units which form the Masses, and it is for my benefit (as I am informed) that the two great parties in the state are for ever toiling. To improve my condition, mental and bodily, is the end and aim of all modern statesmanship. The idea of

Digitized by Google

my necessities pains the Conservative nobility more acutely than the gout itself; and afflicts aristocratic Whigs more keenly than loss of office. The Church desires to retain its revenues solely with the object of applying them to my needs; and even the Law is being shaped and hewn into such forms as may most conveniently suit my exigences. If they do but succeed in pleasing *me*, Mr Gladstone will no longer cast about for his three courses, and Mr Bright will nod his head approvingly, and cease to speak his burning words. The misfortune is, however, that all these good designs are frustrated from the ignorance about me which is prevalent not only in exalted circles, but in those which profess to understand me thoroughly. The Press, for instance, rests its highest claims to respect upon the fact that it is my mouthpiece; that if I could speak (only unhappily I am inarticulate), I should talk exactly like a Leading Article.

Far be it from me—being what I am—to contradict any voice of authority: my notions, as I am aware, are of themselves absolutely valueless; it is impossible to be too emphatic in that statement; but then, on the other hand, it cannot annoy anybody to hear them stated. People—I mean people of real intelligence, and education, and position—people who possess wealth, and trained wits, and learning, and everything, in short, which I do *not* possess—have only to reflect that I am a Person of No Consequence, and to forgive me. It is not worth while to be angry with a worm. Moreover, since these excellent folks do take such a marvellous interest in me, it is surely right that they should know what I really am. Some of them can only mark me from afar off, and at a great elevation—'Up in a Balloon' was the expression used by Somebody in parliament—and even those better situated can only use one eye at a time, watching me through a microscope; and that is not half so satisfactory, because (among other things) it compels them to wink at so much. The prevalent weakness of my superiors seems to me to be the use of one eye only; but there—I mean no offence: once more please to remember that if I happen to tread on anybody's toes, it is not designedly; if I ask a question or two which may seem impertinent, I do so like Miss Rosa Dartell, 'merely for information,' not at all with the idea of embarrassing my betters.

I want to know the reason of a number of things, which I daresay are simple enough and easily explicable, and which it would only occur to a Person of No Consequence to ask. Here is one of them.

Why is it that society generally—that is, Good Society—and all the Newspapers, are so enraged with that Unknown Individual, who, at a late horticultural fête in London, followed the Prince of Wales about, as he was eating cherries, and preserved the stones which he threw away? To be sure, it was rather a disagreeable case of sycophancy, but surely not an extreme one! It seems to me that H.R.H. himself could scarcely have been astonished at such a proceeding. Every word that poor young gentleman speaks is pounced upon as though he were the girl in the fairy tale who discoursed pearls and diamonds; he can't open his mouth but a reporter is ready to telegraph every syllable to headquarters, where it is set up in type. And, indeed, it would really seem that he is dowered with great peculiar graces of expression: he does not articulate like a common person at all, but always 'remarks in a condescending manner.' One might imagine that a young fellow who is a good deal mixed up with the military might occasionally indulge in the adjective 'jolly;' but this is not the case. On occasions to which that word might apply, 'he is graciously pleased to express his approbation.' He does not laugh, as Persons of No Consequence do; but it is sometimes 'not difficult to perceive that H.R.H. was considerably amused.' When he leaves town for some attractive spot—the lakes, or the moors, or the sea-coast—'he honours the neighbourhood with his august presence.' The works of Providence are expected to be in high spirits at the approach of this young man, and especially if any object should 'especially attract his attention.' Wherever he is announced to appear, a mob of more or less genteel folks gather together to applaud him. Even when he hurries through a railway station in a special train, both sides of the platform are lined with expectant faces and bare heads. If he takes a drive in a pony-carriage, it is reported; if he walks out with a gun and a dog, it is recorded; if he stops within doors, the affair is serious, and gives rise to 'alarming rumours.'

Is all this 'Loyalty?' Because, if so, it does not quite answer to the definition of that virtue in the dictionaries. And if not; if it is mere rank sycophancy and toadyism, what do you imagine that H.R.H. thinks of it all? What *can* a good-natured young gentleman, who has no absurd and conceited views of his own individuality, and who is sensible that his words are not the distillation of wisdom, nor his tastes the most exalted and appreciative that can possibly be conceived, think of it all? Above all, what can he think of his fellow-creatures who thus voluntarily abase themselves before him? What can he think of the distinguished fashionables who have to be appealed to by the *Times'* correspondent *not* to go to Wildbad, who are adjured to leave H.R.H. one summer month in peace and free from British snobbism? I know what *I* should feel if I were he. I should come to the conclusion—but then, to be sure, I am a Person of No Consequence, and my conclusions are not worth coming to—that since the public, over which I am eventually to reign, are such born sycophants, it would not much signify how I behaved to them as their Ruler; that, whatever I did, they would be sure to bow, and smile, and applaud; and that, in particular, this Newspaper Press, which was said to be the guardian of liberty and the fosterer of independence, would be sure to be my most obedient humble servant.

If in all this lip-homage there was any recognition of merit—or even an approval of one thing above another thing—there would be less to complain of, although even then the flattery would be laid on coarsely enough, and as it were in slabs; but, as the case stands, it is a mere senseless adulation, which would be loathsome, if it were not absurd. Whether or not it is a sign of the Americanisation of our institutions, I know not, but no one can fail to have observed that side by side with the broadening of our basis of representation has grown a certain fulsome behaviour towards persons in eminent positions, quite distinct from due respect, and quite apart from any merit or public advantage in themselves.

Many titled, but otherwise obscure individuals, have, as it happens, of late appeared in our courts

Digitized by Google

of justice, to meet with a reception, to say the least of it, very indecorous in such places. There is only one police magistrate in London, and (as it seems) not a single judge upon the bench, who can refrain from addressing a witness, or referring to a defendant, if he chance to be a lord, in the following terms: 'Now, my lord, I shall treat you exactly as though you were a common person;' or (in a case where the minister of justice evidently wished to appear the moral successor of that judge who sent the heir-apparent to prison): 'My lord, your rank has no effect upon me whatever; I shall do my duty just as though you were a chimney-sweep.'

'Why, good Heavens!' one would say, 'of course he would!' Where is the necessity of his saying that? Methinks he doth protest too much. It is generally understood that a court of justice is indifferent to gradations of rank. But the fact is, that so rampant has Snobbism of all kinds become, that even those excellent and honest folk, the judges, hasten to free themselves from the suspicion of the universal contagion, and in doing so, appear considerably infected with the very disease they would appear to have escaped.

And as it is with the judges, so it appears to me is it with a free and independent press. Conscious of its own vulgar prying and persistent dogging of the footsteps of royalty, conscious of its daily chronicle of the most trivial acts of Eminent Personages, it affects a fervour of indignation against the devotee who picked up the cherry-stones discarded by the heir-apparent. This much-abused collector of curiosities (whose wife is perhaps now wearing a necklace formed of those precious stones with great satisfaction) is only one step lower in the scale of sycophancy after all; and, moreover, he may not be a Teacher and an Elevator, as the third estate aspires to be, but only a Unit among the Millions, like myself.

P.S.—After these remarks were penned, news arrives from the Underworld, that even that part of the globe is similarly infected. 'The sheets and towels used by Prince Alfred while in New Zealand are to be sold by auction, and it is expected will bring a high price.'

LIFE AND DEATH AT ST BREACA'S.

IN EIGHT CHAPTERS.—CHAPTER V.

Mrs Secker's prepossession against Jeanne increased rapidly as she perceived that she tried to entangle Augustine's affections; just as, before his return, she had laid herself out to attract his father's admiration. She was by no means the wife she would have chosen for her pure-hearted boy, and it was really distressing to have him unsettled just as his prospects were so good. She had no doubt that Mr Hoskins would do for him as if he were his own son, provided he continued to please him; but he could not contemplate marrying for many years; and this foreigner had it not in her to be the wise, tender, constant friend to whom it is safe to be bound for a long engagement. If she saw any one who would be a better match, she would throw Augustine over, and he would never recover the blow. Yet she, poor mother, could do nothing. With all her heart, Mrs Secker longed to have the holidays over; and how very hard that was!

It was inevitable that Augustine should be caught. He was trustful and affectionate, and had never been familiar in young ladies' society. Here was a caressing, impulsive young creature, pretty in his sight, a stranger, unprotected, and most unfortunately circumstanced, hanging on his words and looks, telling him, with her great varying dark eyes, that she worshipped him. She could have no interested motive, said he to himself. She knew that he was poor, and that his family were down in the world. In her own selfish, unrefined way, Jeanne did love him; loved him, though in her folly she had resolved to marry for riches, and believed that nothing could be easier in England; loved him, though she intended to rid herself of him if he interfered with her advancement. She had never imagined any feeling so delicious as the certainty that his heart was entirely hers; she could think of nothing so intolerable as his bestowing a thought on another woman. When they parted on the day before his return to Loganstone, a tremendous rush of feeling overpowered every consideration. In a few passionate, hurried words, he implored her to have pity on him, and be true to him for ever; and weeping, clinging to him, she told him she lived but in his love. He had never dreamed that for him life could have anything so enchanting. To his prematurely chastened experience, it had seemed as, at the best, to be met with fortitude. He was in a new, vivid, unguessed-at world, while he listened to her fond tones, looked at her glowing face, felt her tears and caresses. How should he tread again his beaten track? Was all the happiness allotted him condensed into that crisis? Thus he questioned, and checked a shiver, even then.

That night Jeanne walked very long in the colonnade. A July full moon shone serenely on the beautiful bay; glow-worms sparkled in the grass. But a few yards from her, the calm deep sea whispered to the rocks below; flowers made the still air fragrant; but the girl's was not a poetic nature, and the delicious influences did not teach her. Brooding over turbid thoughts, she walked to and fro till fatigue compelled her to stop. Leaning against the sill of the schoolroom window, she looked up, and out of herself. Her mind rambled somewhat in this way: 'How Augustine would enjoy this! How different we are! I wonder why. We are both young, both unfortunate; but we are no more alike than this calm is to a tempest.' She started, for steps were stirring in the house. It was very unusual after midnight. That Mr Monsey was up great part of the night, was understood; but the room he called his study, and to which he betook himself in the evening, was in a distant part of the house, and she had never met him at night. The door opened, and he came out, intoxicated evidently, and malicious.

'Ah, Mademoiselle, sorry to have disturbed you. Pleasant to be out this fine night. But where's Young Pill-box? Hope I've not frightened him away. Sort of thing is charming; used to be long ago, I know; but not quite proper, is it?'

'I am afraid it is later than I thought it was, Mr Monsey. I will wish you good-night.'

'Oh, pray, don't. Can I find him for you? Not proper, as I said, but pleasant, very. I never spoil sport. I'm not strait-laced; only thing I'm particular about—hate popery. Had a priest here a few weeks ago: won't stand that sort of thing. Sharp girl, very—said he was a miner; but

Digitized by Google

post-boy told landlady—stupid fellow.' Angry and terrified, she passed him, and went to her room.

Three months later, haggard and weary, Augustine presented himself late one evening before his startled mother. His first words were: 'Is my father in?' and his next: 'Thank God, that he is not! for I am come home in disgrace—ruined, perhaps.'

The sweet eyes fixed on him expressed the fullest trust and sympathy, and it was no shrinking from increased temporal trouble, but deep affection, that made her voice tremble as she said: 'Never mind, my own child; I 'm sure it 's not your fault. Don't hurry to tell me, if it distresses you.'

'But I must tell you before my father comes, if possible. Perhaps you have guessed that I am engaged to Jeanne Royer. I could not tell you sooner, because I knew you did not think well of her, and I cannot bear even a look that blames her, poor darling! Her lot is indeed hard, and excitement about her has worn me terribly. Her letters have been full of complainings, and a week ago one of them drove me nearly mad. She hinted that impertinence from that old ruffian Monsey was added to her troubles; that she ought not to remain in his house, yet knew not what to do.' He paused, drew a long breath, and set his teeth firmly together. 'Of course, I have been utterly unfit for my work. I directed medicine wrong twice on Tuesday. Mr Hoskins made the best of it, and implored me to be careful. Yesterday, I sent an ounce of laudanum to old Mrs Penruddock, instead of a black dose; and if she had not known the smell, of course she would have taken it, and died. Nothing could be kinder than the Hoskinses. She cried; and he said he would rather have lost his little finger, but that there was no help for it; that not only was his practice in danger, but the patients' lives were; that whatever came of it afterwards, for the present I must leave him. So here I am, as if you have not enough to bear without this.'

She had stood behind him, that if her countenance expressed anguish, he might not see it; and she had passed her fingers soothingly through his bright curls, and sometimes laid her cheek on his head while he was speaking. When he had done, she drew him close to her bosom, and they wept together; but she felt that her indignation against Jeanne exceeded her pity for her child. She wished for a moment that she could hate her without sinning, but all she said was: 'Let us thank God, dear, that there is nothing worse, and try to bear it meekly, and hope for the best. Go to bed before your father comes. I will bring you tea. You are really ill, and I will tell him so, and all'——

'But he will storm at you—say it 's all your fault, perhaps.'

'Never mind: I do not really care. I used to be afraid of him; I 'm not now; and he is so uncertain, that he may take quite a different view.'

And so it proved. He expressed nothing but sympathy for Augustine, and evaporated whatever indignation he felt in the subjoined note to Mr Monsey:

DEAR SIR—When I allowed myself to become a frequent guest at your table, I did not suspect that degradation of my family was involved in the acceptance of your hospitalities, and that the blandishments of a French governess were designed to ruin my son's prospects. He is dismissed from the honourable though humble post which his father's misfortunes made of moment to him, and he is come to add to the burden that presses on his mother's heart. While I congratulate you and your tool on the success of your manœuvres, I beg to have it distinctly understood that my door is closed against you and every member of your household. A poor incumbent may possess the feelings of a gentleman, though he is not the younger son of a James's baronet.—I remain, dear sir, yours truly, MARCUS SECKER.

When Mr Monsey had read the note, he went to find his wife, and sent for Jeanne. 'You had better get rid of her, perhaps,' he said. 'I do not care much about this, whatever it may mean; though I think the girls ought to have a steady person. But she 's a concealed papist—and I have an objection to that sort of thing.'

'I do not care whether she goes or stays, but I must have some one; and the children are used to her, and fond of her, and I don't know where to get any one else.'

'Where did you get her?'

'Suzanne found her out.'

'The deuce she did! I did not know that.'

'I don't suppose you cared. Suzanne heard of her from her sister, who is Madame de Montansier's maid. This girl was a protégée of Madame de Montansier's. She has done very well.'

'I never liked her.'

'No; you don't think her pretty. I do.'

When Jeanne entered, pale and hard, Mrs Monsey began: 'Mr Monsey has had a very extraordinary letter from Mr Secker, from which it appears that his son is in some trouble, and that it is your fault. Mr Monsey wishes to know if you have anything to say which we ought to know.'—Jeanne seemed unable to speak; and Mrs Monsey continued: 'Of course a person in your position is required to be steady; and though Mr Secker is half mad, there must be some ground for so very strange a letter as he has written.'

'You 'd better make a clean breast of it, Mademoiselle,' said Mr Monsey with a touch of the manner which had been so offensive one night in the colonnade. 'Mr Secker desires that you will not enter his house again.'

She stood at bay; her hands crossed and tightly clasped, resting on the table; her eyes darkening, her frame quivering. Mr and Mrs Monsey looked at her curiously. At last she spoke, very hoarsely: 'It seems to me, Madame, that I have nothing to say unless I know the charge against me.'

'You may read the note,' said Mr Monsey, giving it to her.

How she had longed for it! not venturing to hope for it.—Was that all? Why, it was a triumph! There was a man in the world who had sacrificed everything for her! What signified anything else? Vanity, intensely gratified, sent the blood to her face, raised her head, and strengthened her voice. 'I am not ashamed of loving and being loved,' she said firmly.

'But your "loving and being loved," as you call it,' uttered Mrs Monsey pettishly, 'ought to have been better managed, so as not to bring impertinent letters on us. Besides, I have a great regard for Mr Secker, and I do not choose to have him annoyed by any one in my house.'

'I can only say, Madame, that I do not know what Mr Secker means, but that I am affianced to his son.'

Digitized by Google

Mr Monsey left the room whistling.

'You are very foolish,' went on Mrs Monsey. 'If even the young man does not change his mind—and of course he will—he has not a chance of marrying for years, and I am not surprised that his father is angry. You must understand that I do not choose my daughters to be made aware of this exceedingly silly affair. The longer young ladies are kept ignorant of such things, the better.'

Jeanne longed to laugh mockingly, and her lip curled as she replied: 'Madame may rely on my respecting their simplicity.—May I go now, Madame?'

'Yes. I don't think I've anything more to say at present.'

Mr Monsey wrote:

MY DEAR SIR—I am at a loss to infer more from your note than that my amiable young friend Augustine is in some difficulty. Well, 'boys will be boys,' and we were boys ourselves once. I hope there will be nothing to prevent his coming with you to dine with us to-morrow.—Yours, very truly, ARTHUR MONSEY.

Mr Secker was furious, and replied:

DEAR SIR—My son and I will not dine with you to-morrow. Gentlemanlike tact is one thing; low vulgar cunning another.—Yours truly, MARCUS SECKER.

Mr Monsey thought if he could prolong the correspondence, it would be worth publishing, but Mr Secker vouchsafed no answer to his second note, which follows:

MY DEAR SIR—I agree with you fully, and am really sorry you won't come. I have a capital turbot.—Yours, very truly, ARTHUR MONSEY.

Jeanne had to return to the schoolroom, and teach for an hour, then to take her pupils to walk. She could do nothing till after the early dinner, when they went to their mother for a while, and she was free. Then she wrote:

MY VERY MUCH BELOVED—You are in trouble, and you have not told it to me. I find it from a cruel note of your father's to Mr Monsey; he gave it to me to read, and asked what it meant. It says that I have ruined you—I, who would die to save you; that I must not go to the house—I, who am languishing to see you. What has happened? Where shall we meet? Write to me, I conjure you, by the post. I go to the office with this—I fear to trust any one. Oh, why are we so unhappy? We, so young? And you are good—so good—too good for your poor loving JEANNE.

How, indeed, was she to see him? And why had he not written to her for several days? She *must* see him—must know thoroughly the extent of her power over him. She had meant him to be jealous; but not to drive him to desperation. What had he done? She wished she had not implied the lie about Mr Monsey. Of course, she knew—no woman ever gauged her effect better—that Mr Monsey thought no more about her than she thought about him. But how could she explain it all away? Augustine was very innocent and unsuspicious. Perhaps he would believe her if she said that she had taken alarm too easily—that French notions respecting the propriety to be observed towards young girls were so rigid that she was very probably mistaken. But how could she contrive to see him? He would never enter Mr Monsey's house, believing him to be a rascal; and after her experience of his sneering jocularity, she dared not ask Augustine to meet her at night, as, French proprieties notwithstanding, she otherwise certainly would have done.

MY BEECH CLUMP.

Soft sunshine floods a peaceful world,
And flames above the wold;
The forest-sprays gleam half-uncurled,
Tipped each with lambent gold.

But most the grand old beeches take
A fuller, warmer glow,
Whereat old memories awake,
Sweet fancies bud and blow.

How oft, in many a bygone May,
For men long dead, their sheen
Brightened the dusky woodland way
With curving breadths of green!

And shook, 'twixt many a summer sun,
In graceful checkered shades—
The ringdove's haunt, the squirrel's run,
When Autumn strewed the glades.

Their knotted roots type earnest will,
That holds its purpose fast;
Their monstrous arms may bend, but still
Regain their place at last.

Each bough for me—each dancing spray—
With happy dreams is bright;
I love their murmurs through the day,
Their rustling through the night.

A boy, I clomb each mighty head,
And 'neath their shadow slept,
Tints from their golden Autumn shed,
O'er youth's fond visions crept.

Ye cherished trees! may many a swain
Beneath you tell his grief,
And in your magic find his pain
From Nature wins relief.

No axe shall cut, no knife shall lop
Or bole or spreading arm;
Spare, winds, each venerable top!
Here, tempests, breathe no harm!

Endeared to home and homely life,
Ye share my hope, my fear;
Wave gently, when I quit earth's strife,
Above your poet's bier!

And murmur mournful dirges low,
And shiver in the breeze;
And as new Summers come and go,
New generations please;

And influence ev'ry thoughtful mind,
And move each kindly breast
In Nature and her joys to find
Contentment, patience, rest!

CHAMBERS'S JOURNAL

OF

POPULAR

LITERATURE, SCIENCE, AND ART

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 300. SATURDAY, SEPTEMBER 25, 1869. PRICE 1½d.

A PEEP AT POMPEII.

LOOKING at a village on the slope of Vesuvius, apparently as entire as if of recent erection, I was surprised to be told '*that* is Pompeii.' Though aware how completely the greater part of the disinterred city had been exposed to the light of day, it somehow had not occurred to me that, seen from Naples, a distance of eleven miles, it would be thus distinctly apparent. The distance from which it was seen prevented us perceiving that the houses had no roofs, these having all been broken down by the enormous mass of ashes from Vesuvius, and by the heavings of the earthquake.

Pompeii is accessible by railway or by carriage from Naples. In order not to be hampered as to hours of arriving and departure, we hired a conveyance for the day, with the intention of lunching at *Hôtel Diomède*, which is kept by a polite Frenchman, who informed us that he had only Italian enough to enable him to take money, which he seems to do with moderation, as he only charged a couple of francs for a bottle of excellent Lacryma Christi, made from a vine peculiar to the neighbourhood of Vesuvius.

Arriving at the Herculaneum gate of Pompeii, we were admitted by a turnstile, paying a franc for admission, and being consigned to the care of a *custode*, who is prohibited from taking any fee from visitors, but generally contrives to get something out of them by the sale of photographs. He is very sharp in looking after them, so that they shall not pocket some of the smaller objects met with in the walk through the city.

The custode knowing no language but his own, conversation is very limited, unless the traveller happens to be familiar with Italian. To obviate this inconvenience, it is customary to hire in Naples a *commissionario*, who speaks English with great intrepidity, and sometimes gives astounding information with a gravity truly ludicrous.

Having entered by the Herculaneum gate, we are literally in a city of the dead; we are in 'The Street of Tombs;' the highway on each side being lined with white marble tombs, perfectly clean and fresh, with the inscriptions and sepulchral designs quite legible and distinct. As I am not writing an antiquarian treatise, I shall only give a single translation of an inscription touching by its beautiful simplicity: 'Farewell, most happy soul of Caia Oppia. We shall follow thee in such order as nature shall appoint. Farewell, sweetest mother.'

According to our modern ideas, a highway lined by tombs would form a rather lugubrious approach to a town. But go to Rome, and drive for half-a-dozen miles along the Appian Way, surrounded on both sides by monuments, and it will at once be acknowledged that the old Romans did wisely in not permitting sepulture within their cities, unless under exceptional circumstances. As to the melancholy presumed to be excited by constantly passing the mansions of the dead, the Romans do not appear to have suffered from it. We must remember the spirit of paganism, which is embodied in the dying words of Mirabeau: 'Nothing now remains but to die among flowers and perfumes;' and we must see its actual effects before we can understand feelings so different from ours. The sensual, by introducing at their feasts memorials of mortality, endeavoured to find in the idea of death a stimulus to jollity. A skeleton introduced among the guests gave point to the exhortation, '*Vivamus, dum licet esse bene*' (Let us enjoy life while we may).

The more contemplative and refined, having no security for the happiness of the dead in another and a better world, cherished the more tenderly their mortal remains, and surrounded them with all that could please the eye or soothe the imagination of the living. The mourners whose loved ones filled the tomb delighted to adorn their resting-places, and to make them look fresh and gay with flowers, among which were conspicuous the lily and the rose.

> Full canisters of fragrant lilies bring,
> Mixed with the purple roses of the spring;
> Let me with funeral flowers his body strew;
> This gift which parents to their children owe,
> This unavailing gift at least I may bestow.
>
> DRYDEN'S *Virgil.*

Digitized by Google

Looking at the small dimensions of the tombs at Pompeii, we get over the difficulty of how they could be family burial-places, when we remember that only the ashes of the dead were deposited within the tomb, the bodies having been burned in an *ustrinum*. It would appear that monuments were sometimes injured by the incremation being conducted near them; hence the not uncommon inscription forbidding the application of funeral piles against them.

But leaving the Street of Tombs, let us enter Pompeii. The road at this point is wide, and paved with lava retaining the deep ruts made by the carriages. In other places, however, the streets are so narrow that for a vehicle to be turned in them must have been impracticable. They have, however, on both sides, a raised footpath for passengers, whose comfort is still further provided for by the frequent erection of stepping-stones, to enable them to pass dry-shod from one side to the other, when the road happened to be flooded by a sudden fall of rain.

Near the gate is an inn, in the portico of which were discovered various coins and personal ornaments, and in the court-yard the remains of carriages and harness, and the skeleton of an ass. The houses are generally one-storied, but many have had two or three floors. The external walls are plain, with few openings to the street, as the private apartments all look into an interior court, and are lighted from it. The flat roofs have all fallen in; but the walls being generally entire, and the rubbish having been completely removed, the appearance of the streets has not greatly suffered. The removal of rubbish from a small street was going on during our visit, but as it was lazily removed in hand-baskets, we could not help longing for a gang of English navvies with spades and wheelbarrows, to let the Italians see what excavating really is.

The honesty of the labourers seems very dubious, as a custode was constantly on the watch lest they should secrete for their own use any valuables which they may discover. Though nothing was found while we were present, yet in the house the excavation of which we witnessed, three human skeletons were discovered, with their gold and silver ornaments, a very handsome gold ring set with an amethyst intaglio of Abundance, and various other objects of value. As perhaps a third part of the city is still to be investigated, it is very likely that further discoveries of interest will be made from time to time, and enable us still better to understand the domestic usages of the Romans. A walk through Pompeii is far more instructive than all that the visitor may have previously read; and instead of wasting time lecturing on classical antiquities, a teacher in one of our higher schools would spend his time far more profitably were he to conduct his more advanced pupils to Rome and Naples. A two months' tour, as arranged by Mr Cook, will, it seems, not cost more than twenty pounds. As an inducement, we may add that the direct route from Florence to Rome by Foligno, is through delightful mountain scenery in the Apennines, and that an opportunity will thus be afforded of visiting the Thrasymene Lake and Cannæ.

But we have wandered from Pompeii, to which let us return. In good houses, there are a porter's lodge, a vestibule, a hall of public audience; and beyond, there is the inner court, round which are arranged the family apartments. This court is surrounded by porticoes supported by columns, in the intervals between which are sleeping recesses, and the triclinium, or place for reclining on at meals. In winter, this was under the portico, and protected from the open air; but in summer it was placed beside the marble fountain, pond, or parterre for flowers, occupying the centre of the court. The really private rooms were few, but tastefully painted, and adorned with articles of *virtu*. Warm and cold baths, rooms for servants, a little chapel for the household gods, and cellars below for storing wine and oil, completed the establishment of a Pompeian gentleman.

The floors of common houses even are paved with coarse mosaic in white and black marble; and *Salve*, in black letters on a white ground, often salutes you, on crossing the threshold. Or, a dog *couchant*, with the less hospitable motto, *Cave canem*, warns none but good men and true to enter here. Possibly, it may have been a benevolent hint to beware of a live dog, stationed there as a protection to a domicile so accessible to every passenger. The houses of the rich are paved with finer mosaics, representing hunting-scenes, fruits, flowers, birds, and beasts in their natural colours. The walls are divided into panels, with rich borders, painted with a great variety of objects, often of great merit in the execution, but too frequently very indelicate in the subjects. Pictures, copies which we brought home as specimens of this style of panelling, represent a naked charioteer driving a chariot drawn by geese, and a scantily draped woman taking naked Cupids from a wicker basket, for the inspection of two ladies, beside whom stands a Cupid. As the latter picture was found in the Temple of Venus, we may conclude that the woman and those whom she is visiting are not of immaculate reputation.

The streets are regular, and where several meet, there is a public fountain. Their names are legible; and the blank spaces on the walls are filled with gaudy pictures of the presiding deities, with electioneering notices, with amatory and indecent verses, with rudely scratched caricatures. Sometimes the scribblings on the interior walls and pillars of a dwelling refer to domestic matters, such as, how much lard was bought, how many tunics sent to the wash, or when a child or a donkey was born.

The shops are mere open sheds below a dwelling-house, with a stone counter in front, and a few shelves inside. The names and trades of their owners are legible, and the signs of their craft are conspicuous, and sometimes very startling.

One of the best houses is a suburban villa, which belonged to a wealthy citizen, Diomedes, whose family seems to have perished; for eighteen skeletons were found in the wine-cellar, huddled together close to an aperture in the wall. They had sought this underground place of refuge, but the minute dust and the sulphureous vapour suffocated them. The wine-jars, like big Eau-de-Cologne bottles, but of unglazed earthenware, are still ranged against the wall, but instead of fine old Falernian, are filled to the brim with volcanic dust. In the garden, which runs down towards the sea, two bodies were found, being probably those of two persons who in despair left their friends in the cellar, and endeavoured to find their

Digitized by Google

way to the beach. But it was too late. Through an atmosphere blacker than the deepest midnight darkness, and impregnated with suffocating vapours, there could be no advance; and so these two unfortunates miserably perished, being unable to find the door of a small garden, as familiar to them as their bedrooms. In the hand of one was a bunch of keys, and near them were found silver vases and money, dropped at last as worthless, in the struggle for dear life. In the horrible darkness, the blind alone could have turned to advantage their habit of moving about without the aid of sight. In Bulwer's *Last Days of Pompeii*, this circumstance is skilfully seized upon, and gives rise to the thrilling incident of the blind slave-girl's escape through a garden.

The most horribly interesting place in Pompeii is a room containing plaster-casts, made according to the ingenious process devised by Signor Fiorelli. The showers of pumice-stone by which Pompeii was overwhelmed, were followed by streams of tenacious mud, which flowed over the interstices not filled by the pumice-stone. Objects thus encased were as if in a plaster mould; and when they happened to be human bodies, their decay left a cavity in which their forms were perfectly preserved. Filling up these cavities with liquid plaster, Signor Fiorelli succeeded in obtaining admirable casts of human beings who had perished during the destruction of Pompeii. We thus can have a stereoscope of their death-agony. We have a painfully interesting stereoscope of a cast thus obtained. Two women, mother and child, very probably, are lying feet to feet. The limbs of the elder are extended, her left arm hangs loosely, and on her finger is a coarse iron ring. She seems to have died without a struggle. But the poor girl at her feet, with her legs drawn up convulsively, her hands clenched in agony, her face close to the ground, must have had a terrific death.

We are struck by the limited dimensions of the private dwellings at Pompeii, the best of which seem to us models of fine houses, rather than handsome and comfortable abodes. But we understand the tastes of the people better on reaching the forums, baths, temples, theatres, and the amphitheatre, which, for a third-rate provincial town, are in a style of luxury and magnificence truly surprising. It is clear that the Pompeians, favoured with a delicious climate, lived abroad all day, and only supped and slept at home. The public buildings, round the civil and military forums, with their beautiful and airy porticoes, filled with choice works of art, afforded ample space for exercise under cover; and a visit to the baths, the gymnasium, and the amphitheatre, enabled the luxurious Pompeian gentleman to pass the long summer day agreeably enough. The amphitheatre, outside the town, is an immense place; the circular rows of seats rising upwards from the level of the arena, and pierced with numerous places of exit for the spectators: the spaces for the gladiators, the dens for the wild beasts, are so entire, that it is not difficult to imagine the scenes there often enacted. One might almost expect it to resound to-morrow with the roar of wild beasts, the savage shouts of the multitude, the critical remarks of patrician amateurs, and the consultations of Pompeian matrons, debating whether the attitude of the wounded gladiator deserved that they should raise their thumbs to save his life.

It is to be regretted that the relics of Pompeii could not be left where found, as seeing them there would have much enhanced their interest; but their removal to the Museum at Naples has the advantage of enabling us to see collected together a great deal of the objects which ministered to the daily life of the defunct inhabitants of Pompeii, Herculaneum, and Stabiæ.

In some things they were primitive enough, but in others as artificial as ourselves; judging from the *matériel* of a lady's toilet, which comprehended rouge, false hair, teeth, and eyebrows, as well as all that vanity could desire in the shape of perfumes, necklaces, earrings, bracelets, and brooches. But it must have been provoking to the fair one not to be able to see the general effect of her form and ornaments reflected in a large pier-glass. The mirrors are only small plates of polished metal, capable of shewing more than an ugly woman might like to see, but less than a beautiful one desires. Under a glass case is a sad mingling of vanity and mortality: the skull and the impression of a youthful female bosom are mixed with a purse, necklace, and bracelets, taken from the body of a Pompeian lady.

Here are all sorts of kitchen utensils, some of them containing the last meal cooked on the day of the fatal catastrophe. There are loaves converted into brown masses, but retaining their shape and the baker's name; eggs, fruit, grains, honeycomb, &c. Inkstands for ever dried up, styles and tablets never to be resumed, lie in mournful literary ease in company with a large collection of charred manuscripts. Some of these have been unrolled, but no work of much merit has rewarded the toil of the classic antiquary.

If we would form a true idea of the moral condition of the Pompeians we must visit the reserved cabinet of the Museum, whose contents cannot be described further than to state that painting and sculpture have been lavishly employed in embodying the obscenest ideas and depicting the most abominable habits. If our minds be filled with commiseration for the fate of Pompeii, we cannot resist the conclusion that much of what was buried deserved destruction; and that the graceful embellishments of its social life were allied with a moral depravity so profound as to make us thankful that we live in happier days.

BETSY'S BEAU.

'It is a thing that I never did allow, and that I never will allow,' said my wife, making up for her small person and unimposing aspect, by speaking very loudly, and as if she had had large experience in servants—lessons duly instilled by a lady, a near relative, who kindly supervises our domestic affairs, and pays us long visits. 'If it had been a relative, or I had been asked, I might not have objected; but I must beg that nothing of the kind ever occur again,' said my wife in continuation of her lecture.

'But, please, 'm, he didn't have nothink to eat,' said our one handmaiden deprecatingly, but with somewhat of an injured tone.

'I was not alluding to that, Elizabeth,' said Mrs Scribe severely, 'but to the principle. I do not go so far as to say I will not allow followers; but if

Digitized by Google

anything similar to last night's affair takes place, I shall consider that you have forfeited your situation.—Now, clear away the breakfast-things.'

'"Anything similar to last night's affair,"' I said, repeating my wife's words, as soon as Elizabeth had indignantly swept the table, and then herself out of the room. 'I suppose "anything similar" means another life-guard or a grenadier?'

'Now, don't be absurd, dear,' was the reply. 'Of course, we cannot allow such goings on.'

'We?' said I.

'Well, there then, *I* cannot allow such goings on; and I'm sure you do not wish me to go down into my own kitchen of a night, to be startled by great scarlet men.'

'You never evinced any fear of the great scarlet lady, my dear,' I ventured to observe, and making what I thought a very pungent allusion to sundry leanings towards vestments, candles, incense, and flowers, as displayed at a neighbouring church.

'How witty!' was the caustic rejoinder; when I took refuge in the morning paper, and afterwards beat a retreat city-ward.

By way of peace-offering, I came back that evening bearing 'the neatest thing' I could purchase in the shape of umbrellas; but it was not warmly received.

'Elizabeth has given warning this afternoon,' said my wife.

'Tit for tat,' I replied; 'for I'm sure you gave her warnings enough this morning.'

'And now I think the best thing to be done is to let her go; for the silly thing is quite infatuated with the great tall booby I found in the kitchen last night, and has done nothing but sob, and cry, and go on, ever since.'

'I trust that there are no briny pearls in this soup?' I said.

'Of course not,' was the reply. 'I made it myself.'

'How weak are women,' I remarked after a pause; 'and yet how hard upon each other's failings. "None but the brave deserve the fair," says the proverb; and the fair think, in consequence, that they have the only right to the brave.'

'The brave! Such stuff! Why, I believe, George, if you had your way, you would encourage the girl in her mad fit. A soldier, indeed, without a penny to help himself, let alone to keep a wife!'

'But the manly beauty—the uniform!' I suggested.

'Manly nonsense!'

'And besides, it does not seem fair that the whole of the military force should be monopolised by the nursemaids, leaving only Policeman X for the cooks, and'——

'There!' exclaimed my wife; 'look at that! Did you ever see such audacity?'

Turning immediately, I could not refrain from a smile, for plainly shewn upon the window-blind by the street lamp was the shadow of a huge life-guardsman, his well-padded chest, fierce moustache, and elegantly balanced foraging-cap being displayed to great advantage.

'That's the same man!' exclaimed my wife; 'and now, if you watch, you will see him pass the window and go down the area.'

'The soles are getting cold, my love,' I said; 'and I should infinitely prefer a portion, to turning myself into a vedette to watch the movements of the enemy. Now, if your respected mamma had happened to be here!'

'Now, don't be ungenerous. I'm sure mamma never suggested anything that was not for your good, George.'

'Perhaps not, my love,' I said; 'but it is not always agreeable to take physic, however beneficial it may prove.—Thanks! Now I'll trouble you for the anchovy. No potatoes, thank you.—Shall I ring for the other things? Slow-moving Betsy will not have them up before we have done with the fish.'

'If you please,' was the very polite reply, and turning my head, I found that the shadow-picture upon the blind had disappeared.

'Of course it has,' said my wife, who had divined my thoughts. 'And he is now down in the kitchen, feasting upon the tit-bits supplied to him by that disgraceful creature.'

'Let 's ring and startle them, then,' said I; and leaving my chair, I gave a lusty peal at the bell.

In the course of a minute or two up came Elizabeth, very smart, and very ruddy of cheek—due, no doubt, to the cooking—and began to change the dishes.

'Did I not hear some one down-stairs, Elizabeth?' said my diplomatic wife.

'Down-stairs, mum? No, mum; not since the milk came.'

'Oh, that was at four o'clock,' said my wife; 'I mean just now.'

'No, mum, not as I've heerd: the bell hasn't been touched for a good hour.'

'Oh!' said my wife, and then all was silent, while the soup and fish were removed, and the partridges Smyth sent us were placed upon the table; when the maid disappeared.

'Pity she admires, or rather has her destiny ruled by, Mars, for she is a capital cook,' I said, going on with the carving. 'Daresay she reads Zadkiel.'

'Of course,' said my wife; 'and *Bow Bells*, and the *London Journal*, and *Family Herald*, and all sorts of stuff.'

'And the *Moonstone*, and *Birds of Prey*, I suppose, too,' I observed; 'but perhaps she does not favour Mudie.'

'If you wish to send me up to my bedroom in tears, George, pray say so. I'm sure I don't know what I have done that'—sob—'that'—sob—pocket-handkerchief, and one tear right in the bread-sauce.

But the next moment, plainly heard, there was the buzz, buzz of a manly voice, a giggle, a squeak, and the scraping of a chair—all plainly heard to proceed from the kitchen—coming up, as it were, through the floor; for the houses in New Park Crescent are very slightly built, so slightly, indeed, that we have never started a piano of our own, in consequence of the abundance of musical sounds proceeding from Nos. 4 and 6, right and left of us.

Digitized by Google

'A deceitful creature!' exclaimed my wife, no longer tearful; 'and did she not declare to my face, ten minutes ago, that there was no one down-stairs?—Ring the bell, George.'

'Not till I've finished my dinner in peace, my love,' I said firmly, 'even if there were the whole of the Turkish Contingent down-stairs. After dinner, I'm at your service; but if I am to engage Shaw the life-guardsman, I must have another glass or two of sherry first.—Who the deuce can that be?' I exclaimed, for a cab stopped at the gate, and there was a loud ring at the front bell.

Then came the soft patter of poor Elizabeth's feet, the opening of the front door, a short sharp altercation, as if a cabman were dissatisfied with his fare, and then my wife started from her chair exclaiming: 'Why, it's mamma!'

'The devil'——

'George!' exclaimed my wife; and the next moment the door opened: there was embracing; and I had to leave the choicest, brownest tit-bit of partridge on my plate, to be kissed and called 'my dear boy!'

'No;' she would not have the soup up—mamma would not. She was so sorry, but the train was late, or she would have been with us in time to sit down to dinner.—There was a sole left, was there? Then she would have that; it could not be so very cold.

'Bring the fish back, Elizabeth,' said my wife; and it was evident that for the present Mars was completely out of her memory.

A few minutes elapsed, during which 'dear mamma' had a glass of sherry, and then Elizabeth came back holding in her hand the head of a sole; the one, I was ready to swear, I had left on my plate, for I knew it by its gouged-out eye.

'Oh, 'm, if you please, 'm!' exclaimed Elizabeth.

'Well, Elizabeth?' said my wife.

'That there cat, 'm, while I was up answering the door. There was nothing left but this here head, mum, as I was just in time to see it jump off the table on to the floor.'

'You careless creature!' cried my wife, 'to leave it like that. There, bring a hot plate.—Have a little partridge, mamma, dear?'

Directly after, I saw some one's face change, and a very suspicious look was directed at the hand-maid, but that young lady evidently saw nothing; and the meal passed off in a most satisfactory way—that is to say, as far as appearances went—for I knew that I did not have anything like my share of the birds.

At last I was left alone to have my one glass or two of claret, and the ladies ascended, as I supposed, to the drawing-room; while, under the idea that the new arrival would render her secure from interruption, the fair Elizabeth descended to the nether regions.

'Now, I wonder whether that gentleman is below stairs?' I thought; and then, somehow, my ideas were shunted off on to another line, and went off at express rate, till I was roused by hearing the front door open.

'Who in the world is that going out?' I thought, and then I listened for the closing, but in vain; while directly after a strange ghostly shadow passed the window, which shade I made out to be that of my respected mother-in-law, with a mantle over her head.

'Why, she's going down into the kitchen,' I muttered; and leaving my seat, I opened the door just in time to catch my wife in the passage.

'Oh, I see!' I exclaimed softly; 'going to attack the enemy front and rear. Elaborate tactics, I must say!'

'You need not trouble yourself, sir, unless you please, was the reply. 'I daresay mamma and I can discomfit the enemy, as you term him, without your help.'

'But are you sure there is any one below?' I said.

'O dear no, sir! only that there is a cat there with a strong love for fried soles!'

'There, come along!' I said, for there was no help for it; and if there is anything I dislike, it is meddling with the servants and their belongings.

But we had not half descended the kitchen stairs, before we heard loud voices in altercation.

'That I'm sure there ain't, mum, if it's the last words I had to utter, mum, there ain't; and if missus was here'——

'Your mistress is here, Elizabeth!' said my wife, now entering the kitchen, with the writer following, feeling very small, and taking in the *coup d'œil* of Mrs Scribe's mamma standing at the area door, and Betsy keeping guard over that leading into the back kitchen.

'Take the candle and look in the coal-cellar, George,' said my mother-in-law. 'I'm certain I heard some man's voice down-stairs.'

'It must have been next door, sir,' said Betsy, appealing to me.

'Walls are thin!' I suggested, feeling disposed to draw off the forces, and to give the unfortunate enemy, if one there were, an opportunity to retreat.

''Strue as goodness, mum, there's no one here,' said Betsy.

'Oh, you bad abandoned hussy!' exclaimed Mrs Scribe's mamma, shaking her head at the maiden.—'Why don't you look in the coal-cellar, George?'

I felt disposed to swear at the coal-cellar; but Mrs Scribe just then whispering 'Must *I* go?' I went, to make the pleasant discovery that there was not above a sack left of the last two tons; but Mars was not there, neither was he in the dust-bin; and coming back out of the area, I found our dear mamma peering in the kitchen cupboard, and apparently about next to open the drawers of the dresser.

All this time, poor Betsy, with the palest of pale faces, was keeping guard over the back-kitchen door, which my wife now approached.

'Which surely, mum, you're not going to demean yourself by going in that dirty place, mum?' said the girl.

'Dirty, indeed, I've no doubt,' said Mrs Scribe's mamma.

'There; why not take the girl's word?' said I, wishing, with my customary pusillanimity, to make a compromise. 'Is there any one—a soldier in that back kitchen, Elizabeth?'

But instead of answering, the girl buried her face in her apron, and began to sob bitterly, when, leading her aside, the ladies opened the door, and motioned to me to go first.

What could I do but obey? So, taking up the candle I had the moment before set down, I stepped boldly in, feeling sure that the murder must now be out. But no; the one large

Digitized by Google

cupboard stood wide open, and there was no one behind the door; the place was perfectly empty.

'Look under the table, George!' exclaimed Mrs Scribe's mamma.

'Don't talk nonsense!' I exclaimed. 'Why, a cat could not hide itself under that table.—Now, I hope you are satisfied;' and banging down the candlestick, I strode back to our little dining-room, soon after hearing the ladies go up-stairs.

Poor Betsy looked very pale and troubled when she came to announce tea; but I was not surprised, and spoke kindly to the girl, believing that this time she had been unjustly accused; and then went and partook of my comfortless cup.

The tea was removed, and an hour passed, and then Mrs Scribe's mamma, fatigued with her journey from Hastings, retired to her bedroom—what in most houses would have been the back drawing-room—while I descended to my little den behind the dining-room, to try to finish an article commenced that morning, Mrs Scribe following shortly, to sit by my fire and 'tatt,' that being her custom when I am disposed to work after tea.

We were both in very severe moods, she upon her low *bergère* stool, I at my table; and for a time nothing was heard but the clicking of Mrs S.'s tatting shuttle, and the scratching of my pen.

But there was no article-finishing that night with so many clouds in the horizon; for, raising my eyes, I could see a couple of tears stealing down on either side of the prettiest little nose in the world; my pen dropped; the tatting fell all of a horrible tangle; and then some one was on her knees at my feet, and I was just going to press my lips on the white forehead within their reach, when there was a noise!

Yes; there was a noise—a strange, hair-stirring groan, apparently at our shoulders; and then the sound of footsteps on the stairs, in the passage, and then a loud flop, as of some one falling on the oil-cloth, followed by hysterical sobs and cries.

We leaped up and opened the door, to find poor Betsy apparently in a fit—now sobbing, now crying, now shrieking, and pouring forth 'Ohs!' innumerable, but quite incapable of answering questions.

Then came the ringing of Mrs Scribe's mamma's bell, and, as it was of course not answered, the opening of her door, and her voice descending to know what all the groaning meant that she could hear.

And now, not only from Betsy, but as from the wall, came groan after groan—loud, heart-wrung, half-stifled groans, similar to that which had first startled us, and which I had laid to the credit of Betsy.

'Oh,' exclaimed dear mamma, 'it is some poor creature dying next door, and the cries have frightened this poor girl.—Run, George, and see if you can be of any avail.'

Then came more groans, and several distinct knocks at the wall.

'There, there; pray, go, dear,' said my wife; 'some one must be in great peril.'

Directly after there was a loud peal at the front-door bell, and on going, I found my neighbour Jones evidently come for help.

'What is the matter?'

'What is the matter?'

Both in a breath.

'Some one must be dying at your house,' said Jones.

'No, no; at your house,' I said.

'But we can hear the groans in our library.'

'So can we in ours!' I exclaimed. 'Come here.' And leading the way into the back room, there we could hear the stifled groans again.

'It 's in your house,' I said.

'No, no; it 's in the chimney,' exclaimed Mr Jones. 'Good Heavens! there 'll be some one smothered!'

'Yes, yes, yes; chimney, chimney,' shrieked Elizabeth; and then she went off again into strong, genuine hysterics.

'Is any one there?' I cried, going close to the wall.

'Oh-h-h!' came back a dismal groan in reply; and now a light burst upon my brain.

'Here, Jones—this way,' I cried; and snatching up the little lamp, I was going down-stairs, when the shrieking of the ladies in protest at being left in the dark arrested me.

'Want a light?' said a gruff voice; and, starting, I looked round to encounter a policeman, who, attracted by Betsy's screams, had come in by the open door.

'Here—this way, my man,' I cried. 'There is some one stuck in the chimney.'

'In the what?' he exclaimed incredulously.

'Oh-h-h!' came from the wall again.

'It 's t'other side; that 's what it is,' said the policeman.

'It isn't, I tell you,' cried Jones. 'There, man; listen.'

'Oh-h-h!' came now, and a strange rustling noise as of some one struggling.

'I 'm blest if there ain't!' exclaimed the constable.

'Here—this way; I know,' I said; and, leading the way, we soon stood in the back kitchen, where, by the help of the policeman's bull's-eye, I could just make out a pair of boot-soles up the chimney, and something glistening, which I made out to be spurs.

We shouted up the chimney; but no answer came, and there was only an occasional kicking of the boots—feeble kicking, as if their occupier was in a sore strait.

'Let 's get up-stairs again,' said the policeman. 'He 's stuck tight, that 's what he is;' and, obedient to the voice of law, we followed to the back room, where, after tapping at the wall two or three times, and eliciting a faint groan that sounded something like 'Help!' the constable started off—rather leisurely, I thought—but soon returned with a crowbar and hammer-armed bricklayer, and another policeman.

There was no stopping to tear up our Brussels carpet, for, attacking the wall, bricks, mortar, plaster, and torn paper soon formed a dusty heap; and after guiding himself by listening once or twice, in an incredibly short space of time there was a hole made through into the chimney communicating with the back kitchen, and through that hole came a faint sigh.

'Come; hold up, old chap, whoever you are,' said one of the policemen; and then to me: 'Got a drop of brandy, sir?'

I soon fetched the spirit, and then, in the sight of the horrified women, the hole was sufficiently enlarged to lay bare a ghastly, soot-blackened face,

Digitized by Google

with protruding eyeballs and grinning teeth; but as the air seemed to reach the man's lungs more purely, there was a change took place, aided by some brandy administered in a spoon by one of the policemen.

It was all plain enough now, and I was not much surprised, when, the hole being sufficiently enlarged, a tall, stout life-guardsman was dragged out, but only to fall upon the rubbish-heap, completely exhausted.

'Found on the premises for felonious purposes,' said one policeman. 'Course you'll press the charge, sir?'

But I did not answer, being too much taken up with the poor fellow before me, whom it was evident a few more minutes would have stifled.

'Couldn't you get down again?' I asked him, as soon as he could speak.

'No; not an inch, sir—nor yet up—jammed in,' he gasped; 'and 'eat from next chimney, too, seemed to stop my breath.'

'How did you get there, eh?' queried one policeman.

'There; don't bother him,' I said. 'I know; and he's half dead now.—Here; have some more brandy.'

'Thanky, sir,' he gasped feebly, and swallowed a little, but only with great difficulty; and it was pitiful to see the complete prostration of the great fellow; his gay scarlet jacket reduced to a blackened, torn dilapidation; and his trim whiskers and moustache all limp and mortar-filled.

'Why didn't you knock or call for help sooner?' I said, as I knelt down by him.

'I couldn't, master,' he whispered. 'I hadn't the heart, for the poor lass's sake; and I wouldn't have groaned when I did, if I could have kept 'em back.'

I always was weak; but if the true man did not stand out there, I thought, I'm no judge: suffice it, those few earnest words had quite won me to his side, and I had mapped out my course.

'You'll press the charge?' said one of the policemen again.

'No,' I said firmly. 'The poor fellow had no felonious intent, and he has been punished enough without what will follow for breaking barrack-law.'

'Absurd!' exclaimed Mrs Scribe's mamma shrilly. 'I desire, George, that you have him taken off to prison directly, or we shall all be murdered in our beds.'

'The sooner you are in yours, madam, I think, the better,' I said politely; 'for your costume'——

She staid to hear no more, for her dressing-gown and night-cap, hitherto forgotten in the excitement, disappeared like magic, followed by a banging door. I satisfied, then, the grinning policemen and the bricklayer; and, moved by egregious folly, as Mrs Scribe's mamma afterwards told me, I allowed the wretched man to pass the night in an easy-chair, seeing him off myself almost as soon as it was light.

Betsy left us at the end of a week, and I must own to always supporting Mrs Scribe in her determination to have no followers from the neighbouring barracks. Whether our maid married the man of her choice, I know not; but this I do know, that a great piece of my little library Brussels was totally spoiled; and if we wanted a reminder when loud talking or sounds from the next house had ceased to startle us in the late hours, when sitting together—if, I say, we wanted a reminder, there it was in faded paper over the new wall which marked the hole from which we were favoured with the advent of Betsy's Beau.

P.S.—Probably owing to the shock to her nerves, Mrs Scribe's mamma returned to Hastings the next day, and did not visit us again for six months.

COTTAGES.

THAT a large proportion of the agricultural labourers of Great Britain are at present unprovided with cottages in which they and their families may enjoy a moderate degree of comfort, and in which the decencies of life are possible, cannot be doubted. In very many instances, also, their dwellings are situated so far from their daily work as to cause much needless inconvenience both to themselves and their wives and children in going to and returning from field-labour. During the last twenty or thirty years, vigorous efforts have been made by many landowners to remedy the state of things upon their respective estates. Praiseworthy attempts to stimulate the supply of good cottages have also been made during the same period by the principal agricultural societies, and by other associations both in the country and in London; but the great obstacle to the success of these efforts has hitherto been the question of expense. In exceptional cases cottages satisfying all the demands of health, decency, and comfort have been built for about L.100. This, however, has only been accomplished in places where there was an ample supply of local materials, and in most instances the cost has been L.120, L.130, and even L.140. The price of bricks, lime, timber, and building materials of course influences materially the cost of erection. During the four years 1863–4–5–6, the Enclosure Commissioners expended the sum of L.73,044, 3s. 8d. in building five hundred and nine agricultural cottages—the average cost of each of which was therefore L.143. It will readily be perceived that the amount of rent which an ordinary agricultural labourer can afford to pay will only yield a small percentage upon outlays like these. It is estimated that the proportion of rent which a cottager can manage to pay is one-seventh of his weekly income; consequently, with an income of nine shillings a week he might succeed in paying a rent of one shilling and sixpence per week; with fourteen shillings a week, two shillings; and so on. It is, however, generally conceded, that the highest rent which the ordinary agricultural labourer can afford to pay is from two shillings and sixpence to two shillings and ninepence per week—the mean being two shillings a week. As six pounds per cent. is regarded as a fair return on cottage building, seven pounds ten shillings a year would be the proper rent to secure such a return upon an outlay in building a cottage of L.125; but two shillings a week gives only five pounds four shillings a year. It is evident, therefore, that although many generous landlords have erected admirable cottages at a large cost, and

Digitized by Google

have let them to their labourers at prices which barely return two-and-a-half per cent. upon the cost of erection, yet we cannot expect such examples to be very widely followed. It is of course true that a return for money expended in the erection of cottages is often received by the landlord, not, perhaps, in the direct shape of a money payment for rent, but in other indirect, though sufficiently obvious ways. This fact, however, is by no means invariably perceived by all landlords, and hence it is absolutely essential to any rapid progress in the supply of good cottages, that a direct and satisfactory return upon the cost of their erection should be procurable.

According to the plans published by the societies for improving labourers' cottages, and according, also, to Dr Hunter's Report to the Medical Officer of the Privy-council on the State of the Dwellings of the Rural Poor (which Report was laid before parliament in the year 1865), the chief requirements for health, decency, and comfort in an agricultural labourer's cottage are: 1. That the living-room should not be less than 12 feet × 12 feet × 9 feet, or contain not less than 1296 cubic feet. 2. That no bedroom should contain less than 650 cubic feet. 3. That there should be a scullery with a fire-place in it, in order to prevent the necessity of having a fire in the living-room in warm weather. 4. That the dry-earth closet should be beyond the scullery, with covered midden attached on the outside. 5. That there should be a porch with a light on one side, a seat under the light, with pegs for wet coats &c. on the other side; the door should be divided, the dwarf door below fitting with the larger half above. 6. That means of ventilation should be provided in every room. 7. That at least one bedroom should have a fire-place, and when there are three bedrooms, that two should have fire-places. 8. That the windows should be of sufficient size to be light and cheerful, and should be capable of admitting air at their highest points. 9. That there should be an oven, and that the cooking-range should be of a construction to economise fuel, and to render available the waste heat for the purpose of warming the different rooms. 10. That the drainage should be effectually provided for. 11. That the water should be collected from the roof, and conveyed into a cistern attached to each cottage. 12. That the floors should be of wood. 13. That the elevation should be pleasing to the eye.

There would now seem to be hope that the great work of providing cottages in which all the above requirements are fulfilled, and which, nevertheless, can be built at so moderate a price as to pay—even in the direct shape of rental—a fair percentage upon the cost of their erection, will soon be accomplished. It appears that Mr Edwin Chadwick, C.B., whilst engaged in the discharge of his duties as a juror at the Paris Exhibition of 1867, formed so favourable an opinion of a method of constructing cottages invented by Mr Nicoll of No. 42 Regent Circus, and exhibited at the Paris Exhibition, as to bring it under the notice of the commissioners engaged in the inquiry which is now being made into the employment of women and children in agriculture. These gentlemen at once made the most accurate inquiries in their power upon the subject of Mr Nicoll's invention, from gentlemen practically conversant with the requirements of cottage-building, and with most encouraging results.

Mr Nicoll's cottages are erected of slabs of concrete, and the mode of construction of these slabs may be described briefly as follows: A slab is formed of a size varying with the purposes for which it is to be used in the building, but commonly nine feet by three feet, and three inches thick. The slab is composed of several layers, which together form the thickness of three inches. The centre consists of a fabric of straw sewn together by a large sewing-machine, and compressed at the same time by rollers to one inch in thickness. It is steeped in a silicate, to render it incombustible, and then set in a frame of one-inch angle-iron, strengthened by cross-bars of iron, which go through it at intervals of eight or twelve inches, and which are welded to the iron frame. A coating of small gravel held together by Syssell asphalt is laid on each surface of the straw, a quarter of an inch thick, small spaces being left clear at intervals (but afterwards covered up), to admit of nut-screws being inserted to screw the slabs together when put into their place in the building. When so fixed in the building—the lower edge having been first firmly imbedded in a foundation of concrete—an external coat is applied of concrete, made with the best Portland cement, in the proportion of one of cement to six of broken stone, or any other hard material; and then an internal coating of the same is added half an inch thick. There is thus formed a fabric three inches thick, which has as great strength as nine-inch bonded brick-work. Although only three inches thick, the interior layer of straw so obstructs the conduction of heat, that such a wall has been found by experience—as it might of course be expected in theory to be—both warmer in winter and cooler in summer than nine-inch brick-work. The very hard and durable nature of the best Portland cement-concrete, if properly mixed, causes such a wall to resist successfully frost and damp. It is also quite impervious to vermin. The upright angle-irons at the corners, and those across the line of the floor and roof, are made of somewhat larger dimensions for a cottage with an upper floor, than when all the rooms are on the ground floor. As, however, in either case the iron frames of the slabs are all screwed to each other and to the uprights, a structure of immense strength is produced. The slabs forming the roof need only to have an external coating of concrete half an inch thick; the internal coating of concrete is dispensed with, the layer of fine gravel, or powdered stone and asphalt, being sufficient; and as it is capable of receiving a wash of any colour, it becomes a ceiling.

In order to make the cost of construction of his cottages as low as possible, Mr Nicoll has adopted several contrivances, by which he materially reduces the amount of joiner's and glazier's work. By an application also of the forms of flue perfected by Mr Douglas Galton, C.B., and General Morin, he secures a very satisfactory mode of economising fuel, at the same time providing increased warmth and ventilation, together with a hot-air closet for drying clothes. The value of a dry-air closet of this kind, which enables a labourer to dry his working-clothes thoroughly, and so to ward off rheumatism and its attendant evils, is very great. It is gratifying to learn that upon Mr Nicoll's plan, which we have just described, a cottage with a living-room and three bedrooms of ample size, and fulfilling all the requirements of health, decency, and comfort, can be built for L.85. Such a cottage

Digitized by Google

being of great strength, and proof against both fire and damp, no appreciable sum need be calculated upon as necessary for repairs. A rent, therefore, of one shilling and sixpence a week, or L.3, 18s. a year, would pay within a fraction of five per cent. per annum—which, upon the assumption that the building is found to be as durable as alleged, may fairly be considered a full return for the capital of L.85 invested in its erection.

Cottages having but one bedroom, and others having two bedrooms only, are often wanted upon an estate, for the use of the aged, or for couples having no children, in certain proportions to cottages having three bedrooms—as pointed out by Dr Hunter in his Report to the Medical Officer of the Privy-council, to which we have already referred. Such cottages can be erected upon Mr Nicoll's plan—the cost of the first being L.50, and of the second L.65; upon which the rent of one shilling, and one shilling and threepence a week respectively, would pay an interest of five per cent.

A great preference is often expressed by the wives of agricultural labourers for cottages having all the rooms upon the ground floor; they say that they are better able to look after the children when they are in rooms adjoining the living-room. Some influential landowners are therefore returning to the plan of having all the rooms in cottages upon the ground floor. The designs for improved cottages published by the various cottage improvement societies are, however, generally on the plan of an upper story—the advantages of that plan being the saving in the cost of the roof and the smaller quantity of land used. Where the value of the land is, however, not an object of paramount importance, it would seem that Mr Nicoll's mode of construction affords the means of providing, at an exceedingly moderate cost, and in a satisfactory way, full-sized cottages having all the rooms upon the ground floor, in the manner preferred by so many of the women who are destined to live in them. Mr Nicoll's building material being impermeable to damp, prevents there being any objection —excepting in unusually wet situations—to the bedrooms being upon the ground floor. If, however, any landlord who may be willing to try the experiment of having a few cottages built upon Mr Nicoll's plan, should prefer the arrangement of having the bedrooms upon the upper floor, such cottages can be built of Mr Nicoll's slabs, on plans similar to those published by the cottage improvement societies, but at a cost somewhat above that at which they can be built when all the rooms are upon the ground floor. Specimens of Mr Nicoll's cottages can be seen at Twickenham, and near the Fulwell Station, about two miles from Twickenham. The one most recently erected at Twickenham contains the flues upon Mr Galton and General Morin's principle. A small policeman's lodge at the entrance into the grounds of the South Kensington Museum in Princes-gate has also been erected of Mr Nicoll's patent slabs, but with an exterior of brick and terra-cotta. Although the slabs of which this lodge is composed are only three inches thick, its great strength was shewn by an accident which happened to it soon after it was erected about two years ago. Just after it was finished, a wagon was coming in with a load of iron joists; in taking a turn, the wagon drove the iron centre clasp of the folding-door of the gate against the wall of the cottage with great force. One of the superintendents, who witnessed the accident, said that if the lodge had been built of nine-inch brick, the blow would have brought it all down; as it was, it only indented the slab. The portion displaced was forced back again by the workmen, and the concrete surface was restored, so that the injury was repaired in a few minutes, and at a merely nominal cost. The angle-iron, the cross iron bars of the frame, and the cement, together form a construction of such solidity that one-inch angle-iron is quite sufficient for all ordinary purposes, especially as when the frames are screwed together, the inch angle-iron becomes double. The frames are also held together by the uprights at every angle, and by the cross-ties at the foot of the roof. The whole plan of the construction is, in fact, similar to that of an iron ship—the theory of the construction being perfectly the same. It may be added that although the accident which happened to the policeman's lodge above mentioned may be cited as a good proof of the structural strength of the slabs, yet the lodge itself is composed, so far as the material of its external and internal surface is concerned, of a mixture of sand and cement, much inferior to the gravel and cement now used by Mr Nicoll.

Before we leave the subject of Mr Nicoll's method of construction, we must remark that the prices mentioned above as those at which cottages upon his plan can be erected, are calculated upon the assumption that the cottages are to be erected within fifty miles of London. An addition to the estimated cost of erection proportionate to the distance of the cottages from London will have to be made for the expense of conveying the slabs by railway. This expense, however, would not be considerable, as the whole weight of the slabs does not exceed a few tons. We may add that the prices mentioned above include everything necessary to render the cottages fit for immediate occupation.

The Central Cottage Improvement Society has very recently published a plan for a cottage with living-room and three bedrooms, all upon the ground floor. They state that the estimated cost of erection (excluding the formation of the platform on which it is suggested that the cottage might be built), with the use of brick and timber in the ordinary way, is about L.110. When concrete or cheaper materials can be used, the cost, of course, would be less than that sum. The same society has also recently signed a contract for a pair of four-roomed cottages to be built as an experiment of small concrete blocks for the sum of L.200.

The Prince Consort, it may be recollected, amongst his other good works, endeavoured to help on the supply of good cottages for labourers, 'substantial and convenient, and at a price not beyond their means.' With this end in view, he caused to be erected several specimen cottages opposite the Exhibition building of 1851. Unfortunately, however, these cottages did not fulfil the expectations which were formed of them.

In perusing the evidence upon the subject of cottage accommodation, collected by the assistant-commissioners in the inquiry now being made into the employment of women and children in agriculture, it is satisfactory to find that there is a general opinion growing up both among landlords and farmers that every cottage inhabited by a labouring man and his family should have three bedrooms—one for himself and his wife, another for the male

Digitized by Google

children, and a third for the female children. At present, however, though much has been done of late years to mitigate the evil, there is scarcely a parish in England in which there are not to be found cottages which are utterly unfit for the occupation of human beings, and in which the decencies of life are, to their occupants, utterly impossible. A case is cited in the Report of Mr Norman, one of the assistant-commissioners in the inquiry just referred to, in which a cottage measuring only sixteen feet by eighteen feet was inhabited by a grandfather aged eighty-four years, father, mother, and eleven children—in all fourteen souls! In the village of South Rauceby, Lincolnshire, there are twenty-seven cottages containing only one bedroom, and to each of which cottages the average number of inhabitants is upwards of four. One cottage, out of this collection of twenty-seven one-bedroomed cottages, contained no fewer than ten inhabitants; another contained nine; a third contained eight; two contained seven each; and three contained six each! We might quote evidence of a similar kind from every county in England very literally *ad nauseam*. Not only is it that the bedroom accommodation of cottages like these is so shamefully limited, but their sanitary arrangements—if sanitary arrangements they can be called—are simply deplorable. Everywhere the cry of the English parochial clergy is that churches and schools are well nigh useless, unless better house accommodation can be provided for their parishioners. The influence of the lessons taught at church and school is neutralised by the evil effect of home associations. The natural and inevitable result of the horrible overcrowding which still prevails so largely in many parts of England, is that the first seeds of immorality are sown under the family roof. Upon the other hand, the evidence of both clergy and landowners is overwhelming—that if a labourer be transferred from a miserable cottage to one in which comfort and decency are possible, the change for the better produced in him is almost startling. The drunkard ceases to frequent the public-house, into which he had often been driven by the squalor of his own dwelling, and begins to pass his evenings by his own fireside; the wife is transferred from a dirty slattern into a decent housewife; the manners and dress of the children are greatly improved. Nor can it be doubted that an employer of labour who may build good cottages for his labourers near to their work, reaps therefrom the great advantage of having good, steady, stay-at-home workmen. 'Once put a man into a good house,' it was said over and over again to Mr Stanhope, one of the assistant-commissioners in the inquiry above referred to, 'and his wife won't let him leave it!' It is therefore clear that, although an employer who may supply his labourers with good cottages may not receive from them, in the direct shape of rent, a full percentage upon his outlay in erecting the cottages, yet he does derive therefrom, although indirectly, great advantages. It is, however, earnestly to be hoped that, by means of Mr Nicoll's invention, or some other, it may soon be possible to erect cottages sufficiently cheap to enable them, when let at moderate rents, to yield a full percentage upon the cost of their erection. Signs, we rejoice to think, are not wanting to shew that the old epoch of cottage neglect in England is passing away. We are even warranted in believing that the day is fast coming when every agricultural labourer in England shall have a house over his head in which the comforts and the decencies of life are attainable, and which may without mockery be called his Home.

LIFE AND DEATH AT ST BREACA'S.

IN EIGHT CHAPTERS.—CHAPTER VI.

'I SHALL go to St Breaca's to look after that poor fellow this morning,' said Mr Hoskins to his wife, ten days after Augustine's return home. 'The fright has sobered him by this time, and I don't mean to "whistle him down the wind."'

'That's right, John; and find out what upset him; he'll have told his mother, I'll be bound. Old Betty has heard that he is mad after that French girl at the Gray House. If his father was like any one else, he would soon settle the business, but he only spoils what he meddles with; and soft-spoken as he is, I believe Mrs Secker daren't say her soul's her own. I hope you'll bring the lad back; the house is not the same without him.'

'No. I miss him, I can tell you, and I doubt if I could replace him if I would. I shall try to see his mother alone.'

Mr Hoskins's fast-trotting mare, *Jenny Quick*, carried him briskly to St Breaca's. Mr Secker was reading prayers—Friday; Augustine had gone with him. All served the good doctor's purpose; and as Mrs Secker was simplicity itself, he was quickly in possession of all the information he wanted.

'Just as I feared,' he said; 'but keep up your spirits. I think I see my way, but I won't reckon my chickens yet. Tell Augustine that my wife wants him to come to-morrow, and stay till Monday. She has forgotten the proportions of a vile compound of senna, quassia, and ginger which he mixes, and she persuades some poor bodies to swallow. You can let him know that I am not savage. Poor fellow! there never was a better lad. What a blessed thing it would be if your sex would let ours alone!—You don't like that. Never mind. No one could ever suspect you of weaving snares for a poor fool. Kind regards to Mr Secker. He doesn't need to be told that he's welcome to a glass of the old brown sherry as often as he'll come for it.—I can't stay to see him, thank you.—The big boys are at school, I suppose? Those are fine bouncing fellows; you ought to have a premium for them.'

'Poor dear fellow,' said Mrs Hoskins, when her husband had told her all he had gleaned; 'no wonder he didn't know what he was about. What a pity! I wonder if Mr Monsey did really annoy her, or if she only said so to make Augustine jealous? Whichever way it was, a proper-minded girl would not have told him anything of the kind; but I suppose foreigners can't behave decently. Is not Mrs Secker very angry?'

'I should think so. The quiet little woman was like a sheep stamping at a big dog, by way of protecting her lamb. She does not approve of the girl.'

'Well, what do you mean to do?'

Digitized by Google

'In the first place, I won't let Secker go back. She can't come after him here. I must watch that he does no mischief. I shall tell him that, of course, she cannot stay at the Gray House, and that he must tell her to give notice at once.'

'But where is she to go?'

'Why, oddly enough, those dear old maids at Myldmouth complained to me only yesterday that people were gone so mad after French (Jemima interjected that she really believed they thought no other language was spoken in heaven) that their school was going down for want of a resident Parisian. They dreaded the expense of bringing one from Paris, or even London, and could hear of none in the neighbourhood. I shall represent Ma'amselle as put providentially in their way. I'm sure they'll bite.' Mrs Hoskins shook her silvered head, and looked doubtful. 'Now, that I call straining at gnats, Sabina,' said her husband. 'I'd by no means send the girl into a private family, for there she might make more misery; but I defy her to get at the other sex while she is under Miss Wiseman's whalebone rule.'

'But she may injure the girls.'

'I don't think so, upon my word. I really believe that a poacher makes a good keeper.'

'Well, I hope it may answer.'

'At all events, we'll try.'

Mrs Hoskins threw her arms round Augustine's neck when he returned, and Mr Hoskins's eyes were moist when he gave him his hand. The poor fellow himself was choked with emotion. They comforted him, and he fell into their views readily; and before he went to bed the first night, he wrote to propose the plan to Jeanne, and his letter ended thus: 'I cannot eat or sleep; application to my business is simply impossible, till you are safe with kind good women. Under the most favourable circumstances, it must be long before I can give my Jeanne her own home, but I want to be fit to begin to work for that object. Myldmouth is thirty miles hence. We will write often, and hope to meet sometimes. Can you guess how often your eyes float before me? how often I hear your light footstep—the rustle of your pretty dress? All, all, so wonderfully, so indescribably dear. How cruel it is that anything approaching to a decent likeness is beyond the reach of poor people like you and me! But if I had yours, I should waste half my time in pondering over it, and finding it unworthy of you. I am impatient for your answer. I kiss your dear little hands, especially that mystical finger, and am your fondly devoted

AUGUSTINE SECKER.

Jeanne replied:

MY VERY MUCH LOVED—I have kissed your letter over and over again, laid my cheek on it, tied it up in my curls, with my tears wetted it. Of course I want to leave this odious place. I have all arranged. I have seen Mrs Monsey, and said to her that I could no longer stay. She said I was in the right, and she would speak well of me. Your friends will write to her to inquire about me—that is the proper thing. Oh! I do want to go; but when shall I see you? How hard it is to love as we love, and be separated! Is not this life very strange and miserable? How good you are to forgive me all the harm I have done you! Your mother will never. But you will not change. All the books say how inconstant is man; but no, you are not. You will never break the heart of your Jeanne, who adores you.

CHAPTER VII.

The Misses Wiseman engaged Jeanne to go to them after the Christmas holidays. The coach in which she must travel passed Mr Hoskins's door daily. He and his wife agreed to invite her to stay two days, and to start from their house. They hoped the engagement would come to nothing; but decided that, so long as it existed, its business ought to be conducted openly and respectably. Prejudiced though they were, Jeanne's tact brought them to the admission that her lover's infatuation was not without excuse. He was very happy. Her coming, a guest, where he lived, seemed an earnest of a future home together. She was going where all was unexceptionable and every one good. She had made a favourable impression, and he might hope to welcome her back again. He whistled as he stood at the garden-gate, watching for the mail. He had never thought the white frost, the holly-berries, the robins, the early sunshine, so joyous. The guard's horn, the crack of the whip, the steam even from the horses, all was cheery; and the coach was empty, and would be for the next stage. It had been settled that he should go so far, and walk back. It was almost like starting on one's bridal tour. That Jeanne was subdued, gave him, for once, no pain. It was so very sweet to comfort her as man is meant to comfort woman, and to be sure that she was sorry to part from him. The drive seemed strangely short. The last loving words were exchanged, the last kiss was given, and Augustine was on his way home. He walked fast, as a young man with full heart and busy mind does walk, and he did not observe the changing weather till heavy rain began to fall. He was very warm, and it chilled him. He had no umbrella, and was wet through, when he had yet four miles to go. When he came in, Mr Hoskins shook his head; Mrs Hoskins sent him into a hot bed, and gave him stimulants; but next day, and many days after, he was feverish, and racked with pain. 'He has no stamina, and his mother's family are consumptive, and this coming after all his worry, is serious. If it goes to his lungs, we shall not save him,' said Mr Hoskins.

If there was one person more odious than another to the Misses Wiseman of Hayfield House, Myldmouth, it was a flirt. The moment they saw Jeanne, their hearts contracted, and they would have rid themselves of her at once, unexceptionable as seemed her testimonials, if it could have been done honourably. 'We must keep her for a quarter before we give her notice,' said Miss Margaret to her eldest sister, when they returned from church after Mademoiselle Royer's first appearance there with them. 'The way she threw those great eyes of hers all round, especially on that young curate, was such a distraction to me, that I could think of nothing else. I have no more idea of the text than if I had not heard it; and I have to find fault by-and-by with the children who cannot give a good account of the sermon!'

'We need not keep her so long as that,' returned her sister, 'unless she conduct herself well, and that, I think, is very improbable. What a trial it will be to go out to walk with her! She cannot stand, hold her head, use her handkerchief, do

Digitized by Google

anything like any one else. She is an embodiment of vain self-consciousness. Nothing can be worse than her example for the elder girls, especially as they think her very pretty, and have taken a great fancy to her. I cannot help suspecting that Mr Hoskins recommended her from compassion, or to oblige a friend, or from some other motive which will not bear investigation. Very unfair, if he did.'

'I will set Mrs Sharpe to try to find out something about her,' said Margaret; and that lady, visiting a great deal, was not long in ascertaining the connection between the French girl and Mr Hoskins's handsome assistant, with its concomitant disagreeables. Thenceforward, the sisters could hardly repress a wish that she would commit herself; but there was no denying that she was clever, industrious, and peculiarly obliging.

Mr Secker had not accepted current events; that, indeed, could not have been expected from him. Through the suspension of amity with the family at the Gray House, he lost many pleasant hours; and though he was addicted to expressions of contemptuous pity for men or women who had 'no resources in themselves,' time hung heavily on his hands. Taste for study he had not; his temperament was incapable of concentration. His parochial work was light between Sundays, for the sick—and he did not resent it—preferred the Wesleyan minister, who did not read prayers out of a book. Even when he was good tempered, the inevitable discomforts of his poor home irritated his delicate nerves and affronted his tastes; and it was all so much worse in winter. In summer evenings, he would have taken long rapid walks, while his imagination ran wild in framing conversations never to be held, and letters never to be required. He was very sore about Augustine's sudden summons back by Mr Hoskins. 'Had I been a man of fortune,' said he, 'or even the incumbent of a small living, he would not have presumed to treat my son so.' When he became aware that Jeanne Royer had been the Hoskinses' guest, he declared that he and his family were victims of a conspiracy to crush them to the dust. That step did indeed seem unkind even to gentle Mrs Secker, and she could not refrain from saying: 'I never would have believed it; I thought they would do all they could to keep her out of his way.' It is very difficult to do good, and we have to mourn sometimes over the success of our plans. Mr and Mrs Hoskins had alienated the Seckers, displeased the Misses Wiseman, placed Jeanne Royer in a position which was thoroughly irksome to her, and the youth whom they had striven to serve was dying! The cold caught on that walk home had settled on his lungs, and his most attached friends had provided the inducement to take the walk, had even proposed it to him!

Who, that is not very young, does not know the deceitfulness of consumption? Its pauses, its fluctuations, its hopefulness. The weather is to be milder or steadier; something unusual or unsuspected in the case or the constitution will be developed: this victim will certainly not die. Some one else was as ill—worse even—years ago; had at first identical symptoms; and look at him now! Think of all the fine healthy men he has outlived!

Thus had Augustine Secker's loving watchers talked when May came; and then he was too weak to leave his bed. He had gone home early in April. Mrs Hoskins would have nursed him; but he wanted his mother, and his mother wanted him. The women understood one another by that time, and compromised. Mr Hoskins was to see him often; and from his house was to come every comfort.

'The one thing I dread daily and hourly,' had the poor fellow said, 'is my father's tongue. It would not be intolerable if he would let that poor girl alone; but to be bound by filial duty to hear silently all that he says and insinuates about her, is maddening. Setting affection aside, she is a woman, and young, and unprotected. He should reflect that Sophia may be situated some day as she is.'

'He never does reflect,' returned the mother incautiously: 'he would not hurt your feelings if he did, for he is miserable about your illness.'

'And yet he retards my recovery! I wonder it does not occur to him that it is hard—very hard—for us never to see one another: you understand that, though you don't like poor Jeanne.'

'I can, my darling; and I will never say a word against her, or do anything that you would dislike.'

Many similar conversations had these two; and long silences, when often she yearned to know if he were aware of his real state, or if she or anybody ought to tell him. If his father had been like her ideal of a Christian minister, how gently he would have broken the awful news! how soothingly they would have read, and wept, and prayed together!

Mr Hoskins was of opinion that Augustine's professional knowledge prevented his being in the dark; that he talked cheerfully, partly to keep up his mother's spirits, partly because self-delusion was contingent on the disease. A bright morning came, when he wished his mother would air his summer clothes, he should want them soon. She did air them; and the following night was far advanced when he said abruptly: 'My head is becoming very odd; read the seventeenth of St John.'

She did read it.

'Call my father.—Kiss me.'

He was gasping, when Mr Secker fell on his knees by the bedside sobbing: 'My boy, my first-born, has it come to this?'

'He wants to kiss you—quick,' urged the mother.

He placed his cheek close to the trembling lips, and heard their last utterance: 'All forgiven—don't be unkind—poor little Jeanne!'

When Jeanne received, in a kind note from Mrs Hoskins, the intelligence of Augustine's death, she, according to Miss Wiseman, 'threw herself into violent hysterics.' How, that lady argued, could a girl, who, though engaged, and aware of her lover's illness, spared no pains to make the best of her appearance, and did all she could to attract other men, have any real sorrow for his death, though it lay at her door? But Jeanne was prostrate. She *had* loved him as deeply as she could love any one, better than she should ever love again, and she knew how fondly he had loved her, how entirely he had believed in her. She was sure that he had died without regretting that he had known her; but might he not, disembodied, be aware of all her duplicity? Would his spirit, reproachful, though tender, be near her in the loneliness of the night?

Digitized by Google

Would not an intolerable horror surround her in the darkness? Death had never confronted her before; it had been an indistinct something that happened to other people—no affair of hers. But here was a man, very little older than herself—full of vigour, handsome—*dead!* and if he had never known her, he might still be living. Again, she had been taught her religion early and carefully. She had never lost the conviction that she had committed a deadly sin in denying it. If she had been true to it, she might have converted this man; he would have listened to anything she said. But she had led him to believe that she despised popery, and worshipped with him, and he had died without the sacraments!

But the Misses Wiseman could guess none of this, and thought she was acting, and had 'no patience with her.' On the following morning came a letter from Lotty Monsey, saying that if she liked to go and pay a visit at the Gray House, mamma would be happy to see her, and she could come as soon as she liked, and need not write; that they, the girls, should be delighted to have her; they had no new governess, and Suzanne was generally cross, and they were very dull. Jeanne kissed the writing over and over. Anything was preferable to the Hayfield House rigid routine. It would be a relief to get away from the place where she had first realised Augustine's death. She felt as if he had died in her room. Miss Wiseman made no difficulty about her going; and when she asked how long she could be spared, said that it need not be decided then—that she would write to her. So she started by the mail.

When she reached St Breaca's next morning, the church-bell was tolling. She guessed for what purpose; and when she entered the Gray House, there were more hysterics; and Mrs Monsey said that people who were violent in their grief soon got over it. Her daughters were very compassionate; and Suzanne shewed an amount of kindness to the poor girl which she had never shewn for her before, and put her to bed, and staid with her till sleep came.

Next day she was well enough to send for materials, and begin making mournings. She was a born milliner, and it suited her taste as well as her pocket to make her own clothes. No one whom she could afford to employ would have adapted them so skilfully to her. She put a widow's cap into a coquettish bonnet; and having, according to Mrs Hoskins's advice, written to ask Mrs Secker to let her call on her, she set out with that purpose on the day fortnight of Augustine's burial. The last time she had walked to the house had been with his father, and his evident admiration had been acceptable to her vanity. 'The foolish old man has never forgiven me for preferring his son,' said she to herself. But shame and sorrow oppressed her as she went on, and her knees were weak and her heart was sick when she reached the door. It helped her, and indeed every one, that Mr Secker was at home, and that, acting as he conceived 'a perfect gentleman and man of the world' should act in such circumstances, he talked on indifferent and trifling subjects. They, on the brink of tears, could not. Miss Secker and Sophia had kissed her, and she had whispered to each: 'Pity me, and try to forgive me;' but she could say nothing of the kind to him. By-and-by, in a thick voice, she asked if she might look among Augustine's papers for her letters to him. Mrs Secker started, and replied that none of his things had been touched yet; meaning to convey that she could not yet bear to do anything with them; but Jeanne did not understand, and suggested timidly that perhaps Miss Secker would go with her into his room, and stay with her while she found them. So they went. As soon as they were there, the awful sense of death present, which Jeanne hoped she had shaken off, rushed over her, and with it came tenderness and compunction. She threw herself on the bed, and cried aloud. Mr Secker had expected 'a scene'—rather wished for it, in fact; the softness evoked by his dying son's last words had passed for the time, and his inferior nature predominated. In a minute he was at the bedside, with cruel indifference in his eyes and voice.

'Dear Miss Royer,' he said, 'I have a wife and children whom I cannot allow to be excited in this manner. They have suffered very much lately, as you are aware. You must let me take you into the other room. You may rely upon my sending your letters to you.'

She submitted, cowed, and said she would go. He made no opposition; but Sophia's soft young heart was touched, and she was about to offer to walk with her, when a stern glance from her father, and a warning one from her mother, checked her. 'Poor little thing,' she said afterwards; 'I could not bear her going alone; she looked so young, so childish, except her eyes, in that cap; and she must have been very miserable.' Yes, she was; quite as miserable as culpable. As she chose back streets, that she might weep unheeded behind her thick veil, she breathed air defiled by stale tobacco and refuse of fish: squalid children quarrelled for disgusting trifles, and women scolded as they scold only in low marine districts. Further on—it was low water—the black timbers of the pier, and the mud in the shipwrights' yards, suggested to her disturbed imagination horrors going on secretly in lately filled graves. The dogs at the Gray House barked savagely till she was admitted, and slunk away snarling afterwards. Mr and Mrs Monsey were wrangling in the drawing-room; their daughters keeping out of the way in their bedrooms.

CHAPTER VIII.

'Tell me if you think this will do, Margaret,' said Miss Wiseman to her sister a fortnight later, giving her a note to read:

DEAR MISS ROYER—My sister and I are of opinion that it will be more satisfactory both to you and ourselves that you do not return hither. We do not feel that it is necessary to write more explicitly, and we enclose the amount of salary which would be due to you if you remained with us three months from the present date. We shall be obliged to you for a receipt, and glad to find that the luggage you left reaches you safely: we forward it to-day, carriage paid. Should you think it expedient to refer to us, we will state that you are fully competent to teach your own language, and by no means deficient in industry.—I remain, yours truly, LUCRETIA WISEMAN.

Another blow! Not that she regretted that formal establishment, but it threw her completely on the

Digitized by Google

Monseys, and she had perceived that they did not wish her to stay long. Mrs Monsey had spoken more than once of her return to Hayfield House as a fact to be speedily accomplished. She knew that the whole family watched her while she read the note, received at breakfast. She must tell them its purport, because her boxes would arrive. Laying it before Mrs Monsey, she said: 'More trouble for me.'

'Very provoking, indeed,' was her observation, as she passed it to her husband.

He read it slowly. 'Deuced awkward, upon my word, Mademoiselle. It was only yesterday that Mrs Monsey and I were lamenting that circumstances would prevent our offering you a bed for more than a week longer. I should recommend your advertising. Or what do you think of returning to Paris? Your English experiment has not been successful; and no doubt you have friends there who could take care of you for a time.'

It was no surprise, but bitterly painful. A shadow darkened her pale face, and she said: 'Thank you, Mr Monsey, I will take a long walk, and consider what I had better do.' She left the room.

'I shall be glad when she is safely off the premises,' remarked Mr Monsey. 'It was confounded folly to bring her here. I can't imagine what possessed you to do it. The girl is ill, and desperate. A pretty business it would be if she had a fever in the house, or took it into her head to destroy herself.'

'I wish you wouldn't say such horrid things, Arthur; you make me quite nervous. I asked her here to please the girls; they were wild to have her, and it made a little change for them.'

Jeanne kept tears back till she reached her room, then let them flow passionately for a while. She bathed her face, took a strong dose of lavender, wrote a receipt for Miss Wiseman, and two letters. Next she took a packet from her desk, put it in her pocket, and dressed to go out. Lotty looked in, and asked if she should go with her.

'No, dear; thank you; I should be a wretched companion to-day, and I could not make any plans if I had you to talk to.'

'Well, don't be longer away than you can help,' said the good-natured girl, kissing her. 'If we are to lose you so soon, we must make the most of you.'

Out of that desolate house, and away; first to Augustine's grave. It had been her intention to place a headstone there as soon as she could afford it. The act would soothe her, and be some reparation to his family. Had he lain where no one could see her, she would have thrown herself on the ground, reproached herself, and implored his pardon and pity aloud; but the churchyard was overlooked on one side, and hundreds of eyes might watch her. She did not stay long; she wanted solitude; wanted to be where there was no indication of human existence. It was easy to indulge the feeling. Just round a promontory nothing could be seen but the little bay and its beautiful wild coast. The tide was high, the day calm. She scrambled down into a cove where she and Augustine had often sat and talked. She remembered that the last time they were there together she had thought as she looked down into the clear placid depth, and watched the graceful sea-plants waving gently, as if they sought to prolong to the utmost their enjoyment of the delicious water, that it was no wonder weary wretches sprang into such places to end their woes. She had even said so to him, and he had shaken his head, and replied: 'A bad thought, my sweet: depend upon it, suicide is the most atrocious of crimes—don't try to throw any poetry over it.'

And she had really wondered, and returned: 'Now, I can't see that: I can see that it is horrible to take another's life, but one's own'——

'Is not one's own, my Jeanne, and taking it is the sin which puts repentance out of the sinner's power. See how that aggravates its wickedness.'

Why did she think of this at that moment? she asked herself. Was it an impulse of grace beckoning her to the only safe course left? Return to Paris, candid avowal of her faults, meek submission to their consequences, commencement of a life in which gratification of vanity and worldly aggrandisement should not be principles of action. 'It is not in me,' her mind went on; 'I cannot do it. I was born for pleasure, born to be admired, loved, worshipped; I am fit for nothing else, and all this is denied me—there is no patient drudge in me.' She took out the packet she had brought—Augustine's letters to her, hers to him. She kissed his, read some of her own, tore them all as small as possible, and scattered them to the sea. She was cold; she got up and walked to and fro the little beach as fast as the shingle would let her. Then she thought she would like to look at St Breaca's, and began to climb a high rock whence part of the town could be seen. She was near the summit when her foot slipped, and she fell backwards. She shrieked with all her strength, and stretched out eager agonised hands. In vain! Her skull was fractured in her descent, and the sea received her a battered corpse.

Men in a distant fishing-vessel heard her last cry, wondered what it was, then supposed they had fancied it; but remembered it with terrible surmises when, three or four weeks later, the county paper mentioned the finding of a woman's body some miles down the coast. It defied recognition, and was buried by the parish, after a verdict of 'Found Drowned.'

Jeanne had left a letter on her dressing-table, directed to Mr Monsey, but placed under the looking-glass, in order that it might not be found too soon. She said:

DEAR MR MONSEY—I will not intrude longer on your hospitality. I enclose you a letter which will explain my intentions. When you have read it, will you have it posted? I cannot write it twice, and I want you to understand that you need not fear my troubling you any more. I will only ask you to order all that I have left in your house to be given to Suzanne.—I remain yours truly,

JEANNE ROYER.

The letter was directed—Madame Royer, Poste Restante, Paris. It ran as follows:

When you receive this, I shall be dead, and there will be no clue to me. I am ill, wretched, mad perhaps. Those women have forbidden me to return to them. I cannot stay in this house. Where shall I go? There is no place in the world for me. The good do not trust me; the bad do not want me. It is not easy to forgive you for being my mother; but I try to do so, for I believe that you have loved me. Farewell. JEANNE.

Digitized by Google

Mr Monsey was not much surprised — not shocked, but very uncomfortable during the succeeding fortnight, lest the unhappy girl's remains should be brought to his house.

Madame Royer had a fever, which reduced her to the gates of death; and after her recovery, devoted herself humbly to works of mercy.

Mrs Secker and the Hoskinses grieved for Jeanne, as the thoughtful and feeling ought to grieve for one so pitifully wrecked.

It has been stated that even the most terrible husbands have soft moments. Mrs Secker took advantage of such an interval—with what object is not evident—to represent to hers that had he been influenced by her, and avoided the Monseys, Augustine might be living and prosperous, and Jeanne Royer, differently circumstanced, might have turned out well. 'But, my dear child,' said she to Sophia, 'it is really of no use whatever to talk to your father: he cannot, or will not see anything as any one else does. All I could get out of him was: "Very logical indeed, Mrs Secker. Upon my word, I congratulate you; your conclusions are so perfectly satisfactory to yourself. Now, for me, I confess humbly that whenever I meddle with cause and effect I get completely adrift."'

THE MONTH:

SCIENCE AND ARTS.

The middle of the long vacation is commonly a quiet time for science as well as for law, affording opportunity for retrospect and stock-taking. But as the days shorten, philosophers, naturalists, and the searchers after nature's secrets come back from their holidays, and betake themselves to work. In this they reverse the order stated by the poet, who declares winter to be the 'time for sleeping,' for they all shew, and markedly, that winter is the time for working. So much work is in prospect, that a new weekly journal is to be started to record and make known all that is doing in science.

In concluding a lecture delivered at the Royal Institution, *On the Cryptogamic Forests of the Coal Period*, Mr Carruthers remarked that the ferns and other genera which he had described might be considered the types of the plants to which we are indebted for our stores of mineral fuel. They grew in extensive level plains, their fleshy roots penetrating the soft mud which formed the surface-soil. The moist atmosphere (not at all likely to have been charged with more carbonic acid gas than that of our own day, says Mr Carruthers) would encourage the growth of cellular parasites and epiphytes, which are found now in a fossil condition. The great mud plains were bordered by forests of coniferous trees, which grew, however, mostly on the higher ground. But the plants that grew with the Conifers in these upland regions are as yet quite unknown. In the plants that are known, the biologist finds an especial interest, because they agree in all essentials with some of the humble members of our present Flora, but shewing a development in size and in organisation far beyond that of their modern representatives.

It appears by a communication made recently to the Royal Dublin Society that wherever in Ireland planting and drainage have been properly attended to, the change in the climate and condition of a locality is remarkable. Noxious plants peculiar to a wet soil disappear, and are succeeded by plants which affect a dry soil; and on these there follows a marked improvement in the health of sheep and cattle. In the latter half of last century, more than fifty-five million trees were planted: if similar plantings had been continued, we may believe that climate and industry would have been alike beneficially affected. Mr Andrews, a member of the Royal Irish Academy, states that there are nearly four million acres of unreclaimed land in Ireland, and that what the country wants is 'that steady useful employment of the agricultural labourers, which will do away with all the talk about emigration being the safety-valve of Ireland.' And he adds: 'It is a question now whether the country does possess a sufficient quantity of labour to develop its resources.'

A suggestion has been made by one of the agricultural societies in France that the roots of couch-grass would make good fodder for horses. It is not the first time that this grass, which in some parts of England is called 'twitch,' has been thus spoken of. The roots are sweet, and it is known that horses fed thereon acquire a smooth and lustrous skin. Some economists argue that the waste lands of France, where nothing else will grow, could be utilised by being planted or sown with couch-grass, and that if the plant were once brought into general cultivation, many other useful applications of it would be discovered. We mention this subject on the chance that some English agriculturist will determine whether a really useful application of what most farmers regard as a troublesome weed is possible or not. A few years ago, no one imagined that the spines (foliage) of pine-trees could be converted into wool; but pine-tree wool is now an article of commerce in much request for medical purposes.

Another rural fact worth notice is, that in some parts of France the plague of insects has so much increased that active endeavours are made to protect and propagate small birds. All the prefects have given notice that parents will be held responsible for their children's mischief in the destruction of birds' nests; and in many places earthen pots and old sabots have been fixed up to serve as artificial nests, and were soon tenanted. We are told that the emperor has given orders for the placing of a number of artificial nests in the Bois de Boulogne and the gardens of Tuileries, and superintended a portion of the work in person. After this imperial manifestation, we may hope that the cruel and stupid slaughter of small birds, which has been carried to much greater lengths in France than in this country, will now be checked or completely put down.

The growing question of increased water-supply to large towns, stirs another question of almost equal importance—namely, economy in the use of water. The latter has been discussed at a meeting of the Royal Dublin Society by Mr G. Sanders, who states that the waste of water in Dublin is 'enormous,' just as the gas-supply used

Digitized by Google

to be wasted in the same city when consumers paid by burner only, and not by measure. Meters were introduced, and an immediate saving of 40 per cent. in gas was the result. With this example before him, Mr Sanders recommends that meters should be used for the water-supply, and he exhibited Payton's Patent Meter as admirably suited to its purpose. Although with twelve feet head of water, it will measure five hundred gallons of water an hour, it is so small that it can be made as a time-piece, and stand on a mantel shelf, or in a counting-house under constant inspection. The mechanism is beautifully simple: two cycloidal valves working one within the other in a way which may be exemplified by two turnstiles which overlap each other, and yet allow a stream of people to pass through. So the water flows through the meter, and is accurately measured the while. From these particulars, it would appear that Payton's meter is a very efficient instrument, which may be adopted with advantage wherever water is to be measured or economised.

Amsterdam has long wished to have a direct navigable communication with the North Sea, instead of that by the Zuyder Zee and Texel; and now a ship-canal which is to cost twenty-seven million guilders is in course of construction. A line drawn from Amsterdam, through the inland sea known as the Y, and through Wyker Meer, will indicate its course. The length will be about fifteen miles, with a port at the outfall, which will be on a part of the coast where a harbour of refuge is much needed. Hence, in a few years, Holland will have added one more to the great engineering works which have made that little kingdom famous.

Natal is a young colony, but it grows pine-apples, bananas, oranges, Indian corn, wheat, cotton, coffee, tea, and other useful products. The sugar-cane was an experiment there twenty years ago: now, six thousand tons of sugar are annually exported; and arrow-root figures in the exports to the value of six thousand pounds a year. Cattle and sheep are so abundant, and multiply so rapidly, that preserved beef and mutton may be expected to appear before long in the list of Natalian commodities; while to facilitate trade, a breakwater is being built at the entrance of the landlocked harbour of Durban, to prevent the accumulation of sand, which now interferes with the passage of vessels. It says something for the enterprise of the colonists that this breakwater is constructed after the manner of the great breakwater at Portland, by driving in piles, carrying out a railway over the sea, and the dropping in hundreds of tons of stone from the trucks.

It may now be taken for granted that fresh meat can be sent from Australia to this country, and delivered here in palatable condition. The fact has been demonstrated with mutton and beef, and the Australians are so elated with their success, that they are earnest to discover further improvements in their process of cooking and preserving the meat. With so many hungry mouths on this side the globe, it seems deplorable that in one single tallow-making establishment near Ballarat, nearly two million pounds of mutton were wasted in the boiling down. If the new endeavours prove successful, this waste will be avoided in future; and not only meat, but preserved kidneys and concentrated essence of meat will be shipped to England in surprising quantities.

THE PAUPER'S DEAD CHILD.

Hush! Speak very softly; fasten the door;
With a light tread step on the creaking floor.
There's a ragged handkerchief on the face;
Lift it up gently, as if it were lace.
Yes; only last night little Elsie died;
Just opened her eyes, then shivered, and sighed.
Though I rubbed her hands, wrapped her in my cloak,
She grew cold and colder as morning broke.

Now the pariah coffin lies on the chair;
Though I shut my eyes, still I see it there.
It's unpainted—rude; but then, you see,
She 's used to the coarse things of poverty.
She had grown so thin; dim, sunk were her eyes,
As she looked at me so wistful and wise:
'I'm not hungry now: there 'll be more for you;
Bread lasts much longer for one than for two.'

Rich God! she 'll be rich with thee. Well I mind
How she raised her head last night. 'I shall find
And see God soon,' she smiling said, 'by streams
Sparkling and clear, as I've seen them in dreams.
My Lord—he 's the same as Jesus, you know—
Will lead me, and I shall be rested so;
And I'm sure he 'll let me run to the gate
When I think you 're coming—so don't be late.'

She said something else; but the din and roar
In the great streets without came more and more
Through the broken panes of the window there,
And I couldn't tell what her other words were.
Since it's well with her, I ought to be glad;
By her riches, rich; yet poor, empty, sad,
I am sitting here; while the children creep
Softly up to the door to catch a peep.

I've no flow'rs, except this daisy I found;
It was hidden beneath a rubbish mound.
Like Elsie, though crushed, down-trodden by man,
It came from God, and rest with her it can.
Is it time to go? The rain has come on;
Wet will be the earth that she'll lie upon.
Yet, whene'er I kissed her, she always smiled;
So *this* must be only what *was* my child.

Re-issue of

CHAMBERS'S MISCELLANY

OF

Instructive and Entertaining Tracts.

Issued this day,

MUTINY OF THE BOUNTY.

PRICE ONE PENNY.

The Publishers of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

1*st*. All communications should be addressed to the 'Editor, 47 Paternoster Row, London.'

2*d*. To insure the return of papers that may prove ineligible, postage-stamps should in every case accompany them.

3*d*. All MSS. should bear the author's full CHRISTIAN name, surname, and address, legibly written.

4*th*. MSS. should be written on one side of the leaf only.

Unless Contributors comply with the above rules, the Editor cannot undertake to return rejected papers.

Printed and Published by W. & R. CHAMBERS, 47 Paternoster Row, LONDON, and 339 High Street, EDINBURGH. Also sold by all Booksellers.

CHAMBERS'S JOURNAL

OF

POPULAR

LITERATURE, SCIENCE, AND ART.

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 301. SATURDAY, OCTOBER 2, 1869. PRICE 1½d.

THE ADVENTURE OF THE *MARY ANN*.

IN TWO PARTS.—PART I.

THE *Mary Ann* was a whaling-vessel, well known in the Tasmanian trade. She had always been accounted a lucky ship. When others had returned without oil, or, as the phrase is, 'clean,' she had been able to pay her men good wages, or rather to give her men considerable sums of money as their share in the enterprise, for the principle of co-operation, which is now receiving yearly new applications in England, has long been in use among whalers. Men go out on the agreement that they shall receive a particular specified share of the total proceeds. Sometimes they draw nothing at all at the end of their voyage; sometimes each sailor receives as much as a couple of hundred pounds. But the general effect of the system is that the sailors engaged in the trade are rather above the average; that each man looks after his fellows, and does his best to aid the common cause. When they have reached the whaling-ground, there are no idle hands. While one man is specially appointed to keep a look-out, he is assisted by the eyes of every one on deck; and when at last the welcome 'There she blows!' is heard, men rush to the boats as readily as school-boys rush out of school.

The *Mary Ann* had usually been, as I said, a lucky ship, and men would go out in her for a smaller share of the proceeds of the voyage than they would in other vessels. Her crew was usually, therefore, a picked one, and her captain, old Truesalt, as good a whaler as could be met with. And yet the *Mary Ann* was an old, lumbering, clumsy vessel, which ploughed her way through a heavy sea in as awkward a style as any Dutchman ever built. She *was* of Dutch build. In a gale of wind she had as much notion of riding on the waves as Washington Irving's Tinbroek would have had of dancing a polka. She rolled from side to side until her yards nearly touched the sea, and in her onward course went *through* the opposing waves instead of over them. When she was young, she had been a Dutch East Indiaman. A curious chapter might be written on the vicissitudes of ships. The *Victory* is to be laid up like an old Greenwich pensioner. The ship in which Captain Cook, now a hundred years ago, made one of his voyages round the world, was employed only a few years ago as a collier between Newcastle and London. One of the dirtiest whalers which I ever saw, and this only some six or seven years ago, was the *Prince Regent*, a vessel which had been the yacht of George IV.; and it would be easy to make out quite a long list of vessels now doing the rougher kind of sea-work, which in their younger days have seen noble service.
